Some features of scale transformations for use in the study of broken internal symmetries are pointed out. These scale transformations are used to investigate the problem of how to attain the hypothesized symmetrical limit in broken internal symmetries. The hypothetical limit mass is studied in the case of two-body leptonic π and K decays. (J.F.P.)

17539 STUDY OF THE DECAY PROCESS $K \to \pi e\nu\gamma$ WITH REGARD TO THE SEARCH FOR TIME-REVERSAL VIOLATION. Schutz, Stephen A. Princeton, N. J.; Princeton Univ. (1970). 126p. University Microfilms Order No. 70-23,637.

Thesis.

Decays of the form $K \to \pi e\nu\gamma$ are particularly interesting as a place to look for the effect of time reversal violation, because the time reversal violating effects can show up as triple vector product correlations of momenta, without regard to polarization measurements. The measurement of triple vector product correlations is not a pure test of time reversal invariance because the existence of final state interactions can also produce such correlations. The effects of the final state interactions for $K \to \pi e\nu\gamma$ were calculated and found to be very small, so that these decays are still good candidates for experiments in the search of time reversal violation. The most general amplitude for the decay $K \to \pi e\nu\gamma$ is written down in terms of the inner bremsstrahlung terms and the structure dependent terms. The most general structure dependent term, consistent with electromagnetic current conservation and embodying the assumption that the leptons interact at a point via the usual leptonic current, is written down in terms of eight (six for the electron case) unknown invariant structure functions. The unintegrated differential rate and lepton polarization spectrum are expressed as the sum of a series of terms involving progressively higher powers of the photon energy. If there is a large time reversal violation in the electromagnetic interactions one might expect it to give rise to

a large time reversal violation in the structure dependent part of the decay $K \rightarrow \pi e\nu\gamma$. Consequently, it is useful to estimate the size of the structure dependent terms relative to the inner bremsstrahlung terms. It is found that for a low photon energy cutoff of 100 MeV the ratio of the inner bremsstrahlung part of the decay rate for $K^{\pm} \rightarrow e^{\pm}\pi^0\nu\gamma$ to the decay rate for $K^{\pm} \rightarrow e^{\pm}\pi^0\nu$ is approximately $.28 \times 10^{-2}$. Based on the evaluation of the lowest pole diagrams, the structure dependent contribution for this value of the photon energy cutoff is estimated to be about 3% as large as the inner bremsstrahlung contribution. Graphs of the photon energy spectrum are given so that similar information can be obtained for different values of the photon energy cutoff. (Diss. Abstr. Int., B)

17540 CP VIOLATION: INTERFERENCE EFFECTS IN K^0 DECAY. Coulter, Philip W.; Shaw, Gordon L. (Univ. of California, Irvine). Phys. Rev., D; 3: 779-83(1 Feb 1971).

The intrinsic magnitude of the CP-violating coupling is not simply related to the decay ratio $(K_L \rightarrow 2\pi)/(K_S \rightarrow 2\pi)$, because of the K_L-K_S overlap. It is this intrinsic coupling which is needed to estimate CP violation in other systems. An explicit model showing the interference effects of the K_L-K_S overlap on the relation of the coupling constants to the above decay ratio is examined. There are interference effects in ϵ which depend on nonmeasurable mass shifts. (Theoretical estimates of these mass shifts are discussed.) However, ϵ' does not depend on these mass shifts and thus can be more easily related to the intrinsic CP-violating coupling. (auth)

17541 CHIRAL SYMMETRY AND η–X MIXING. Kobayashi, Makoto (Nagoya Univ., Japan); Maskawa, Toshihide. Progr. Theor. Phys. (Kyoto); 44: 1422-4(Nov 1970).

The mass relation between η and X is examined under the assumption that the symmetry breaking part of the hadron energy density belongs to the representation $(3^*,3) + (3,3^*)$ of chiral $SU(3) \times SU(3)$. (L.B.S.)

Applications (Strong)

17542 20'S, EVEN-PARITY 70'S, AND ODD-PARITY 56'S. Faiman, D. (Oxford Univ.). Lett. Nuovo Cim.; 4: 1231-4(19 Dec 1970).

An experimental search is suggested for certain baryon resonances whose existence could help determine the relative merits of various symmetry schemes that have been proposed for the baryon spectrum. It is suggested to examine those states predicted by the harmonic-oscillator quark model that have unique quantum numbers within each excitation level, and which can accordingly mix with no states closer in energy than two quanta of excitation. (L.B.S.)

17543 DASHEN PARADOX, DOMAINS OF MATHUR, AND OKUBO AND KUO INVARIANCE. Bandelloni, G. (Univ., Genoa). Lett. Nuovo Cim.; 1: 61-4(9 Jan 1971).

It is shown that the paradox of the possibility of negative eigenvalues of the square-mass matrix of Goldstone bosons in a spontaneously broken $SU(3) \times SU(3)$ is easily explained when values for the breaking terms are restricted to Mathur and Okubo domains. Mass values and sum rules are thus obtained, and their behavior is studied under Kuo transformation. A manifest Kuo invariance for zero-hypercharge renormalized bosons is derived; for strange bosons, the Kuo transformation changes the masses of the particles into those of opposite parity. This fact is interpreted as a new definition of parity for these particles which does not change the physical description of the system, owing to the arbitrariness of the relative parity of particles with nonzero hypercharge. (J.F.P.)

17544 ASYMPTOTIC SU(3) AND SU(2) SYMMETRIES. Oneda, S. (International Centre for Theoretical Physics, Trieste, Italy. Univ. of Maryland, College Park); Matsuda, Seisaku. Nucl. Phys.; B26: 203-14(1971).

Formulation of an idea of asymptotic SU(3) and SU(2) symmetries which are compatible with the Gell-Mann-Okubo (GMO) and the SU(2) mass splittings (including mixings) is discussed. Consequences of the application of these asymptotic symmetries so far obtained are briefly reviewed. Combined with the use of suitable equal-time commutation relations involving the generators of these groups and also their time derivatives, these asymptotic symmetries require that there exist rather simple SU(3) and SU(2) inter-multiplet regularities among the mass spectra of hadrons. Broken SU(3) and SU(2) sum rules obtained by using asymptotic symmetries exhibit simple but sometimes very significant modifications of exact SU(3) and exact SU(2) sum rules through the appearance of the physical masses and the mixing parameters in the sum rules. 17545 PARITY-VIOLATING INTERNUCLEON POTENTIAL IN NUCLEAR REACTIONS OF THE n–p SYSTEM. Hadjimichael, E. (State Univ. of New York, Stony Brook. Fairfield Univ., Conn.); Fischbach, Ephraim. Contracts 31-6028B; AT(30-1)-3668B. Phys. Rev., D; 3: 755-61(1 Feb 1971).

The parity-violating nucleon-nucleon interaction arising from weak one-pion exchange and one-vector-meson exchange, was added to the strong, semiphenomenological nucleon-nucleon interaction and its effects on the n–p system were studied in detail. The parity admixtures in the initial and final states of the n–p system in deuteron photodisintegration and in radiative n–p capture have been calculated for various models of the weak-interaction Hamiltonian H_w and found to be in the range 10^{-3}–10^{-7} depending on the model of H_w, thus allowing for the possibility of discriminating among models of H_w by comparison to experiment. (auth)

17546 MODEL HAMILTONIAN FOR LOW ENERGY BARYON PSEUDO-SCALAR MESON SCATTERING. Redei, L. B. (Umea Univ., Sweden). Ann. Inst. Henri Poincare, Sect. A; 13: No. 1, 99-102(1970).

A broken SU_3 relativistic equation is solved to obtain the masses of the baryon resonances. The potential is obtained by making an off energy shell extrapolation of the baryon exchange Born term derived from an SU_3 symmetric Lagrangian. The breaking of SU_3 symmetry is introduced by using the physical masses for the baryons and the mesons. The value of the pion-nucleon coupling constant is determined by requiring the model to reproduce the mass of the $N^*_{\frac{3}{2}}$(1238) resonance. The mass was found to be approximately linearly dependent upon the inverse power of the coupling constant and $g^2/4\pi = 38$. (France)

Field Theories

General

17547 FIELD-THEORETIC DESCRIPTION OF MASSLESS PARTICLES WITH HIGHER SPIN AND DEFINITE PARITY. II. HALF-INTEGER SPIN. Cukierda, T. (Univ. of Wroclaw). J. Math. Phys. (N. Y.); 12: 36-9(Jan 1971).

The $S + \frac{1}{2}$ equivalent theories describing a free massive field with half-integer spin S in the limit $M \rightarrow 0$ are investigated. It is shown that for $m = 0$ they are not equivalent and describe different massless particles, with helicities $H = \pm\frac{1}{2}, \pm\frac{3}{2}, \cdots, \pm S$. The inequivalence is caused by the possibility of having different gauge transformations for different massless spinor–tensors $G^{k}_{\dot{\alpha}\cdots(\mu\nu)A}$. (auth)

17548 NEW APPROACH TO THE NOETHER THEOREMS. Plybon, Benjamin F. (Miami Univ., Oxford, Ohio). J. Math. Phys. (N. Y.); 12: 57-60(Jan 1971).

The Noether theorems were derived by Noether for n-dimensional Euclidean spaces, but they have been used in relativistic theories where the geometry is not Euclidean. A derivation of the Noether theorems, is given assuming only a Riemannian space and following the method used by Noether as closely as possible. This requires new definitions of total variations for fields and integrals since a covariant total variation for tensor fields is required. The results have been applied to electromagnetic fields. (auth)

17549 CLASSICAL SCALAR FIELD THEORIES AND THE RELATIVISTIC KEPLER PROBLEM. Andersen, C. M.; von Baeyer, Hans C. (Coll. of William and Mary, Williamsburg, Va.). Ann. Phys. (N. Y.); 62: 120-34(Jan 1971).

Two versions of classical relativistic field theory corresponding to massless scalar exchange are compared. It is found that they lead to identical field equations but different equations of motion. The motion of one particle bound by the field of another, infinitely massive particle, i.e., the Kepler problem, is examined. In one case the path is an ellipse precessing through an angle equal to minus one-sixth the value predicted by general relativity. In the other case the path is an ellipse which does not precess. The relativistic Kepler problem in the latter case is identical to that formulated by Fronsdal, who started from an approximation to the Bethe–Salpeter equation. (auth)

17550 THEORY OF ZERO-MASS FERMIONS. Smirnov, L. I. (Leningrad Electro-Technic Inst.). Teor. Mat. Fiz.; 6: 87-9 (Jan 1971). (In Russian).

The existence of two types of zero-mass fermion fields is shown. These fields differ from Dirac and Weyl fields. The free field theory is constructed for both types of fields. (auth)

XUM

17551 DIVERGENCE OF AXIAL-VECTOR CURRENT IN THE GRAVITATIONAL FIELD. II. ANOMALOUS COMMUTATORS AND MODEL THEORY. Kimura, Toshiei (Hiroshima Univ.). Progr. Theor. Phys. (Kyoto); 44: 1353-70(Nov 1970).

It is attempted to derive the anomalous commutators of the axial-vector current and the gravitational field variables by the reduction formula and the Bjorken-Johnson-Low limiting procedure for the axial-vector current-two graviton matrix element. For this purpose, the additional Lagrangian density for the gravitational field is introduced so that the gravitational interaction reduces to a renormalizable one. In spite of such a technique, the derived commutators are not consistent except for several ones and show that the Bjorken-Johnson-Low behavior does not hold in a strict sense. With the aid of the commutators which seem to be rigorous, the other commutators are determined so as to be consistent with each other, with the divergence equation and with the quantization procedure of the gravitational field. In the second place, a model is presented to confirm the appropriateness of the anomalous commutators. By setting out the field-current identity and the canonical commutators, the divergence equation of the axial-vector current is derived. The additional gravitational Lagrangian density plays an important role also in this model. Finally, the relation between the two methods is discussed. (auth)

Quantum Field Theory

17552 (AD-711404) THEORY AND APPLICATIONS OF PADE APPROXIMANTS AND QUANTUM FIELD THEORY. Final Scientific Report, October 1968-June 1970. Chisholm, J. S. R. (Kent Univ., Canterbury (England)). 29 Jul 1970. 13p. (AFOSR-70-2346-TR). NTIS.

Preliminary investigations of the application of the Pade technique to sequences of approximants to single-variable integrals show that existing integration methods can be improved upon, particularly when the integrands are singular or are infinitely oscillating. Series of derivatives of δ-functions were investigated (a) term-by-term as a generalized function and (b) by forming Pade approximants of the Fourier transformed series. When the latter series is a series of Stieltjes, convergence of the approximants in interpretation (b) is established, to the generalized function defined by interpretation (a). Study has begun on solving linear integral equations of the form $f = g + \lambda Kf$ by forming the Pade approximant of the Neumann series. The method appears to work, but is dependent upon the accuracy of performing multiple integrals, which is to be studied under (a) above. Simple algorithms were established which permit easy extraction of magnetic moment contributions from vertex parts in field theory. (auth)

17553 (JINR-P2-5513) QUANTIUM THEORY BY THE POINCARE GROUP. Khristov, Kh. Ya. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1970. 55p. (In Russian). Dep. NTIS (U. S. Sales Only).

In the direction of previous work a quantum mechanics and a quantum field theory are considered where the wave functions and the field operators depend not on the 4 coordinates in the Minkovski space M but on all 10 variables determining the inertia frames of reference i.e., the elements of the Poincaré group. P = (t,l) (t-translation vector, l-Lorentz matrix). The difference is that metrics in the space P invariant in respect to (t,l) → (s,h)(t,l)(0,k) (1) are introduced. With this the metrics are determined up to two constants (to be found by the experiment). As an example one writes and solves the equation in P, analogous to the Klein-Gordon equation in M. Further, the second quantization of this equation is given by writing the equation for the commutator, invariant in respect to (1). It was not completely solved, but it is clear that the local commutativity holds. The aim is to get nontrivial models of interaction field theories by making larger the set of solutions. (auth)

17554 (JINR-P2-5523) PROBLEM OF APPLICATION OF THE GALILEAN TRANSFORMATIONS IN QUANTUM MECHANICS. Streltsov, V. N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1970. 5p. (In Russian). Dep. NTIS (U. S. Sales Only).

The fact, that the wave function (when transforming to the other frame of references) acquires an additional phase in the Galilean approximation, is shown to be at variance with the relativistic formula of transformation $\psi'(x',t) = \psi(x,t)$. (auth)

17555 (NYO-1932(2)-183) FINITE THEORY OF QUANTUM ELECTRODYNAMICS. Lee, T. D. (Columbia Univ., New York). Jul 1970. Contract AT(30-1)-1932. 35p. Dep. NTIS.

The treatment of the formulation of a finite theory of quantum electrodynamics covers the indefinite metric and unitarity, the modified photon and fermion fields, Feynman diagrams, experimental consequences, and causality. (J.F.P.)

17556 WAVE EQUATIONS WITH MULTIPLE LORENTZ GROUP REPRESENTATIONS: HALF-INTEGRAL SPIN. Fedorov, F. I.; Pletyukhov, V. A. (Belorussian State Univ., Minsk). Vestsi Akad. Navuk BSSR, Ser. Fiz.-Mat. Navuk; No. 3, 78-83 (1970). (In Russian).

The structure of matrices of relativistic wave equations of the first order, describing half-integral-spin particles, for which the set of Lorentz group representations contains representation multiples, was examined. These equations were analyzed. (J.F.P.)

17557 WAVE EQUATION WITH MULTIPLE REPRESENTATIONS FOR PARTICLE WITH SPIN 1. Pletyukhov, V. A.; Fedorov, F. I. (Belorussian State Univ., Minsk). Vestsi Akad. Navuk BSSR, Ser. Fiz.-Mat. Navuk; No. 3, 84-92(1970). (In Russian).

A relativistic wave equation for spin-1 particles was constructed using the twofold vector representation of the Lorentz group. The dimension of the matrices γ_k is 15. The minimal equation has the form $\gamma^3(\gamma^2 - 1) = 0$. Scattering of the studied vector particle in the electrostatic field occurs also, as in the case of the spin-1 Duffin-Kemmer particle. Matrix elements of Compton scattering differ from the corresponding Duffin-Kemmer scattering. (tr-auth)

17558 FOUNDATIONS OF GAUGE THEORY. Peak, David. Albany, N. Y.; State Univ. of New York (1970). 116p. University Microfilms Order No. 70-25,472.

Thesis.

The mathematical basis for a local gauge theory of the type suggested by Yang and Mills is made precise. The gauge fields of the conventional theory are presented as components of differential forms related to a principal fiber bundle with the gauge group for structure group, and the space-time manifold for base space. The gauge fields are then seen to be intimately connected to the Lie algebra associated with the gauge group. Several conditions are presented under which the gauge fields vanish everywhere (an empty gauge theory). The bundle structure strongly insinuates that the relation between the space-time symmetries and the internal symmetries of physical fields greatly influences the nature of the local gauge theory dealing with those internal degrees of freedom. In particular, under certain assumptions the existence or nonexistence of gauge particles is shown to completely determine the internal-external relation. The difficulties inherent in attempting to formulate a consistent local gauge theory for the strong interactions are considered primarily. A simple model is proposed in which the mass of the gauge particle is viewed as a breaking agent for the hadronic symmetries. Qualitative descriptions of the existence of massless bosons associated with a broken symmetry, the geometrical structure of the extended hadron, and the possible significance of Mach's principle in the very small are all elicited from the model. (Diss. Abstr. Int., B)

17559 RELATIVISTIC QUANTUM MECHANICS OF SCALAR BOSONS. Walter, John Fitler. Philadelphia; Drexel Inst. of Tech. (1970). 119p. University Microfilms Order No. 70-23,250.

Thesis.

A discussion of the relativistic theory of the quantum mechanics of scalar bosons is given, and the general procedures are developed for and then applied to the solution of elementary physical problems. For the case of external electromagnetic fields, the bound state eigenvalue problem and the stationary-state scattering problem are considered in a time-independent formulation. In a time-dependent formulation scattering and pair annihilation are considered for unnormalized wave functions for infinite times and also for wave packets for finite times. In the case of the bound-state problem, the energy levels are obtained, but one must introduce quasi-stationary states in order to obtain a reasonable probabilistic interpretation. The regular scattering cross section is obtained from both the time-independent and the time-dependent formulations, but the annihilation cross section can only be obtained from the latter. This cross section is of much smaller magnitude than the regular scattering cross section. The calculations for wave packets are done numerically and the results are present graphically. It is found that the probability for pair annihilation is small for ordinary electromagnetic field intensities. The expression for the spread of a free particle represented by a Gaussian wave packet is also determined. Finally the equations of motion for the boson in interaction with the dynamic electromagnetic field are determined using gauge-independent coordinates and the Hamiltonian formulation of theories with constraints. This approach avoids

the difficulties encountered in the specification of the boundary conditions due to the constraints. (Diss. Abstr. Int., B)

17560 LORENTZ INVARIANCE AND NORMAL PRODUCT. Taguchi, Yukio (Univ. of Osaka Prefecture); Yamamoto, Kunio. Progr. Theor. Phys. (Kyoto); 44: 1280-6(Nov 1970).

It is shown that the energy-momentum tensor of the free complex scalar field with a correct transformation property about the Lorentz group should be written in a normal product. A brief discussion of an interacting case is made. It is expected that in general all the local operators with definite transformation properties under the Lorentz group should be written in a normal product. (auth)

17561 APPLICATION OF THE PRINCIPLE OF THE MINIMUM MAXIMUM MODULUS TO GENERALIZED MOMENT PROBLEMS AND SOME REMARKS ON QUANTUM FIELD THEORY. Baker, George A. Jr. (Brookhaven National Lab., Upton, N. Y.), Gammel, John L. J. Math. Anal. Appl.; 33: 197-211(Jan 1971).

A method is developed for separating into component parts functions which are the difference of two series of Stieltjes, and with other related but more complex structures which occur in certain physical problems. The approach differs from the classical one in that one also can construct a convergent sequence of values to the function value throughout the cut complex plane. (auth)

17562 TWO-COMPONENT SPINOR FIELD. Marx, E. (Drexel Univ., Philadelphia). Physica; 49: 469-92(16 Nov 1970).

A theory of the classical two-component spinor field and its interpretation as a wave function in relativistic quantum mechanics is presented. Contrary to the classical Direc bispinor field, this spinor field gives rise to a conserved indefinite charge, which is the basis of the probabilistic interpretation of the wave function. First the theory of a spin-$\frac{1}{2}$ particle in an external electromagnetic field is presented, which is then extended to several identical fermions. A theory of a fixed number of particles is dealt with in which pair annihilation and creation appear in the form of a reflection of the wave packet by a potential barrier on the time axis, which changes the mode of propagation of a particle from forward to backward in time and vice versa. Also the theory of the interaction with a dynamical electromagnetic field is presented in a gauge-independent, Lorentz-covariant, observer-dependent formulation. A brief discussion of the possible quantization procedures, using commutators or anticommutators, for the spinor field follows. (auth)

17563 MATHEMATICAL PROPERTY OF DIRAC PLANE WAVES. Muraskin, M. (Univ. of North Dakota, Grand Forks). J. Math. Phys. (N. Y.); 12: 28-31(Jan 1971).

From Dirac plane waves, one can define a g_{ij}, Γ^i_{jk}, and e^q. It is found that Dirac plane waves satisfy, in addition to the Dirac equation, a set of nonlinear field equations involving these quantities. General e^q plane waves do not satisfy these equations. (auth)

17564 ELECTRODYNAMICS OF DIRECT INTERPARTICLE ACTION. II. RELATIVISTIC TREATMENT OF RADIATIVE PROCESSES. Hoyle, F.; Narlikar, J. V. (Cambridge Univ., Eng.). Ann. Phys. (N. Y.); 62: 44-97(Jan 1971).

A sequel to earlier work that described nonrelativistic quantum electrodynamics in terms of the time symmetric theory of direct interparticle action is presented. The restriction to a nonrelativistic treatment is removed. The path integral approach to quantum mechanics is extended to include relativistic particles with spin as a preliminary to achieving this end. The response of the universe can be obtained in two ways, by an extension of the previous method or by using a general condition analogous to the general condition, $\Sigma_{\text{particles}} [F_{\text{ret}} - F_{\text{adv}}] = 0$, of Wheeler and Feynman. The second method is used since it avoids the need to calculate the detailed properties of the absorber. The rules of quantum electrodynamics in the form stated by Feynman are derived, thereby showing that all the practical results of the usual theory of quantum electrodynamics can also be obtained from the direct particle theory. Radiation corrections are discussed. The direct particle theory throws some light on the processes of renormalization. The point of view that both mass and charge should be finite before as well as after renormalization is partially developed. (auth)

17565 CARRUTHERS' THEOREM FOR PARAPARTICLES. Davies, Ruth; Bloore, F. J. (Univ. of Liverpool). Progr. Theor. Phys. (Kyoto); 44: 1371-5(Nov 1970).

The group theory underlying Carruthers' theorem (that isotopic multiplets of selfconjugate bosons have integer isospin) is summarized, and a proof is given for parabosons, based on the commutation relations. (auth)

17566 DIMENSIONALITY OF SPACE–TIME. Mariwalla, K. H. (Arya-Mehr Univ. of Tech., Teheran). J. Math. Phys. (N. Y.); 12: 96-9(Jan 1971).

It is shown that, for a local Poincaré covariant quantum field theory in which the usual relation between the TCP symmetry and spin-statistic holds, the dimensionality of space–time should be even. Further plausibility arguments are presented in favor of the observed dimensionality, on basis of the following factors: simplicity, relativistic local quantum field theory, general relativity, the nature of some observed interactions, classical mechanical force concept. (auth)

17567 EXTREMUM PRINCIPLES FOR THE EQUATION $\nabla^2\phi = \phi - \phi^3$. Robinson, Peter D. (Univ. of Wisconsin, Madison). J. Math. Phys. (N. Y.); 12: 23-8(Jan 1971).

It has been conjectured that the Lagrangian functional $G(\Phi) = \int [\frac{1}{2}\Phi(-\nabla^2 + 1)\Phi - \frac{1}{4}\Phi^4]\, dr$ provides an upper bound for $G(\varphi_0)$, where φ_0 is the ground-state eigenfunction of the nonlinear field equation $-\nabla^2\varphi + \varphi - \varphi^3 = 0$, provided that $G(\Phi)$ is constrained to be stationary with respect to variations in the amplitude of Φ. It is demonstrated that this conjecture is true. The effect of a stationary-scale constraint on $G(\Phi)$ is also shown to guarantee an upper bound. Complementary functionals arising from a Euler–Hamilton approach to the problem are investigated. Unfortunately, these do not (as in more favorable circumstances) provide lower bounds for $G(\varphi_0)$, but merely alternative upper bounds. With a very simple trial function, a complementary bound is closer to $G(\varphi_0)$ than is $G(\Phi)$. (auth)

17568 PROPAGATORS OF HIGH-SPIN PARTICLES WITH SELF-ENERGY PARTS. Iwasaki, Yoichi (Kyoto Univ.). Progr. Theor. Phys. (Kyoto); 44: 1376-82(Nov 1970).

It is shown that a kind of unitarity imposes a condition on the propagators of high-spin particles. The usual propagators do not satisfy this condition, while those which have been introduced in connection with the O(4) symmetry satisfy it. The dressed propagators have poles even at lower partial waves. This fact means that a high-spin particle cannot exist by itself, but it must be accompanied by lower-spin particles. The existence of the latter may correspond to the abnormal solutions of the B–S equation. Also a difficulty of the scalar-tensor theory of the graviton is pointed out. (auth)

17569 LORENTZ INVARIANCE AND NORMAL PRODUCT IN AN INTERACTING SYSTEM. Taguchi, Yukio (Univ. of Osaka Prefecture); Yamamoto, Kunio. Progr. Theor. Phys. (Kyoto); 44: 1287-90(Nov 1970).

It is shown that from requirement of the Lorentz invariance any vector and tensor operators composed of interacting field variables should be written in a normal product, in the sense of zero vacuum expectation value, except for the term constant × $\delta_{\mu\nu}$ for the tensor operator. (auth)

17570 AXIAL-VECTOR CURRENT IN SPINOR ELECTRODYNAMICS. Akiba, Tomoya; Ebata, Takeshi (Tohoku Univ., Sendai). Progr. Theor. Phys. (Kyoto); 44: 1340-52(Nov 1970).

A formalism for the axial-vector current j^5_μ defined in spinor electrodynamics is presented in order to preserve the formal divergence relation of j^5_μ. The only deviation from the conventional way of field thoery is to introduce a simple kinematical pole in some matrix element of j^5_μ. The vertex parts of j^5_μ are divided into two parts, one contributing to $\partial^\mu j^5_\mu$ and necessarily satisfying gauge conditions, and the other giving a vanishing contribution to $\partial^\mu j^5_\mu$. It is shown that renormalization of ultraviolet divergences can be carried out without any trouble in the former, while in the latter it is difficult to keep obvious gauge invariance. Adler's low-energy theorem, which has some relevance to $\pi^0 \to 2\gamma$ decay, manifests itself as a consequence of gauge invariance and the divergence relation of j^5_μ. (auth)

17571 CAN LOCAL GAUGE TRANSFORMATIONS BE IMPLEMENTED? Dell'Antonio, G. F. (Inst. for Advanced Study, Princeton, N. J.). J. Math. Phys. (N. Y.); 12: 148-56(Jan 1971).

One studies conditions under which a gauge transformation can be implemented by a unitary operator in some representations of the canonical (anti-) commutation relations; an application is then given to local gauge transformations in field theory. (auth)

17572 PHOTON SPIN FORMALISM. Epstein, Kenneth J. J. Math. Phys. (N. Y.); 12: 125-30(Jan 1971).

A new approach to quantum electrodynamics is considered, in which photon spin terms are incorporated phenomenologically into the equations of classical electrodynamics in such a way as to yield quantized equations in the Heisenberg picture, for which relativistic requirements are satisfied. Photon momentum and energy analyses in the new formalism are then compared to the corresponding analyses in conventional field-theoretic formalisms, and

XUM

questions regarding mathematical and physical consistency are discussed. Different notations are used to distinguish between physical and Hilbert space vectors, noting that the Hilbert space of the vector wavefunction has a 3-dimensional subspace resembling physical space, mathematically, in a way that allows interesting results, which can be described by two formalisms when auxiliary notation is necessary to analyze relations involving both kinds of vectors. (auth)

17573 DISTRIBUTIONS AND THEIR HERMITE EXPANSIONS. Simon, Barry (Princeton Univ., N. J.). J. Math. Phys. (N. Y.); 12: 140-8(Jan 1971).

A self-contained treatment of the technical parts of distribution theory needed in quantum field theory is presented. The treatment is particularly suited for physicists since an absolute minimum of abstract functional analysis is used: In fact, only the Baire category theorem is needed. The simple nature of some proofs depends on extensive use of the expansion of a distribution as a sum of harmonic oscillator wave functions. While this Hermite expansion is not new, the fact that it provides elementary proofs of several theorems does appear to be new. (auth)

17574 VALIDITY OF THE ASYMPTOTIC THEOREMS AT HIGH ENERGIES IN LOCAL QUANTIUM FIELD THEORY. Tran hu'u, Phat (Univ. de Hanoi, Viet-Nam). Acta Phys. Pol.; B1: 331-7(Oct-Dec 1970). (In French).

It is shown that it is also possible to obtain asymptotic relations in the theory of quantized fields in which the principle of causality can be modified. This means that the experimental verification of the Pomeranchuk type can give no information on the validity of the fundamental principles in quantum field theory. One cannot use the asymptotic relations as well-founded criteria in order to verify the validity of these principles. (tr-auth)

Gravitation and General Relativity

17575 (AD-713140) RESEARCH IN GENERAL RELATIVITY. Final Report. Newman, Ezra T.; Janis, Allen I. (Pittsburgh Univ., Pa. Dept. of Physics). Aug 1970. Contract F33615-70-C-1081. 169p. (ARL-70-0136). NTIS.

Work in three areas of research connected with general relativity is discussed: The development of trapped surfaces; a new approach to equations of motion; and some applications of group theory to general relativity, in particular to equations of motion. (auth)

17576 CYLINDRICALLY SYMMETRIC NULL FIELDS IN GENERAL RELATIVITY. Rao, J. Krishna (Sardar Patel Univ., Vallabh Vidyanagar, India). Indian J. Pure Appl. Math.; 1: 367-71(Jul 1970).

A class of exact solutions of the cylindrically symmetric spacetime with two degrees of freedom corresponding to the field equations, $R_{ij} = \sigma\omega_i\omega_j$, $\omega_i\omega^i = 0$, is obtained. The solutions possess wave-like character and were interpreted as representing the propagation of gravitational radiation on a null field background. (auth)

17577 EINSTEIN-MAXWELL FIELDS IN THE PRESENCE OF MATTER AND PRESSURE. Goodinson, P. A.; Newing, R. A. (University Coll. of North Wales, Bangor). J. Inst. Math. Appl.; 6: 212-21(Sep 1970).

Conditions for the existence of an electromagnetic field in the presence of matter and pressure are expressed in terms of the eigenvalues and eigenvectors of the Ricci tensor. The question of the representation of conditions for a null field as the limit of corresponding conditions for a nonnull field in the absence of matter is examined from a new point of view. (auth) (UK)

17578 ASYMPTOTIC STATES OF MASSIVE PARTICLES INTERACTING WITH GRAVITATIONAL FIELDS. Kulish, P. P. (Mathematics Inst., Moscow). Teor. Mat. Fiz.; 6: 28-35(Jan 1971). (In Russian).

It is shown that analogously to quantum electrodynamics the infrared divergences do not arise in the interaction of massive particles with gravitational field, if a certain modification of the scattering operator and the space of states, on which the latter is defined, is performed. (auth)

17579 GRAVITATIONAL STRESSES. Fikhtengol'ts, I. G. (Leningrad Inst. of Precision Mechanics and Optics). Dokl. Akad. Nauk SSSR; 194: 553-6(21 Sep 1970). (In Russian).

Certain magnitudes related to the tensor of curvature and interpreted as gravitational intensities were analyzed considering mainly the harmonic coordinates. It is shown that there is a certain basis for interpreting the magnitude $(1/3\mathfrak{C})\rho_{\mu\nu}$, (where $\mathfrak{C}$ is the Einstein's gravitation constant) as the magnitude describing gravitation intensities. (R.V.J.)

17580 TIDAL GRAVITATIONAL ACCELERATIONS NEAR AN ARBITRARY TIMELIKE GEODESIC IN SCHWARZSCHILD SPACE. Finley III, J. D. (Univ. of New Mexico, Albuquerque). J. Math. Phys. (N. Y.); 12: 32-6(Jan 1971).

It is suggested that a "physical" definition of a singularity in a space-time manifold might be that it is a point where the relative accelerations of nearby timelike geodesics become infinite. Along an arbitrary timelike geodesic in Schwarzschild space, an orthonormal tetrad of 4-vectors is constructed which is used to define "elevator coordinates" in a neighborhood of the geodesic. These coordinates are used to determine the tidal gravitational accelerations near the geodesic, and it is pointed out that these accelerations are finite (and continuous) at r = 2m, the "Schwarzschild surface," although they are unbounded as r approaches 0. (auth)

17581 APPLICATION OF REGGE CALCULUS TO THE SCHWARZSCHILD AND REISSNER-NORDSTROEM GEOMETRIES AT THE MOMENT OF TIME SYMMETRY. Wong, Cheuk-yin (Princeton Univ., N. J. Oak Ridge National Lab., Tenn.). J. Math. Phys. (N. Y.); 12: 70-8(Jan 1971).

Applied to 3-dimensional space, Regge calculus approximates a curved space by a collection of tetrahedrons or other simple solid blocks. Within each block the goemetry is Euclidean. Curvature is idealized as concentrated at the edge common to two or more of these solids. Specialization is made to a static geometry endowed with spherical symmetry and to a radial electric field produced by the flux of electric lines of force trapped in a throat connecting two quasi-Euclidean regions of space. In method (1) the space is decomposed into shells separated from one another by icosahedral surfaces, all having a common center. Method (2) is even simpler: Space is decomposed into successive spherical shells of area $4\pi\rho_i^2$ separated by a proper distance d. Regge calculus gives a recurrence relation relating the dimensions of the successive shells. The approximate geometries calculated by methods (1) and (2) are compared with the well-known exact Schwarzschild and Reissner-Nordstrom geometries. Errors range from roughly 10% down to less than 1%, depending upon the method of analysis, the quantity under analysis, and the fineness of the subdivision. (auth)

17582 NONLINEAR REALIZATIONS OF SPACE-TIME SYMMETRIES. SCALAR AND TENSOR GRAVITY. Isham, C. J.; Salam, Abdus; Strathdee, J. (International Centre for Theoretical Physics, Trieste, Italy). Ann. Phys. (N. Y.); 62: 98-119(Jan 1971).

The study of conformal group symmetries within the framework of nonlinear realizations is extended and re-expressed in terms of metric tensors and connections on space-time. The standard Vierbein formalism of general relativity is then reinterpreted in terms of nonlinear realizations of the group GL(4,R). Throughout the connection between massless Goldstone bosons and the preferred fields of nonlinear realizations is emphasized. (auth)

Scattering Theory

Refer also to abstracts 16815, 17406, 17496, and 17561.

17583 (COO-264-567) DUAL LOOP TERMS AND COUNTERTERMS BY MEANS OF THEIR PROJECTIVE GROUP. Fenster, Stanley (Argonne National Lab., Ill.); Karpf, Armin D. (Chicago Univ., Ill. Enrico Fermi Inst.). Dec 1970. Contract AT(11-1)-264. 12p. (EFI-70-74). Dep. NTIS.

A unified treatment of dual loop term and counterterm by means of their projective group is presented for the one loop case. The significance of parameters in this method of linear differential equations is discussed for multi loop terms. (auth)

17584 (JINR-E2-5244) ACCOUNT OF CORRECTIONS TO THE EIKONAL APPROXIMATION IN THE QUASIPOTENTIAL APPROACH. Garsevanishvili, V. R.; Goloskokov, S. V.; Matveev, V. A.; Slepchenko, L. A.; Tavkhelidze, A. N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1970. 14p. Dep. NTIS (U. S. Sales Only).

The corrections to the eikonal approximation in the quasipotential approach of the relative order 1/p as compared to leading contributions at high energies are studied. (auth)

17585 (JINR-E2-5568) FACTORIZATION OF DUAL AMPLITUDES AND LOOPS IN THE COHERENT STATE MODEL. Kvinikhidze, A. N.; Popov, Kh. D.; Stoyanov, D. Ts.; Tavkhelidze,

A. N. (Joint Inst. for Nuclear Research, Dubna (USSR), Lab. of Theoretical Physics). 1971. 10p. Dep. NTIS (U. S. Sales Only).

In the coherent state formalism with a finite set of five-dimensional oscillators, a factorization of the dual N-point amplitude with respect to the operators of these oscillators is proposed. A convergent expression for the planar one-loop diagram is obtained. (auth)

17586 (TID-25654) TWO-VARIABLE EXPANSIONS BASED ON THE LORENTZ AND CONFORMAL GROUPS. Winternitz, P. (Carnegie-Mellon Univ., Pittsburgh, Pa. Dept. of Physics). [1970]. 33p. Dep. NTIS.

A review is given of a scattering theory based on two-variable expansions furnished by the Lorentz group. Arguments are given for using the conformal group in such a program, in order to make as much use as possible of relativistic invariance and crossing symmetry simultaneously. (auth)

17587 PARTIAL WAVE METHOD FOR A NONSPHERICAL SCATTERER. Demkov, Yu. N.; Rudakov, V. S. (Leningrad State Univ.). Zh. Eksp. Teor. Fiz.; 59: 2035-47(Dec 1970). (In Russian).

The S-representation for a nonspherical scatterer, which generalizes the ordinary phase shift method for the spherically symmetric problem, is considered. It is shown that for a low incident-particle energy the phase behavior is analogous to that in the spherically symmetric case. The phases can be classified with respect to the azimuthal quantum number l, there being 2l + 1 phases $\eta_l \sim E^{l+1/2}$. For a symmetric scatterer the partial waves and phases can be classified with respect to the symmetry group representations, degeneracy being defined by the dimension of the representation. The Hulthen–Schwinger variational principles, perturbation theory, virial theorem, Neuman–Wigner theorem on nonintersection of $\eta(E)$ curves related to a single representation of the symmetry group are formulated. The Levinson theorem which relates the phase behavior with the number of bound states is discussed. For the case when the scatterer can be represented as a superposition of n zero-range potentials the problem reduces to a purely algebraic problem, to inversion of an n-th-order matrix. The cross section averaged over the directions of the incident wave is expressed as the trace of the matrix in a form convenient for calculations. Some simple examples and resonance cases are considered. The possibilities of applying the method and in particular of applying it to the problem of elastic scattering of electrons by molecules is discussed. (auth)

17588 MODEL OF FIXED SPIN SOURCE SCATTERING. Gostev, V. B.; San'ko, V. A. Vestn. Mosk. Univ., Ser. III. Fiz. Astron.; No. 6, 94-7(Nov-Dec 1968). (In Russian).

Integral equations for scattering (in-states) and scattering amplitudes for quantum field model (a generalized Lee model) were obtained by H. Chew (Phys. Rev. 132: 2756(1966)) by introducing pseudoscalar interactions (with fixed particle spin ½). An attempt was made of obtaining an approximate solution for these equations and for determining the properties of scattering amplitudes using a somewhat more complex model or generalizing Lee model by means of pseudoscalar interactions and adding a fixed particle into the Lee model $\nu-\theta$ sector. (R.V.J.)

17589 ELEMENTARY TREATMENT OF RELATIVISTIC CROSS SECTIONS. Terrall, J. R. Amer. J. Phys.; 38: 1460-74(Dec 1970).

It is shown that, when relativity must be taken into account, there is no need to revise the ordinary definition of a cross section. Rather, a slight rearrangement of factors will obtain Lorentz invariant quantities. To demonstrate invariance is quite simple. Next, the reaction rate density can easily be written down just by bringing together, from a particle viewpoint, the various factors one knows on physical grounds should be present. Again, by judicious grouping, the result can be expressed as a product of factors that are separately invariant. The Lorentz transformation of an angular distribution (without explicitly using the Lorentz transformation equations), the relativistic normalization of wave functions, and finally, the connection of this simple approach with S-matrix theory are discussed. (auth)

17590 OPERATORIAL FACTORIZATION AND SYMMETRY OF THE SHAPIRO–VIRASORO MODEL. Yoshimura, M. (Univ. of California, Berkeley). Phys. Lett.; 34B: 79-82(18 Jan 1971).

An operator formalism is presented which exhibits factorization of the nonplanar dual model proposed first by Virasoro and generalized by Shapiro. The model is shown to contain sufficient gauge operators as well as a selection rule in order to eliminate all the ghosts. A further generalization of the model is also suggested. (auth)

17591 THEORY OF KINETIC EQUATIONS IN PRESENCE OF BOUND-STATE PARTICLES. Peletminskii, S. V. (Technical Physics Inst., Kiev). Teor. Mat. Fiz.; 6: 123-41(Jan 1971). (In Russian).

On the basis of formal quantum scattering theory the problems of constructing kinetic equations for particle systems where the formation of the bound states is possible are considered. With the aid of the spatial correlation weakening principle, the chain of integral equations in terms of Moeller scattering operators is deduced. The collision integral for particles in the bound state is found in the main approximation respect to the density. (auth)

17592 CORRECTIONS TO THE EIKONAL APPROXIMATION IN THE QUASI-POTENTIAL APPROACH. Garsevanishvili, V. R.; Goloskokov, S. V.; Matveev, V. A.; Slepchenko, L. A.; Tavkhelidze, A. N. (Joint Inst. for Nuclear Research, Dubna, USSR). Teor. Mat. Fiz.; 6: 36-41(Jan 1971). (In Russian).

The corrections of the relative order 1/p to the eikonal approximation in the quasi-potential approach are studied. (auth)

17593 SYSTEMATICS OF ELASTIC SCATTERING. Jones, Lorella M.; Ravenhall, D. G. (Univ. of Illinois, Urbana). Phys. Rev., D; 3: 690-5(1 Feb 1971).

A simplification of the crossing matrix for elastic scattering is pointed out. New amplitudes, with particularly simple properties under parity and time reversal, are defined. These are useful in theories where the quantity of interest is the amount of direct-channel helicity flip or sum. For example, in the accompanying paper, this formalism is employed to study suppression of direct-channel helicity flip for Pomeranchukon exchange, as well as other patterns of direct-channel amplitude suppression induced by exchange of particular quantum numbers in the crossed channel. (auth)

17594 REGGE POLE THEORY AND UNITARITY. Obara, Takashi (Nihon Univ., Tokyo). Progr. Theor. Phys. (Kyoto); 44: 1307-11(Nov 1970).

Under the assumptions that are the case for nonrelativistic theory, it is shown that the Regge pole theory is compatible with unitarity only if the Regge singularities are infinite in number. By merely taking into account a finite number of them, unitarity is justified in restricted regions such as $t \to \infty$ and $s \to s_0$. It is also shown that the double spectral function on which unitarity imposes some restrictions can be constructed by the use of an infinite set of the parallel daughter trajectories. Therefore, introduction of these trajectories can remove the difficulties between the Regge pole theory and unitarity. (auth)

17595 REGGEIZATION OF THE BETHE–SALPETER SCATTERING AMPLITUDES. Matsumoto, Hideki (Tokyo Univ.). Progr. Theor. Phys. (Kyoto); 44: 1317-39(Nov 1970).

The Reggeization of the Bethe–Salpeter amplitude is investigated with general kernels. Assuming some integral representations for the interaction kernels and the modified propagator of the scattering particles with unequal masses, a sufficient condition is obtained for the kernels to be of the Hilbert–Schmidt type. Provided that this condition is satisfied, the following is proved, by studying the meromorphy domain of the partial-wave amplitudes: (1) the Sommerfeld–Watson transformation can be performed, (2) the asymptotic behavior of the leading trajectory as $s \to -\infty$ (s: total mass squared) is determined by the rightmost fixed singularity of the kernels, and (3) if the spectral functions of the integral representations are non-negative definite, the derivative of the largest eignvalue $\mu_{Max}(s,l) = \{\lambda_{Min}(s,l)\}^{-1}$ with respect to the angular momentum l is negative for $s < 0$ and $l > -1$, and the leading trajectory is real for $s < 0$ and is nondegenerate. (auth)

17596 ENHANCEMENT OF ACAUSAL EFFECTS BY MULTIPLE SCATTERING. Trueman, T. L. (Brookhaven National Lab., Upton, N. Y.). Nucl. Phys.; B26: 83-103(1971).

The theory of finite electrodynamics due to Lee and Wick predicts small acausal effects. In elementary scattering processes, these effects are too small, by many orders of magnitude, to be detected. A simplified version of this theory, due to Lee and Wick, is applied to multiple coherent scattering processes. The target particles are arranged in various ways—two-particle target; very small, very dense target; many random scatterers; periodic monolayer; three-dimensional periodic array—and the change in the wave packet on passing through the target is calculated. It is found that, in principle, significant enhancement of the acausal effects may be achieved. Unfortunately, the requirements on the target parameters are quite severe and probably met only in dense stars, if anywhere. (auth)

17597 SINGULAR POTENTIALS. Frank, William M. (Naval Ordnance Lab., Silver Spring, Md.); Land, David J.; Spector, Richard M. Rev. Mod. Phys.; 43: 36-98(Jan 1971).

An attempt is made to present a comprehensive review of the literature dealing with singular potentials through March 1969.

XUM

The treatment is confined principally to nonrelativistic quantum mechanics, i.e., to solutions of the partial-wave Schrödinger equation with a singular potential. Some general physical and mathematical properties are given. Exact solutions are presented for those potentials for which they are available. Techniques which have been used in obtaining approximate solutions are outlined. Formal and physical applications of singular potentials are presented. Formal applications are those for which singular potentials have served as mathematical models illustrating concepts in elementary particle physics. These include applications to the Regge pole formalism, quantum field theories, and the peratization approximation. Physical applications entail those which have been made to molecular physics and to high-energy phenomenology. (auth)

17598 RELATIVISITIC QUANTUM MECHANICS OF A MECHANICAL CONTINUUM UNDERLYING THE DUAL AMPLITUDE. Takabayasi, Takehiko (Nagoya Univ., Japan). Progr. Theor. Phys. (Kyoto); 44: 1429-30(Nov 1970).

A new formulation of relativistic quantum mechanics of a string is presented. It consists of a unique wave equation which builds in automatically an infinite number of subsidiary conditions to suppress unphysical states. It is shown that the dual amplitude can be derived on the basis of this formalism. (L.B.S.)

17599 IMPACT PARAMETER AMPLITUDE WITH A DIRECT-CHANNEL REGGE POLE. Adachi, Toshimi (Tokyo Metropolitan Tech. Coll.). Progr. Theor. Phys. (Kyoto); 44: 1425-7 (Nov 1970).

The problem of incorporating direct-channel resonances in the impact-parameter formalism in the high-energy region is considered. Using previous results (T. Adachi, Prog. Theor. Phys., 562: 44(1970)), it is shown that the resonances appear in the part A(k,B) of H(k,B). When the impact-parameter amplitude A(k,B) is approximated by a direct-channel Regge trajectory, a high-energy approximation of A(k,B) yields a small-angle diffraction peak. The high-energy behavior of the Regge trajectory is also discussed. (L.B.S.)

17600 INTRODUCTION TO MULTIPLE ASYMPTOTIC SERIES WITH AN APPLICATION TO ELASTIC SCATTERING. Shere, Kenneth D. (Univ. of Nebraska, Lincoln). J. Math. Phys. (N. Y.); 12: 78-82 (Jan 1971).

The concept of asymptotic power series is extended to multiple series of the form $\Sigma_{m=0}^{\infty}\Sigma_{n=0}^{\infty}a_{m,n}x^{-n}e^{-\lambda mx}$. This theory is then applied to elastic scattering from the Yukawa potential. An asymptotic series for the solution at large distances is obtained which is valid for arbitrary wave number and angular momentum. (auth)

17601 PROBABILISTIC INTERPRETATION OF THE CLASSICAL SCATTERING CROSS SECTION. Babbitt, Donald G. (Univ. of California, Los Angeles). J. Math. Phys. (N. Y.); 12: 53-7(Jan 1971).

The probabilistic interpretation of the classical scattering cross section is discussed in a mathematically rigorous framework. In particular, extensive use is made of the notion of a Poisson process based on a plane and on a sphere. The case of Rutherford scattering is given as a detailed illustration. (auth)

17602 NORMALIZATION OF CERTAIN HIGHER-ORDER PHASE-INTEGRAL APPROXIMATIONS FOR WAVEFUNCTIONS OF BOUND STATES IN A POTENTIAL WELL. Yngve, Staffan (Uppsala Univ.). J. Math. Phys. (N. Y.); 12: 114-17(Jan 1971).

Furry has given a formula for the normalization integral of a physically acceptable solution of the time-independent 1-dimensional Schrödinger equation corresponding to a bound state. Considering the wavefunction of a bound state in a single-well potential and using Furry's formula and the connection formulas discussed by N. Fröman, the normalization factor is derived for the higher-order phase-integral approximations introduced earlier by N. Fröman. For the special case of the first-order JWKB approximation, the approximate normalization factor thus obtained is equivalent to that given by Pauli and Furry. (auth)

17603 INCREASING ORDER OF SCATTERING AMPLITUDES IN LOCAL QUANTUM FIELD THEORY. Tran hu'u, Phat (Univ. de Hanoi, Viet-Nam). Acta Phys. Pol.; B1: 323-29(Oct-Dec 1970). (In French).

It is shown that it is possible to obtain the theorems of Greenberg and Low, Froissart, etc. in a theory of quantized fields, in which the principle of causality can be modified. This means that the experimental verification of these theorems can give no information on the validity of the fundamental principles for high energies. (tr-auth)

Particle Accelerators

Refer also to abstracts 15702–15704, 15903, 17351, 17443, and 18178.

17604 (AD-711587) REPORT OF LINAC OPERATION: JANUARY 1–JUNE 30, 1970. Interim Report No. 10. (Naval Research Lab., Washington, D. C.). Aug 1970. 26p. (NRL-MR-2158). NTIS.

The operation and use of the NRL 60-MeV Electron Linear Accelerator is described for the period 1 January–30 June 1970. Progress on the research program is discussed, including 180 degree electron scattering on H and He isotopes, photonuclear excitation studies of 11B and 13C, and neutron resonance spin determinations for isotopes. Installation of various interface electronics completes a computer data acquisition system insofar as the neutron time-of-flight experiments are concerned, and preliminary data with the system have been taken. Total manned time for the period was 1955 hours, divided into 1320 hours for beam and set-up time (including 83 hours for outside users), 612 hours devoted to maintenance and improvements, and 23 hours lost to breakdowns, a record low that will be difficult to beat. References are included, as are brief descriptions of the use of the linac by other groups. (auth) (USGRDR)

17605 (CEA-N-1286) STUDY OF GEOMETRICAL ABERRATIONS OF QUADRUPOLAR LENSES IN GUIDING DEVICES OR FINITE-EMITTANCE BEAM-MATCHING SYSTEMS. APPLICATION TO THE STUDY OF A MATCHING TRIPLET. Tanguy, Pierre (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). Dec 1970. 66p. (In French). Dep. NTIS (U. S. Sales Only).

It is shown that from a knowledge of the transfer matrix and aberrations coefficients of a quadrupole lens system, and the four-dimensional beam emittance at the entrance of the lens system, it is possible to obtain all the characteristic beam properties (beam cross section, density in the real plane, density in phase planes, etc.) at the end of the system. Quantitative results are given in relation to aberrations effects in matching system devices. (auth) (France)

17606 (CERN-Trans-70-10) PRIMING AND MEASUREMENT OF COHERENT BETATRON OSCILLATION OF A BEAM DURING THE INITIAL PHASE OF ACCELERATION. Andreichuk, V. N.; Assev, A. A.; Zaitsev, V. I.; Myae, E. A. (Gosudarstvennyi Komitet po Ispol'zovaniyu Atomnoi Energii SSSR, Serpukhov. Institut Fiziki Vysokikh Energii). Translated by M. Besroukoff (CERN, Geneva, Switzerland), from report IFVE-SKU-70-6. 12p. (In French). Dep. NTIS (U. S. Sales Only).

For priming the betatron oscillations, a modulator is described and shown schematically. An oscillogram of the signal obtained from the primed betatron oscillations is shown, and results of measurements of the natural behavior of the betatron oscillation frequency at the beginning of the acceleration are plotted. Also shown are curves for the frequency of the radial betatron oscillations with and without correction. (J.F.P.)

17607 (JINR-P9-5285) ELECTRONUCLEAR METHOD OF NEUTRON GENERATION AND FISSILE MATERIAL PRODUCTION. Vasil'kov, R. G.; Gol'danskii, V. I.; Dzhelepov, V. P.; Dmitrievskii, V. P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1970. 21p. (In Russian). Dep. NTIS (U. S. Sales Only).

The possibility of applying the electronuclear method of free-neutron production to nuclear power technology is considered from the most general standpoint. The method is based on the fact that heavy atomic nuclei emit many neutrons when absorbing protons (deuterons) accelerated to high energies. A brief review of the relevant experimental evidence, concerning neutron emission by highly excited nuclei and electron multiplication in targets, is given; and some known designs of electronuclear facilities based on proton and/or deuteron accelerators with beam powers up to 100 MW are discussed. The main difficulties in developing high-current accelerating systems, capable of providing currents sufficiently large (~0.1 A at energies of the order of 1 GeV) for the electronuclear method, are briefly analyzed. Speculation about inherent features of such electronuclear reactors and/or neutron generators is presented, and their possible role for applied and scientific purposes as well as their use in conjunction with ordinary nuclear reactors (in particular, fast breeders) is discussed. (auth)

17608 (JINR-P9-5488) PROGRESS IN CREATION OF THE ACCELERATING SECTION OF A RINGOTRON (KOLSTETRON). Anishchenko, N. G.; Balalykin, N. I.; Vasil'ev, V. A.; (and others) (Joint Inst. for Nuclear Research, Dubna (USSR)). 1970. 12p. (In Russian). Dep. NTIS (U. S. Sales Only).

Some questions connected with the creation of the cryogenic high-frequency accelerating system of a ringotron are considered. The data on the behavior of the superconducting layer of cavities in the external magnetic fields of 20 kG are presented, and equipment for producing the layers is described. Data on superconducting solenoids are given as well as the scheme of the system

of the sections. The problems of energy supply for solenoids and energy evacuation are discussed. (auth)

17609 (KFK-1262) KARLSRUHE POLARIZED ION SOURCE. Bechtold, V.; Brueckmann, H.; Finken, D.; Friedrich, L.; Hamdi, K.; Seitz, E.; Ziegler, P. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Experimentelle Kernphysik). Aug 1970. 8p. (CONF-700811-13). Dep. NTIS (U. S. Sales Only).

From 3rd International Symposium on Polarization Phenomena in Nuclear Reactions, Madison, Wis.

The investigation of different charge exchange reactions shows that positively charged polarized hydrogen ion beams can be produced with a Lamb shift type ion source. The special features of the Karlsruhe polarized Lamb shift type ion source C-LASKA which is designed for operation at the Karlsruhe isochronous cyclotron are discussed. Beams of negatively charged polarized deuterium ions have been obtained with high beam qualities and the source C-LASKA will deliver polarized deuteron beams for injection into the cyclotron with an intensity of the order of 1 μA at an emittance of 1 cm Rad $\sqrt{eV}$. (auth)

17610 (KFK-1265) ENERGY DEPENDENCE OF CHARGE EXCHANGE REACTIONS FAVOURABLY USED IN LAMBSHIFT TYPE ION SOURCES. Bechtold, V.; Brueckmann, H.; Finken, D.; Friedrich, L.; Hamdi, K.; Seitz, E. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Experimentelle Kernphysik). Aug 1970. 5p. Dep. NTIS (U. S. Sales Only).

Iodine and argon can be favorably used in Lambshift type ion sources for selective ionization by charge exchange collisions. The energy dependence of the selectivity of these charge exchange collisions has been measured by investigating the quenching effect and the nuclear tensor polarization. Both reactions show with increasing energy the same monotonous decrease of the selectivity. For production of polarized deuterons at optimum conditions a Lamb-shift ion source is to be operated below 1 keV beam energy. (auth)

17611 (LA-4474) STOPPED MUON CHANNEL FOR LAMPF. Hughes, V. W.; Ohnuma, S.; Tanabe, K.; Thompson, P.; Vogel, H. F. (Los Alamos Scientific Lab., N. Mex.). May 1970. Contract W-7405-eng-36. 38p. Dep. NTIS.

The design of the Stopped Muon Channel for LAMPF is discussed in detail, including the characteristics of the output beams with regard to intensity, emittance, polarization, and beam purity. The channel consists of a pion collection and bending portion, an alternating gradient quadrupole portion to capture decay muons, and a final magnetic analyzer portion to provide a pure muon beam. Alternative designs are considered, but none has been found to be preferable to the proposed design. (auth)

17612 (LA-tr-71-2) HIGH ENERGY AND HIGH RESOLUTION SPECTROMETRY USING THE BEAM OF THE SATURNE SYNCHROTRON. Thirion, Jacques; Birien, Paul; Saudinos, Jean (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). Translated for Los Alamos Scientific Lab., N. Mex., from report CEA-N-1248. 74p. Dep. NTIS.

An abstract of this paper, prepared from the original language appeared as NSA 24: 15705.

17613 (LYCEN-7055) THE INTERDIGITAL H-TYPE (IH) STRUCTURE, AN ACCELERATING STRUCTURE FOR LOW ENERGY BEAMS. Bres, M.; Chabert, A.; Foret, F.; Tran, D. T.; Voisin, G. (Lyon Univ., France. Institut de Physique Nucleaire). Jul 1970. 35p. Dep. NTIS (U. S. Sales Only).

A brief description of the structure is given; its principal characteristics, which have been deduced from a series of experiments, are discussed from a theoretical point of view. Its practical use in an accelerator is considered and the Lyon heavy-ion linear accelerator project is used as an illustration. (auth) (France)

17614 (SLAC-Trans-127) STRUCTURE OF ELECTRON BUNCHES FROM AN INJECTOR WITH STEPPED VARIATION OF THE WAVE PHASE VELOCITY. Vishnyakov, V. A.; Grishaev, I. A.; Grizhko, V. M.; Kolosov, V. I.; Krasnikov, V. D.; Mel'nichenko, V. V.; Fursov, G. L. (Akademiya Nauk Ukrainskoi SSR, Kharkov. Fiziko-Tekhnicheskii Institut). Translated for Stanford Linear Accelerator Center, Calif., from report KHFTI-70-17. 11p. Dep. NTIS.

Calculations and experimental data on the structure of bunches produced by an injecting section with a step change in the phase velocity of the wave are reported. It is shown that the output parameters of the 2 GeV electron linac can be improved by using an injector with a step change in the phase velocity of the wave. (auth)

17615 (SLAC-Trans-128) PROBLEMS OF BEAM OPTICS IN A MULTISECTION 2-GeV ELECTRON LINAC. Grishaev, I. A.; Gugel, I. N.; Dovbnya, A. N.; Kolot, Z. M.; Kornienko, E. V.; Mocheshnikov, N. I.; Perrenko, V. V. (Akademiya Nauk Ukrainskoi SSR, Kharkov. Fiziko-Tekhnicheskii Institut). Translated for Stanford Linear Accelerator Center, Calif., from report KHFTI-70-18. 29p. Dep. NTIS.

The influence of transverse high-frequency fields on the properties of the accelerating channel and on the beam emittance as a function of the phase width of a bunch is discussed. It is shown that a linear accelerator is capable of particle phase separations, as a result of which the trajectories of particles with different phases are separated in space and the effective output emittance is much greater than the ideal value. Possible methods of using this property to shorten the phase length of a bunch are discussed. The effect of phase fluctuations on the extracted-beam parameters is examined, including the emittance in different planes, the energy spectra, and the angular and radial distributions. A method of producing short relativistic electron bunches is described. In this method high-frequency transverse fields produce a coupling between the particle phase and its radial-angular characteristics, and this is then used to produce nonisochronous motion of the particles in a longitudinal magnetic field (solenoid) or a quadrupole channel (strongly focusing system of the FD type). The discussed problems have been investigated numerically using a model and the M-220A digital computer and the MN-7M analog computer. The "Emittance" program is described. (auth)

17616 (TRI-70-3) CONCEPTUAL DESIGN OF THE INJECTION SYSTEM FOR A 500 MeV H^- CYCLOTRON. Fredriksson, O. K.; Meads, P. F.; Smith, I. L.; Younger, F. C. (TRI-Univ. Meson Facility, Vancouver (British Columbia)). May 1970. 44p. Dep. NTIS (U. S. Sales Only).

A conceptual design for a negative hydrogen ion injection system for the TRIUMF negative ion cyclotron is presented. This system provides ions at an energy of 300 keV in pulses of suitable duration and frequency for acceleration by the cyclotron. Average beam currents in excess of 1000 μA are expected when pulses of 7 nsec are injected. Peak intensities of up to 10 mA are expected for pulses of less than 1 nsec. The design incorporates an Ehlers type ion source held at a 300 keV potential by a very well-regulated Cockcroft-Walton rectifier. The accelerated ions are transported in a system utilizing electrostatic quadrupoles and achromatic bending systems to maintain the time structure of the beam pulses. Chopping and bunching are controlled at cyclotron frequency. The phase angle is adjusted for the correct beam arrival at the cyclotron accelerating gap. The beam is transported from a separate ion source room over the top of the cyclotron shielding and then down the axis of the cyclotron to the inflector near the cyclotron median plane. Stray fields of over 40 G are expected. Magnetic shielding will be required. (auth)

17617 INVESTIGATION OF SECONDARY CHARGED PARTICLE EFFECTS ON PROTON BEAMS IN BETATRON REGIME. Dimov, G. I.; Dudnikov, V. G.; Shamovskii, V. G. At. Energ. (USSR); 29: 356-61(Nov 1970). (In Russian).

The interaction of proton beams of 1 MeV in accelerator rings with secondary charged particles formed by the ionization of the residual gas is investigated. The space charge of low intensity proton beams is fully compensated with electrons. At current increases the coherent oscillations, which cause the relaxation oscillations of space-charge density, arise. In high intensity beams, the coherent oscillations arise before the proton beam vertical dump. (auth)

17618 NUMERICAL CALCULATION OF ABSOLUTE FORWARD THICK-TARGET BREMSSTRAHLUNG SPECTRA. Ferdinande, H.; Knuyt, G.; Van de Vijver, R.; Jacobs, R. (Rijksuniversiteit, Ghent). Nucl. Instrum. Methods; 91: 135-40 (1971).

A method is presented to obtain a simple analytical expression from which one can calculate numerically the absolute forward thick-target bremsstrahlung spectrum produced by electrons in the energy range from 1 to about 25 MeV. In penetrating the target, multiple scattering or diffusion and energy loss of the electrons together with attenuation of the created gamma-ray beam occur and all these phenomena are taken into account. Comparison with experimental results for 1 to 21 MeV electrons incident on low and high Z-, intermediate and thick targets, shows a remarkably good agreement in magnitude and shape. The overall accuracy of the results is estimated to be of the order of 20%. (auth)

17619 MAGNET-SPARK-CHAMBER SYSTEM USED IN AN EXPERIMENT ON (p,2p) REACTIONS AT 600 MeV. Fagerstroem, B. (Univ. of Uppsala); Johansson, A.; Tibell, G.; (and others). Nucl. Instrum. Methods; 91: 125-33(1971).

An account is given of the experimental apparatus used in a study of (p,2p) reactions at 600 MeV. Particular emphasis

XUM

is placed on the evaluation of the momenta from the spark chamber coordinates and from the magnetic field. A discussion on various error sources is given. (auth)

17620 DIFFERENTIALLY PUMPED GAS TARGET. Bussiere, J.; Robson, J. M. (Univ. of Ottawa). Nucl. Instrum. Methods; 91: 103-7(1971).

A differentially pumped gas target is described in which the gas is localized in a central region of one inch length. Advantage is taken of the supersonic jet created by the emerging gas to obtain a high pressure gradient outside this region. (auth)

17621 GAMMA FLASH SUPPRESSION FOR THE ORELA PULSED NEUTRON SOURCE. Macklin, R. L. (Oak Ridge National Lab., Tenn.). Nucl. Instrum. Methods; 91: 79-84(1971).

A gamma ray flash suppression system for neutron time-of-flight experiments at the Oak Ridge Electron Linear Accelerator (ORELA) has been found very effective for partial cross section measurements. For capture cross section measurements at 40 m the residual pileup flash pulse from a typical sample is well within the neutron binding energy range, where the detector response is linear. This has allowed two parameter (time and pulse height) analysis down to 0.5 μsec after the flash. (auth)

17622 CALCULATION OF THE LONG-LIVED INDUCED ACTIVITY IN THE SOIL AROUND HIGH-ENERGY ACCELERATOR TARGET AREAS. Gabriel, T. A. (Oak Ridge National Lab., Tenn.). Nucl. Instrum. Methods; 91: 67-72(1971).

Nucleon-meson cascade calculations have been carried out and estimates of the induced activity in the soil surrounding high-energy accelerator target areas have been obtained. Results on the contribution to the induced activity from various residual nuclei are presented for a specific irradiation time and as a function of time after beam shutdown for a 3-GeV proton accelerator. (auth)

17623 ULTRA-HIGH RESOLUTION SPECTROMETER SYSTEM FOR CHARGED PARTICLE STUDIES OF NUCLEI. Blosser, H. G.; Crawley, G. M.; Deforest, R.; Kashy, E.; Wildenthal, B. H. (Michigan State Univ., East Lansing). Nucl. Instrum. Methods; 91: 61-5(1971).

An arrangement for introducing feedback into a charged particle magnetic analysis system for nuclear reaction studies is described. In initial tests of the system, a resolution of 5 keV has been obtained in (p,p′) studies at 30 MeV with 70% of the cyclotron internal beam on target. This corresponds to a resolving power $p/\Delta p$ of 12,000. Essential features of the system, in addition to the feedback, are a careful definition of the cyclotron source by means of internal slits and the use of dispersion matching to cancel the effect of coherent on-target energy spread. (auth)

17624 SINGLE-DIFFERENCE BREMSSTRAHLUNG UNFOLDING TECHNIQUE FOR THE MEASUREMENT OF HIGH ENERGY PHOTONUCLEAR CROSS SECTIONS. Matthews, J. L.; Owens, R. O. (Univ. of Glasgow). Nucl. Instrum. Methods; 91: 37-43(1971).

A new method for obtaining photonuclear cross sections from bremsstrahlung yield data is described and compared with the conventional unfolding techniques. This single-difference method, which is intended for experiments in the 40 to 130 MeV photon energy range, uses two bremsstrahlung radiators of different atomic number, viz. Be and Al. A high energy peak is produced in the difference photon spectrum by virtue of the different electron energy losses in the two radiators, whilst the weak Z-dependence of the bremsstrahlung spectrum alloys near cancellation of the intensity at low photon energies. For the measurements in question the new method is shown to be superior to other techniques. (auth)

17625 APPARATUS FOR CHANNELING EXPERIMENTS. Gemmell, D. S.; Worthington, J. N. (Argonne National Lab., Ill.). Nucl. Instrum. Methods; 91: 15-28(1971).

A description is given of an apparatus for use in measurements on channeling and related effects seen in the passage of charged particles through single crystals. The system features good angular resolution, suitability of use for many different types of experiment and computer control of the goniometer and detector motions as well as of the data acquisition and analysis. Some examples of data recorded with the system are presented. (auth)

17626 TARGET ASSEMBLY FOR LOW YIELD NEUTRON AND GAMMA-RAY EXPERIMENTS. Robb, A. D.; Schier, W. A. (Univ. of Virginia, Charlottesville). Nucl. Instrum. Methods; 91: 13-14(1971).

A simply designed target assembly for low yield neutron and gamma-ray experiments which require close target to detector geometries is described. The assembly allows one to measure a full angular distribution to back angles of approximately 170° with a minimum of wall material between the target and the detector at all angles. The beam spot at the target position can be readily monitored with a closed circuit TV for accurate remote focusing and positioning. (auth)

17627 FLOW SYSTEM FOR THE CONTINUOUS ACTIVATION OF GASEOUS OR LIQUID SAMPLES PARTICULARLY FOR AN ELECTRON ACCELERATOR. Filss, P.; Guldbakke, S.; Nolte, G.; Tietze, K. (Physikalisch-Technische Bundesanstalt, Brunswick). Nucl. Instrum. Methods; 91: 1-4(1971). (In German).

A flow system for the activation of gaseous or liquid samples is described for the optimal use of the radiation source giving good counting geometry. Choosing a transport time of appr. $^3/_4$ of the half life of the investigated nuclide makes the measured decay rate independent of flow velocity. The determination of photonuclear cross sections needing high accuracy of measurement is possible. The radiation source used was the bremsstrahlung beam of an electron synchrotron. An absorbed dose rate of 1000 rd/min continuously produces a concentration of activity of 1 μCi/ml in distilled water. (auth)

17628 300 GeV DESIGN. CERN Cour.; 11: 3-8(Jan 1971).

The design of the proposed CERN 300-GeV proton synchrotron as decided by the "300 GeV Machine Committee" is outlined. The main parameters are listed. (W.H.K.)

17629 FAST RABBIT SYSTEM FOR NEUTRON GENERATORS. Schramel, P. (Gesellschaft fuer Strahlenforschung mbH, Neuherberg, Ger.). Kerntechnik; 12: 373-6(Sep 1970).

The design of a pneumatic target transport system for a Van de Graaff 14-MeV neutron irradiation facility is described. The rabbit facility has a transport time of about 100 ms for determining short-lived activities. The facility was designed for the determination of oxygen by neutron activation analysis. (W.H.K.)

17630 PRESENT STATE OF THE PHYSICS AND TECHNOLOGY OF ACCELERATION. Alikhan'yan, A. I.; Kheifets, S. A. (Erevan Physics Inst.). Usp. Fiz. Nauk; 101: 218-48(Jun 1970). (In Russian).

This review is divided into two main parts. One deals with traditional methods of acceleration, and the other deals with new methods. The section under traditional methods notes recent improvements and operating characteristics of proton and electron synchrotrons in various parts of the world including machines at Geneva, Saclay, Dubna, Moscow, Serpukhov, Argonne, Brookhaven, Berkeley, Princeton, Erevan, Tomsk, Tokyo, Cornell, etc. Planned additions are described. There are listings of linear accelerators, phasotrons, relativistic cyclotrons, and monoenergetic cyclotrons. The characteristics of electron, positron, and proton accumulators are listed. Under new methods, acceleration is accomplished by the use of the collective fields of a plasma, the use of superconducting magnets and resonators at low temperatures, and the use of computers to control the parameters of an accelerating system. (132 references.) (TTT)

17631 INFLUENCE OF SPACE CHARGE ON STABILITY OF BETATRON OSCILLATIONS IN CYCLIC ACCELERATORS. Kolomenskii, A. A.; Polukhin, A. T. At. Energ. (USSR); 29: 352-6(Nov 1970). (In Russian).

A theoretical investigation is presented concerning the influence of accelerated beam space charge on betatron oscillation stability in the vicinity of the parametric and combination resonances. The corresponding self-consistent equations are solved approximately by means of the asymptotic averaging method. The criteria are found for estimation of the value of the permissible space charge. It is shown that this charge can lead not only to increasing, but also to decreasing betatron amplitudes. The specific instability is investigated which can arise due to coupling between transverse and longitudinal oscillations through the space charge. (auth)

17632 1.2 MeV HIGH-CURRENT PROTON ACCELERATOR. Abramyan, E. A.; Brovin, M. M.; Vecheslavov, V. V.; (and others). At. Energ. (USSR); 29: 346-51(Nov 1970). (In Russian).

The peculiarities of calculation and design of an experimental transformer-type proton accelerator are described. The ion source with electromagnetic oscillation of electrons and accelerating tube with electrostatic quadrupole lenses are used for forming and transporting the proton beam. The main purpose of developing the accelerator was a verification of designing ideas and applicability of calculating methods for producing high-current proton beams. A 1.2 MeV proton beam with maximum and average currents of about 80 and 9 mA, respectively, was obtained (pulse duration at pulse rate 50 cps). There is satisfactory agreement between calculated and experimental values of the main parameters. The results of this work may be used for the design of high-current proton injectors or industrial devices. (auth)

17633 GEOMETRY OF THE ORBITS IN SECTOR-TYPE CYCLOTRONS. Moroz, E. M. This paper was summarized in

At. Energ. (USSR); 28: 142-3(Feb 1970) as paper No. 369/5277. (In Russian).

Geometrical relationships between the elements of the orbit in a sector cyclotron with a stepped field are derived. (W.H.K.)

17634 METHOD OF CALCULATING THE ION TRAJECTORIES IN A RADIAL-SECTOR STEP-FIELD CYCLOTRON. Moroz, E. M. This paper was summarized in At. Energ. (USSR); 28: 143(Feb 1970) as paper No. 370/5345. (In Russian).

Recurrence formulas are given for the trajectory calculation. The calculation assumes a stepped magnetic field of the sector-cyclotron type, radial boundaries of sectors and dees, the accelerating gaps are negligibly narrow, and the increase of particle energy in the accelerating gap is phase independent. (W.H.K.)

17635 BEAM POSITION STABILIZATION SYSTEM FOR THE VAN DE GRAAFF ACCELERATOR LECH. Bienkowski, Andzhsei (Univ., Warsaw). Nukleonika; 15: 285-90(1970). (In Russian).

A beam position stabilization system in the switching magnet exit slits is described. A good beam position stability at the target is obtained with the stability of the switching magnet power supply of ±1.5%. (auth)

17636 STABILIZATION OF THE TRANSVERSE COHERENT RESISTANCE INSTABILITY BY AUTOMATIC CORRECTION. Roginskii, L. A. This paper was summarized in At. Energ. (USSR); 28: 143-4(Feb 1970) as paper No. 371/5376. (Ir Russian).

The dispersion equations for the beam eigenfrequencies are obtained by the solution of the linearized kinetic equation for the particle distribution function. The transfer coefficients of the dispersion equation are then chosen to stabilize the transverse coherent resistance instability. Landau damping is taken into account. (W.H.K.)

17637 PRODUCTION OF MULTIPLY CHARGED IONS IN GAS-DISCHARGE ION SOURCES. Krupp, H. (Univ., Heidelberg). Nucl. Instrum. Methods; 90: 167-72(1970).

From 2nd International Conference on Beam–Foil Spectroscopy, Lysekil, Sweden. See CONF-700634.

The two contrary processes of multiply charged ion production and their possible superpositions that take place in gas-discharge ion sources are described. Three different types of ion sources are compared, each of which is inherently related to one of these production processes in regard to its discharge parameters. Investigations have shown that by variation of the geometry, the gas pressure, and the magnetic field strength, particular sets of discharge parameters can be found under which reasonable currents of the desired multiply charged ion are obtained. The problem of ion-source design is considered under the aspects of lifetime and performance. (auth)

17638 UNIVERSITY OF TOLEDO BEAM–FOIL FACILITY. Schectman, R. M.; Curtis, L. J.; Strecker, C.; Kormanyos, K. (Univ. of Toledo). Nucl. Instrum. Methods; 90: 197-201(1970).

From 2nd International Conference on Beam–Foil Spectroscopy, Lysekil, Sweden. See CONF-700634.

The facility for experimental work in beam–foil spectroscopy being developed at The University of Toledo is described. Novel features include: 1. Provisions for optically scanning the ion beam and automatically recording the data so obtained in a multichannel analyzer. Scanning is accomplished by moving a collimating lens and mirror parallel to the beam with constant velocity. The collimated beam is subsequently focused on the entrance slit of a Perkin Elmer f/4.5 grating monochromator. Single photons are detected and pulses are recorded in a multiscaler synchronized with the beam scanner. 2. A facility for making charge-state identification of spectral lines, using a technique compatible with the geometry employed for mean-life measurements, is being constructed. A set of parallel electric field plates can be raised in the observation chamber to beam level through vacuum feedthroughs and a transverse electric field applied. Light from the beam is observed through a slit located a distance L downstream along the plate and spectral wavelengths are determined for both directions of the applied electric field E. The net transverse Doppler shift induced can easily be seen to be $\Delta\lambda/\lambda = Z \cdot 2eEL/(2mc^2T)^{\frac{1}{2}}$, where T and mc^2 are the kinetic and rest energies of the ion beam, respectively. Introduction of representative parameters shows that a shift of 2 Å/unit charge is easily attainable. 3. Use of nanosecond pulsed-beam time-of-flight techniques to measure the energy of the ion beam after it emerges from the foil. This technique has been in routine use in nuclear physics experiments, and its extension to these applications is described. (auth)

17639 CERN–IHEP BOSON SPECTROMETER. A TECHNICAL DESCRIPTION. Baud, R.; Benz, H.; Blumenfeld, H.; (and others). pp 557-79 of Experimental Meson Spectroscopy. /Baltay, Charles (ed.). New York; Columbia Univ. Press (1970).

From Experimental Meson Spectroscopy Conference, Philadelphia, Pa. See CONF-700525.

Design modifications of the CERN–IHEP Boson Spectrometer (CBS) at the Serpukhov Synchrotron are described. The CBS is a missing-mass spectrometer and is used to study to X^- decay in the $\pi^- + p \rightarrow p + X^-$ interaction. (W.H.K.)

17640 MULTIPARTICLE SPECTROMETER SYSTEM FOR THE 10 TO 30 GeV/c REGION. Ficenec, J. R. (Virginia Polytechnic Inst., Blacksburg); Clifford, T. S.; Schreiner, W. M.; (and others). pp 581-92 of Experimental Meson Spectroscopy. /Baltay, Charles (ed.). New York; Columbia Univ. Press (1970).

From Experimental Meson Spectroscopy Conference, Philadelphia, Pa. See CONF-700525.

The system is designed to initially study multiparticle production in p + p interactions at 28.5 MeV/c. The system consists of three spectrometers and a PDP-9 computer connected via the Brooknet data link to the CDC-6600 computer. The spectrometer is described and some meson experiments that can be performed using the device are indicated. (W.H.K.)

17641 MULTIPARTICLE MAGNETIC SPECTROMETER SYSTEMS WITH ELECTRONIC DIGITIZED DETECTORS AND ON-LINE COMPUTER. Lindenbaum, S. J. (Brookhaven National Lab., Upton, N. Y.). pp 609-39 of Experimental Meson Spectroscopy. /Baltay, Charles (ed.). New York; Columbia Univ. Press (1970).

From Experimental Meson Spectroscopy Conference, Philadelphia, Pa. See CONF-700525.

The present status and future plans for the digitized detector MK I Double Vee Magnetic Spectrometer system at BNL are reviewed. The detector layout and data handling system, resolution, and interaction that can be investigated are discussed. (W.H.K.)

17642 USES OF CYCLOTRONS IN CHEMISTRY, METALLURGY, AND BIOLOGY. Proceedings of Conference Held at Oxford, 22–23 September 1969. Amphlett, C. B. (ed.). London; Butterworth and Company Ltd. (1970). 409p. 250s. (CONF-690924).

Available from Daniel Davey and Company, Inc., Hartford, Conn.

Thirty four papers were presented at the conference. A separate abstract was prepared for each. (UK)

For abstracts of individual papers see: 15554–15557, 15648, 15700–15704, 15717, 15912, 16042, 16043, 16188, 16387, 16557, 16558, 16619, 17643–17651, 17738, 17824, 17927–17929, and 18018.

17643 APPARATUS FOR THE PROTON IRRADIATION OF SUPERCRITICAL WATER IN A FLOW SYSTEM. Marsh, W. R. (Atomic Energy Research Establishment, Harwell, Eng.). pp 101-16 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

An apparatus is described for the irradiation of water at pressures up to 400 bar (6000 psi) and temperatures up to 600°C by high-energy protons from the Harwell Variable Energy Cyclotron. The irradiation vessel is a pressure vessel fabricated from Nimonic 80A alloy, one end of which is thinner than the normal wall thickness and acts as a window for the particle beam. Irradiation is carried out with ~45 MeV protons, which penetrate the end window and emerge with a mean energy of ~7 MeV. The sampling system allows a measured volume to be delivered into a conventional gas-handling vacuum apparatus with minimal disturbance to flow. Dissolved product gases are measured by gas chromatography. At a steady current, steady concentrations of products, dependent on flow-rate and production G value, were obtained. Under supercritical conditions the low dielectric constant (<10) might be expected to lead to high concentrations of reactive intermediate species near the track center, resulting in higher molecular yields. The net yields of hydrogen measured with pure water (G = ~5) in preliminary experiments were higher than at room temperature, but could be suppressed to negligible values by small concentrations of oxygen and ammonia ($<5 \times 10^{-2}$M), suggesting that fast back reactions occur at the high temperatures. (UK)

17644 INITIAL EXPERIENCE WITH A 30-in ISOCHRONOUS CYCLOTRON FOR MEDICAL USE. Tilbury, R. S.; Mamacos, J. P.; Laughlin, J. S. (Sloan-Kettering Inst. for Cancer Research, New York). pp 117-24 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in

XUM

Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

Several methods were developed for the production of radionuclides using a 30 in. diam. isochronous cyclotron at the Sloan–Kettering Institute for Cancer Research. The radionuclides were converted into radiochemicals or radiopharmaceuticals for use in research and diagnosis of cancer. Alternative reactions were investigated for the production of ^{18}F, ^{123}I, ^{121}I, ^{52}Fe, ^{11}C, and other radionuclides. Methods of production and chemical processing of radioactive gases, O_2, N_2, CO, and CO_2 labelled with ^{15}O, ^{13}N, and ^{11}C, were developed. Target chambers for the irradiation of gases, solids, and liquids were designed and constructed. The liquid target chamber used for ^{18}F production contained 10 ml of water, was constructed mainly of titanium, and provided a catalyst chamber for the recombination of hydrogen and oxygen radiolytic gases. The solid target chamber used for the production of ^{52}Fe, ^{48}Cr, and the irradiation of any solid material in vacuo was water cooled to withstand >50 μA beam current. The gas target chambers were designed for the irradiation of gases or gaseous mixtures, or for the irradiation of solids (e.g., charcoal, boric oxide, tellurium metal) in a gas stream. An internal target probe was designed and constructed with efficient water cooling for the irradiation of solids inside the vacuum chamber of the cyclotron, to take advantage of the higher beam currents available and of the variation of particle energy with radius. (auth) (UK)

17645 RADIOISOTOPE PRODUCTION IN THE I.Ph.P.E. CYCLOTRON. Krasnov, N. N.; Dmitriev, P. P.; Konstantinov, I. O.; (and others) (Inst. of Physics and Power Engineering, Obninsk, USSR). pp 159–67 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

The main problems of radioisotope production on the cyclotron are considered and operational data for isotope production in the cyclotron are presented. Three types of targets used for the bombardment of different materials by the cyclotron beam are described. Data are given on the isotope yields for 40 isotopes produced on the I.Ph.P.E. cyclotron. (auth) (UK)

17646 MINIMUM CYCLOTRON SIZE FOR RADIATION THERAPY: A STUDY OF RELEVANT PHYSICAL PARAMETERS. Goodman, Leon J. (Columbia Univ., Upton, N. Y.); Marino, Stephen A.; Brennan, James T. Contract AT-(30-1)-2740. pp 209–24 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

The use of the reaction $^{9}Be(^{2}H,n)^{10}B$ with cyclotron-generated deuterons was examined with respect to radiotherapy requirements. Improvement in depth dose was required which could only be achieved by increase of energy of the deuteron beam. To obtain the necessary information on the cyclotron magnet diameter required experiments simulating realistic therapy conditions were performed within the last year at the Texas A and M Variable Energy Cyclotron (TAMVEC). Collimated beams of neutrons were generated by deuterons of various energies bombarding thick and thin beryllium targets. Dose rate, depth dose and secondary particle build-up measurements were made using a tissue-equivalent ionization chamber in a large tissue phantom. These studies show the minimum deuteron energy required to be ~30 MeV to satisfy the criterion of 50% depth dose at a minimum depth of 10 cm of tissue. The thin-target investigations demonstrated that depth dose can be increased somewhat if thin targets are used. (UK)

17647 TECHNIQUES USED IN ON-LINE FISSION EXPERIMENTS WITH THE V.E.C. Croall, I. F.; Cunninghame, J. G. (Atomic Energy Research Establishment, Harwell, Eng.). pp 225–31 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

Techniques currently in use on the Harwell Variable Energy Cyclotron for on-line fission studies are discussed. Methods of target preparation and thickness measurement are described. Pulse-height measurements and preliminary data processing use a PDP-8 computer programmed to act as an associative storage analyzer. Investigations carried out using these techniques include the effects of increasing incident particle energy on the proton-induced fission of ^{232}Th, and the effects of angular momentum on the fission of the compound nucleus ^{210}Po. (auth) (UK)

17648 ON-LINE NUCLEAR SPECTROSCOPY OF SHORT-LIVED ISOTOPES. Macfarlane, Ronald D. (Texas A and M Univ., College Station. Niels Bohr Inst., Copenhagen); Oakey, Neil S.; Gough, Richard A. pp 232–9 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

Some details of the helium-jet recoil transport method are discussed, particularly with respect to the speed of the system for transporting short-lived radioactive species. Experiments are described where specific hot atom reactions are used to isolate nuclear reaction products. The possible adaptation of the helium-jet recoil transport method for on-line mass separation is also discussed and some results are presented on helium-product separation and product ionization. (auth) (UK)

17649 CYCLOTRON IRRADIATION OF EXTENDED OBJECTS. Dealler, J. F. B.; Ettinger, K. V. (Univ. of Birmingham, Eng.). pp 240–9 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

The problems of achieving uniform irradiation of objects which are large in comparison with the size of the cyclotron beam are discussed, and the method of assessing uniformity is described. Techniques of achieving a uniform distribution of radiation over a large specimen placed outside the vacuum system are proposed, based on a method of applying random movements to the target. (auth) (UK)

17650 TARGET SYSTEMS FOR RADIOISOTOPE PRODUCTION ON THE MEDICAL RESEARCH COUNCIL CYCLOTRON. Vonberg, D. D.; Baker, L. C.; Buckingham, P. D.; (and others) (Hammersmith Hospital, London). pp 258–72 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

Target systems used for short-lived radioisotope production on the M.R.C. Cyclotron are described in detail and the factors affecting efficient production discussed. Choice of target material, target cooling, radioisotope recovery, suitable beam energy and target thickness for optimum yield of the required isotope, are all considered. The problems of power dissipation in the internal target using beam currents up to 300 μA are fully discussed. Reasons for using the static "grazing incidence" target in preference to rotary or vibratory target systems are stated and methods of internal target preparation described. Beam extraction through a thin vacuum-retaining foil permits a range of external targets to be bombarded using beams of low power density and also allows the use of energy-degrading foils. A method is described of indicating the external beam distribution during bombardment and details are given of external targets using solid, liquid and gaseous target materials. Recently-developed targets for radioactive gas production are described and typical performance figures quoted. (auth) (UK)

17651 TECHNIQUES AND APPARATUS FOR IRRADIATING METALLURGICAL SPECIMENS ON THE HARWELL VARIABLE ENERGY CYCLOTRON. Worth, J. H. (Atomic Energy Research Establishment, Harwell, Eng.). pp 282–93 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

The Harwell Variable Energy Cyclotron has been used in a variety of metallurgical experiments. The build-up of nuclear reaction products that occurs in reactor structural and fuel materials was simulated by implanting inert gas ions in metals and ceramics. Medium energy ions were used to create radiation damage in many different materials to simulate fast neutron damage. Carbon ions were implanted in molybdenum to study the effects of controlled amounts of interstitial impurities. Beams from the cyclotron will also be used to study the mechanism of ion channelling through single crystals. The apparatus and techniques used for these experiments are discussed and methods of obtaining uniform concentrations of implanted ions throughout a volume are described. The factors governing the choice of beams for radiation damage experiments are also discussed. (auth) (UK)

17652 HIGH ENERGY NUCLEAR SPECTROSCOPY PROJECT FOR THE SATURNE SYNCHROTRON. Saudinos, J. (CEA,

Saclay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.98-9(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

A high energy nuclear spectrosccpy project designed by Saclay Nuclear Physics Department is briefly described. An energy resolution about 100 keV with 1 GeV protons is contemplated. (France)

17653 MEASUREMENT OF CYCLOTRON PARAMETERS BY THE METHODS OF OPTICAL SPECTROSCOPY. Trofimov, O. A.; Yushkov, A. V. Izv. Akad. Nauk Kaz. SSR, Ser. Fiz.-Mat.; No. 2, 35-41(Mar-Apr 1968). (In Russian).

The possibilities were examined of the measurement of the absolute quantity and the intensity topographies of the high-frequency electric field between the dees, and also the energies of the accelerated ions by the method of optical spectroscopy, based on the electro- and magneto-optical effects (Stark, Doppler, and Wien effects), occurring in the cyclotron. Estimates were made of these effects for different experimental geometries. (tr-auth)

17654 A 40 TO 200 kV ION ACCELERATOR WITH THREE BEAM LINES. Bannenberg, J. G.; Boerboom, A. J. H. (FOM-Insituut voor Atoom- en Molecuulfysika, Amsterdam). Nucl. Instrum. Methods; 91: 269-76(1971).

The accelerator (mass range 1 to 86) consists of a sputtered ion source or a duoplasmatron with extraction electrode, Einzel lens, analyzing magnet, and associated power supplies, mounted inside a metal box at high voltage; a three-cylinder accelerating lens with the last cylinder at ground potential, the central cylinder following a nonlinear relation to the accelerating voltage to focus the beam at the mass-defining diaphragm at a fixed position; and a combination of an electrostatic quadrupole triplet, a second diaphragm, a three-port switch magnet, and another triplet. The two diaphragms make it possible to control beam radius and divergence (max. 1°) independently. (auth)

17655 A CYCLOTRON AS AN INJECTOR AND AS A POST-ACCELERATOR FOR A TANDEM VAN-de-GRAAFF. Boettger, O.; Mahrt, R. (AEG-Telefunken Research Inst., Frankfurt am Main). Nucl. Instrum. Methods; 91: 277-83(1971).

Utilization of a cyclotron in addition to a tandem van de Graaff will greatly enlarge the acceleration potentiality for both light and heavy particles. Energies achievable by series arrangements of a tandem and a cyclotron and vice versa are considered. Details and problems connected with these arrangements, such as external injection into a cyclotron, stripping, bunching, beam transfer, and energy variation are discussed. (auth)

17656 MASS-SEPARATED ION SOURCE. Wilson, R. G.; Jamba, D. M. (Hughes Research Labs., Malibu, Calif.). Nucl. Instrum. Methods; 91: 285-8(1971).

A mass-separated ion source can eliminate the need for large mass separation units in energetic ion beam systems. The performance of a Colutron mass-separated ion source employing a small Wein (E × B) velocity filter as the mass separation element, an Einzel lens for focusing, and a hot-cathode, electron-bombardment ion source was studied. Mass-separation and focusing capabilities were determined by mass spectra and ion image-converter measurements. Emittance and perveance measurements of the total unit were made. The unit was operated with H_2, He, H_2O, Kr, and with BN in a charge holder in an H_2 discharge (to study boron beams). Nearly parallel, μA beams of masses up to about 12 amu and diameters from 3 to 5 mm were well resolved. (auth)

17657 BALANCE FOR USE IN TARGET EVAPORATION CHAMBERS. Chamberlin, E. P. (Texas A and M Univ., College Station). Nucl. Instrum. Methods; 91: 289(1971).

A torque-motor balance for measuring the amount of target material evaporated onto a substrate inside a deposition chamber is described. The readout is analog and is accurate to within 3%. (auth)

17658 INFLUENCE OF THE NATURE AND THE THICKNESS OF TARGETS ON THE PRODUCTION OF BREMSSTRAHLUNG UTILIZABLE FOR ACTIVATION BY (γ,n) REACTIONS. Engelmann, Ch. (CEN, Saclay, France). Nucl. Instrum. Methods; 91: 189-94(1971). (In French).

The effect of the Z of the target and its thickness for Al, Cu, and Pt on (γ,n)-induced activities was determined with silver and carbon activation monitors. The existence of an optimum thickness, apparently independent of Z but a function of the energy of the incident electrons, is deduced. It is also shown that maximum activation with a platinum target is three times as great as that with an aluminum target, and that it does not vary proportionally with the square of the Z of the target. (auth)

17659 NON-LINEARITIES AND ABERRATIONS OF CORPUSCULAR-OPTICAL ELEMENTS. Jung, V. (Kernforschungszentrum, Karlsruhe, Ger.). Nucl. Instrum. Methods; 91: 195-203(1971).

One of the objectives aimed at in corpuscular optics is to deform the phase area of a particle beam on its passage through corpuscular-optical elements only to such an extent that, firstly, the actual area is not increased and, secondly, there is no effective expansion of the phase area as a result of trail formation caused by nonlinearities. Thus, the preparation of corpuscular-optical elements requires the reduction of nonlinearities to a reasonable level. They are caused, on the one hand, by effective field boundaries which are neither plane nor plane-parallel and, on the other hand, by faults in the transverse field distribution. Other causes of aberrations are the longitudinal components of end fields and the geometrical aperture defects which lead to the aberrations known from light optics also without the longitudinal components' being taken into account. In the application of numerous corpuscular-optical elements for the design of linear or circular accelerators, special importance is attached to the elimination of undesired nonlinear effects in order to obtain good beam quality and low activation of experimental facilities. (auth)

17660 SIMULTANEOUS ACCELERATION OF TWO BEAMS IN A LINEAR ACCELERATOR. Westcott, C. H. (Chalk River Nuclear Labs., Ont.). Acta Phys. Pol.; A38: 515-20(Nov 1970).

The Canadian Project for an Intense Neutron Generator required for maximum utility two separate beams of 1 GeV protons from a single linac, with currents roughly in the ratio 100:1. The system was continuous (i.e., unpulsed, although of course the beam had a radio frequency time-variation) and it was desired that both beams be similarly continuous. A simple method of achieving this is described. (auth)

17661 VARIATION IN THE POSITION OF THE CENTRAL AXIS MAXIMUM BUILDUP POINT WITH FIELD SIZE FOR HIGH-ENERGY PHOTON BEAMS. Almond, P.; Van Roosenbeeke, E.; Brown, R.; Milcramp, J.; Williams, C. B. (M. D. Anderson Hospital, Houston, Tex.). Brit. J. Radiol.; 43: 911(Dec 1970).

During preliminary tests of a 25 MeV linear accelerator for therapeutic use, it was found that the position of the central axis maximum build-up varied with field size, but was independent of a flattening filter. The machine was capable of producing photon fields greater than 35 × 35 cm at 1 m. All fields measured were of square cross section. (UK)

17662 TECHNIQUE FOR THE COMPUTATION OF CHARGED-PARTICLE TRAJECTORIES IN RADIO-FREQUENCY QUADRUPOLE DEVICES. Chisholm, T.; Stark, A. M. (Mullard Research Labs., Redhill, Eng.). J. Phys., D (London); 3: 1717-26(Nov 1970).

A method of computing the trajectories of charged particles which would occur in a real quadrupole device is presented. A successive, over-relaxation procedure is used first to solve the Laplace equation for the specified electrode system. Subsequently a simple Runge–Kutta integration is used to compute the trajectory. A number of results are presented showing that the conditions necessary for stable trajectories in the particular system studied are more restrictive than those predicted by the hyperbolic solution. (auth) (UK)

17663 COCKCROFT–WALTON ELECTRON ACCELERATOR FOR RADIATION CENTER OF OSAKA PREFECTURE. Yoshida, Toshio (Radiation Center of Osaka Prefecture, Sakai, Japan); Kitagawa, Michiharu; Miyashita, Kyoichi; Nagai, Akio; Ueda, Kazuhiro. Mitsubishi Denki Giho; 44: 1215-19(Sep 1970). (In Japanese).

A Cockcroft–Walton electron accelerator has been built and delivered to the Radiation Center of Osaka Prefecture. This is a totally enclosed electron beam irradiation device rated at 600 keV, 3 mA, and very small in size because of the use of SF_6 gas as insulation. In its construction, a high voltage generator producing 600 kV and the electron beam irradiator are arranged separately, but connected with extra high voltage cables. In addition to these features, it has an electron gun which is very easy to change. Performance of the accelerator is described. (auth) (Japan)

17664 A YIELD ESTIMATION FOR NEGATIVE HEAVY IONS, EMITTED FROM METAL TARGETS BY HEAVY PARTICLE BOMBARDMENT IN THE MeV-REGION. Mokler, P. H. (Kernforschungsanlage, Juelich, Ger.). Nucl. Instrum. Methods; 91: 267-8 (1971).

The yield of negative ions emitted from targets of Cu, Ag, and Au is estimated by extrapolating measured values for the case where the primary heavy ions have an energy of some MeV. This case is of special interest in a suggested device, which consists of two tandem Van de Graaff accelerators with opposite polarity of the high voltages. In this device the emitting target is placed at the terminal of the first accelerator, and the source of the bombarding ions is at ground potential. The estimate shows that under certain conditions currents of relatively large intensities and high energies can be achieved. (auth)

17665 (GA–9364) COHERENT SCATTERING LAW FOR POLYCRYSTALLINE BERYLLIUM. Borgonovi, G. M. (Gulf General Atomic, Inc., San Diego, Calif.). 16 May 1969. Contract AT(04-3)-167. 44p. Dep. NTIS.

A new calculation of the coherent one-phonon scattering law for beryllium is presented in which the dependence on the mesh is limited. The coherent scattering law for a single crystal is derived and extended to the polycrystalline case. The scattering law is compared with previous derivations and with experimental results. (J.W.R.)

17666 EVIDENCE FOR QUARTET STRUCTURE IN MEDIUM AND HEAVY NUCLEI. Danos, M.; Gillet, V. (CEN de Saclay, Gif-sur-Yvette, France). Phys. Lett.; 34B: 24-6(18 Jan 1971).

The second differences of the nuclear masses keeping T constant are discussed for even-even nuclei throughout the mass table. They are shown to be consistent with the quartet picture of weakly interacting tight two-proton two-neutron structures. (auth)

17667 EXPERIMENTAL INVESTIGATION OF 1/v-ABSORBERS IN A 1/E-NEUTRON FLUX. Bensch, F. (Oesterreichische Hochschule, Vienna). Atomkernenergie; 15: 273-4 (1970). (In German).

Disc-shaped 1/v absorbers have been irradiated at a beam hole as well as in an appropriate area 35 cm above the core of the TRIGA Mark II reactor. A 1/E spectrum of the slowed-down neutrons is given in the irradiation positions. The measured absorption rates correspond sufficiently well with values to be expected from theoretical considerations. (auth)

17668 ONE-SPEED NEUTRON TRANSPORT WITH ANISOTROPIC SCATTERING BY THE TRANSFER MATRIX METHOD. Caroll, Gerhard Albert. New York; New York Univ. (1969). 284p. University Microfilms Order No. 70-19,279.

Thesis.

The transfer-matrix method is applied to the solution of several one-speed neutron-transport problems in slab geometry. The specific problems considered are the problem of reflection and transmission by a slab, the Milne problem, and the critical problem with symmetric reflectors. The solutions are written in terms of integral operators which are derived explicitly as functions of the slab cross sections and thickness. The scattering cross section is expressed as a series of Legendre polynomials of arbitrary order. Treatment of nonabsorbing and multiplying media is given in detail. Numerical solutions for the three problems are obtained by expanding the angular distribution in a series of double Legendre polynomials. A procedure is presented which yields accurate values of the scattered distribution when neutrons are monodirectionally incident on a slab. Among the problems considered which lack a precise treatment in the literature is the criticality problem for slabs with symmetric finite reflectors. The calculational advantages of the transfer-matrix method are demonstrated, and explicit comparisons of computing times with invariant imbedding and doubling techniques are given. (Diss. Abstr. Int., B)

17669 GENERALIZATION OF THE NODAL APPROXIMATIONS TO THE LINEAR BOLTZMANN EQUATION APPLIED TO PROBLEMS IN NEUTRON TRANSPORT THEORY. Stenstrom, Dennis Gabriel. Seattle; Univ. of Washington (1970). 188p. University Microfilms Order No. 70-19,660.

Thesis.

A generalized nodal approximation to the one-dimensional neutron transport equation is developed; and the procedure for its extension to energy-dependent multidimensional problems, outlined. The most attractive feature of the method is the possibility of reducing the number of angular nodes while still retaining the same accuracy. The advantages of the approximation are demonstrated in some homogeneous and inhomogeneous source problems. Numerical evaluation is performed on model problems in monoenergetic neutron transport in plane geometry. These problems include the determination of the Milne asymptotic decay constant, the critical problem, and the isotropic slab albedo problem. In the latter two problems, the emphasis is on the calculation of the angular flux rather than integrated quantities since this is where conventional methods usually fail. These problems have demonstrated that the number of angular nodes required for a given accuracy can be reduced by a factor of two to four by using reasonable trial solutions, and that normally improved results will be obtained whenever trial solutions are used which are a better approximation to the trial solution than is an isotropic distribution. The procedure for extending the generalized nodal approximation to more realistic problems, such as those involving energy dependence and multidimensional geometries, is outlined and discussed since it is for these problems that the method will be particularly advantageous and useful. (TSS) (Diss. Abstr. Int., B)

17670 SOLUTION TO THE BOLTZMANN EQUATION FOR MONOENERGETIC NEUTRONS IN A SLAB. Boffi, Vinicio C.; Molinari, Vincenzo G. (CNEN, Bologna). Meccanica; 5: 177-86(Sep 1970).

A physical solution to the linear integro–differential Boltzmann equation, which governs the stationary distribution of the flux of monoenergetic neutrons in the interior and at the boundary of an infinite slab of finite thickness, is presented. Results for both the angular and the total fluxes are obtained by properly accounting for the boundary conditions of the problem and by a Fourier transform of the original Boltzmann equation. An integral linear Fredholm equation for the Fourier transform of the total flux is thus derived. The solution of such an equation is given two different representations according to the two decompositions devised for the given Fredholm kernel. The solution obtained in each case is finally inverted termwise to yield the sought total flux in the original space. The result for the angular flux follows, then, directly from the result for the total flux. (auth)

17671 HYBRID COMPUTER METHOD FOR TWO-DIMENSIONAL CALCULATIONS INVOLVING THE LAPLACIAN OPERATOR. Jaworski, Richard Lee. Ames, Iowa; Iowa State Univ. (1969). 69p. University Microfilms Order No. 70-7708.

Thesis.

Hybrid computer solutions of partial differential equations involving space and time variables are often made by representing a single spatial variable with the continuous independent variable of the analog computer and the time variable as discrete time increments. This is known as the continuous space, discrete time method. Because the analog computer has only one continuous independent variable, this method has been limited to the continuous description of a single spatial variable and modal approximations of all remaining spatial variables. In this study, spatial variables are related through a parametric variable. A differential equation whose solution is a function of the original spatial variables is formulated in terms of one parametric variable which can be represented by the one continuous variable available on a hybrid computer. As an illustration of this related independent variables approach, the coordinates of a polar coordinate system are represented by the spiral of Archimedes, $r = k\theta$. The Laplacian operator in r and θ is integrated over a differential area defined by the spiral, and partial derivatives with respect to r and θ are approximated by differences between values of the dependent variable at adjacent spiral revolutions. r and θ are then expressed in terms of the parametric variable S, $r = K_1S$, and $\theta = k_2S$ so the Laplacian operator is reduced from two spatial variables to one parametric variable. This method was applied to the two dimensional diffusion equation describing the neutron flux in an infinite cylindrical reactor. Critical enrichment calculations performed using a digital computer code demonstrated the validity of the related independent variables technique and that the method was applicable to reactor configurations which did not have a flux gradient at the center of the reactor. When compared with a standard two dimensional method, a 250% savings in execution time was noted. (Diss. Abstr. Int., B)

17672 ON A TIME-DEPENDENT INTEGRO–DIFFERENTIAL EQUATION IN RADIATIVE TRANSFER AND NEUTRON TRANSPORT THEORY. Thomassen, Richard Raymond. Pullman, Wash.; Washington State Univ. (1970). 52p. University Microfilms Order No. 70-25,005.

Thesis.

A time-dependent integro-differential equation of radiative transfer (neutron transport) is solved for a semi-infinite isotropic scattering medium in which an initial radiation intensity is specified. The time-dependent integro-differential equation is solved using Laplace transform methods and the Wick-Chandrasekhar approximation technique. The problem is considered with the semi-infinite scattering medium bounded by a vacuum or by an overlying atmosphere where there is only absorption and scattering of radiation. (Diss. Abstr. Int., B)

17673 DISTRIBUTION OF THERMAL NEUTRONS IN A CYLINDRICAL CELL. Laletin, N. I. At. Energ. (USSR); 28: 242-3(Mar 1970). (In Russian).

In a multi-zone cylindrical cell there are constant sources of thermal neutrons in each zone. It is assumed that the thermal neutron flux is described by a single-velocity transfer equation with isotropic neutron scattering and the neutron interaction being characterized by the total interaction cross section and by the absorption cross section. An expression is given for the neutron distribution in each cell zone. Values are calculated for neutron fluxes at the zone boundaries. The error is less than 0.2 to 0.3% for a two-zone cell. The two-zone approximation in most cases represents a suitable compromise between accuracy of the calculation and extensiveness of the required calculations. (TTT).

17674 MODAL APPROXIMATIONS IN TIME-DEPENDENT REACTOR AND NEUTRON KINETICS CALCULATIONS. McConnell, Benjamin Wade. Blacksburg, Va.; Virginia Polytechnic Inst. (1970). 77p. University Microfilms Order No. 70-24,220.

Thesis.

The solution of the space, time, and energy-dependent diffusion approximation of the transport equation by the method of modal expansions is considered. The basic concept of the modal expansion method, as devised by Stacey, involves replacing the "exact" equation under consideration by a more mathematically tractable set of approximate equations with a reduced number of independent variables. To illustrate the procedures involved, the numerical solutions of the pulsed neutron thermalization problem in both a bare and a reflected non-multiplying slab and the neutron kinetics problem for a fast dilute assembly are considered. In each of these examples, the time-dependent calculation requires the solution of a non-symmetric matrix eigenvalue problem which is solved by utilizing the QR algorithm. In addition, some methods used in the selection of the expansion modes and related weighting operators are briefly considered. (Diss. Abstr. Int., B)

17675 POLARIZED NEUTRON PASSAGE THROUGH FERROMAGNETIC FILMS. Drabkin, G. M.; Trunov, V. A.; Dmitriev, R. P. (Ioffe Inst. of Physics and Tech., Leningrad). Zh. Tekh. Fiz.; 40: 1317-19(Jun 1970). (In Russian).

Experimental studies were made of the method for producing a spatial periodic magnetic field for resonance inversion of polarized neutron beams by means of ferromagnetic films. It is shown that the film filter is highly efficient and it can be well controlled by resonator temperatures. Thus, experiments confirmed that ferromagnetic films may be used as effective filters during analysis of polarized neutron velocities. (R.V.J.)

17676 TEMPERATURE DEPENDENT THERMAL-NEUTRON DIFFUSION COEFFICIENTS IN H_2O AND D_2O. Pappano, Alfred William. Morgantown, W. Va.; West Virginia Univ. (1969). 76p. University Microfilms Order No. 70-15,260.

Thesis.

Utilizing the Brown and St. John cross-section model for neutron elastic scattering with the assumptions of isotropic scattering in the center-of-mass system and an isotropic Maxwellian velocity distribution of moderator nuclei, calculations are presented for the first-order spherical-harmonic expansion coefficient of the total scattering probability which is valid for any general moderator mass (M). This is accomplished initially by an independent derivation and verification of Smelov's $\sigma_{s1}(E - E')$, which is subsequently integrated over all final energies to obtain a unique analytic expression for $\sigma_{s1}(E)$. Application of this function is shown in the formulation of an energy-dependent diffusion coefficient whose flux-weighted value is then numerically integrated over thermal energies to obtain average thermal-neutron diffusion coefficients at various temperatures. For D_2O this approach has led to values of $\bar{D}$ that are within experimental error at most temperatures while for H_2O these predictions were inconsistent due to the inability of this model to describe adequately the total scattering cross section of hydrogen in H_2O. (Diss. Abstr. Int., B)

17677 ORIENTED GRAPHITE AS A NEUTRON MONOCHROMATOR. Riste, T. (Institutt for Atomenergi, Kjeller, Norway). pp 91-104 of Instrumentation for Neutron Inelastic Scattering Research. Vienna; International Atomic Energy Agency (1970).

From Meeting on Instrumentation for Neutron Inelastic Scattering Research, Vienna, Austria. See STI/PUB-275; CONF-691220.

A number of samples of oriented graphite of various thicknesses and of mosaic widths in the range 0.8 to 3.0° have been investigated for reflectivity of thermal neutrons. The observed values agree rather well with those calculated on the assumption of ideally imperfect samples. The peak reflectivity and the integrated reflectivity were found to be superior to other monochromators tested by a factor of about 2 to 10. For 4-Å neutrons peak reflectivities above 0.9 can easily be attained. An important feature is the absence of double Bragg scattering in graphite, leading to a considerable reduction of the intensity of extraneous neutrons in the primary beam. This was demonstrated by comparing the neutron spectra reflected from graphite and zinc monochromators. The merit of graphite monochromators in different set-ups for inelastic scattering experiments is discussed. (auth)

17678 REFLECTIVITY OF NEUTRONS BY DISTORTED COPPER CRYSTALS. Dymond, R. R.; Brockhouse, B. N. (McMaster Univ., Hamilton, Ont.). pp 105-15 of Instrumentation for Neutron Inelastic Scattering Research. Vienna; International Atomic Energy Agency (1970).

From Meeting on Instrumentation for Neutron Inelastic Scattering Research, Vienna, Austria. See STI/PUB-275; CONF-691220.

The absolute reflectivities of the (200) planes of two mechanically distorted copper crystal slabs have been measured in reflection and transmission over a wavelength range from 0.8 to 2.0 Å. The crystals, which had rocking curves with FWHM of about 30 minutes of arc, had integrated reflectivities ranging from about 6 minutes to 17 minutes, and peak reflectivities ranging from 20 to 55% for the different wavelengths. In view of the high angles of take-off (small d-spacing, 1.8 Å) these results compare favorably with those for any known type of neutron monochromator. The results are compared with calculations based on Bacon and Lowde's model of an infinite mosaic slab, using effective linear absorption coefficients to account for the effect of simultaneous reflections. (auth)

17679 TIME-DEPENDENT THERMALIZATION OF NEUTRONS IN AN EINSTEIN SOLID WITH APPLICATION TO ZIRCONIUM HYDRIDE. von Blatz, Ralph (Univ., Karlsruhe, Ger.). Atomkernenergie; 16: 201-5(1970). (In German).

The Einstein model of a solid is investigated in terms of its neutron thermalization properties. It is shown that the energy mode concept is valid although there is no corresponding discrete time eigenvalue. Thermalization in zirconium hydride may be explained by the Einstein model for times $\tau < 30\ \mu s$, whereas for longer times the influence of the Debye part of the lattice vibrations dominates. This effect is discussed with the aid of the Heavy Crystal- and the Heavy Gas model. (auth)

17680 PROTON DYNAMICS IN ICE STUDIED BY INELASTIC SCATTERING OF SLOW NEUTRONS. Burgman, J. O. (Royal Inst. of Tech., Stockholm). Atompraxis; 16: 324-8(Sep-Oct 1970).

The lattice dynamics of ice between 143°K and the melting point was studied by inelastic scattering of cold neutrons. It was shown that the sharp peaks in the ice spectrum close to the melting point are preserved even at low temperatures. In this neutron-scattering experiment, however, only energy-gain processes are studied, and for such processes the temperature dependence of the Boltzmann factor causes the intensities of the peaks to decrease with decreasing temperature. A comparison with infrared and Raman spectroscopy was carried out in the low-frequency region, and satisfactory agreement was shown to exist between observed peaks in the neutron-scattering spectra and intermolecular bands observed in infrared and Raman spectral investigations concerning the structure of water and ice. (auth)

17681 ROTATIONAL MOLECULAR MOTION AND THE TRANSIENT NATURE OF LIQUIDS AS SEEN BY SLOW-NEUTRON SCATTERING. Larsson, K. E. (Royal Inst. of Tech., Stockholm). Phys. Rev., A; 3: 1006-22(1 Mar 1971).

The analysis of neutron spectra scattered from molecular solids and liquids presents a formidable problem which so far has been only slightly touched upon. For a period of ten years, the translational motions of atoms in monatomic liquids have been investigated by neutron spectroscopists; their theoretical interpretation has reached a certain degree of refinement. An understanding of the effects of rotational motions on the neutron spectra scattered from molecular liquids, however, has not been developed to the same degree. The aim of the present work is to use some simple but reasonable model for the translational motions and to investigate in more detail the effect of the various possible rotational motions on the observed neutron spectrum. The general principle used is that translational and rotational motions are statistically uncorrelated. Thus, when the molecule as a whole vibrates and diffuses, it is assumed that it can also perform librations, free rotations, or rotation diffusion. Phonon expansions are done for the molecular vibrations and librations. Sears' basic theory is used to describe the free rotations and rotational diffusion. A cross section is obtained which contains all the basic components in the scattered-neutron spectrum. A discussion of "good"- and "bad"-resolution measurements is carried through. The value of older neutron-linewidth determi-

XUM

nations is discussed. It is concluded that the resolution width ought to be ≤0.1 × (the width of the rotational spectrum) if finer details of the rotational motion should be observed as resolved structure. With the aid of good-resolution data it is shown that the nature of the rotational motion changes drastically over the liquid range, from librations to almost free rotations. Comparison is made to changes of rotational motion of ions in the phase transition from the ferro- to the para-electric phase in the solid state. It is shown that from such observations of molecular motion the liquid appears as a phase transition or as a transient phenomenon. (auth)

17682 APPLICATION OF INTERFERENCE LAYERS TO THE OPTICS OF X RAYS AND NEUTRONS. Croce, P.; Pardo, B. (Paris Univ., Orsay, France). Nouv. Rev. Opt. Appl.; 1: 229-32(Jul-Aug 1970). (In French).

The propagation of x rays and neutrons in a multiple-layer system is studied for the case of negligible Laue diffraction. The x rays and neutrons, which are at grazing incidence, behave as ultraviolet radiation at normal incidence, the surface irregularities are of the same order of magnitude, and the layers have a thickness of several hundred angstroms. An experimental study was then made of the reflection of x rays by a triple interference layer. (France)

17683 (AD-711285) NUMERICAL INVESTIGATION OF THE DEUTERON GROUND STATE. Cahill, Philip T. (United States Naval Academy, Annapolis, Md.). 15 May 1970. 73p. (USNA-TSPR-6). NTIS.

Schrodinger's equation is used to compute the energy depth and range parameters used in various forms for the potential experienced by the two nucleons of the deuteron in its ground state. Analytic expressions for the wave function, effective range, scattering length, and root-mean-square radius for that system under the influence of a spherical square well are determined. For the more complex cases of potentials with exponential forms in them (excluding the cut-off exponential), analytic solutions are not so readily attainable; accordingly, a numerical scheme involving the Numerov iteration technique, a Runge–Kutta method particularly useful for second-order differential equations lacking first order terms and suggested by Raynal, was set up and programmed for use on the COMNET computer system using BASIC as the primary language. Parameters for various potentials were calculated and, as a result a new picture of the nucleus developed. While a complete search scheme for these parameters could not be formed, three programs were written which can, with a minimum of assistance from the programmer, determine the parameters for potential forms involving four arbitrary constants. Among the criteria they use are the values of the binding energy, scattering length, effective range, and root-mean-square radius. (auth) (USGRDR)

17684 (KFK-1055) INVESTIGATION OF T = 0 EXCITED STATES OF ^{4}He USING THREE-PARTICLE REACTIONS. Haase, E. L.; Hagelberg, R.; Wang, W. N.; Lin, E. K.; Saylor, D. P.; Fawzi, M. A. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Experimentelle Kernphysik). Aug 1970. 31p. (CONF-700417-2). Dep. NTIS (U. S. Sales Only).

From Joint Meeting of the German and Dutch Physical Societies, Eindhoven, Netherlands.

Using 52 MeV deuterons and 104 MeV α-particles coincidence measurements in three entrance channels were carried out for the following reactions: ^{4}He(d,d′t)^{1}H, ^{4}He(α,α′t)^{1}H, ^{6}Li(d,α′t)^{1}H, ^{4}He(α,α′^{3}He)n, ^{6}Li(d,α′^{3}He)n, ^{4}He(d,d′d)D, ^{4}He(α,α′d)D, and ^{6}Li(d,α′d)D. In measuring the correlations, the detector of the inelastic particle was kept at a fixed position and the second detector scanned over a range of coplanar angles favoring ^{4}He final state interactions. The data can be fitted consistently with six T = 0 excited states of ^{4}He, at 20.2 MeV, 21.1 MeV, 21.9 MeV, 25.5 MeV, 28.5 MeV and 31.8 MeV with widths (Γ) of 0.2 MeV, 0.8 MeV, 1.8 MeV, 2.9 MeV, 5.3 MeV and 5.6 MeV respectively. The validity of the sequential reaction mechanism is examined. The internal consistency of the level parameters for the three entrance and three decay channels as well as the symmetry of the extracted angular correlations about 0 and 90° in the recoil system (center of mass) agree very well with the model of sequential decay. The angular correlations agree well with the predictions of a simple theory using the impulse approximation. (auth)

17685 (KFK-1204) INVESTIGATION OF THE ELASTIC SCATTERING OF 104-MeV α PARTICLES IN ^{3}He. Fetscher, W.; Sattler, K.; Schmeing, N. C.; Seibt, E.; Weddigen, Ch. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Experimentelle Kernphysik). Jul 1970. 18p. (In German). Dep. NTIS (U. S. Sales Only).

The differential cross section for the elastic scattering of 104 MeV-α-particles on ^{3}He was measured and a double scattering experiment was prepared to determine the spin-orbit term of the optical potential. The differential scattering cross section shows a wide absorption minimum at θ_{CM} = 100°. The decline at forward angles can be explained qualitatively by an optical potential. The backwards peaking presumably results from neutron exchange. A partial wave analysis according to the "Strong-Absorption-Model" gives about 50% absorption for $l \leq 4$ and purely elastic scattering for $l \geq 6$. The experimental setup for making polarization measurements was tested by double scattering of α-particles on ^{4}He. (auth)

17686 (LA-4538) POLARIZATION OF ELASTICALLY SCATTERED TRITONS AND ^{3}He. Armstrong, D. D.; Keaton, P. W. Jr. (Los Alamos Scientific Lab., N. Mex.). Oct 1970. Contract W-7405-eng-36. 9p. Dep. NTIS.

The measurement of the polarization of tritons elastically scattered from ^{4}He has established this reaction as a good polarizer (or analyzer) for tritons. The polarization measurements were recently extended over a sufficient angular and energy range to allow a phase-shift analysis that more accurately describes both the cross-section and polarization data. Based on the assumption that the optical model potential for a triton is just the sum of the optical model potentials of its constituent nucleons suitably averaged over their internal motion in the triton, the polarization of tritons elastically scattered from nuclei is expected to be small. Measurements (at angles ~60°) give small polarizations for tritons elastically scattered from nickel and ^{54}Fe. (auth)

17687 (N-70-36659) INTERACTION OF INTERMEDIATE-ENERGY PROTONS WITH LIGHT NUCLEI. Roberts, W. K.; Vincent, J. S.; Boschitz, E. T.; Gutow, K.; Blecher, M.; (and others) (National Aeronautics and Space Administration, Cleveland, Ohio. Lewis Research Center). Aug 1970. 57p. (NASA-TN-D-5961; E-5430). NTIS.

The elastic and quasi-elastic scattering of 600-MeV protons from light nuclei was studied. Differential cross sections were obtained for the scattering of protons from hydrogen, deuterium, helium-3, and helium-4. Polarization was measured for deuterium and ^{4}He nuclei. The p/p cross section data are in excellent agreement with the predictions for the Livermore phase shifts. Small-angle p/D, p/^{3}He, and p/^{4}He elastic scattering data are compared with calculations based on the multiple scattering theories of Watson and of Glauber. Large-angle p/D data are compared with the predictions of a model recently proposed by Kerman and Kisslinger. Quasi-free p/D scattering differential cross sections at 12° in the laboratory were measured for nine nuclei between atomic numbers A = 3 and A = 208 and follow very closely a cubic root of A dependence. (auth) (STAR)

17688 CROSS-SECTION MEASUREMENTS FOR THE REACTION ^{10}B(p,^{3}He)^{8}Be. Squier, G. T. A. (Queen's Univ., Belfast); Johnston, A. R.; Spiers, E. W.; Harbison, S. A.; Stewart, N. M. Nucl. Phys.; A160: 602-8(1971).

Cross sections were measured for the transitions to the ground state and first excited state of ^{8}Be and to the two 2^+ levels at 16.63 MeV and 16.93 MeV excitation in the reaction ^{10}B(p,^{3}He) at E_p = 49.5 MeV. The angular distributions of the cross section were compared with DWBA predictions. (auth)

17689 THREE-NUCLEON CALCULATIONS WITH REALISTIC FORCES. Malfliet, R. A. (Univ. of Utrecht); Tjon, J. A. Ann. Phys. (N. Y.); 61: 425-50(Dec 1970).

Within the framework of the Faddeev equations the triton binding energy, doublet scattering length, Coulomb energy, and S′- and D-state probabilities are determined. The two-particle interactions used are of the local Yukawa type and also include tensor forces. The sensitivity of the three-particle observables for variations of the two-body data is studied. Although no agreement with experiment is obtained, the results clearly favor the Van Oers–Seagrave value for the doublet scattering length. Finally, calculations are also performed using the local nucleon–nucleon potentials proposed by Reid; the results obtained for this set of potentials are $E_T = -6.5$ MeV and $a_t = 2.4$ F. (auth)

17690 NEUTRON-NEUTRON EFFECTIVE RANGE PARAMETERS FROM THE ^{3}H(^{2}H,^{3}He)2n AND ^{3}He(^{2}H,^{3}H)2p REACTIONS. Larson, H. T.; Bacher, A. D.; Nagatani, K.; Tombrello, T. A. (California Inst. of Tech., Pasadena). Nucl. Phys.; A149: 161-96(1970).

The energy spectra of ^{3}H and ^{3}He nuclei from the ^{3}He(^{2}H, ^{3}H)2p, ^{3}H(^{2}H, ^{3}He)2n, ^{3}He(^{2}H, ^{3}He)pn, and ^{3}H(^{2}H, ^{3}H)pn reactions were measured between 6 and 20° at a bombarding energy of 11 MeV. An upper limit of 5 μb/sr was determined for the cross section for producing a bound di-neutron at 6 and 7.5°. The ^{3}H(^{2}H, ^{3}He)2n and ^{3}He(^{2}H, ^{3}H)2p data together with previous measurements at higher energies were used to investigate the reliability of information obtained about the two-nucleon system from such three-body final state reactions. As an aid to these investigations, Born approximation calculations were made employing realistic nucleon–nucleon potentials and an antisymmetrized final state wave function for the five-particle system. These calculations reproduce many of the features observed in the experimental data and indicate that the role of complex exchange processes cannot be ignored. The results show that previous attempts to obtain information on the neutron–neutron effective range parameters from the ^{3}H(^{2}H, ^{3}He)2n reaction may have seriously overestimated the accuracy that could be obtained. (auth)

17691 PROTON–PROTON FINAL-STATE INTERACTION IN THE ^{2}H(p,pn)p REACTION. Ivanovich, M.; von Witsch, W.; Hungerford III, E. V.; Phillips, G. C. (Rice Univ., Houston, Tex.). Nucl. Phys.; A156: 616-28(1970).

The ^{2}H(p, pn) reaction was studied under conditions suitable for the observation of the proton–proton final-state interaction at relative energies in the p–p system between 0.0 and 2.5 MeV. A kinematically complete experiment was performed, detecting protons and neutrons in coincidence, for bombarding energies between 8 and 13 MeV. Models based on the Watson-Migdal theory were used to fit the experimental spectra and the possibility of extracting two-nucleon scattering parameters was investigated. A value of 7.7 ± 0.6 fm for the proton–proton scattering length was obtained. (auth)

17692 VECTOR POLARIZATION MEASUREMENTS AND PHASE-SHIFT ANALYSIS FOR d-α SCATTERING BETWEEN 3 AND 11 MeV. Keller, L. G.; Haeberli, W. (Univ. of Wisconsin, Madison). Nucl. Phys.; A156: 465-76(1970).

Vector-polarized deuterons from a tandem accelerator were used to measure the vector analysing power in d-α elastic scattering at deuteron energies from 3 to 11 MeV in steps of 1 MeV, for c.m. angles between 21 and 152°. A phase-shift analysis was carried out of the differential cross section and of tensor and vector polarization data. It was found that f-waves must be included above 8 MeV. The analysis confirms the presence of the two known d-wave resonances. The p-wave phase shifts were found to be small. An alternate solution with large p-wave phase shifts was found at 8 MeV. (auth)

17693 NEUTRON–NEUTRON SCATTERING PARAMETERS FROM ^{3}He(d,t)2p AND ^{3}H(d,^{3}He)2n REACTIONS. Larson, Harold Theodore. Pasadena, Calif.; California Inst. of Tech. (1970). 216p. University Microfilms Order No. 70-24,303.

Thesis.

The energy spectra of tritons and helium-3 nuclei from the reactions ^{3}He(d,t)2p, ^{3}H(d,^{3}He)2n, ^{3}He(d,^{3}He)pn, and ^{3}H(d,t)pn were measured between 6° and 20° at a bombarding energy of 10.9 MeV. An upper limit of 5 μb/sr. was obtained for producing a bound di-neutron at 6° and 7.5°. The ^{3}He(d,t)2p and ^{3}H(d,^{3}He)2n data, together with previous measurements at higher energies, have been used to investigate whether one can unambiguously extract information on the two-nucleon system from these three-body final-state reactions. As an aid to these theoretical investigations, Born approximation calculations were made employing realistic nucleon–nucleon potentials and an antisymmetrized final state wave function for the five-particle system. These calculations reproduce many of the features observed in the experimental data and indicate that the role of exchange processes cannot be ignored. The results show that previous attempts to obtain information on the neutron–neutron scattering length from the ^{3}H(d,^{3}He)2n reaction may have seriously overestimated the precision that could be attained. (Diss. Abstr. Int., B)

17694 PRECISE MEASUREMENT OF NEUTRON–PROTON TOTAL CROSS SECTION FROM 25 TO 60 MeV. Brady, F. P.; Knox, W. J.; Jungerman, J. A.; McGie, M. R.; Walraven, R. L. (Univ. of California, Davis). Contract AT(11-1)-GEN 10. Phys. Rev. Lett.; 25: 1628-31(7 Dec 1970).

The neutron–proton total cross section was measured to better than 1% in the energy range 25 to 60 MeV. The results agree with data at lower energies but are several percent higher than both previous measurements and current phase-shift predictions in this energy range. (auth)

17695 THREE-BODY CALCULATIONS OF ELASTIC DEUTERON–^{4}He SCATTERING WITH FADDEEV EQUATIONS. Hofmann, H. M.; Fick, D. (Univ., Erlangen, Ger.). Z. Phys.; 240: 420-9 (1970).

The Faddeev equations are applied to the deuteron–^{4}He system. For the interactions between the particles square-well potentials are used. In order to solve the Faddeev equations, the t-matrix is approximated by one separable term. The phase shifts of the elastic deuteron–^{4}He scattering are calculated. It is shown that the separable approximation with only one term is insufficient for such calculations. (auth)

17696 TWO-NUCLEON FINAL STATE INTERACTIONS AND THE ^{4}He(p,t)2p, ^{4}He(p,^{3}He)pn, AND ^{4}He(p,d)^{3}He REACTIONS AT 156 MeV. Bernas, M.; Bachelier, D.; Lee, J. K.; (and others) (Institut de Physique Nucleaire, Orsay, France). Nucl. Phys.; A156: 289-304(1970).

The pp and pn final state interaction (FSI) spectra were measured in the ^{4}He(p,t)2p and ^{4}He(p,^{3}He)pn reactions at 156 MeV. The Watson-Migdal treatment and the known scattering length were used to analyze the spectrum shapes at different small angles: the agreement obtained was quite good; the Watson-Migdal assumptions are better satisfied for higher primary energies. Use of a modified Born approximation for the pp spectrum further improves the fit. When comparing the absolute magnitudes of the three reactions, it appears that the ^{4}He(p,^{3}He)pn spectra should include mainly the singlet contribution. The angular distribution of the reaction ^{4}He(p,d)^{3}He was measured from 3 to 177° (c.m.). No evidence was found for excited states of ^{3}He. (auth)

17697 NEUTRON–ALPHA SCATTERING. Omojola, D. A. F. (Univ. of Lagos, Nigeria). J. Phys., A (London); 3: 630-52 (Nov 1970).

The following topics are covered: (1) A new formulation of the elastic neutron–alpha (n–^{4}He) scattering using the most general form of the nuclear interaction which includes the central, non-central exchange–linear spin–orbit, tensor and quadratic spin–orbit forces is given. (2) The resonating group method of Wheeler is employed to construct the five-body wave functions and from the Schroedinger equation a set of simultaneous integro–differential equations is derived. (3) The Hamada and Johnston potentials used are expressed in Gaussian form permitting analytical integrations and leading to great economy of computing time. There are repulsive cores in all states. (4) An extension of n–^{4}He scattering formulation to include the D-state of the alpha wave function is discussed. (5) The resulting integro–differential equations are then solved by the method of finite differences. Programs for computing the direct and indirect (kernels) terms and for the solution of the equations written in Algol language were prepared for the University of London Atlas computer. The equations are then solved at different incident neutron energies. (auth) (UK)

17698 STUDY OF THE REACTION ^{4}He(e,e'd)^{2}H. Skopik, Dennis Michael. Washington, D. C.; American Univ. (1970). 87p. University Microfilms Order No. 70-22,778.

Thesis.

The differential cross section of ^{4}He(e,e'd)^{2}H was measured at six angles and over an energy interval of 35–50 MeV. Since the center of mass and charge coincide, the reaction is expected to be primarily E2. The measured angular distribution of the deuterons is consistent with $\sin^2\theta\cos^2\theta$. The measured cross section is a factor of 10 lower than the predictions of earlier theory. Calculations in a direct reaction model were performed in an attempt to fit the magnitude of the experimental cross section and its energy dependence. (Diss. Abstr. Int., B)

17699 STUDY OF THE ^{3}H(p,p)^{3}H, ^{3}He(p,p)^{3}He, AND ^{3}H(p,n)^{3}He REACTIONS AT E_p = 156 MeV. Narboni, Ph.; Langevin-Joliot, H.; Didelez, J. P.; (and others) (Univ. Paris, Orsay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.81-2(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Differential cross sections were measured, using tritium and ^{3}He gaseous targets at low temperature. The (p,p) reactions were studied from 16° to 178° (CM) and the (p,n) reactions from 109° to 178° (CM). For backward angles, the ^{3}H(p,n)^{3}He cross sections are about one fourth as large as for elastic scattering. Preliminary theoretical calculations do not explain this difference. (France)

17700 COHERENT SCATTERING OF PIONS AND PROTONS ON ^{4}He, ^{3}He, ^{3}H AT ABOUT 1 GeV. Fain, J.; Gardes, J.; Meritet, L.; Querrou, M.; Riss, D. (Univ., Clermont-Ferrand, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.104-5 (May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The differential cross section for coherent elastic scattering of 1.12 GeV pions on ^{4}He was measured. The recoil nucleus detec-

XUM

tion method was used. Some preliminary results concerning the scattering of 600 MeV protons on ^{4}He are also given. (auth) (France)

17701 D(p,2p)n REACTION AT 156 MeV. Takeutchi, F.; Yuasa, T.; Kuroda, K.; Sakamoto, Y. (Univ. Paris, Orsay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.186-7 (May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Quasi-free p-p scattering was studied at 156 MeV. The kinematic conditions were completely determined by measuring the angles of emerging protons and the kinematic energy of one of them. The experimental differential cross sections were compared to calculations based on the impulse approximation (spectator model) and also including effects of multiple scattering and final-state interactions. (auth) (France)

17702 USE OF NON-LOCAL SEPARABLE POTENTIALS IN THE STUDY OF $\alpha-\alpha$ ELASTIC SCATTERING. Pigeon, J.; Barguil, J.; Fayard, C.; Lamot, G. H.; El Baz, E. (Univ., Lyon). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.194-5(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Non-local separable potentials were used for the $\alpha-\alpha$ elastic scattering study below 100 MeV. Different shapes were tried giving a good agreement with experimental data. (auth) (France)

17703 QUASI-FREE SCATTERING IN THE D(p,2p)n REACTION FROM 25 TO 40 MeV. Durand, J. L.; Arvieux, J.; Fiore, A.; Perrin, C. (Univ., Grenoble, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.196-7(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The D(p,2p)n differential cross section $d^3\sigma/d\Omega_1 d\Omega_2 dE_1$ was measured in absolute value at bombarding energies of 25, 30, 35, and 40 MeV for a set of angles where the spectra were dominated by the direct knock-out mechanism. At these energies experimental cross sections are smaller than the cross sections given by impulse approximation calculations. (auth) (France)

17704 STUDY OF THE ELASTIC SCATTERING ^{4}He(t,t)^{4}He. Wery, M.; Seltz, R.; Bing, O.; Bonneaud, G.; Kraus, L. (CNRS, Strasbourg). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.201-2(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Cross sections for the elastic scattering of t by ^{4}He were measured in the range $0.8 \leq E_t \leq 3.85$ MeV (lab. system). Excitation functions were measured at center of mass angles 49.50°, 61.92°, 69.24°, 93.71°, and 108.44°. Angular distributions were measured at E_t = 1.75, 2.15, and 3.80 MeV. The resonance of 4.65 MeV in ^{7}Li was observed. A data analysis in the framework of S-matrix theory confirms spin and parity assignments of $\frac{1}{2}^-$ for this resonance. (auth) (France)

17705 STUDY OF THE $P_{\frac{3}{2}}$ AND $P_{\frac{1}{2}}$ STATES OF ^{5}Li BY THE RESONANCE SCATTERING ^{4}He(p,p)^{4}He. Kraus, L.; Linck, I.; Wery, M. (CNRS, Strasbourg). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.203-4(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The scattering of protons in helium gas was measured in the energy range 0.5 to 2 MeV. An analysis of various cross-section data is presented for E_p = 0.5 to 18 MeV. (auth) (France)

17706 MECHANISM OF THE ^{3}He(d,p)^{4}He REACTION FROM 2 TO 27 MeV. Allab, M.; Beaumevieille, H. (Institut d'Etudes Nucleaires, Algiers). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.207-8(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The angular distributions of the ^{3}He(d,p)^{4}He reaction was analyzed at $2 < E_d \leq 27$ MeV using a formalism describing simultaneously direct and compound processes. The direct mechanism is described by D.W.B.A. approximation; the characteristics of ^{5}Li* excited states around $E_x \simeq 20$ MeV were examined. (auth) (France)

17707 (INP-721) ELASTIC SCATTERING OF HIGH ENERGY HADRONS FROM DEFORMED ^{12}C NUCLEUS. Lesniak, H.; Lesniak, L. (Institute of Nuclear Physics, Krakow (Poland)). 1970. 17p. Dep. NTIS (U. S. Sales Only).

Elastic scattering of high-energy protons from deformed ^{12}C nuclei is calculated using the multiple collision theory and deformed harmonic oscillator wave functions. Calculated differential cross sections are compared with the experimental data. Good agreement is found for the oblate deformation. (auth)

17708 (INR-1200) ^{9}Be/d,α_0/^{7}Li/g.s./ AND ^{9}Be/d, α_1/^{7}Li*/ 470 keV/ REACTIONS IN THE 0.9-2.2 MeV ENERGY RANGE. Saganek, A.; Sledzinska, I.; Turos, A.; Wilhelmi, Z.; Zwieglinski, B. (Institute of Nuclear Research, Warsaw (Poland)). 1970. 29p. Dep. NTIS (U. S. Sales Only).

Angular distributions and total cross sections of ^{9}Be(d,α_0) ^{7}Li(g.s.) and ^{9}Be(d,α_1) ^{7}Li*(470 keV) reactions were measured over the angular range from 15 to 165° (LAB.) in 100-keV steps. Detailed description of the experimental technique is given. (auth)

17709 (JINR-P15-5519) PROBLEM OF THE NEAR-THRESHOLD ANOMALY IN INTERACTION OF PROTONS WITH ^{9}Be NUCLEI AT 2.06 MeV. Gopych, P. M.; Salatskii, V. I.; Sizov, I. V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1971. 6p. (In Russian). Dep. NTIS (U. S. Sales Only).

The elastic scattering of protons on the ^{9}Be nuclei is measured for angles of 120° and 135° of lab. sys. in the energy range 1.97 to 2.18 MeV. No anomalies denoting the existence of narrow resonances in the range of the threshold (2.06 MeV) of the reaction ^{9}Be(p,n)^{9}B are observed. (auth)

17710 REACTIONS (p,t) AND (p,^{3}He) ON LIGHT NUCLEI. Olsen, David Kurt. Minneapolis; Univ. of Minnesota (1970). 139p. University Microfilms Order No. 70-20,222.

Thesis.

Differential cross sections are measured for (p,t) and (p,^{3}He) reactions at 39.8 MeV from ^{14}C, ^{17}O, ^{18}O, ^{20}Ne, and ^{22}Ne targets to selected states in the residual nuclei. The ^{14}C(p,t)^{12}C data and previous 1p shell (p,^{3}He) data are compared with DWBA calculations using intermediate-coupled, 1p shell wave functions. For several transitions within the 1p shell for which both L = 0 and L = 2 are allowed, the shapes of the angular distributions indicate that the L = 0 component is being predicted to be too large relative to the L = 2 component. Generally, the calculated integrated cross section ratios to the ground states are in reasonable agreement with experiment. The ^{22}Ne(p,t)^{20}Ne data to positive parity, K = 0 rotational bands is compared with DWBA calculations using pure Nilsson wave functions for these states, and there is marked disagreement between the calculated and experimental integrated cross section ratios. In addition, two cases are found in which the present theory is inadequate to predict the (p,t) to (p,^{3}He) cross section ratios to isobaric analog states when both T = 0 and T = 1 are allowed for the (p,^{3}He) reaction. Several instances are also observed in which the experimental transitions proceed in violation of the standard selection rules. (Diss. Abstr. Int., B)

17711 1^+ ISOSPIN DOUBLET IN ^{12}C. Reisman, Frederic David. College Park, Md.; Univ. of Maryland (1970). 67p. University Microfilms Order No. 70-23,312.

Thesis.

Isospin mixing between the 12.71-MeV ($J^\pi = 1^+$, T = 0) and 15.11-MeV ($J^\pi = 1^+$, T = 1) energy levels of ^{12}C was studied using the ^{13}C(^{3}He,α)^{12}C reaction using 2.5-MeV ^{3}He particles. The relative α-particle widths Γ_α/Γ were measured for both levels and used to determine the isospin mixing parameter for the two levels. In addition, the γ-ray branching ratios of the levels to the ground state and several excited states of ^{12}C were measured. The results were compared with theoretical calculations of M1 transition strengths. (Diss. Abstr. Int., B)

17712 STUDY OF ^{6}Li STATES FROM THE ^{7}Li(^{3}He,α)^{6}Li REACTION. Kane, Raymond Joseph. Washington, D. C.; Georgetown Univ. (1970). 154p. University Microfilms Order No. 70-21,273.

Thesis.

A study of the energy levels of ^{6}Li from the ^{7}Li(^{3}He,α)^{6}Li reaction is made. A coincidence timing technique is combined with one- and two-parameter analysis for the identification of the energy levels of the ^{6}Li nucleus excited in this reaction. Isospin is thought to be a good quantum number for light nuclei and energy levels of relatively low excitation energy. Isospin selection rules impose restrictions on the decay modes of levels for which isospin is a valid quantum number. The applicability of isospin selection rules to the ^{6}Li nucleus and the validity of present isospin assignments for ^{6}Li are studied by direct observation of ^{7}Li(^{3}He,α)^{6}Li decay products. (Diss. Abstr. Int., B)

17713 LEVELS AT 4,63 MeV AND 5,6 MeV IN ^{7}Li STUDIED IN (d,p) REACTIONS. Holtebekk, Trygve; Monsrud, Arne E. (Univ. of Oslo). Phys. Norv.; No. 3, 215-19(1969).

The ^{6}Li(d,p)^{7}Li reaction leading to the 4.63 MeV level and an assumed level near 5.5 MeV in ^{7}Li was studied with deuterons of 1.88 MeV energy. Values obtained for the excitation energy and the width of the 4.63 MeV level are in good agreement with previously accepted values. The distribution of protons between 0 and 90° is nearly isotropic. The differential cross section for the reaction was determined to be (0.6 ± 0.3) mb/sr. A proton peak corresponding to a level at (5.65 ± 0.02) MeV in ^{7}Li, due to the ^{6}Li(d,p)^{7}Li reaction is lacking. (auth) (Norway)

17714 POLARIZATION TRANSFER IN THE (p,n) REACTION ON LIGHT NUCLEI AND NUCLEON–NUCLEON PHASE SHIFTS AT 30 AND 50 MeV. Ramavataram, K.; Ho-Kim, Q. (Univ. Laval, Quebec). Nucl. Phys.; A156: 395-405(1970).

The polarization transfer coefficient α_1 for neutrons emitted in the forward direction in the charge exchange (p,n) reactions on ^{2}H, ^{6}Li, and ^{7}Li target nuclei for incident proton energies of 25 to 100 MeV was calculated in the impulse approximation. The energy-dependent and energy-independent nucleon-nucleon phase shifts of Arndt and McGregor and the Yale phase shifts were used. Experimental values of α_1 recently obtained at proton energies of 30 and 50 MeV are in disagreement with the results of the calculation based on Yale phase shifts, but show a preference for Arndt-McGregor phase shifts. (auth)

17715 A STUDY OF SOME (p,t) AND (p,^{3}He) REACTIONS INDUCED BY 49.5 MeV POLARIZED PROTONS. Nelson, J. M.; Chant, N. S.; Fisher, P. S. (Nuclear Physics Lab., Oxford). Nucl. Phys.; A156: 406-48(1970).

The polarization analyzing powers of the reactions ^{12}C(p,t)^{10}C, ^{16}O(p,t)^{14}O, ^{16}O(p,^{3}He)^{14}N, and ^{28}Si(p,t)^{26}Si were measured using a 49.5-MeV polarized proton beam. The differential cross sections were measured in companion experiments with an unpolarized beam. The predictions of a spin-dependent distorted wave Born approximation theory were compared with the data and satisfactory agreement was obtained only if finite-range corrections are included in the calculations. Optical-model potentials, which reproduce elastic scattering data, were used in all calculations. Despite moderate insensitivity of the predictions to the presence of spin-orbit forces, the strength of the tri-nucleon spin-orbit potential was deduced to be less than 5 MeV. Calculations in which different transferred angular momenta enter coherently were carried out and the effect of the interference term is shown to be small for the case considered. (auth)

17716 THE PHOTODISINTEGRATION OF ^{12}C LEADING TO EXCITED STATES OF ^{11}B AND ^{11}C. Medicus, H. A.; Bowey, E. M.; Gayther, D. B.; Patrick, B. H.; Winhold, E. J. (Atomic Energy Research Establishment, Harwell, Eng.). Nucl. Phys.; A156: 257-75(1970).

Gamma spectra from the reactions ^{12}C(γ,nγ′) and ^{12}C(γ,pγ′) were measured at 112° using bremsstrahlung photons with end-point energies 24.5, 27, 33, and 42 MeV in order to study the transitions from the giant dipole resonance in ^{12}C to excited states in ^{11}B and ^{11}C. The γ rays were detected in a Ge(Li) detector. Using measured response functions of the detector to γ rays the fractions of decays of the excited ^{12}C nucleus that proceed through the various excited states of the residual nucleus were determined. The fractions of neutrons and protons emitted to the ground states of ^{11}C and ^{11}B were found by measuring the ^{11}C β^{+} activity, combining it with the known $(\gamma,n_0)/(\gamma,p_0)$ integrated cross-section ratio. Approximately 90% of the neutron and proton emission proceed through the ground states, with approximately 5% to each of the first excited states and the remainder shared among the higher levels of odd and even parity. The behavior of the cross sections for transitions to the excited states was deduced as a function of excitation energy, and it appeared that most of the cross sections are concentrated into regions only a few MeV wide. The results are interpreted in terms of current models of the giant resonance in ^{12}C and of the unified model for the states in ^{11}B and ^{11}C. It appeared that only a quite complex structure of the ^{12}C ground state can explain the excitation of these many states of negative and positive parity. Comparison of proton and neutron emitting reactions to analog states also permits some conclusions to be drawn about isospin impurities in the giant resonance. (auth)

17717 ION–ION POTENTIALS IN A TWO CENTER MODEL. Mosel, U. (Univ. of Tennessee, Knoxville, Oak Ridge National Lab., Tenn.); Thomas, T. D.; Riesenfeldt, P. Phys. Lett.; 33B: 565-7(21 Dec 1970).

The two center shell model was used to calculate ion–ion potentials for ^{12}C + ^{12}C, ^{16}O + ^{16}O, and ^{18}O + ^{18}O. Because of the ion shell structure the ^{16}O + ^{16}O potential is significantly shallow, in agreement with optical model potentials derived from scattering experiments. A mechanism is proposed to calculate the transition between adiabatic and nonadiabatic potentials as a function of the ion energies. (auth)

17718 CAN THE 7.65 MeV 0^{+} STATE IN ^{12}C BELONG TO A LINEAR CHAIN OF α-CLUSTERS? De Takacsy, N.; Das Gupta, S. (McGill Univ., Montreal). Phys. Lett.; 33B: 556-8 (21 Dec 1970).

The low-lying bands of ^{12}C are studied using an α-cluster model that allows for the mixing of intrinsic configurations of different shapes through an algebraic approximation to the required Hill-Wheeler integrals. The intrinsic state for the ground state band does not deviate much from an equilateral triangle of three α-clusters. However, the linear chain configuration of three α's is unstable against deviation from linearity and as a result, the second intrinsic state of positive parity is very far from a linear chain of three α's. (auth)

17719 n-p CORRELATIONS IN THE ^{12}C(d,pn)^{12}C REACTION: A SEARCH FOR PROXIMITY SCATTERING AND SINGLET DEUTERON CONTRIBUTIONS. Sandler, Julian. Houston Tex.; Rice Univ. (1970). 162p. University Microfilms Order No. 70-23,570.

Thesis.

The ^{12}C(d,pn)^{12}C reaction was studied in a kinematically complete experiment at geometries suitable for proximity scattering and singlet deuteron reaction mechanisms. The reaction is dominated by sequential decay via the 3.51--3.56 MeV doublet in ^{12}N. Evidence for singlet deuteron production at low bombarding energies is presented. Published reports of proximity scattering contributions to this reaction are not substantiated by this study. (Diss. Abstr. Int., B)

17720 THEORY OF α_0 ANGULAR DISTRIBUTIONS FROM THE REACTION ^{10}B(d,α) WITH THE POSSIBILITY OF A DYNAMICAL CLUSTER STRUCTURE OF ^{10}B. Nalda, J.; Barriuso, T.; Casanova, J. (Instituto de Estudios Nucleares, Valladolid, Spain). Nucl. Phys.; A149: 350-62(1970). (In French).

The angular dependence of the differential cross section is calculated by means of dispersion theory, with excitation energies from 2 to 14 MeV, for three non-relativistic Feynman diagrams. The contribution of these internal mechanisms is studied by the shift of singularities and a correspondence for each mechanism with a dynamical cluster structure of ^{10}B. Theoretical results interpret the experimental facts in the above interval of energies. (auth)

17721 ELECTRON SCATTERING FROM ^{13}C. Yang, C. S., Tomusiak, E. L.; Gupta, R. K.; Caplan, H. S. (Saskatchewan Accelerator Lab., Saskatoon). Nucl. Phys.; A162: 71-81(1971).

Cross sections for elastic and inelastic electron scattering from ^{13}C have been measured using both enriched solid and gas targets. Analysis of the elastic form factor supports an earlier result that the rms charge radius of ^{13}C is smaller than that of ^{12}C. Ten levels at excitation energies of 3.69, 7.55, 8.86, 9.50, 11.72, 11.97, 12.32, 13.76, 15.11 and 19.15 MeV were observed at momentum transfers ranging from 0.63 to 1.23 fm^{-1}. Calculations of the inelastic form factors using the wave functions of Boyarkina, Cohen and Kurath, and Goldhammer, Hill and Nachamkin are presented and compared with the existing experimental results for the levels at 3.69 MeV ($\frac{3}{2}^{-}$, $\frac{1}{2}$) 7.55 MeV ($\frac{5}{2}^{-}$, $\frac{1}{2}$) and 15.11 MeV ($\frac{5}{2}^{-}$, $\frac{3}{2}$). (auth)

17722 MUON CAPTURE RATE IN ^{16}O AND THE GROUND-STATE WAVE FUNCTION. Eriksinae, P.; Saarela, M.; Kallio, A. (Dept. of Theoretical Physics, Oulu, Finland). Phys. Lett.; 34B: 5-6(18 Jan 1971).

The effect of deformed components in ^{16}O ground-state wave function upon total μ-capture rate is studied. It is found that the discrepancy between theory and experiment is reduced to great extent both in group summation method and in closure approximation. (auth)

17723 LEVELS OF ^{10}B FROM ^{9}Be(p,d_0)^{9}Be, ^{9}Be(p,α_0)^{6}Li, AND ^{9}Be(p,α_1)^{6}Li* REACTIONS. Tu, Joseph Hoang Thanh. College Park, Md.; Univ. of Maryland (1969). 196p. University Microfilms Order No. 70-24,346.

Thesis.

Differential cross sections for ^{9}Be(p,d_0)^{9}Be and ^{9}Be(p,α_0)^{6}Li were measured at lab angles of 15, 30, 50, 70, 90, 110, 130, 150° at proton energy from 0.20 to 2.00 MeV corresponding to excitation of ^{10}B from 6.77 to 8.39 MeV. Differential cross sections for ^{9}Be(p,α_1)^{6}Li* were also obtained at 20, 30, 50, 70, 90, 110, 130, and 150° at proton energy from 1.1 to 2.5 MeV. The total cross sections for d_0 and α_0 exhibit definite peaks at 0.330, 0.450, 0.935 MeV superposed on a broad background. The α_1 total cross section shows a single 1-MeV broad peak centered at 1.8 MeV. Strongly energy-varying asymmetry in the background of both the d_0 and α_0 data indicate existence of broad interfering levels. The

data were analyzed using a "multi-level" R-matrix computer program, including all open channels, and incorporating both resonant and nonresonant effects. The latter originates from the distant-level term R^0 and simultaneously provides the correction of the usual hard-sphere phase-shifts through the diagonal elements of R^0 obtained by an optical model calculation and gives nonresonant reaction terms through its nondiagonal elements. These terms, although small by themselves, interfere strongly with the resonances. They also provide a reasonable fit to the reaction cross-sections at higher energies which exhibit a marked "direct" character. Analysis was made extremely complicated by the fact that little was previously known about the levels involved, even their existence. The following conclusions are based on a consistent set of levels and their characteristics which give a good fit to all the data. Nine levels were included. These are at E_p = 0.325, 0.375, 0.450, 0.650, 0.960, 1.10, 1.29, 1.55, 1.80 with respective $J\pi$ of 1^-, 1^+, 2^-, 1^-, 3^+, 2^-, 1^+, 2^+, and Γ of 125, 110, 89, 425, 135, 200, 220, 370, 1100 keV. Of these the 0.325, 0.96, 1.29 levels have been seen by proton elastic scattering and radiative capture. The other levels which are postulated here in order to fit the present data, should show up in $^6Li(\alpha,\alpha)^6Li$ or $^6Li(\alpha,\gamma)^{10}B$, or in $^{10}B(d,d')$. Furthermore, the levels at 0.65, 1.55, 1.80 might also be checked by $^9Be(p,\gamma)$ or $^9Be(p,p)$ since the proton widths are not too small. (Diss. Abstr. Int., B)

17724 VECTOR ANALYSING POWER OF THE PICK-UP REACTION $^{12}C(d,t)^{12}C$. Debenham, A. A.; Griffith, J. A. R.; Irshad, M.; Roman, S. (Univ. of Brimingham, Eng.). Nucl. Phys.; A160: 649-53(1971).

The vector analyzing power was measured for the reaction $^{13}C(d,t)^{12}C$ initiated by 12.1-MeV polarized deuterons and proceeding to the ground and 4.43-MeV states of ^{12}C. Large analyzing powers were observed especially for the ground-state reaction. The results are compared with the predictions of the distorted-wave Born approximation and with data for the $^{12}C(d,p)^{13}C$ reaction. (auth)

17725 THE d-^{12}C OPTICAL POTENTIAL BELOW 12 MeV. Wilsch, H.; Clausnitzer, G. (Univ., Erlangen, Ger.). Nucl. Phys.; A160: 609-17(1971).

The analyzing power of ^{12}C for the elastic scattering of vector-polarized deuterons at 9, 10, 11, and 12.0 MeV is measured. A simultaneous optical-model analysis of the cross section and analyzing power shows clearly that there is no reasonable optical potential of the usual form in this energy region. (auth)

17726 COLLECTIVE NATURE OF THE LOW-LYING STATES IN ^{27}Al AND ^{23}Na INVESTIGATED WITH (p,α) REACTIONS. Philipp, G.; Emmerich, W.-D.; Hofmann, A.; Kroner, G.; Thomas, K. (Univ., Erlangen, Ger.). Nucl. Phys.; A160: 654-64(1971).

A tandem Van de Graaff accelerator was used to study (p,α) reactions with the target nuclei ^{31}P, ^{30}Si, ^{27}Al, and ^{26}Mg. At bombarding energies between 5.8 and 8.2 MeV and between 10 and 11.5 MeV differential cross sections for the excitation of the low-lying states of the residual nuclei were measured. The spin dependence of the integrated cross sections and angular distributions are discussed using collective models. (auth)

17727 DEFORMATIONS OF LIGHT NUCLEI IN THE LOCAL DENSITY APPROXIMATION. Zofka, J.; Ripka, G. (CEN de Saclay, Gif-sur-Yvette, France). Phys. Lett.; 34B: 10-12(18 Jan 1971).

The states of doubly even N = Z nuclei from ^{12}C to ^{40}Ca are calculated in Hartree–Fock theory using the density-dependent effective interaction of Negele. The results are compared to those obtained with the effective interaction of Brink and Boeker. (auth)

17728 NUCLEAR BREMSSTRAHLUNG FROM A SPIN-ZERO TARGET. Dale, C.; Strobel, G. L. (Univ. of Georgia, Athens). Nucl. Phys.; A156: 600-8(1970).

From Low's theorem the low-energy limit of the bremsstrahlung amplitudes can be calculated from the corresponding elastic scattering cross section. This was applied to proton bombardment of ^{12}C. The results gave a differential cross section that agreed quantitatively with the experimental data for bremsstrahlung induced by 140-MeV lab energy protons on ^{12}C. (auth)

17729 CONTINUUM CALCULATION OF THE ^{12}C PHOTODISINTEGRATION LEADING TO LOW-LYING MASS-11 STATES. Birkholz, J. (Technische Hochschule, Darmstadt, Ger.). Phys. Lett.; 34B: 1-4(18 Jan 1971).

The shell-model approach to nuclear reactions is applied to the photonuclear giant resonance of ^{12}C. A separable approximation method is presented and its accuracy is tested. The characteristic features of the (γ,n) and (γ,p) cross sections are fairly well described by taking into account the low-lying excited states of the residual mass-11 system. (auth)

17730 OPEN-SHELL RANDOM-PHASE APPROXIMATION AND THE NEGATIVE PARITY EXCITATIONS OF ^{12}C. Rowe, D. J.; Wong, S. S. M. (Univ. of Toronto). Nucl. Phys.; A153: 561-85(1970).

The equations-of-motion formalism was used to extend the RPA (random-phase approximation) to the negative parity excitations of open-shell nuclei. Thus the open-shell RPA extends the simple microscopic description of collective vibrations to non-simple nuclei and renders a whole new range of nuclei accessible to microscopic theoretical investigation. As a simple example, the model is applied to describe the negative parity excitations of ^{12}C based on an uncorrelated ground state taken from a shell-model calculation within the $1p_{\frac{3}{2}}$ and $1p_{\frac{1}{2}}$ subshells. Comparison is made with the (much less realistic) standard RPA for which the uncorrelated ground state is taken to be the closed $1p_{\frac{3}{2}}$ sub-shell. (auth)

17731 DEUTERON INDUCED REACTIONS ON ^{13}C. Liebenauer, Paul Henry. Cleveland; Case Western Reserve Univ. (1970). 78p. University Microfilms Order No. 70-25,888.

Thesis.

Excitation functions and angular distributions were obtained for most of the kinematically available exit channels from the ^{13}C + d system. Excitation functions in the energy interval 1.0 to 2.7 MeV were obtained at selected angles for the following: $^{13}C(d,p_0)^{14}C$ (g.s.), $^{13}C(d,p_1)^{14}C$ (6.09 MeV), $^{13}C(d,p_3)^{14}C$ (6.72 MeV), $^{13}C(d,p_4)^{14}C$ (6.89 MeV), $^{13}C(d,d)^{13}C$ (elastic), $^{13}C(d,t_0)^{12}C$ (g.s.), $^{13}C(d,\alpha_0)^{11}B$ (g.s.), $^{13}C(d,\alpha_1)^{11}B$ (2.14 MeV), and $^{13}C(d,\alpha_2)^{11}B$ (4.46 MeV). Angular distributions in the angular range 20 to 160° were obtained at selected energies for the following: $^{13}C(d,p_0)^{14}C$ (g.s.), $^{13}C(d,p_3)^{14}C$ (6.72 MeV), $^{13}C(d,p_4)^{14}C$ (6.89 MeV), $^{13}C(d,t_0)^{12}C$ (g.s.), $^{13}C(d,\alpha_0)^{11}B$ (g.s.), and $^{13}C(d,\alpha_1)^{11}B$ (2.14 MeV). The data show that the reaction mechanism does not proceed solely via compound nucleus, but that direct processes must be considered. Resonances in the excitation functions were used to obtain values for the energy levels in the compound nucleus, ^{15}N, in the range of excitation energies between 17.1 and 18.5 MeV. The results are in good agreement with previous work. (Diss. Abstr. Int., B)

17732 COULOMB ENERGY OF A = 6 NUCLEI. Alessandrini, V. A.; Avalos, D. R.; Epele, L. N.; Gregorio, M. A.; Fanchiotti, H. (Univ. Nacional, La Plata). Nucl. Phys.; A150: 273-81(1970).

The binding energy of the 3.562-MeV excited state of ^{6}Li, which belongs to an isotopic triplet together with the ground state of ^{6}He and the (unstable) nucleus ^{6}Be, is computed by introducing Coulomb effects in a three-body model of ^{6}He. The calculation is carried out in the framework of the Faddeev–Lovelace equations, and the results obtained are in excellent agreement with experiments. (auth)

17733 COMMENT ON THE ISOSPIN-NONCONSERVING REACTION $^{12}C(d,\alpha)^{10}B(0^+,T=1)$. Weller, H. R. (Univ. of Florida, Gainesville). Phys. Rev., C; 2: 321-2(Jul 1970).

The second-order ^{6}Li mechanism proposed by Noble can account for the recent observation of fine structure if the $^6Li^*$ and ^{8}Be nuclei are coupled to states of definite J^π. (auth)

17734 SEQUENTIAL DECAY IN THE $^7Li(\alpha,t)^8Be(\alpha)^4He$ AND $^7Li(\alpha,\alpha')^7Li^*(t)^4He$ REACTIONS AT E_α = 50 MeV. Lambert, J. M.; Treado, P. A.; Beach, L. A.; Theus, R. B.; Petersen, E. L. (Naval Research Lab., Washington, D. C.). Nucl. Phys., A152: 516-28(1970).

The $^7Li(\alpha,t)^8Be(\alpha)^4He$ and $^7Li(\alpha,\alpha')^7Li^*(t)^4He$ reactions have been observed in a kinematically complete experiment with E_α = 50 MeV, particle identification, and on-line computer coincidence electronics. Sequential decay through the ground, 2.9, 11.4, 16.6 and 16.9, and 19.9 MeV states of ^{8}Be and the 4.63 and 7.48 MeV states of ^{7}Li has been observed. Triton angular distributions for the decay through the ground state of ^{8}Be were obtained with and without coincidence requirements. Agreement of these distributions implies isotropic decay in the c.m. of the ^{8}Be ground state. The contribution of quasi-elastic processes is small due to the specific limited portion of phase space observed. (auth)

17735 EXCITATION FUNCTIONS OF PROTON-INDUCED REACTIONS ON OXYGEN AT MEDIUM ENERGIES. Bunker, Stephen Norbert. Los Angeles; Univ. of California (1970). 160p. University Microfilms Order No. 70-19,835.

Thesis.

Elastic and inelastic protons scattered from ^{16}O were observed at laboratory angles between 60 and 160° with NaI(Tl) detectors. The incident beam energy was varied in approximately 200 keV steps from 21.25 to 33.12 MeV and in 500 keV steps at higher energies up to 38.50 MeV. Angular distributions at the same energies were also taken for inelastic scattering with Q = –6.05, –6.13 MeV (doublet), and Q = –8.88 MeV. The excitation functions for the (p,d) and (p,α) reactions were measured at 70° for the same energy range, and the (p,t) reaction was observed above 31 MeV. The elastic data are partially integrated over the angular range 100 to 160°. Several peaks are observed both in the normal exci-

tation functions and in the integrated curves. These peaks exist with varying magnitudes in most of the reaction channels studied. An optical-model-with-resonance analysis of the data is presented, which indicates states at E_p = 21.6, 22.6, 23.5, 24.7, 26.4, 28.3, and 30.1 MeV with J^π assignments of $^9/_2^+$, $^9/_2^+$, $^7/_2^+$, $^7/_2^+$, $^7/_2^-$, $^5/_2^-$, and $^5/_2^+$. A coupled-channels calculation is also performed on the elastic and inelastic (Q = −6.05, −6.13 MeV) channels, which assumes coupling to a vibrational state. (Diss. Abstr. Int. B.)

17736 $^{15}N(p,\gamma_{1}\gamma)^{16}O$ AND THE DEFORMED GIANT RESONANCE IN ^{16}O. Barnett, A. R.; Lowe, J. (Univ. of Minnesota, Minneapolis). Phys. Rev. Lett.; 26: 266-9(1 Feb 1971).

The cascade γ-ray decay of states at 19.9 and 20.4 MeV in ^{16}O was observed using the reaction $^{15}N(p,\gamma_{1}\gamma)^{16}O$. These states appear to have the properties expected of giant dipole states based on the $J^\pi = 3^-$ state at 6.13 MeV. Together with earlier work, the result implies that giant dipole states based on the $J^\pi = 0^+$ state at 6.05 MeV are displaced significantly from the energies expected from a simple weak-coupling model. (auth)

17737 $^{16}O(\alpha,\gamma)^{20}Ne$ AND $^{28}Si(\alpha,\gamma)^{32}S$ REACTIONS AT LOW ENERGY. Toevs, James Waldo. Pasadena, Calif.; California Inst. of Tech. (1970). 136p. University Microfilms Order No. 70-18,047.

Thesis.

The $^{28}Si(\alpha,\gamma)^{32}S$ and $^{16}O(\alpha,\gamma)^{20}Ne$ reactions were investigated to provide data for the calculation of the stellar rates of these reactions. The gamma rays were counted with a NaI(Tl) detection system having a high detection efficiency which is approximately independent of the gamma-ray cascade structure of a nuclear level; the detection efficiency was determined experimentally. The reaction $^{28}Si(\alpha,\gamma)^{32}S$ was studied for He^+ bombarding energies from 1.4 to 2.7 MeV. In this region five new resonances were found; and their strengths, $(2J + 1)\Gamma_\alpha\Gamma_\gamma/\Gamma$, were measured. An upper limit for the cross section was also established for bombarding energies below 1.7 MeV. The $^{16}O(\alpha,\gamma)^{20}Ne$ reaction was investigated in the energy region from 0.85 to 1.8 MeV; strengths for the previously known resonances were measured, and an upper limit for the cross section was determined for energies below 1 MeV. Stellar interaction rates and photodisintegration rates are calculated from the measured resonance strengths, and semi-empirical fits to these rates are given to facilitate astrophysical calculations. (Diss. Abstr. Int. B.)

17738 NOVEL METHOD FOR THE MEASUREMENT OF EXCITATION FUNCTIONS FOR CHARGED-PARTICLE REACTIONS ON GASES. Rautenbach, W. L.; Steyn, J.; Richards, D.; Smith, H. J. (National Physical Research Lab., Pretoria). pp 365-72 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

Excitation functions are presented for the production of ^{18}F by irradiation of ^{16}O with 32 MeV α-particles and 35 MeV ^3He ions at the Pretoria cyclotron. The maximum measured cross-section for the production of ^{18}F by ^3He irradiation of oxygen was 380 mbarn at 7.7 MeV. The excitation curve for the production of ^{18}F by irradiation of oxygen with α-particles reached 120 mbarn at 31.5 MeV, and was still rising at this energy. The ^{18}F activity was determined absolutely by $4\pi-\beta\gamma$ coincidence measurements which were carried out directly on the aluminium catcher foils. The difficulties of using the "stacked layer" technique on gaseous elements were overcome by introducing the gas between a number of accurately-spaced thin metal foils. The foils also served to degrade the beam energy. Provided that the gas layers were thin enough, all the radioactive nuclei produced in the gas by a charged-particle beam passing through the stack were collected by recoil onto the foil situated in the forward direction. (auth) (UK)

17739 ELASTIC SCATTERING OF 166 MeV ALPHA PARTICLES. Brissaud, I.; Tatischeff, B. (Univ. Paris, Orsay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.85-6 (May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The elastic scattering of 166 MeV alpha particles on C, Si, Sn, and Pb was investigated. Optical potentials were calculated using effective alpha particle–nucleon interaction and matter distribution. This method was also used to study other experimental results, at lower energies. (auth) (France)

17740 SCATTERING OF 14 MeV POLARIZED NEUTRONS ON ^{12}C AND ^{16}O. Sene, R.; Delpierre, P.; Kahane, J.; De Crespin de Billy, M. (College de France, Paris). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.88-9(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The distribution of the asymmetry in the elastic scattering of 14.1 MeV polarized neutrons on C-12 and O-16 was measured and was interpreted using an optical potential. (France)

17741 STUDY OF THE FIRST EXCITED STATE OF ^{14}N FROM THE INELASTIC SCATTERING OF 24 MeV POLARIZED PROTONS. Escudie, J. L.; Tarrats, A. (CEA, Saclay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.94-5(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The inelastic scattering of polarized protons of 24 MeV on ^{14}N, leading to the first excited state was studied in order to investigate the effect of the tensor force. The analysis presently in progress uses a microscopic D.W.B.A. approach including charge exchange effects. (auth) (France)

17742 QUASI-ELASTIC SCATTERING OF HIGH ENERGY ELECTRONS ON ^{12}C. Berthot, J.; Bertin, P. Y.; Isabelle, D. B. (Univ., Clermont-Ferrand, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.106-7(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Energy spectra for quasi-elastic scattering were established for different kinematic conditions. The results are in good agreement with the shell model predictions. However, at least two structures were observed in the region of high-energy excitation. (auth) (France)

17743 MECHANISM OF REACTIONS $^6Li(\alpha,d)^8Be$ AND $^6Li(\alpha,p)^9Be$. Lefevre, C. (Univ., Grenoble, France); Deconninck, G.; Demortier, G.; Longequeue, N. J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.125-6(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Reactions at energies of 28, 32, 36 and 40 MeV, were studied. The results obtained indicate a mechanism of direct reaction between two alpha particles superposed on a diffraction mechanism. (France)

17744 MECHANISM OF (p,n) REACTIONS ON ^9Be. Deconninck, G.; Bodart, F. (Centre de Physique Nucleaire, Louvain, Belg.). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.127-8(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The neutrons emitted in these reactions may arise from diverse mechanisms. Measurements were made in the 2.8 to 4.1 MeV range. The angular distributions of the neutron spectra were obtained at six different energies using time-of-flight measurements. (France)

17745 INTERACTION OF FAST NEUTRONS WITH ^{12}C. Deconninck, G.; Meulders, J. P. (Centre de Physique Nucleaire, Louvain, Belg.). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.129-30(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Elastic and inelastic scattering cross sections of neutrons on ^{12}C were measured between 14 and 20 MeV. Good fits were obtained at 18 MeV with standard optical model parameters and the giant resonance at E_n = 19.6 MeV was studied with a coherent interference mechanism between the potential and the resonant scattering. (auth) (France)

17746 MECHANISM OF (t,d) REACTIONS ON ^6Li, ^9Be, AND ^{10}B WITH TRITON ENERGIES UP TO 3.5 MeV. Bing, O.; Seltz, R.; Gerardin, C.; Wery, M. (CNRS, Strasbourg). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.142-3(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Differential cross sections were measured between 1.5 and 3.5 MeV for the $^6Li(t,d)^7Li$, $^9Be(t,d)^{10}Be$ and $^{10}B(t,d)^{11}B$ reactions going to the ground states of residual nuclei. D.W.B.A. calculations provided satisfactory fits to the ^6Li and ^9Be reactions. For the $^{10}B(t,d)^{11}B$ reaction a single stripping mechanism was unable to explain the large backward peak. (auth) (France)

17747 STUDY OF THE $^{10}B(t,\alpha)^9Be^*$ REACTION INDUCED BY TRITONS WITH ENERGIES UP TO 3.5 MeV. Gerardin, C.; Seltz, R.; Wery, M. (CNRS, Strasbourg). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.144-5(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Differential cross sections were measured between 1.5 and 3.5

XUM

MeV for the $^{10}B(t,\alpha)^{9}Be$ reaction going to the ground state and the 1.75, 2.43 and 3.03 MeV states of ^{9}Be. Most of these reactions proceed predominantly by direct interaction. D.W.B.A. calculation results for pickup are given and discussed. The reaction giving the negative parity states of ^{9}Be apparently proceed by an other direct mechanism. The fit for the 1.75 MeV ($1/2^+$) level is consistent with a $^{8}Be + p + n$ configuration of ^{10}B. (auth) (France)

17748 STUDY OF $^{9}Be(d,p_0)^{10}Be$ AND $^{9}Be(d,t_0)^{8}Be$ REACTIONS FROM 0.24 TO 3.8 MeV. Scheurer, J. N.; Berrada, M.; Frois, B.; (and others) (Univ. Bordeaux, Gradignan, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.146-7(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The reactions (d,p_0) and (d,t_0) on ^{9}Be were studied from 240 keV to 3.8 MeV. Angular distributions are given for 240 keV, 2.2 MeV and 3.8 MeV. The reaction (d,p_0) is analyzed in terms of D.W.B.A. theory. (auth) (France)

17749 STUDY OF $^{11}B(n,n'\gamma)$ REACTIONS. Haouat, G.; Lachkar, J.; Patin, Y.; Sigaud, J. (CEA, Montrouge, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.148-9(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The angular distribution of photons following the $^{11}B(n,n'\gamma)^{11}B$ reaction, at neutron energies of 7.18, 8.5 and 9.72 MeV, was studied; the first and the third energies correspond to compound nucleus resonance. The excitation function at 90° of these photons, was measured in the 4.8 to 9.7 MeV energy range. (auth) (France)

17750 RECOIL-DISTANCE MEASUREMENTS OF LIFE-TIMES. Frick, G.; Haas, F.; Heusch, B.; (and others) (CNRS, Strasbourg). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.158-9(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Recoil-distance measurements of lifetimes of excited states produced in the $^{10}B(\alpha,p)^{13}C$, $^{7}Li(\alpha,n)^{10}B$, $^{27}Al(\alpha,p)^{30}Si$ and $^{27}Al(\alpha,n)^{30}P$ reactions are reported. The mean lives obtained are as follows: 9.9 ± 0.9 ps for the 3.85 MeV level in ^{13}C, 2.15 ± 0.45 ps for ^{10}B (2.15 MeV), 24.2 ± 2.0 ps for ^{30}Si (3.79 MeV) and 55 ± 7 ps for ^{30}P (0.709 MeV). (auth) (France)

17751 MECHANISM OF THE $^{14}N(^{3}He,p)^{16}O$ REACTION AT 3 MeV. Meynadier, C.; Allab, M.; Allard, J. F.; Chambon, B.; Dumazet, G. (Institut d'Etudes Nucleaires, Algiers). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.160-1(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Differential cross-section measurements were made for the $^{14}N(^{3}He,p)^{16}O$ reaction at a bombarding energy of 3 MeV. Angular distributions of some proton groups suggesting a direct process were analyzed with the PWBA theory assuming a deuteron capture. The possible manifestation of the four-point graphs is discussed. (auth) (France)

17752 INTERACTION MECHANISM IN THE $^{11}B(p,\alpha)^{8}Be(0^+)$ REACTION. Cavaignac, J. F. (Univ., Grenoble, France); Longequeue, N.; Honda, T. J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.164-5(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The $^{11}B(p,\alpha)^{8}Be$ (0^+) reaction was studied at E_p = 12, 20, 24 and 30 MeV. A phase wave analysis taking account of the pickup and heavy particle pickup processes fits the experimental results fairly well. (auth) (France)

17753 T = 3/2 STATES IN (p,t) AND (p,^{3}He) REACTIONS ON ^{35}Cl AND ^{37}Cl. Bruandet, J. F.; Longequeue. N.; Longequeue, J. P.; Maillard, J. P.; Vignon, B. (Univ., enoble, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.166-7(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The ^{35}Cl and ^{37}Cl (p,t) and (p,^{3}He) reactions were studied using a 40 MeV proton beam. Isobaric analog states of final nuclei were observed. (auth) (France)

17754 EVIDENCE FOR THE 2p-1t STATES IN ^{17}O BY THE DOUBLE STRIPPING REACTION ON ^{15}N. Lemaire, M. C. (CEA, Saclay, France); Mermaz, M. C.; Seth, K. K.; Scheurer, J. N. J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.174-5 (May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The $^{15}N(^{3}He,p)^{17}O$ reaction was performed with the 18 MeV ^{3}He beam of the Saclay E.N. Van de Graaff Tandem accelerator. A D.W.B.A. angular distribution analysis using the Glendenning two-nucleon transfer formalism for the form factor calculation bears out clearly the general provisions of the Zuker shell model calculations of ^{17}O nucleus. (auth) (France)

17755 THREE-NUCLEON TRANSFER IN (^{6}Li,t) REACTIONS. Bassani, G.; Calamand, A.; Pappalardo, G.; (and others) (CEA, Saclay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.176-7(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The $^{13}C(^{6}Li,t)^{16}O$ and $^{12}C(^{6}Li,t)^{15}O$ reactions have been studied using the 28 MeV beam from the Saclay Tandem Van de Graaff. The angular distributions of the strongly excited states typically exhibit a pronounced forward peaking suggesting an important contribution from a direct reaction mechanism. (auth) (France)

17756 THREE-, FOUR-, AND FIVE-NUCLEON TRANSFER REACTIONS INDUCED BY HEAVY IONS. Roynette, J. C.; Colombani, P.; Jacmart, J. C.; (and others) (Univ. Paris, Orsay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.178-9 (May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Three-, four- and five-nucleon transfer reactions leading to ^{16}O residual nucleus were studied with ^{12}C, ^{16}O, ^{20}Ne beams, between 72 and 100 MeV. Excitation spectra show the population of final states of ^{16}O residual nucleus to be rather selective. (auth) (France)

17757 STUDY OF THE (p,2p) REACTION AT 600 MeV. Kullander, S. (European Organization for Nuclear Research, Geneva). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.182-3 (May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

At 600 MeV (p,2p) reactions were investigated with carbon, silicon, calcium, vanadium targets. 4×10^{6} events are recorded. Preliminary results on the inner shells and the momentum distributions are given. (auth) (France)

17758 STUDY OF THE DISTORTION IN $^{12}C(p,2p)^{11}B_{1p\frac{1}{2}}$ AND $^{40}Ca(p,2p)^{39}K_{2S\frac{1}{2}}$ IN COPLANAR AND NON-COPLANAR GEOMETRY AT 156 MeV. Hourany, E.; Yuasa, T.; Didelez, J. P.; (and others) (Univ. Paris, Orsay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.184-5(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The cross section of the symmetric (p,2p) reaction on ^{12}C and ^{40}Ca was measured with range telescopes, in coplanar and non-coplanar geometry, at 156 MeV. The interpretation is done in the simple impulse approximation and in D W I A using an optical potential deduced from the elastic proton scattering. (auth) (France)

17759 QUASI-ELASTIC SCATTERING ON NUCLEON CLUSTERS IN ^{7}Li AND ^{12}C AT 156 MeV. Bachelier, D.; Brussel, M. K.; Radvanyi, P.; (and others) (Univ. Paris, Orsay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.188-9(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The quasi-elastic scattering reaction (p,pt) on ^{7}Li was studied at 156 MeV; the angular correlation has the shape typical of a $L \neq 0$ (2P) momentum distribution. Probabilities of clustering corresponding to the parentages $^{7}Li \rightarrow t + \alpha$, $^{6}Li \rightarrow d + \alpha$ and $^{6}Li \rightarrow t + {}^{3}He$ are compared. (auth) (France)

17760 $(\alpha,2\alpha)$ REACTION ON ^{6}Li, ^{7}Li, ^{9}Be, ^{12}C AND ^{16}O AT 55 MeV. Pizzi, J. R.; Gaillard, M.; Gaillard, P.; (and others) (Univ., Lyon). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C.192-3(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The $(\alpha,2\alpha)$ reaction was studied at 55 MeV in order to test the mechanism of quasi-elastic scattering of alpha particles by the alpha clusters of the target nuclei. The results obtained on ^{6}Li, ^{7}Li and ^{9}Be are in agreement with this mechanism. The preliminary results on ^{12}C and ^{16}O show the mechanism is more complicated for these nuclei. (auth) (France)

17761 STUDY OF THE (α,α') AND $(\alpha,2\alpha)$ MECHANISM OCCURRING IN THE REACTION $\alpha + {}^{12}C \rightarrow 4\alpha$ AT 90 MeV. Jacquot, C.; Sakamoto, Y.; Jung, M.; Girardin, L.; Braun, H. (Univ.,

Strasbourg). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.199-200(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The breakup of ^{12}C into three α particles by 90 MeV incident α particles was observed. The events with two energetic α particles are analyzed by using the α cluster model of ^{12}C. The excitation energy spectrum and the recoil momentum distribution of the residual nucleus ^{8}Be were studied. The three α particles with small energies are plotted in the Dalitz diagram to get information about the spin and the parity of the excited states of ^{12}C. (auth) (France)

17762 REACTIONS $^{22}Ne(p,p)$ AND $^{22}Ne(p,p')$. ANALOG STATE OF THE NINTH EXCITED STATE OF ^{22}Ne IN ^{23}Na. Rihet, Y.; Beaumevieille, H.; Dumazet, G.; Lambert, M.; Meynadier, C. (Institut d'Etudes Nucleaires, Algiers). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.209-10(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The differential cross sections of $^{22}Ne(p,p)$ and $^{22}Ne(p,p')$ reactions were measured from 2.4 to 3.2 MeV, at eleven different angles, in 4 keV steps. An isobaric analog state of $^{23}Ne^*$ (E_{ex} = 3.99 MeV) in ^{23}Na is suggested at E_{ex} = 11.85 MeV (E_p = 3.2 MeV). (auth) (France)

17763 SPIN AND PARITY OF THE ^{12}C EXCITED STATE AT 18.36 MeV FROM THE $^{11}B(p,p)$ REACTION. Chanut, Y.; Beaumevieille, H.; Drain, D.; Meynadier, C.; Rihet, Y. (Institut d'Etudes Nucleaires, Algiers). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.211-12(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Excitation functions were measured for elastic scattering of protons from ^{11}B at proton energies from 1.1 to 3 MeV and at seven angles from 43 to 166° (C.M.). An analysis of the data indicates a spin-parity assignment of 3^- for the 18.36 MeV level in ^{12}C formed at the 2.62 MeV resonance. (auth) (France)

17764 STUDY OF THE ^{8}Be LEVELS FROM $^{4}He(\alpha,\alpha)$ SCATTERING IN THE FRAME OF THE THEORY OF RESONANCES WITH COMPLEX ENERGY. Tsan Ung Chan (Univ., Grenoble, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.219-20(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Levels schemes of ^{8}Be in the energy range 22 to 27 MeV are examined in the frame of Humblet–Rosenfeld complex eigenvalue theory of nuclear reaction by the analysis of the scattering ^{4}He (α,α). (auth) (France)

17765 MECHANISM OF $^{9}Be(p,p')^{9}Be$ AND $^{9}Be(p,\alpha_0)^{6}Li$ REACTIONS AT LOW ENERGY. Bontemps, A.; Longequeue, N.; Ligeon, E.; Cavaignac, J. F. (CEA, Grenoble, France. Univ., Grenoble, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.221-2(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The low energy reactions $^{9}Be(p,p)$ and $^{9}Be(p,\alpha)$ were studied. The elastic scattering was analyzed with a compound nucleus formalism, the (p,α) reaction with a theory of interference between a direct knock on mechanism and a resonance ($J^\pi = 2^-$). (auth) (France)

17766 DECAY OF ^{12}C INTO THREE ALPHA PARTICLES. Giorni, A.; Kong, A.; Siou, D. (Univ., Grenoble, France. CEA, Grenoble, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.223-4(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The $^{11}B + p \rightarrow {}^{12}C \rightarrow 3\alpha$ reaction was studied at E_p = 0.163, 0.68, 1.4 and 2 MeV. A calculation in which the reaction amplitude including the formation of a compound nucleus of ^{12}C and $\alpha-\alpha$ final state interactions is compared to the results. The sequential decay with only one $\alpha-\alpha$ interaction gives a good description of the experimental results. However, the calculations and experimental results are not in a good agreement for the 0^+ level of the ^{12}C nucleus because, in this region, the 0^+, 1^- and 3^- levels are in interference. (auth) (France)

17767 STUDY OF THE DECAY MODES OF THE ^{9}Li NUCLEUS. Chen, Yu-ssu. Pasadena, Calif.; California Inst. of Tech. (1970). 96p. University Microfilms Order No. 70-20,644.

Thesis.

The beta decay of the ^{9}Li nucleus and the subsequent particle decays of the unbound states of the ^{9}Be nucleus were investigated with two complementary techniques—the recoil-particle method and the beta-neutron coincidence method. ^{9}Li nuclei were produced by the $^{18}O(^{7}Li,^{9}Li)^{16}O$ reaction with a 20 MeV bombarding energy and by the $t(^{7}Li,^{9}Li)p$ reaction with a 14 MeV bombarding energy. The energy spectrum of the delayed alphas and the time-of-flight spectrum of the delayed neutrons were obtained. The half-life was also measured and was found to be 177 ± 3 msec. Besides the known decay branches to the ground state and to the 2.43 MeV state in ^{9}Be, a new decay branch to an unbound state in ^{9}Be at an excitation energy of 2.78 ± 0.125 MeV was observed. The branching ratios and the log ft values were found to be; (65.0)%, (32.0)%, (3.0)% and (5.12), (5.00) (5.97) to the ground state, the 2.43 MeV and the 2.78 MeV states, respectively. The observed properties of the 2.78 MeV state favor an assignment of $\frac{1}{2}^-$. It decays mainly by p-wave neutron emission to the ground state of ^{8}Be and has center-of-mass width of 1.1 ± 0.125 MeV. The fraction of the decays of the 2.43 MeV state in ^{9}Be involving emission of an f-wave neutron to the ground state of ^{8}Be was found to be (6.4 ± 1.2)%. (Diss. Abstr. Int., B)

17768 EXISTENCE OF A LEVEL OF ^{13}C AT E = 10.82 MeV. Meynadier, C.; Chanut, Y.; Drain, D. (Institut d'Etudes Nucleaires, Algiers). Lett. Nuovo Cim.; 4: 1063-7(5 Dec 1970). (In French).

The presence of two excited levels of ^{13}C at 10.76 ± 0.01 and 10.82 ± 0.01 MeV is shown with certitude. Also, the widths of some levels of ^{13}C are stated precisely. The reaction $^{11}B(^{3}He,p)^{13}C$ at an incident energy of 3 MeV was studied using a gaseous target of isotopic boron and a good-resolution detection system. (J.F.P.)

17769 THREE-ALPHA FINAL STATE INTERACTIONS. McMahan, C. Alex; Duck, Ian M. (Rice Univ., Houston, Tex.). Nucl. Phys.; A157: 417-34(1970).

A soluble model of the decay of a 2^+ particle into three identical strongly interacting 0^+ particles was used to investigate the reaction $^{11}B(p,\alpha)2\alpha$ at a proton energy of 2.65 MeV through the 18.37 MeV state of ^{12}C. The strong final state interactions are described by Faddeev equations with separable two-body interactions to represent the ground and first excited states of ^{8}Be. It is necessary to use a mixed ^{12}C initial configuration to reproduce the experimentally observed interference effects. A fit to the data requires the approximate inclusion of the Coulomb phase shifts. The decay is dominated by final state interactions with little evidence for direct three-body decay. (auth)

17770 ELASTIC ELECTRON SCATTERING FROM ^{13}C. Heisenberg, J.; McCarthy, J. S.; Sick, I. (Stanford Univ., Calif.). Nucl. Phys.; A157: 435-48(1970).

Cross sections for elastic scattering of electrons from the charge and magnetic distribution of ^{13}C were measured. The data, covering a range of q of 0.4 to 3.4 fm^{-1} are fitted by a phenomenological charge distribution. The difference between ^{12}C and ^{13}C is analyzed in terms of the change in parameters of the Woods–Saxon potential used in a shell-model description of the nuclei. (auth)

17771 TRANSFER REACTIONS LEADING TO STATES OF ^{11}C. Bohne, W.; Bommer, J.; Fuchs, H.; (and others) (Hahn-Meitner-Institut fuer Kernforschung, Berlin). Nucl. Phys.; A157: 593-608(1970).

The stripping reactions $^{10}B(d,n)^{11}C$ and $^{10}B(\tau,d)^{11}C$ were studied at 5.8 and 11.0 MeV, respectively. The reaction $^{12}C(\tau,\alpha)^{11}C$ was investigated at 9.5, 10.5, and 11.5 MeV. The results are described by DWBA and spectroscopic factors are extracted, where possible. Comparison of the different reactions yields estimates of the inherent uncertainty of the procedure. While the (d,n) and (τ,d) reactions are largely direct and yield spectroscopic information, the $^{12}C(\tau,\alpha)$ reaction exhibits interference of more complicated reaction mechanisms. The spins of ^{11}C levels at 8.65 MeV and 8.69 MeV were determined to be $\frac{5}{2}$ or $\frac{7}{2}$. (auth)

17772 (AD-712083) EXCITATION OF PARTICLE-HOLE STATES IN ^{28}Si BY INELASTIC ELECTRON SCATTERING AT HIGH MOMENTUM TRANSFER. Sick, I.; Donnelly, T. W. Jr.; Walecka, J. D.; Walker, G. E. (Stanford Univ., Calif. High-Energy Physics Lab.). Aug 1970. Contracts Nonr-225(67); F44620-68-C-0075. 16p. (HEPL-638; ITP-364). NTIS.

The predictions of the particle-hole model for ^{28}Si are compared with experimental results for large-angle high-momentum-

XUM

transfer inelastic electron scattering. A few high-spin T = 1 states are seen to dominate the cross section. (auth) (USGRDR)

17773 (LYCEN-7074) ^{54}Fe(d,α) REACTION AT 28 MeV. Guichard, A.; Chevallier, M.; Gaillard, P.; Grossiord, J.-Y.; Gusakow, M.; Pizzi, J-R.; Ruhla, C. (Lyon Univ. (France). Institut de Physique Nucleaire). Nov 1970. 21p. (In French). Dep. NTIS (U. S. Sales Only).

Deuterons accelerated to 28 MeV were used to investigate the ^{54}Fe(d,α) reaction. Angular distributions, for excitation energies up to about 4.5 MeV, were obtained. D.W.B.A. calculations were made on the basis of the Glendenning two-nucleon transfer theory. The results provide information about two-hole states of ^{52}Mn. (France)

17774 (NP-18623) APPARATUS FOR HIGH-RESOLUTION DETECTION OF CHARGED PARTICLES: APPLICATION TO STUDY OF THE 1st T = 2 STATE OF ^{32}S. Gales, Sydney (Paris Univ., Orsay (France)). 1970. 64p. (In French). Dep. NTIS (U. S. Sales Only).

Thesis.

The apparatus is an example of the use of developments in cooled high-resistivity surface-barrier junctions giving enhanced energy resolution. The equipment was used to study the first T = 2 state of ^{32}S. The following reactions were investigated: ^{31}P(p,γ)^{32}S, ^{31}P(p,p$_1$γ)^{31}P, ^{31}P(p,p$_2$γ)^{31}P, ^{31}P(p,α$_1$γ)^{28}Si, and ^{31}P(p,α$_0$)^{28}Si. In addition, the ^{31}P(p,p$_0$)^{31}P reaction at incident energies of between 3.150 and 3.300 MeV was studied. The resonance E$_p$ = 3.189 ± 0.003 MeV possesses all the characteristics of the T = 2, ^{32}S level. (France)

17775 (ORNL-TM-3284) Al(n,xγ) REACTIONS FOR 5.3 ≤ E$_n$ ≤ 9.0 MeV. Dickens, J. K. (Oak Ridge National Lab., Tenn., 18 Jan 1971. Contract W-7405-eng-26. 38p. Dep. NTIS.

Interactions of neutrons with aluminum were studied by measuring gamma-ray-production cross sections. Spectra were obtained for incident mean neutron energies E$_n$ = 5.35, 5.85, 6.4, 6.9, 7.45, 7.95, 8.5, and 9.0 MeV. The gamma rays were detected using a coaxial Ge(Li) detector of 30 cm^3 active volume. Data were obtained for gamma-ray scattering angles of 55° for all E$_n$, for 90° for all E$_n$ except 5.35 MeV, and 75° for E$_n$ = 6.4 and 7.45 MeV. Time-of-flight was used with the detector to discriminate against pulses due to neutrons and background radiation. The gamma-ray spectra were reduced using a computer system based upon visual display of the data and estimation of the peak area using an interactive light pen. A simple algorithm which does not require a priori knowledge of the spectrum was used to estimate the underlying Compton distribution. Absolute cross sections for production of gamma rays were obtained for the incident neutron energies quoted above. The cross sections have been compared, where possible, with previous measurements with good agreement. The spectra were studied for gamma rays which could be associated with de-excitation of nuclear levels having unknown decay modes. Gamma rays were found having energies appropriate for ground-state decay of levels at excitation energies E$_x$ = 5.155, 5.414, 5.434, 6.514, 6.821, 6.956, 7.920, 7.411, 7.471, 7.56 (doublet), 7.655, 8.148, and 8.184 MeV. (auth)

17776 STUDY OF γ TRANSITIONS IN THE NUCLEI ^{40}K AND ^{28}Al. Freeman, R. M.; Gallmann, A. (Laboratoire de Physique Nucleaire et d'Instrumentation Nucleaire, Strasbourg). Nucl. Phys.; A156: 305-13(1970). (In French).

Gamma branching ratios in the nuclei ^{40}K and ^{28}Al were determined from particle-gamma coincidence measurements of the reactions ^{39}K(d,pγ)^{40}K and ^{27}Al(d,pγ)^{28}Al. In ^{40}K, results are given for only a few levels below 4 MeV that were excited with sufficient intensity. Some γ rays from ^{41}K(d,pγ)^{42}K were also seen. Decay schemes were obtained for most of the levels of ^{28}Al up to nearly 4 MeV excitation energy. The fifth excited state of ^{28}Al is shown to be a doublet separated by 2.9 ± 0.8 keV. (auth)

17777 LIFETIMES OF THE 3.79-MeV STATE OF ^{30}Si AND 0.709-MeV STATE OF ^{30}P. Haas, F.; Heusch, B.; Frick, G.; Gallmann, A.; Alburger, D. E. (Laboratoire de Physique Nucleaire et d'Instrumentation Nucleaire, Strasbourg). Nucl. Phys.; A156: 385-94(1970). (In French).

Recoil-distance measurements of lifetimes of excited states produced in the ^{27}Al(α,p)^{30}Si and ^{27}Al(α,n)^{30}P reactions are reported. The mean lives obtained are as follows: ^{30}Si, 3.79-MeV level, τ = 24.2 ± 2.0 ps and ^{30}P, 0.709-MeV level, τ = 55 ± 7 ps. These results are compared to previous measurements and theoretical predictions. (auth)

17778 PROTON SCATTERING AND THE OPTICAL MODEL DIFFERENCES BETWEEN ^{40}Ca AND ^{48}Ca. Maggiore, C. J.; Gruhn, C. R.; Kuo, T. Y. T.; Preedom, B. M. (Michigan State Univ., East Lansing). Phys. Lett.; 33B: 571-3(21 Dec 1970).

Elastic proton scattering from ^{48}Ca and ^{40}Ca was measured at 25, 30, 35 and 40 MeV. The rms radius determined by the optical model is 0.15 fm larger for ^{48}Ca than for ^{40}Ca, consistent with the $A^{\frac{1}{3}}$ law. (auth)

17779 SHELL MODEL CALCULATIONS FOR ^{34}Cl AND ^{38}K WITH THE MODIFIED SURFACE DELTA INTERACTION INCLUDING A TENSOR FORCE. Evers, D.; Stocker, W. (Univ., Muich). Phys. Lett.; 33B: 559-62(21 Dec 1970).

The effect of adding a tensor force to the MDSI is investigated for the low energy spectra of ^{34}Cl and ^{38}K, and for the transition rates involving J = 1$^+$ states in these nuclei. The model space includes the 2s$_{\frac{1}{2}}$, 1d$_{\frac{3}{2}}$ shells and 0 or 2 particles in the 1f$_{\frac{7}{2}}$ shell. (auth)

17780 STUDY OF THE REACTION (^{3}He,α) WITH SEVERAL S-D SHELL NUCLEI. McQueen, John Edmund Jr. Chapel Hill, N. C.; Univ. of North Carolina (1970). 103p. University Microfilms Order No. 70-21,212.

Thesis.

Using a 4 MeV Van de Graaff accelerator to produce an 8 MeV beam of doubly-ionized ^{3}He, angular distributions of ^{3}He particles elastically scattered from the nuclei ^{24}Mg, ^{26}Mg, ^{28}Si, ^{30}Si and ^{32}S were measured. Angular distributions were also obtained of the alpha particles resulting from the reactions ^{24}Mg(^{3}He,α)^{23}Mg, ^{26}Mg(^{3}He,α)^{25}Mg, ^{28}Si(^{3}He,α)^{27}Si, ^{30}Si(^{3}He,α)^{29}Si and ^{32}S(^{3}He,α)^{31}S. The Mg and Si targets were made from isotopically enriched oxides while an antimony sulfide target was used for sulfur. The scattered particles were collected in an array of 6 solid state surface barrier detectors and the pulses from these detectors were analyzed and processed by an on-line DDP-224 computer. Excitation curves were taken from 6.2 to 8.4 MeV for the (^{3}He,α) reaction on ^{24}Mg, ^{28}Si and ^{30}Si. These data were analyzed using the theory of Ericson fluctuations which indicated that the reaction was predominately (>80%) direct at angles less than 60 degrees. The elastic scattering data were fit with an optical model computer code and parameters for the entrance channel of a DWBA analysis were obtained. The DWBA calculations were made and compared to experiment and spectroscopic factors were extracted. Evidence was seen for a J-dependent effect in the l = 2 transfer processes which could not be produced in the theoretical calculations by the addition of a spin-orbit potential. The cross sections of the (^{3}He,α) reactions on ^{24}Mg, ^{28}Si and ^{32}S were found to be considerably larger than those for ^{26}Mg and ^{30}S. This is explained as being partially the result of the Q-value differences with the remaining difference attributed to reaction mechanisms other than the ordinary neutron pickup process. (Diss. Abstr. Int., B)

17781 COEXISTENCE IN ^{20}Ne, ^{22}Ne, AND ^{24}Mg. Strottman, Daniel. Stony Brook, N. Y.; State Univ. of New York (1969). 125p. University Microfilms Order No. 70-2485.

Thesis.

The effect of the mixing of multi-shell configurations is investigated in the sd shell nuclei ^{20}Ne, ^{22}Ne, and ^{24}Mg. E2 transition rates are calculated using wave functions obtained from a normal shell model calculation to determine where multi-shell configurations are important. Such discrepancies are qualitatively explained in ^{20}Ne and ^{24}Mg. Although the shell model correctly predicts the energy splitting of the ground state energy band in ^{20}Ne and the interband E2 transition rates, it fails to predict one of the two 0$^+$ states at 6.7 and 7.2 MeV and the rotational band based on it, and the 0$^+$ state at 8.7 MeV. It also misses by a factor of six the intraband transition from the 0$^+$ at 6.72 MeV to the 2$^+$ state at 1.63 MeV. Limiting the hole states to maximum weight in SU(3), two hole and four hole states in strong coupling are included, taking the unperturbed positions of the band heads as parameters. The hole states are lowered from their unperturbed positions by deforming the core. A small lack of overlap factor is included because deformation is expected to win out over the buildup of the matrix elements caused by including core polarization and pf-excitations correctly. The spins and parities of several states in the 9-11 MeV region are predicted as are E2 transition rates for all levels. Agreement is obtained only when the four hole state lies lower than the two hole state. An experiment is proposed to determine which of the two 0$^+$ states around 7-MeV is core excited. Recent shell model calculations in ^{22}Ne and ^{24}Mg have incorrectly given the splitting of the first two 2$^+$ states. By including pf^2 and pf^4 states, the ground state is lowered with respect to the K = 2 band. In ^{22}Ne the sd^{4}pf^2 configuration is taken to be (14 0); as the spin-orbit coupling badly breaks SU(3) symmetry, we also consider the state $|sd^4(80)L_1 \times f^2L_2, L>$. Inclusion of this configuration corrects for two-thirds of the discrepancy. Two hole states are not expected to play a large role in the relative band splitting. This is because the two hole state in strong coupling is (8 6) which has K = 0 and K = 2. Explicit calculations

show this to be true. The pf^2 and pf^4 configurations are also included in the ^{24}Mg basis. The pf^2 state helps correct for a small part of the discrepancy but other anomalies arise. The pf^4 configuration is shown to have little effect on the spectra. (Diss. Abstr. Int., B)

17782 BETA DECAY OF ^{58}Cu. Carlson, L. E.; Hutcheon, D. A.; Robertson, A. G.; (and others) (Nuclear Physics Lab., Oxford). Nucl. Phys.; A162: 35-41(1971).

The β^+ decay of the 1^+ ground state of ^{58}Cu to excited states of ^{58}Ni has been investigated by a study of the subsequent de-excitation γ-rays using a Ge(Li) detector. Branching ratios for positron transitions to the following ^{58}Ni states were obtained: 1.454 MeV (2^+), 2.0 ± 1.1%; 2.775 MeV (2^+), <0.22%; 2.902 MeV (1^+), 3.0 ± 1.2%; 2.943 MeV (0^+), 9.9 ± 1.6%; 3.038 MeV (2^+), 0.29 ± 0.09%; 3.263 MeV (2^+), 1.06 ± 0.14%; 3.531 MeV (0^+), <0.14%; 3.593 MeV (1^+), 0.67 ± 0.10%; and 3.898 MeV (2^+), <0.18%. Positive parity is assigned to the 2.902, 2.943, 3.263 and 3.593 MeV levels of ^{58}Ni and the log ft values deduced from the above branching ratios are compared to shell-model predictions. (auth)

17783 SPINS AND LIFETIMES OF SOME LOW-LYING STATES OF ^{58}Ni. Start, D. F. H.; Anderson, R.; Carlson, L. E.; Robertson, A. G.; Grace, M. A. (Nuclear Physics Lab., Oxford). Nucl. Phys.; A162: 49-70(1971).

Particle-gamma-ray angular correlation studies of the $^{58}Ni(p,p'\gamma)$ reaction have been used to determine the spins of the following states of ^{58}Ni: 2.775 MeV (2), 2.943 MeV (0), 3.038 MeV (1,2), 3.263 MeV (2), 3.420 MeV (3,4), 3.531 MeV (0), 3.593 MeV (1), 3.620 MeV (2,3,4), 3.774 MeV (2,3,4), and 4.108 MeV (2). Gamma-ray branching ratios and mixing ratios were also measured. The Doppler-shift attenuation method has been used to measure the lifetimes of the states of 2.902 MeV ($100^{+\infty}_{-88}$ fs) and 3.774 MeV ($400^{+\infty}_{-88}$ fs) while the mean life of the 2.943 MeV level was found to be 2.9 ± 0.1 ns by direct timing. The internal conversion coefficient of the 2.943 (0^+) MeV to 2.902 (1^+) MeV has been measured to be 0.48 ± 0.05 and an upper limit of 2% has been placed on the 2.943 MeV to ground state E0 transition. The experimental energy level spectrum of ^{58}Ni and electromagnetic transition rates are compared to shell-model predictions calculated using the two-body interaction matrix elements of Kuo. (auth)

17784 DECAY SCHEME STUDIES OF SHORT-LIVED ISOTOPES OF $69 \lesssim A \lesssim 88$ PRODUCED BY HEAVY-ION BOMBARDMENT. Doron, T. A.; Blann, M. (Univ. of Rochester, N. Y.). Nucl. Phys.; A161: 12-48(1971).

Sulfur-32 and ^{16}O ion beams were used to produce neutron deficient nucleides in the mass range $69 \lesssim A \lesssim 88$. Half-lives and energies of γ-rays following decay of these isotopes were measured. Isotopic assignments were made by combining cross bombardment techniques with compound nucleus evaporation calculations. Many assignments could be made by measuring the half-lives and excitation functions for individual γ-rays formed with a variety of target-projectile combinations. Several activities were found for which the assignments are ambiguous, although several likely assignments are suggested. (auth)

17785 STUDY OF ^{43}Sc STATES WITH PROTON TRANSFER REACTIONS ON ^{42}Ca. Bommer, J. (Hahn-Meitner-Institut fuer Kernforschung, Berlin); Grabisch, K.; Kluge, H.; (and others). Nucl. Phys.; A160: 577-601(1971).

The proton transfer reactions (d,n) and (^{3}He,d) on ^{42}Ca were studied. The reaction $^{42}Ca(d,n)^{43}Sc$ was studied by the time-of-flight method at deuteron energies between 5.0 and 6.05 MeV. The reaction $^{42}Ca(^3He,d)^{43}Sc$ was studied at 18.0 MeV with a magnetic spectrograph. Altogether 54 levels in ^{43}Sc up to an excitation energy of 6.92 MeV were identified including states at 4.234 and 6.145 MeV, which are T = ½ analogs of the $f_{7/2}$ ground state and the 2.048 MeV $p_{3/2}$ state, respectively, in ^{43}Ca. The l-values and spectroscopic strengths were determined for 31 transitions. Within the errors of the experiments and the DWBA analyses, the spectroscopic strengths derived from the (d,n) and the (^{3}He,d) experiments are in agreement for both T = ½ and T = ³/₂ states, i.e., there are no T-dependent discrepancies. Similar agreement is found in the strengths of the s- and d-hole transitions, which reflect the degree of particle–hole impurity in the $^{42}Ca_{g.s.}$ wave function. A second $\frac{1}{2}^+$ state is indicated at 2.657 MeV. It appears a likely candidate for the head of a second $K^\pi = \frac{1}{2}^+$ band of 6p–3h character as proposed by Johnstone. (auth)

17786 LOW-INTENSITY TRANSITIONS IN THE DECAY OF ^{88}Rb. Pratt, William W. (Pennsylvania State Univ., University Park). Nucl. Phys.; A160: 626-9(1971).

The γ rays following the decay of ^{88}Rb were studied with a 40-cm³ Ge(Li) detector with the aim of resolving discrepancies in some recent determinations of the decay scheme of this isotope. The existence of a 1799-keV γ ray was confirmed and three new γ rays with energies of 1218, 1295, and 1368 keV were found. All of these results are in good agreement with a decay scheme recently proposed by Ragaini and Knight. (auth)

17787 THE DECAY OF 23.0 MIN ^{79}Rb TO LEVELS IN ^{79}Kr. Lingeman, E. W. A.; de Boer, F. W. N.; Koldewijn, P.; Maurenzig, P. R. (Instituut voor Kernphysisch Onderzoek, Amsterdam). Nucl. Phys.; A160: 630-40(1971).

The radioactive decay of ^{79}Rb(23.0 ± 0.5 min) was studied with the aid of semiconductor radiation detectors. Both singles and coincidence spectra were recorded. The decay energy, 3520 ± 45 keV, was determined by measuring the endpoint of the positron spectrum in coincidence with prominent γ rays. A decay scheme is proposed incorporating most of the measured γ rays. The following energies in keV and parities of levels are assigned: ground state ($\frac{5}{2}^-$), 130.01 ± 0.12($\frac{1}{2}^+$), 147.3 ± 0.7($\frac{5}{2}^-$), 182.4 ± 0.5($\frac{3}{2}^+$), 291.4 ± 0.7($\frac{5}{2}^-$), 383.71 ± 0.18, 532.82 ± 0.33, 688.21 ± 0.09, 751.7 ± 0.7($\frac{5}{2}^-$), 934.0 ± 1.4, 1089.4 ± 0.4, 1474.7 ± 0.3. The spin and parity of the ^{79}Rb ground state are most probably $\frac{3}{2}^-$. (auth)

17788 ANALYSIS OF THE $^{35,37}Cl(p,t)$ AND $(p,^3He)$ REACTIONS TO MIRROR AND ANALOGUE STATES. Vignon, B. (Nuclear Physics Lab., Grenoble, France); Bruandet, J. F.; Longequeue, N.; Towner, I. S. Nucl. Phys.; A162: 82-96(1971).

The (p,t) and (p,^{3}He) reactions on $^{35,37}Cl$ are used to study the mirror and analog states in Cl and S isotopes. The T = ³/₂ states are identified at 5.55, 6.95, 7.35 and 8.10 MeV in ^{35}Cl and at 5.65 and 7.25 MeV in ^{35}Cl. Angular distributions for the strong transitions are obtained and analyzed using a zero-range DWBA theory. The ratio of (p,t) and (p,^{3}He) cross sections is within theoretical limits. Shell-model calculations in the model space $(2s_{1/2}, 1d_{3/2})^n$ have been carried out with four sets of two-body interaction matrix elements and the resulting level schemes and relative peak cross sections for (p,t) and (p,^{3}He) reactions are compared with experiment. Possible deficiencies in the model are discussed. (auth)

17789 PHOTOPRODUCTION OF CHARGED PIONS FROM NUCLEI. Blomqvist, I.; Nydahl, G.; Forkman, B. (Univ. of Lund, Sweden. Lund Inst. of Tech., Sweden). Nucl. Phys.; A162: 193-207(1971).

The yields of the reactions $^{41}K(\gamma,\pi^+)^{41}Ar$, $^{63}Cu(\gamma,\pi^+)^{63}Ni$, $^{88}Sr(\gamma,\pi^+)^{88}Rb$, and $^{138}Ba(\gamma,\pi^+)^{138}Cs$ were measured by activation analysis. Data on the reactions $^{11}B(\gamma,\pi^-)^{11}C$, $^{27}Al(\gamma,\pi^+)^{27}Mg$ and $^{51}V(\gamma,\pi^+)^{51}Ti$ obtained earlier were reanalyzed. The experimental cross sections are compared to predictions from simple model calculations. (auth)

17790 NUCLEAR MULTI CONFIGURATION HARTREE–FOCK CALCULATION. Faessler, A.; Plastino, A.; Schmid, K. W. (Univ., Muenster, Ger.). Phys. Lett.; 34B: 31-3(18 Jan 1971).

The Multi Configuration Hartree–Fock (MCHF) theory is applied to the ground state of ^{28}Si. The single particle basis states are the $0d_{5/2}$ and $1s_{1/2}$ orbitals. A comparison is made with the results of a Hartree–Fock calculation performed in the same space. (auth)

17791 PROTON HOLE STATES IN ^{20}F. Johnstone, I. P.; Castel, B.; Sostegno, P. (Queen's Univ., Kingston, Ont.). Phys. Lett.; 34B: 34-6(18 Jan 1971).

Proton hole states in ^{20}F are investigated by coupling $p_{1/2}$ and $p_{3/2}$ holes to states lying below 5 MeV in ^{21}Ne, using ^{21}Ne wave functions obtained from a band-mixing PHF calculation. (auth)

17792 INVESTIGATION OF THE DECAY $^{73}As \rightarrow {}^{73}Ge$. Kyles J.; McGeorge, J. C.; Shaikh, F.; Byrne, J. (Univ. of Edinburgh). Nucl. Phys.; A150: 143-60(1970).

The γ-ray, K x-ray, and conversion electron spectra produced by electron capture in ^{73}As were investigated using delayed coincidence techniques. Values of 0.57 ± 0.10 sec and 2.94 ± 0.04 μsec were derived for the half-lives of the 66.8 and 13.5 keV levels in ^{73}Ge. The transitions at 53.3 and 13.5 keV were confirmed to be M2 retarded and E2 enhanced, respectively. An attempt was made to interpret these results in terms of core excitation or cooperative properties of the nuclear levels. Results were also obtained for the K-capture fraction in ^{73}As and for the K-shell fluorescence yield in germanium. (auth)

17793 SCATTERING OF 19.5 MeV α-PARTICLES BY ^{62}Cu, ^{64}Ni, ^{65}Cu, AND ^{66}Zn. Ivascu, M.; Semenescu, G.; Bucurescu, D.; Titirici, M. (Inst. for Atomic Physics, Bucharest). Nucl. Phys.; A147: 107-19(1970).

A study of 19.5-MeV α-particle scattering by ^{62}Cu, ^{64}Ni, ^{65}Cu, and ^{66}Zn is presented. The elastic scattering angular distributions were analyzed with a parametrized phase-shift model and with the optical model. The inelastic scattering angular distributions to the first excited state were analyzed with the Austern–

Blair model and DWBA. Nonadiabatic effects were included in the Austern–Blair model calculations, and the results are similar to those of the DWBA. (auth)

17794 ANGULAR CORRELATION STUDIES OF THE ^{40}Ca $(pp'\gamma)^{40}$Ca REACTION. Sinex III, Charles Helm. Houston, Tex.; Rice Univ. (1970). 187p. University Microfilms Order No. 70-23,574.

Thesis.

Angular correlation and Doppler shift attenuation measurements were used to determine the gamma ray decay modes, spins, and lifetimes of excited states at 6.752 and 7.114 MeV in ^{40}Ca. These levels were populated by inelastic proton scattering in beam energies of 10 to 11 MeV with the inelastic proton detected in an annular counter placed 180° with respect to the beam axis. The gamma rays were detected in a 5″ × 5″ (NaI(Tl)) detector for the correlation measurements and in a 25 cm^3 Li–Ge detector for the lifetime measurements. The 6.752-MeV level was found to decay only to the 3$^-$ level at 3.737 MeV which decays only to the ground state. Two double correlation functions, $p'-\gamma_{3.0\,MeV}$ and $p'-\gamma_{3.7\,MeV}$ were measured. A second detector was added to this geometry (at 90° in the plane) and two triple correlation functions, $p'-\gamma(\theta)_{3.0\,MeV}-\gamma(90°)_{3.7\,MeV}$ and $p'-\gamma(90°)_{3.0\,MeV}-\gamma(\theta)_{3.7\,MeV}$ were measured. Analysis of these data yielded a unique spin assignment of 2 for the 6.75-MeV level. The lifetime was determined by observing the Doppler shift of the 3.0 MeV gamma ray at angles of 30° and 120° when detected in coincidence with inelastic protons from the 6.752 MeV level. The lifetime was found to be $205^{+80}_{-50} \times 10^{-13}$ seconds. The 7.114-MeV level was found to be a narrowly-separated doublet and new gamma ray decay modes are proposed for both members. One level decays mainly to the ground state of ^{40}Ca and double correlation measurements fix its spin as 2. The other level decays to the 3$^-$ level at 3.737 MeV and the 5$^-$ level at 4.491 MeV. Double correlation measurements fix its spin as 3 and branching ratios have been determined for its decay. Doppler shift measurements yield a lifetime of $234 \pm 64 \times 10^{-13}$ seconds for the 3.376 MeV gamma ray from this level. Extensions of angular correlation theory necessary for this work and a number of analysis programs for simultaneously fitting data from several different correlation measurements are described. (Diss. Abstr. Int., B)

17795 ELASTIC SCATTERING OF 1.12 MeV AND 1.33 MeV γ-RAYS THROUGH 90° AND 124.5° BY DIFFERENT ELEMENTS AND THE REAL PARTS OF THE DELBRUECK SCATTERING AMPLITUDES. Basavaraju, G.; Kane, P. P. (Indian Inst. of Tech., Bombay). Nucl. Phys.; A149: 49-62(1970).

The elastic scattering of 1.12- and 1.33-MeV γ rays by lead, mercury, tungsten, tantalum, silver, molybdenum, zirconium, and copper scatterers was studied at scattering angles of 90 and 124.5°. At the larger angle, the differential cross sections for heavy elements are significantly lower than the theoretical estimates made on the basis of a coherent addition of the nuclear Thomson and the atomic Rayleigh amplitudes. The Rayleigh amplitudes were determined by a slight modification of the procedure of Brown and Mayers. It is suggested that the lower values at 124.5° result from a destructive interference between the real Delbrück and Rayleigh amplitudes. The results at 90° do not reveal a significant Delbrück effect. The present results at 1.12 MeV and 1.33 MeV are in satisfactory agreement with many of the recent measurements at 1.12, 1.17, and 1.33 MeV. Results for tungsten, silver, molybdenum, and zirconium were not available earlier. (auth)

17796 (^{3}He,α) REACTION WITH NUCLEI IN THE s–d SHELL McQueen, J. E. Jr.; Joyce, J. M.; Ludwig, E. J. (Univ. of North Carolina, Chapel Hill. Triangle Universities Nuclear Lab., Durham, N. C.). Nucl. Phys.; A151: 295-316(1970).

Using 8-MeV ^{3}He particles, angular distributions of alpha particles were obtained resulting from the reactions ^{24}Mg(^{3}He,α)^{23}Mg, ^{26}Mg(^{3}He,α)^{25}Mg, ^{28}Si(^{3}He,α)^{27}Si, ^{30}Si(^{3}He,α)^{29}Si, and ^{32}S(^{3}He,α)^{31}S. Excitation function data were analyzed by applying the theory of Ericson fluctuations, which indicated that the reaction was predominantly direct (>80%) at the forward scattering angles. The ^{3}He parameters from elastic scattering analyses were incorporated in a DWBA analysis of the (^{3}He,α) reactions and spectroscopic factors were extracted. Evidence was seen for a J-dependent effect in the l = 2 transfer processes, which could not be produced in theoretical calculations by the addition of a spin-orbit potential. The cross sections of the (^{3}He,α) reactions on ^{24}Mg, ^{28}Si, and ^{32}S were found to be considerably larger than those on ^{26}Mg and ^{30}Si. This is explained as being partially the result of the Q-value differences with the remaining difference attributed to reaction mechanisms other than the ordinary neutron-pickup process. (auth)

17797 POSITIVE PARITY STATES IN ^{167}Er. Kanestroem, I.; Loevhoeiden, G. (Univ. of Oslo). Nucl. Phys.; A160: 665-72 (1971).

The positive parity states in ^{167}Er are described in terms of the rotational model, where the particle-rotation coupling is taken into account. The moment of inertia, the Fermi energy, and the coupling strength are determined by fitting the energies. The wave functions thus obtained are used to calculate the (d,p) stripping and (d,t) pick-up cross sections and branching ratios. The results obtained are in agreement with experimental data. (auth)

17798 RELATIVISTIC EFFECTS IN NUCLEAR MOTIONS. Braun, J. J.; Swamy, N. V. V. J. (Oklahoma State Univ., Stillwater). Nucl. Phys.; A160: 641-8(1971).

The wave functions of the relativistic equivalent harmonic oscillator recently proposed were used to calculate elastic electron scattering cross sections in the Born approximation for helium and lead. Calculations were also made with the nonrelativistic isotropic oscillator wave functions. Comparison with high-energy electron scattering experiments shows that relativistic effects may be significant in a heavy nucleus like lead. (auth)

17799 DECAY OF ^{164m}Ho AND ^{164g}Ho. Pathak, B. P.; Mukherjee, S. K. (Saha Inst. of Nuclear Physics, Calcutta). Nucl. Phys.; A160: 618-25(1971).

The disintegration characteristics of ^{164m}Ho and ^{164g}Ho were studied using a high-resolution Ge(Li) spectrometer. Radioactive samples of ^{164m}Ho and ^{164g}Ho were obtained through the (n, 2n) reaction on spectroscopically pure holmium oxide with 14-MeV neutrons. The isomeric cross-section ratio for the yields of the ground and metastable states was estimated to be 1.0 ± 0.25. Gamma rays of 37.7 and 56.1 keV energy were assigned to the decay of ^{164m}Ho, and 73.4- and 91.5-keV γ rays are attributed to the decay of ^{164g}Ho by electron capture and negaton emission, respectively. The branching ratio for the electron capture decay of ^{164g}Ho to the levels in ^{164}Dy was estimated accurately from the analysis of x-ray intensities. The results were incorporated into a decay scheme. (auth)

17800 INVESTIGATION OF PARITY MIXING IN ^{181}Ta AND ^{175}Lu BY MEASUREMENT OF THE CIRCULAR POLARIZATION OF γ-RAYS. Bock, P.; Jenschke, B. (Univ., Karlsruhe, Ger. Kernforschungszentrum, Karlsruhe, Ger.). Nucl. Phys.; A160: 550-68(1971).

The circular polarization of the 482-keV γ radiation of ^{181}Ta and the 343-keV γ radiation of ^{175}Lu was measured with a Compton polarimeter. Spurious effects arising from higher-order contributions of quantum electrodynamics to the Compton scattering cross section were discovered. The results for the polarization are $P = -(4.1 \pm 1.3)10^{-6}$ for ^{181}Ta and $P = -(1.5 \pm 6.0)10^{-6}$ for ^{175}Lu. These values are corrected for instrument asymmetries, bremsstrahlung, and intensity of other lines. (auth)

17801 A STUDY OF THE LEVEL STRUCTURE IN ^{57}Fe FROM THE (d,p) REACTION ON ^{56}Fe. Sen Gupta, H. M. (Univ. of Dacca, Pakistan); Majumder, A. R.; Lin, E. K. Nucl. Phys.; A160: 529-49(1971).

The reaction ^{56}Fe(d,p)^{57}Fe is investigated at 12 MeV using the Aldermaston multichannel magnetic spectrograph. The angular distributions of protons leading to various states in ^{57}Fe up to an excitation of 6.7 MeV are measured over an angular range 5° to 175°. The data are analyzed with distorted-wave Born approximation calculations; a satisfactory agreement is found in most cases up to about 100°. Spin, parity, and spectroscopic factors for various states are obtained, and the positions of the single quasi-particle energies determined. The results are compared with those for the isotonic nuclei ^{55}Cr and ^{59}Ni and with the pairing theory. (auth)

17802 THE STRUCTURE OF ^{61}Co. Hudson, F. R. (Univ. of Bradford, Eng. Atomic Weapons Research Establishment, Aldermaston, Eng.); Glover, R. N. Nucl. Phys.; A160: 482-96 (1971).

The nucleus ^{61}Co was studied by the ^{59}Co(t,p)^{61}Co reaction supplemented by data from the ^{62}Ni(t,α)^{61}Co reaction. The level energies are in good agreement with existing data. States of spin $J = \frac{7}{2}^-$ are identified by L = 0 transitions in the ^{59}Co(t,p) reaction. By comparison with ^{62}Ni(t,α) data, significant $f_{\frac{5}{2}}$ admixture is deduced in the ^{62}Ni ground-state wave function. Correlation of existing ^{58}Fe(^{3}He,d)^{57}Co and ^{58}Ni(t,α)^{57}Co data also indicates $f_{\frac{5}{2}}$ admixture in the ^{58}Ni ground state. The (t,p) angular distributions show groups of L = 2 and L = 2 + 4 transitions as a function of excitation energy. This absence of L = 4 transitions when permitted by the selection rules provides information on the structure of the residual ^{61}Co states. (auth)

17803 DECAY OF ^{60}Co. Rice-Evans, Peter; Aung, Zin (London Univ.). Z. Phys.; 240: 392-5(1970).

The gamma spectrum from ^{60}Co decay was investigated with a 40-cc Ge(Li) detector. A peak at 822 keV is shown to be not a gamma transition but a single escape peak, and an upper limit of 10 is given to the branching ratio of the 2158-keV level. (auth)

17804 ELECTROMAGNETIC BRANCHING IN ^{65}Zn. Robert, K. Q.; Linn, J. R.; Pellegrini, B. J.; Durham, F. E. (Tulane Univ., New Orleans). Nucl. Phys.; A156: 553-60(1970).

The internal conversion coefficients of transitions between the low levels of ^{65}Zn populated in the ^{63}Cu(p,n)^{65}Zn* reaction were measured with an in-beam spectrometer at the E_p = 2.88 and 2.95 MeV isobaric analog resonances and at off-resonance energies. Angular distributions of the γ rays were measured at each energy with Ge(Li) detectors. Absolute neutron cross sections were derived and compared to theory. The values of α_K are: 54 keV: 6 ± 1; 61 keV: $(3 \pm 2) \times 10^{-1}$; 115 keV: $(5.8 \pm 0.5) \times 10^{-2}$; 153 keV: $(2.37 \pm 0.28) \times 10^{-2}$; 207 keV: $(2.05 \pm 0.30) \times 10^{-2}$. The mixing ratio of the 153 keV transition was deduced to be $\delta = 0.24 \pm 0.06$. These data are consistent with previous spin assignments of $J^\pi = 5/2^-$, $1/2^-$ and $3/2^-$ for the 0, 54 and 115 keV levels and establish the spin of the 207 keV level as $J^\pi = 3/2^-$. (auth)

17805 ROTATION-VIBRATION INTERACTION IN ^{27}Al. Roepke, H.; Glattes, V.; Hammel, G. (Univ., Freiburg i. B.). Nucl. Phys.; A156: 477-88(1970).

The existence of two γ-vibrational bands with $K = 5/2 \pm 2$ in ^{27}Al is proposed from a comparison with ^{25}Al and ^{25}Mg. The experimental evidence in favor of vibrational modes of excitation is discussed for these nuclei and also for ^{23}Na. In ^{27}Al a strong rotation-vibration interaction is indicated, which gives rise to the simultaneous appearance of both strong coupling and weak coupling features. In a rotation-vibration-interaction calculation of ^{27}Al, E2 transition strengths and inelastic scattering cross sections are fairly well reproduced. Difficulties arise in the interpretation of spectroscopic factors. (auth)

17806 EXPERIMENTAL STUDY OF THE DECAY OF ^{53}V. Dorikens-Vanpraet, L.; Dorikens, M.; Demuynck, J. (State Univ., Ghent). Z. Phys.; 241: 459-65(1971).

The decay of ^{53}V was investigated with a Ge(Li) spectrometer and gamma-gamma coincidence methods. Accurate energy, intensity and half-life determinations of 7 gamma rays were performed. These gamma rays fit in a level scheme with levels at 563.6, 1006.0, 1289.1, and 1536 keV. (auth)

17807 DIRECTIONAL CORRELATION OF SUCCESSIVE GAMMA-RAYS IN ^{60}Ni. Khan, Saghirun-Nisa; Chaudhry, Khalid Mahmud; Khan, Naeem Ahmad (Atomic Energy Centre, Lahore). Nucleus (Karachi); 6: 206-12(Oct-Dec 1969).

An experiment on gamma-gamma angular correlation employing 1.17- and 1.33-MeV gammas of ^{60}Ni and sodium iodide crystals as detectors is reported. The results obtained possess greater reliability and validity. (auth)

17808 CROSS SECTION FOR PAIR PRODUCTION IN Al, Cu, Cd, AND Pb AT 2.615-MeV γ-RAY ENERGY. Barkan, S. Meric (Univ. of Istanbul). Phys. Rev., A; 1: 1022-32(Apr 1970).

Cross sections for pair production by 2.615-MeV γ rays incident on Al, Cu, Cd, and Pb have been found by subtracting tabulated values of the photoelectric cross section from measured values of total cross sections. The latter were determined to be 129.8, 137.0, 147.6, and 181.9 mb per electron, respectively, for the above elements. The statistical uncertainty is ±0.2%. Subtraction of photoelectric cross sections gives 0.0642 (±5%), 0.343 (±2.3%), 0.991 (±1.4%), and 3.55 (±0.8%) b per atom for pair production. The present result in Pb is 38.9% higher than the Bethe-Heitler Born approximation result and is about 14% higher than Jaeger-Hulme non-Born theoretical results but only 6% higher than the recent, exact non-Born calculation (neglecting screening) by Øverbø, Mork, and Olsen. Differences between our values for Al, Cu, and Cd and the calculated values of these authors are even smaller, namely, 0.5% for Al and Cd, and 3% for Cu. It is pointed out that pair-production cross sections can be found from Born-approximation values by multiplication by $a + bZ$ for $0 < Z < 50$, with $a = 0.97 \pm 0.01$ and $b = 4 \times 10^{-3}$, and by a factor $1 + \alpha Z^2$ for $Z \geq 50$ with $\alpha = (5.8 \pm 0.1) \times 10^{-5}$. (auth)

17809 STROBOSCOPIC AND TIME-DIFFERENTIAL OBSERVATION OF THE NUCLEAR LARMOR PRECESSION ON THE 20 ms ISOMERIC STATE OF ^{71}Ge. Bertschat, H.; Christiansen, J.; Mahnke, H.-E.; Recknagel, E.; Schatz, G.; Sielemann, R.; Witthuhn, W. (Hahn-Meitner-Institut fuer Kernforschung, Berlin). Nucl. Phys.; A150: 282-90(1970).

The methods of the stroboscopic observation of the nuclear Larmor precession as well as the conventional time-differential spin rotation were applied to a nuclear isomer in the millisecond region of lifetimes. The 20.2 msec state of ^{71}Ge was populated by the nuclear reaction ^{71}Ga(p,n). The uncorrected g-factor has been determined to be $g = -0.2304 \pm 0.0005$. (auth)

17810 INVESTIGATION OF ^{59}Co AND ^{61}Co USING THE ^{56}Fe $(\alpha,p\gamma)$ AND ^{64}Ni$(p,\alpha\gamma)$ REACTIONS. Coop, K. L.; Graham, I. G.; Titterton, E. W. (Australian National Univ., Canberra). Nucl. Phys.; A150: 346-68(1970).

The low-lying levels of ^{59}Co and ^{61}Co were investigated using particle-gamma coincidence techniques. Branching ratios were obtained for many states in ^{59}Co below 2.6-MeV excitation, and angular correlations involving several states were measured using the ^{56}Fe$(\alpha,p\gamma)$ reaction. From the correlation data involving transitions from the 1.744-MeV state, assignments of $9/2^-$ ($5/2^-$), $5/2$ and $7/2^-$ were made for the 1.190, 1.482, and 1.744 MeV states, respectively. The measured correlations involving the 1.100 and 1.291 MeV states were consistent with $3/2^-$ assignments for both. In ^{61}Co, the decay properties for many states below 2.3 MeV were determined. Probable spin assignments of $1/2$, $5/2$ or $3/2$ and $5/2$ or $3/2$ were deduced for the states at 1.623, 1.655 and 2.015 MeV, respectively. Systematics of the level structure of the odd-mass isotopes ^{57}Co, ^{59}Co and ^{61}Co were examined and many similarities noted. (auth)

17811 REORIENTATION MEASUREMENTS IN EVEN TITANIUM ISOTOPES. Haeusser, O.; Pelte, D.; Alexander, T. K.; Evans, H. C. (Atomic Energy of Canada Ltd., Chalk River, Ont.). Nucl. Phys.; A150: 417-38(1970).

The first excited 2^+ states in ^{46,48,50}Ti were Coulomb excited using beams of ^{35}Cl and ^{32}S. The results are interpreted in terms of the reorientation effect and yield static quadrupole moments $Q(^{46}\text{Ti}, 889\text{ keV}) = -0.19 \pm 0.10$ b, $Q(^{48}\text{Ti}, 983\text{ keV}) = -0.22 \pm 0.08$ b and $Q(^{50}\text{Ti}, 1550\text{ keV}) = -0.02 \pm 0.09$ b. The B(E2) $(0^+ \rightarrow 2^+)$ values were determined to be $0.107 \pm 0.010\ e^2 \cdot b^2$, $0.069 \pm 0.006\ e^2 \cdot b^2$ and $0.033 \pm 0.003\ e^2 \cdot b^2$, respectively. The results are compared with recent Hartree-Fock calculations. The projectile excitation of ^{32}S was also observed and yielded a limit for the first excited 2^+ state of $-0.05 < Q < 0.25$ b. (auth)

17812 NEUTRON POLARIZATION IN (d,n) AND (^{3}He,n) STRIPPING REACTIONS ON LOW-A NUCLEI. Thomason, Richard Sumner. Durham, N. C.; Duke Univ. (1969). 186p. University Microfilms Order No. 70-18,101.

Thesis.

Angular distributions of the neutron polarizations were measured for the n_0 and n_1 groups from the ^{6}Li(d,n) and ^{7}Li(d,n) reactions for deuteron energies from 2.5 to 3.8 MeV; for the n_0, n_1, and unresolved ($n_2 + n_3$) groups from the ^{9}Be(^{3}He,n) reaction for ^{3}He energies from 2.1 to 3.9 MeV; and for the n_0 groups from the ^{11}B(^{3}He,n) and the ^{13}C(^{3}He,n) reactions from 3.0 to 3.8 MeV. Targets were used that were generally about 200 keV in thickness to the incident ions. Helium was used as a polarization analyzer. The polarization distributions for the four groups from the (d,n) reactions have shapes that are very constant with energy. The maximum absolute value of the measured polarizations is greater than about 0.40 for all these reactions except ^{7}Li(d,n_1). Distorted-wave Born-approximation calculations, in which capture of the proton in the 1p shell with $j = 3/2$ was assumed, were made for the ^{6}Li(d,n_1) and ^{7}Li(d,n_0) reactions at 3.7 MeV. Reasonable agreement with cross section data was obtained; the predicted polarizations resembled the measured data. The shapes of the distributions for the measured groups from the ^{9}Be(^{3}He,n) reactions show a small, gradual change with energy; and the absolute value of the measured polarizations is less than about 0.40 for all three groups. The polarization distributions for the ^{11}B(^{3}He,n_0) group have shapes that are constant with energy within the experimental uncertainties; the polarization averaged over the energy range measured has a minimum of about −0.12 and a maximum of about +0.24. The shapes of the distributions for the ^{13}C(^{3}He,n_0) reaction between 3 and 4 MeV have moderate fluctuations about the average shape; the magnitude ranges from −0.64 to +0.34 over this range. Distorted-wave Born-approximation calculations, in which transfer of the diproton with $S = 0$ was assumed, were made for the ^{9}Be(^{3}He,n_0), ^{11}B(^{3}He,n_0), and ^{13}C(^{3}He,n_0) reactions at the highest energy at which each was measured. Fits to ^{3}He-^{9}Be elastic-scattering data were made to obtain some of the optical-model parameter sets used. Reasonable agreement with cross section data was obtained in all cases except for ^{11}B(^{3}He,n_0); the predicted polarizations for ^{13}C(^{3}He,n_0) resembled the measured data, but the results for ^{9}Be(^{3}He,n_0) were less encouraging. (TSS) (Diss. Abstr. Int., B)

17813 INELASTIC NEUTRON SCATTERING FROM Fe, Al, AND Mn. Lamb, Richard C. Lexington, Ky.; Univ. of Kentucky (1963).

Thesis.

Cross sections were measured for inelastic neutron scattering to individual levels in ^{56}Fe, ^{27}Al, and ^{55}Mn. The Fe and Al measurements were done at 2.97 MeV; the Mn measurement at 2.21 MeV. The cross sections were determined from measurements

XUM

of the de-excitation gamma rays. A pulsed neutron source permitted the use of timing circuitry to discriminate against all radiations other than sample gamma rays. The measurements were normalized to the 0.845-MeV gamma-ray cross section in ^{56}Fe; the value of this cross section is 1220 ± 50 mb at 2.97 MeV. Cross sections were measured for the 2.085- and the 2.66-MeV levels in ^{56}Fe; the 0.842-, 1.01-, 2.21-, and 2.73-MeV levels in ^{27}Al; and the 0.126-, 0.983-, 1.289-, 1.527-, and 1.884-MeV levels in ^{55}Mn. The total inelastic neutron cross section for ^{27}Al was measured to be 0.45 ± 0.04 b; for ^{55}Mn the total inelastic cross section was 1.29 ± 0.1 b. The cross sections to the individual levels were compared with Hauser–Feshbach-type calculations. Neutron penetrabilities were adjusted so that calculated cross sections reproduced measured nonelastic and differential elastic cross sections. The measured and calculated inelastic cross sections are in good agreement for all levels with the exception of the 2.21-MeV level in ^{27}Al. The comparisons are used to infer the following spin sequence for the levels of ^{55}Mn: $\frac{7}{2}^-$ (0.126 MeV); $\frac{9}{2}^-$ (0.983 MeV); $\frac{11}{2}^-$ (1.289 MeV); and, tentatively, $\frac{5}{2}^-$ for the 1.527-MeV level. (TSS) (Diss. Abstr. Int., B)

17814 CROSS SECTIONS OF (n,n′γ) REACTIONS IN CHLORINE AND POTASSIUM. Nichols, Davis Betz. Lexington, Ky.; Univ. of Kentucky (1966).

Thesis.

Production cross sections for the ^{35,37}Cl(n,n′γ) reactions were measured at incident neutron energies of 2.54, 3.09, and 4.03 MeV. Angular distributions of the gamma rays were measured at 3.05 and 4.23 MeV. Gamma rays were detected with NaI(Tl) and Ge (Li) detectors using pulsed beam techniques to eliminate backgrounds. Interpretation of the angular distributions and production cross sections permitted spin assignments of $\frac{1}{2}$, $\frac{5}{2}$, and $\frac{7}{2}$ to the first three excited levels of ^{35}Cl, and $\frac{1}{2}$ and $\frac{5}{2}$ to the first and fourth excited levels of ^{37}Cl. Excitation energies of 1.726 ± 0.004 MeV and 3.71 ± 0.02 MeV were measured for these two levels of ^{37}Cl. Production cross sections for the ^{39,41}K(n,n′γ) reactions were measured at incident neutron energies of 1.82, 2.63, 3.42, and 3.96 MeV. The levels of ^{39}K studied are at 2.519, 2.817, 3.021, and 3.603 MeV excitation energy. Spin assignments and limitations are $\frac{1}{2}^+$ or $\frac{3}{2}^+$, $\frac{1}{2}^-$, $\frac{1}{2}^-$ or $\frac{3}{2}^-$, and $\frac{3}{2}^-$, respectively. Levels of ^{41}K studied are at 0.978, 1.291, 1.559, 1.581, and 1.675 MeV. The assignments and limitations are $\frac{1}{2}$ or $\frac{3}{2}$, $\frac{1}{2}^-$, ≤ $\frac{5}{2}$, $\frac{9}{2}$, ≤$\frac{5}{2}$. (Diss. Abstr. Int. B)

17815 (n,n′γ) REACTIONS AS A TOOL FOR NUCLEAR SPECTROSCOPY NEAR A = 70 AND AT A = 27. Chung, Kuoching. Lexington, Ky.; Univ. of Kentucky (1969). 64p. University Microfilms Order No. 70-16,965.

Thesis.

(n,n′γ) experiments were performed on four even-A Ge isotopes and on ^{27}Al by pulsed-beam time-of-flight techniques with a Ge (Li) detector. The 90° excitation functions of the γ-ray transitions in the Ge(n,n′γ) reactions were measured at incident neutron energies from 0.5 to 2.55 MeV. Angular distributions at E_n = 1.75, 2.13, and 2.55 MeV were also measured. The γ-ray production cross sections and the neutron inelastic-scattering cross sections were obtained at these neutron energies. Theoretical calculations are performed and are in good agreement with the experimental results. The Wolfenstein–Hauser–Feshbach formalism is used for the calculations. Branching ratios and mixing ratios of the γ-ray decay from the second 2^+ state for all the four even-A isotopes were obtained. The 1698-keV level of ^{74}Ge was confirmed, and its decay to the first and second 2^+ states was established. It emits 1102- and 493-keV γ rays. A branching ratio and mixing ratios are determined. A spin of 3 is tentatively assigned to that level for the first time in this work. From these measurements and other available information, the excited energy levels identified below 2.2 MeV are 1041 (2^+) 1216 (0^+), 1709 (2^+), 2153 (4^+), 2157 (2^+), in ^{70}Ge; 691 (0^+), 834 (2^+), 1465 (2^+), 1730 (4^+), 2065 (3^+), in ^{72}Ge; 596 (2^+), 1205 (2^+), 1464 (4^+), 1484 (0^+), 1698 (3), 2198 (2^+), in ^{74}Ge; and 563 (2^+), 1109 (2^+), in ^{76}Ge. The energies are in keV. In addition, a test of the necessity for fluctuation corrections to the statistical model at mass region near A = 70 was made. Tests with neighboring odd- and even-A nuclei show no need for such corrections. Applying the corrections worsens the agreement between theory and experiment. The ^{27}Al (n,n′γ) reactions were measured at E_n = 3.5 MeV. The excitation energies of observed levels are 843-, 1013-, 2213-, 2730-, 2980-, and 3002-keV. Angular distributions of transitions and neutron inelastic-scattering cross sections to all observed levels were obtained except those to the 843-keV level. The cross sections are well reproduced by the model calculations. The 2980- and 3002-keV levels were studied separately in this experiment, and the results support the $\frac{9}{2}$ assignment to the 3002-keV level. (Diss. Abstr. Int., B)

17816 NEUTRON CROSS SECTIONS OF CALCIUM AND POTASSIUM FROM 2.0 TO 8.0 MeV. Reber, Jerry Donald. Lexington, Ky.; Univ. of Kentucky (1967).

Thesis.

The differential cross sections for elastic scattering of neutrons were measured for calcium at neutron energies of 2.06, 3.29, 5.30, 5.88, 6.52, and 7.91 MeV and for potassium at neutron energies of 2.06, 3.74, 4.33, 6.52, and 7.91 MeV. The measurements were made using time-of-flight techniques and a liquid scintillator equipped with gamma-ray discrimination. The calcium and potassium scattering samples were solid right circular cylinders about 2.5 cm in diameter by 4 cm long. Each angular distribution was normalized by comparison with n–p scattering at 40° using a polyethylene sample. The angular distributions were corrected for multiple scattering and flux attenuation in the sample, angular resolution, and dead time of the counting electronics. Transmission measurements of the total cross section for both nuclei were made between 1.8 and 8.3 MeV. The experimental data are compared to optical model calculations using the computer code ABACUS-2. The optical model potential consists of a Wood–Saxon real part, derivative Wood–Saxon imaginary part, and a Thomas-type spin–orbit part. The compound-elastic contributions to the elastic differential cross sections are included using the Hauser–Feshbach formalism. By varying the three potential strengths, good fits are obtained at each energy. The variation of the parameters as a function of energy is discussed. (Diss. Abstr. Int., B)

17817 3.95-MeV LEVEL AND DECAY SCHEME OF ISOBARIC-ANALOG 8.38-MeV STATE IN ^{35}Cl NUCLEUS. Migalenya, V. Ya.; Kopanets, E. G.; Lvov, A. N.; (and others) (Physical-Technical Inst., Kharkov). Ukr. Fiz. Zh.; 15: 1200-2(Jul 1970). (In Russian).

A spectrum of γ rays formed during the decay of the 8.38-MeV level in ^{35}Cl was studied by means of a spectrometer with Ge(Li) detector. Tabulated data are given for the observed γ spectrum which indicate the assumed transitions between levels in ^{35}Cl nuclei and the relative intensity of these transitions. The decay scheme of the 8.38-MeV level is given with a new level in ^{35}Cl with the excitation energy of 3.947 ± 0.014 MeV included. (R.V.J.)

17818 NUCLEAR REACTIONS OF ^{12}C, ^{20}Ne, AND ^{40}Ar INDUCED BY 14-MeV NEUTRONS. Kardonsky, Stanley. New York; City Univ. of New York (1970). 72p. University Microfilms Order No. 70-19,550.

Thesis.

A gridded ionization chamber was used to study neutron-induced reactions in situ of ^{12}C, ^{20}Ne, and ^{40}Ar. Cross sections were calculated for these reactions to various energy levels in the product nuclei, with the ^{12}C(n,α_0)^{9}Be reaction as a neutron flux standard. The cross section for the ^{12}C(n,α_0) reaction was found to be 75 ± 40 mb. The ^{40}Ar(n,α) reaction total cross section was 9.4 ± 1.0 mb. Cross sections of the ^{20}Ne(n,p_0) and ^{20}Ne(n,2α) reactions were measured; these values were 1 mb and 38.0 ± 7.6 mb, respectively. The total cross section of the ^{20}Ne(n,α) reaction was measured to be 11.8 mb. Energy levels in product nucleus ^{37}S at 0.59 ± 0.10 MeV, 1.39 ± 0.09 MeV, 2.20 ± 0.05 MeV, 2.83 ± 0.09 MeV, and 3.50 ± 0.20 MeV were observed and found to be in excellent agreement with previously reported values. Ten levels in product nucleus ^{17}O were observed and found in agreement with prior work. Experimental cross sections for ^{40}Ar and ^{20}Ne were compared with theoretical and semiempirical predictions. The data indicated that all the above reactions proceed via direct mechanisms. A hypothesis as to the mechanism of the ^{20}Ne(n,2α) reaction suggests the reaction proceeds via two competing mechanisms. (Diss. Abstr. Int., B)

17819 PARTICLE AND COLLECTIVE NATURE OF THE STATES IN ^{86}Sr. Friedman, Melvin H. Pittsburgh; Carnegie-Mellon Univ. (1969). 223p. University Microfilms Order No. 70-17,140.

Thesis.

The collective and particle nature of the ^{86}Sr states were studied by the ^{86}Sr(α,α′) and ^{87}Sr(d,t) reactions. Inelastic alpha differential-cross-section angular distributions were obtained for five of the excited states of ^{86}Sr. From these measurements deformation-parameter and parity determinations are made. Fractionization of the octupole states was observed, and comparison is made with Veje's theory. The systematic behavior of the principal octupole state is extended to include the ^{88}Sr nucleus. ^{87}Sr(d,t) cross-section angular distributions were obtained for thirteen of the states in ^{86}Sr. From these measurements spectroscopic factors and parity determinations are made for the ^{86}Sr nucleus. The $g_{\frac{9}{2}}^{-2}$ and $g_{\frac{9}{2}}^{-1}-p_{\frac{1}{2}}^{-1}$ states predicted by Talmi and Unna are identified. Evidence is found which supports the assumption that the neutron two-hole interaction in ^{86}Sr is the same as the proton two-particle interaction in ^{90}Zr. The location of the neutron $1g_{\frac{9}{2}}$, $2p_{\frac{1}{2}}$, $2p_{\frac{3}{2}}$, and $1f_{\frac{5}{2}}$ single-particle energies was measured. Arguments are given which suggest tentative spin

assignments for the 2.675-, 2.86-, 3.03-, 3.189-, and 3.511-MeV states. The amount of $g_{\frac{9}{2}}^{-1}-x_j^{-1}$ configuration present is measured for a number of states in ^{86}Sr. (Diss. Abstr. Int., B)

17820 STUDY OF (p,n) REACTIONS IN ^{51}V AND ^{68}Zn. Egan, James Joseph. Lexington, Ky.; Univ. of Kentucky (1969). 154p. University Microfilms Order No. 70-16,970.

Thesis.

Two pairs of isobaric-analog resonances near 4.1 and 4.9 MeV proton bombarding energy were studied in the ^{68}Zn(p,n)^{68}Ga reaction. Differential cross sections were measured at 2.5, 30, and 130° for neutrons which leave ^{68}Ga in the ground state and 180-keV first excited state in the bombarding energy region from 4.00 to 4.15 MeV. Analog resonances at 4.075 and 4.098 MeV were analyzed according to the Robson theory. Eleven levels in ^{68}Ga up to an excitation energy of 1.088 MeV were identified in time-of-flight spectra. Hauser–Feshbach analyses were done on the angular distributions of neutrons leaving ^{68}Ga in 4 and 6 residual nucleus states at 4.400 and 4.512 MeV respectively, an energy region where no analog resonances appear. Excitation functions for seven neutron groups were measured at 100° in the bombarding energy region 4.7 to 5.0 MeV where two analog resonances, at 4.87 and 4.92 MeV, were seen. An analysis according to the theory of Robson was performed on these resonances in order to obtain spins, parities, and resonance parameters. The 2.335-MeV isobaric analog resonance in ^{51}V(p,n)^{51}Cr and ^{51}V(p,p)^{51}V was analyzed according to the Robson theory. A negative resonance mixing phase was required to fit the resonance in the proton elastic scattering data. This corresponds to a positive level shift when fitting the resonance in the (p,n) data. ^{51}V(p,n)^{51}Cr angular distributions at 4.013 and 5.016 MeV bombarding energies were analyzed via the Hauser–Feshbach formalism. Twelve states in ^{51}Cr were observed up to an excitation energy of 2.39 MeV, including a level at 2.27 MeV which is suggested to be a high-spin state. (Diss. Abstr. Int., B)

17821 PROPERTIES OF ^{29}P, ^{33}S, AND ^{33}Cl NUCLEI FROM DOPPLER-SHIFT ATTENUATION AND ANGULAR CORRELATION MEASUREMENTS. Cummings, John Ernest. Tucson, Ariz.; Univ. of Arizona (1970). 116p. University Microfilms Order No. 70-17,783.

Thesis.

The particle–gamma-coincidence version of the Doppler-shift attenuation method was employed to obtain the following information on the mean lives of low-lying states: in ^{29}P — τ(1.38 MeV) = $(2.1 \pm 0.6) \times 10^{-13}$ sec, τ(1.95 MeV) = $(3.2^{+1.0}_{-1.5}) \times 10^{-13}$ sec; in ^{33}S — τ(0.84 MeV) = $(9^{+2}_{-3}) \times 10^{-13}$ sec, τ(1.97 MeV) = $(1.5 \pm 0.3) \times 10^{-13}$ sec, τ(2.31 MeV) = $(1.4 \pm 0.4) \times 10^{-13}$ sec, τ(2.94 MeV) > 1.4×10^{-12} sec, τ(3.22 MeV) = $(4^{+2}_{-1}) \times 10^{-14}$ sec; and in ^{33}Cl — τ(0.81 MeV) > 1.3×10^{-12} sec. In addition, the particle–gamma-ray method for angular correlation measurements was used to obtain multipole-mixing ratios of $x = +(0.36^{+0.06}_{-0.05}; {}^{+0.7}_{-0.3})$ for the 1.97- → 0.0-MeV transition, and $x = +(0.11^{+0.05}_{-0.08}; {}^{+0.11}_{-0.09})$ or $x = +(1.34 \pm 0.26)$ for the 2.31- → 0.84-MeV transition in ^{33}S. The reduced matrix elements for the electromagnetic transitions among some of the low-lying states in ^{29}P and ^{33}S were obtained. These reduced matrix elements were compared, where applicable, with the predictions of the extreme single-particle model, the shell model with configuration mixing, and the Nilsson rotational model. On the basis of the rotational-model analysis, values of the deformation parameter, $\delta = \Delta R/R_0$ (where ΔR is the difference between the major and minor axes of a spheroidal nucleus, and R_0 is its mean radius), were obtained as follows: $|\delta|_{^{29}P} \simeq 0.40 \pm 0.10$; $|\delta|_{^{33}S} \simeq 0.12^{+0.06}_{-0.04}$. A value of 1949 ± 2 keV was obtained for the excitation energy of the second excited state in ^{29}P. (TSS) (Diss. Abstr. Int., B.)

17822 (^{3}He,d) STRIPPING REACTION ON MEDIUM-WEIGHT NUCLEI. Cage, Marvin Eugene. Boulder, Colo.; Univ. of Colorado (1969). 119p. University Microfilms Order No. 70-16,470.

Thesis.

The ^{39}K(^{3}He, ^{3}He)^{39}K and ^{113}In(^{3}He, ^{3}He)^{113}In elastic-scattering experiments were performed to obtain ^{3}He optical-model parameter sets necessary for the DWBA analyses. Two sets of parameters were found for each reaction: the families with the deeper real well depths yielded the better results for both (^{3}He,d) experiments. The ^{39}K(^{3}He,d)^{40}Ca reaction, performed with a 29.3-MeV ^{3}He beam, provided information on the ground state of ^{40}Ca and 17 excited states, including 2 new states; an overall resolution of 100 keV FWHM was achieved with a E–dE/dx detector telescope and particle-identification system. Angular distributions, partial strengths, and spectroscopic factors were extracted for 14 of these states. Proton particle–hole states having $(1d_{\frac{3}{2}}^{-1}\ 1T_{\frac{1}{2}})^{J=2,3,4,5}_{T=0,1}$ and $(1d_{\frac{3}{2}}^{-1}\ 2p_{\frac{1}{2}})^{J=0,1,2,3}_{T=0}$ configurations were observed. A 37.7-MeV incident ^{3}He beam was used for the ^{113}In(^{3}He, d)^{114}Sn reaction. The ground state of ^{114}Sn and 15 excited states were observed, including 12 new states, with an overall resolution of 150 keV FWHM. Partial strengths were extracted from the angular distributions of 8 peaks, plus 2 sets of peaks containing closely spaced triplets of levels. Angular momentum transfers corresponding to l = 2, l = 4, and l = 5 were observed; these are believed to result from the transferred proton's occupying $2d_{\frac{5}{2}}$, $1g_{\frac{9}{2}}$, and $1h_{\frac{11}{2}}$ orbitals, respectively, and being coupled to a hole in a $1g_{\frac{9}{2}}$ orbital. (TSS) (Diss. Abstr. Int., B)

17823 STUDY OF THE (^{3}He,t) REACTION AND ISOBARIC ANALOG STATES IN 1f–2p SHELL NUCLEI. Becchetti, Frederick Daniel Jr. Minneapolis; Univ. of Minnesota (1969). 84p. University Microfilms Order No. 70-15,700. Thesis.

The (^{3}He,t) reaction leading to isobaric-analog (IAS) and other states in the Ti, Fe, Ni, and Zn isotopes is studied at an incident ^{3}He energy of 24.6 MeV using a magnetic spectrometer and position-sensitive detectors. The (^{3}He,t)Q values measured are used to extract Coulomb displacement energies accurate to ±6 keV or less. The $0^+ \rightarrow 0^+$ analog strength in several nuclei with T > 1 appears to be shared by several states. Two cases in particular, ^{56}Fe–^{56}Co and ^{58}Fe–^{58}Co are studied further using (d,α) and other reactions. The results suggest large isospin mixing for these nuclei. Angular distributions for the $0^+ \rightarrow 0^+$ IAS transition are given for ^{46}Ti, ^{58}Ni, and ^{60}Ni as well as the $0^+ \rightarrow 2^+$ IAS* transition for ^{58}Ni and ^{60}Ni. Several non-analog states are also included. The Coulomb displacement energies and differential cross sections are analyzed using current macro- and microscopic models, and information about the nuclear neutron excess and the (^{3}He,t) reaction mechanism is obtained. Also presented is a global optical-model analysis of published ^{3}He and triton elastic scattering in the region with 40 < A < 210, 10 < E < 40 MeV. (Diss. Abstr. Int., B)

17824 STUDIES OF THE DECAY OF THE COMPOUND NUCLEUS ^{68}Ge. Barkan, S. (Simon Fraser Univ., Burnaby, B. C.); D'Auria, J. M.; Pate, Brian D.; (and others). pp 20-31 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

The decay of the compound nucleus ^{68}Ge, formed via the reactions ^{4}He + ^{64}Zn, ^{12}C + ^{56}Fe, and ^{16}O + ^{52}Cr, was studied through measurements on product activation cross-sections, recoil nucleus ranges, and gamma-ray emission (the latter via in-beam experiments). The experimental results for cross-sections are compared with those from compound statistical calculations featuring explicit inclusion of angular momentum effects. Good agreement is observed when literature values of binding energy and other parameters are employed. Data on the emission of gamma-rays are expected to test the predictions of the calculations in considerably more detail, particularly as to the distribution in energy and angular momentum of the nuclei produced as a result of particle evaporation. The preliminary results presented are interpreted in a qualitative way as to the origin of the spectrum characteristics discussed. (auth) (UK)

17825 ASYMMETRY OF THE INELASTIC SCATTERING OF 20.3 MeV POLARIZED PROTONS ON ^{24}Mg, ^{26}Mg, AND ^{28}Si. Lombard, R. M.; Mayer, B.; Raynal, J. (CEA, Saclay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.90-1(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

A coupled channel analysis introducing a deformed L.S. coupling was performed for ^{24}Mg, ^{26}Mg and ^{28}Si. The introduction of the full Thomas term with an angular dependence for the spin-orbit potential improves the fit to the asymmetry data. (auth) (France)

17826 MEASUREMENT OF THE DEPOLARIZATION PARAMETER IN PROTON ELASTIC SCATTERING. Beurtey, R.; Catillon, P.; Schnabel, P. (CEA, Saclay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.96-7(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The measurement of the depolarization of a proton beam elastically scattered by ^{27}Al, ^{10}B and ^{9}Be is described. Experimental results indicate a small but measurable spin-flip cross section. (auth) (France)

17827 PRODUCTION OF FAST LIGHT FRAGMENTS IN THE INTERACTION OF 20 GeV PROTONS WITH ALUMINUM. Alard, J. P.; Bolta, J. M.; Cordaillat, A.; (and others) (Univ., Clermont-Ferrand, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.100-1(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

XUM

The energy spectra of fast light fragments produced in 20 GeV proton interactions on aluminum are given for angles between 20 and 60°. (auth) (France)

17828 PICK-UP REACTIONS WITH CORE EXCITATION ON ^{28}Si AND ^{40}Ca. Romero, M.; Buenerd, M.; Dupont, Y.; Chabre, M.; Depommier, P. (Univ., Grenoble, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.119-20(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The ^{28}Si(p,d)^{27}Si and ^{40}Ca(p,d)^{39}Ca reactions were studied between 30 and 45 MeV to look for J forbidden transitions involving at 2^+ (in ^{28}Si) or 3^- (in ^{40}Ca) core excitation. A calculation of this process in the entrance channel accounts for 50% of the cross section observed for the transition to the $^7/_2^+$ state at 2.17 MeV in ^{27}Si. (auth) (France)

17829 STUDY OF ^{28}Si(^{3}He,α)^{27}Si AT LOW ENERGY. Rotbard, G.; Ronsin, G.; Kalifa, J.; Vergnes, M. (Univ. Paris, Orsay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.121-2(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Close to the Coulomb barrier the (^{3}He,α) reaction results from a competition between pickup and a less direct mechanism. Even when pickup dominated, the measurement of only one angular distribution did not permit extraction of a reliable spectroscopic factor. (auth)

17830 THEORETICAL STUDY OF ELASTIC AND INELASTIC SCATTERING CROSS SECTIONS OF FAST NEUTRONS OF SULFUR. Le Rigoleur, C.; Kinney, W. E.; Perey, F. G. (Oak Ridge National Lab., Tenn.). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.133-4(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Elastic and inelastic neutron cross sections on sulfur at 5.44, 6.37, 7.54, 8.52 MeV were calculated. The contribution of direct interaction to the neutron inelastic scattering to the 2^+(2.24) and 3^-(5.01) levels were added to the compound process. (auth) (France)

17831 STUDY OF (p,d) REACTIONS WITH A BEAM OF POLARIZED PROTONS. Escudie, J. L.; Gosset, J.; Kamitsubo, H.; Mayer, B. (CEA, Saclay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.135-6(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Differential cross sections and asymmetries were measured for (p,d) reactions on ^{49}Ti, ^{57}Fe, ^{91}Zr, ^{118}Sn and ^{119}Sn. These experiments, added to previous (p,d) experiments on ^{53}Cr, ^{61}Ni, ^{90}Zr, showed a strong j dependence of the measured asymmetries. The D.W.B.A. generally gave a good agreement for both cross sections and asymmetries. (auth) (France)

17832 PARITIES OF SOME EXCITED LEVELS OF ^{15}N FROM 9.05 TO 10.7 MeV. Chambon, B. (Univ., Lyon); Drain, D.; Vidal, J. L.; (and others). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.139-40(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The ^{15}N excited states between 9.05 and 10.07 MeV were studied from the ^{14}N(d,p)^{15}N reaction. The angular distributions for proton groups corresponding to 9.05, 9.16, 9.22 and 10.07 MeV levels in ^{15}N were measured at E_d = 3 MeV. l_n transfer-values and absolute spectroscopic factors of these transitions were deduced from D.W.B.A. analysis. (auth) (France)

17833 STUDY OF THE ^{48}Ti(t,α)^{47}Sc REACTION AT 12 MeV: PRELIMINARY RESULTS. Baudinet-Robinet, Y. (Univ., Liege); Delbrouck-Habaru, J. M.; Winand, L.; Vervier, J. J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.141(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The ^{48}Ti(t,α)^{47}Sc reaction was used at a bombarding energy of about 12 MeV to investigate the states of ^{47}Sc up to about 4 MeV excitation energy. The angular distributions for the first few levels were analyzed successfully by the DWBA method. (auth) (France)

17834 RADIATIVE CAPTURE OF FAST NEUTRONS IN Si, Rb, Sr, AND Y. Rigaud, F. (Univ. Bordeaux, Gradignan, France); Roturier, J.; Irigaray, J. L.; (and others). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.154-5(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Gamma-ray spectra from the radiative capture of 14.06 MeV neutrons in natural Si, Rb, Sr and Y were investigated by means of a time-of-flight spectrometer. The results were interpreted using direct and collective capture mechanisms including the contribution of the interference between them. The agreement between theory and experiment seems satisfactory. (auth) (France)

17835 MECHANISM OF ^{20}Ne(^{3}He,p)^{22}Na REACTIONS AT LOW ENERGIES (3 MeV). Meynadier, C.; Allard, J. F.; Beaumevieille, H.; (and others) (Institut d'Etudes Nucleaires, Algiers). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.162-3(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Angular distributions of the p_{0-4}, p_{8-12}, p_{14} groups were measured for the ^{20}Ne(^{3}He,p)^{22}Na reaction at $E_{^3He}$ = 2.8 and 3 MeV. Theoretical total cross sections calculated by the Hauser–Feshbach theory are in good agreement with averaged experimental ones except for p_{14}. (auth) (France)

17836 SPECTROSCOPY OF ^{62}Zn BY ^{64}Zn(p,t) REACTION. Bruandet, J. F.; Longequeue, N.; Longequeue, J. P.; Vignon, B. (Univ., Grenoble, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.168-9(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The lowest excited levels of ^{62}Zn were studied by ^{64}Zn(p,t) reaction at E_p = 40 MeV. Five levels were observed at Ex = 0.95, 1.75, 2.20, 2.65 and 3.10 MeV. The following values of J,π: 2^+ (0.95), 2^+ (1.75) and 3^- (3.10 MeV) are given. (auth) (France)

17837 REACTIONS INDUCED BY ^{7}Li ON ^{36}Ar. Tellez, A. (CEA, Saclay, France); Fouan, J. P.; Ballini, R.; Delaunay, J. J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.172-3(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The ^{7}Li induced reactions on ^{36}Ar were studied. The configurations excited preferentially in ^{40}Ca by ^{36}Ar(^{7}Li,t) appear to be more important in the higher states ($E_x \geq 10$ MeV). In the low lying ones, only even natural parity states are excited. For the rotational band built on the 3.35 MeV (0^+) level, the results are discussed together with those of (p,p'γ) reactions. (auth) (France)

17838 STATISTICAL NATURE OF ^{20}Ne(d,α)^{18}F AND ^{22}Ne(d,α)^{20}F REACTIONS UP TO 3.2 MeV. Morand, C.; Beaumevieille, H.; Dauchy, A.; (and others) (Institut d'Etudes Nucleaires, Algiers). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.205-6(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Excitation curves of the ^{20}Ne(d,$\alpha_{0-1-5-6}$)^{18}F reactions were plotted in the energy range 2 < E < 3.2 MeV. The α angular distributions of the ^{20}Ne(d,α)^{18}F and ^{22}Ne(d,α)^{20}F reactions were measured for the following states: 0, 0.93, 1.70, 2.10, 2.52 MeV of ^{18}F and 0, 0.65, 1.31 of ^{20}F. Theoretical total cross sections calculated by the Hauser–Feshbach theory, are in good agreement with the averaged experimental ones for the alpha groups with known characteristics. (auth) (France)

17839 SEARCH FOR AN INTERMEDIATE STRUCTURE IN THE TOTAL AND ELASTIC CROSS SECTIONS OF Ti. Adam, A.; Cabe, J.; Cance, M.; (and others) (CEA, Montrouge, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.217-18(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The total and elastic cross sections of neutrons on titanium between 150 and 1200 keV were measured. An intermediate state of $J = ^1/_2$ was found for 700 keV neutrons. (auth) (France)

17840 ENERGY LEVELS AND γ-RAY DECAY SCHEME OF ^{46}V. Chen, Siew-min. Tallahassee; Florida State Univ. (1970). 105p. University Microfilms Order No. 70-20,061.

Thesis.

The ^{46}V nucleus was reached by the ^{46}Ti(p,n)^{46}V reaction using two enriched metallic targets, ^{46}Ti and ^{48}Ti, 2 mg/cm^2 thick. An n-γ coincidence system was set up to overcome the complicated structure which otherwise appears in the γ-ray spectra. A coaxial Ge(Li) detector was used for γ-ray detection and a liquid scintillator for the neutron detection. Some n-γ coincidence spectra were obtained for the ^{46}Ti target at E_p = 8.8, 11.2, 11.5 and 12.0 MeV, and for the ^{48}Ti target at 11.5 MeV. To supplement these data, neutron spectra at 70 and 110° at E_p = 10.4 MeV were taken with ^{3}He proportional counters and an excitation function of the ^{46}Ti(p,n)^{46}V(β^+) reaction was obtained with a plastic scintilla-

tor to detect the ^{46}V β^+-activity as a function of proton energy from 7.9 to 12.0 MeV. The absolute cross section was measured at 9.7 MeV to be 20.4 mb. Four energy levels of ^{46}V excitation energy were fixed energetically with the γ-ray spectra taken at several proton energies as primary and the neutron spectra and the excitation function as supporting data. The accuracy of these levels (910, 1250, 1375 and 1675 keV) is better or equal to 7 keV. The γ-decay scheme was determined and the branching ratio calculated. Assuming that the low-lying levels of ^{46}V have positive parities, tentative spins for the 910, 1250, 1375 and 1675 keV levels were assigned to be (2^+), $(3^+$ or $4^+)$, $(1^+$ or $2^+)$ and (5^+), respectively, from the γ-decay scheme and the branching ratios. Some γ-rays from ^{48}V were also observed. Based on the known energy level scheme of ^{48}V, and on the assumption that γ-rays from low-lying levels will show up more strongly, several of the observed γ-rays were tentatively assigned to the decay of ^{46}V levels. (Diss. Abstr. Int., B)

17841 FINE STRUCTURE OF ANALOG STATES IN ^{61}Cu, ^{63}Cu, AND ^{65}Cu. Browne, John Charles. Durham, N. C.; Duke Univ. (1969). 129p. University Microfilms Order No. 70-20,259. Thesis.

Differential cross sections were measured at laboratory angles of 160, 135, 120 and 90° for $^{60}Ni(p,p)$, $^{62}Ni(p,p)$ and $^{64}Ni(p,p)$ at energies ranging between 1.8 and 3.3 MeV. The $^{64}Ni(p,n)$ total cross section was measured from threshold (~2.50 MeV) to 3.3 MeV. All data were taken using a high resolution electrostatic analyzer-homogenizer system in a 3 MV Van de Graaff laboratory. A total resolution of 300 to 400 eV was realized using thin solid targets of the enriched nickel isotopes. The analogs of the second, sixth and eighth excited states of ^{61}Ni were identified in the $^{60}Ni(p,p)$ experiment. The analogs of the ground state, second and third excited states of ^{63}Ni were observed in the $^{62}Ni(p,p)$ experiment. The analog of the first excited state of ^{65}Ni was identified in the $^{64}Ni(p,p)$ experiment. In all cases, the analog state was fragmented into individual fine-structure resonances. The resonance parameters were obtained by an R-matrix analysis. Only $l = 1$ analog states were observed. Spectroscopic factors were obtained using the resonance parameters extracted from the data and the calculated single-particle widths for these states. Single-particle widths were estimated by calculations using an optical-model code. The spectroscopic factors disagree in many cases with the spectroscopic factors for the parent states extracted from (d,p) measurements. The analog of the second excited state of ^{63}Ni was also observed by elastic proton scattering on a thick ^{62}Ni target. A comparison between these gross-structure results and the averaged fine-structure data was made. The spectroscopic factor for the thick target data is consistent with the spectroscopic factor obtained from the fine-structure measurements. Both numbers, however, disagree with the results of other gross-structure measurements (Gaarde et al., 1966). Coulomb energy differences were calculated for the seven $l = 1$ analog states and their parents. Very consistent results were obtained assuming a $Z/A^{\frac{1}{3}}$ variation for the Coulomb energy. (Diss. Abstr. Int., B)

17842 GAMMA-RAY YIELD CROSS-SECTION FOR INELASTIC SCATTERED FISSION NEUTRONS. Bakov, A. T.; Dvukhsherstnov, V. G.; Kazanskii, Yu. A. At. Energ. (USSR); 29: 338-42(Nov 1970). (In Russian).

The gamma spectra of inelastic scattered neutrons were measured on the neutron spectrum of the uranium to water reactor for Na, Al, Ti, V, Mn, Fe, Ni, Cu, Zn, Zr, Pb, Bi, and ^{238}U. The yield cross section and the number of separate gamma-quantum lines per one inelastic scattering, averaged for neutron energy range $En \geq E_{bound}$, were obtained (where E_{bound} is a boundary neutron energy when the production of gamma-rays of a chosen energy is possible). (auth)

17843 THE DECAYS OF $^{82a+82b}As$ AND ^{78}Ge. Van Klinken, J.; Taff, L. M.; Dijkstra, H. T.; (and others) (Univ., Groningen, Netherlands). Nucl. Phys.; A157: 385-403(1970).

The decays of two states of ^{82}As are reported: ^{82a}As with $T_{\frac{1}{2}} = 19 \pm 1.5$ s and ^{82b}As with $T_{\frac{1}{2}} = 13.0 \pm 0.6$ s. Information on the decay of ^{78}Ge with $T_{\frac{1}{2}} = 40 \pm 4$ s was also obtained. Spectra of single β and γ rays, $\gamma\gamma$ and $\beta\gamma$ coincidence measurements and fast chemical separations were used to identify and to study the decays of these activities, particularly of $^{82a+82b}As$. The two isomers of ^{82}As probably have spin and parity 1^+(a) and 5^-(b). From their decays levels are proposed in ^{82}Se at: 654.8(2^+), 1731.2(2^+), 1735.4(4^+), 2550.8(3^+), 2894.2(4^-), 3454(5^-), 4091, (4321), and (4565) keV. An unusually large hindrance factor of the allowed β decay from the 1^+ state of ^{82a}As was noted. The partial decay scheme of ^{78}Ge has levels in ^{78}As at 230.4 and 772.9 keV and possibly at 985.9 keV. (auth)

17844 INELASTIC SCATTERING OF 50 MeV PROTONS BY ^{54}Fe. Mani, G. S. (Manchester Univ., Eng.). Nucl. Phys.; A157: 471-80(1970).

Inelastic proton scattering from ^{54}Fe at 49.35 MeV was studied with protons from a linear accelerator. Angular distribution for eleven excited states up to an excitation of 5 MeV in ^{54}Fe were obtained. Spin and parity assignments were made using DWBA analysis with first-order collective form factors. (auth)

17845 A STUDY OF THE REACTION $^{46}Ti(p,\gamma)^{47}V$ AT THE 1.363 MeV RESONANCE. McCallum, G. J.; Pohl, K. P. (Inst. of Nuclear Sciences, Lower Hutt, N. Z.). Nucl. Phys.; A157: 552-60(1970).

The reaction $^{46}Ti(p,\gamma)^{47}V$ was studied at the 1.363 MeV resonance by means of a 30 cm^3 Ge(Li) detector. Gamma branching ratio and angular distribution measurements were made. From these measurements together with the results of previous stripping reaction studies the spins and parities of a number of levels are deduced. (auth)

17846 NUCLEAR REACTION STUDIES IN THE NICKEL ISOTOPES: THE $^{62}Ni(d,p)^{63}Ni$ AND $^{64}Ni(d,p)^{65}Ni$ REACTIONS. Anfinsen, T. R. (Univ. of Bergen); Bjoerndal, K.; Graue, A.; (and others). Nucl. Phys.; A157: 561-76(1970).

The reactions $^{62}Ni(d,p)^{63}Ni$ and $^{64}Ni(d,p)^{65}Ni$ were studied at a bombarding energy of 7.5 MeV. With an energy resolution of approximately 13 keV, 78 levels in 63 Ni and 57 levels in ^{65}Ni were observed below 5.2 and 4.7 MeV, respectively. The angular distributions of the proton groups were measured for the majority of the levels and analyzed in terms of zero-range distorted-wave Born approximation calculations. Thus, information about the orbital angular momentum of the transferred neutrons and the spectroscopic strengths of the stripping levels were obtained. A sum-rule analysis was made for the $2p_{\frac{1}{2}}$, $1f_{\frac{7}{2}}$, $2p_{\frac{3}{2}}$, and $1g_{\frac{9}{2}}$ single-particle states and the results compared with both shell-model predictions and recent pairing theory calculations. Levels whose angular distributions do not resemble any theoretical stripping curves are also discussed briefly, and some systematic trends in the level scheme of the odd Ni isotopes are mentioned. (auth)

17847 DECAY OF $^{73m,g}Se$, ^{75m}Ge, AND ^{77m}Ge. Meeker, R. D.; Tucker, A. B. (Ames Lab., Iowa). Nucl. Phys.; A157: 337-57 (1970).

The decays of $^{73m,g}Se$, ^{75m}Ge, and ^{77m}Ge were investigated. Energies and intensities were determined for 49 transitions in ^{73}As. A decay scheme for $^{73m,g}Se$ consisting of 20 excited states was constructed from the results of Ge(Li) singles and coincidence measurements. Ge(Li) singles measurements of γ rays accompanying the decay of the short-lived isomeric states in ^{75}Ge and ^{77}Ge were made. The energy of the isomeric transition in ^{75}Ge was determined to be 139.8 ± 0.1 keV. Log ft values for allowed β decay of this $\frac{1}{2}^+$ isomeric state to known low-lying $\frac{5}{2}^+$ and $\frac{3}{2}^+$ levels in ^{75}As were determined to be greater than 7.8 and 9.4, respectively. The energy of the isomeric transition in ^{77}Ge was determined to be 159.7 ± 0.1 keV. Direct β decay to levels at 195 and 614 keV was discovered. The low-energy level structure of $^{73,75,77}As$ is compared with recent theoretical predictions. (auth)

17848 AN IMPROVED SCHEME FOR THE DECAY OF 86 sec ^{61}Zn. Hoffman, E. J.; Sarantites, D. G. (Washington Univ., St. Louis). Nucl. Phys.; A157: 584-92(1970).

The levels in ^{61}Cu populated in the decay of 86 sec ^{61}Zn were reinvestigated using a 29 cm^3 Ge(Li) detector in an anti-Compton arrangement, which employed a large NaI(Tl) annular detector. From extensive γ energy and intensity measurements as a function of time ten new γ rays were assigned to ^{61}Zn decay and levels at 475.0, 970.3, 1311.0, 1394.6, 1660.5, 1904.5, 1932.5, 2088.8, 2204.3, 2358.2, 2472.6, 2684.0, 2793.0, 2840.6, 2857.0, 2933.3, 3019.2, 3092.3, and 3521.1 keV were observed to be populated in the decay of ^{61}Zn. From log ft values determined in this work, from γ intensity information, and from previously reported correlation data from nuclear reactions definite J^π assignments were made for six levels and limits were placed for another six levels in ^{61}Cu. (auth)

17849 GAMMA RAYS FROM THERMAL NEUTRON CAPTURE IN ^{28}Si, ^{29}Si, AND ^{30}Si. Beard, G. B.; Thomas, G. E. (Argonne National Lab., Ill.). Nucl. Phys.; A157: 520-8(1970).

Thermal-neutron capture γ rays from separated isotopes of silicon were investigated. The results for the $^{28}Si(n,\gamma)^{29}Si$ reaction agreed well with those from other recent investigations in which natural silicon or enriched ^{28}Si were used as targets. The use of targets enriched in ^{29}Si and ^{30}Si markedly increased the sensitivity for detection of γ rays from excited states of ^{30}Si and ^{31}Si. A total of 27 γ rays were seen in the $^{29}Si(n,\gamma)^{30}Si$ reaction, of which 16 are included in the level diagram. For the $^{30}Si(n,\gamma)^{31}Si$ reaction, all 13 observed transitions are included in the accompanying level diagram. The neutron binding energies for the silicon isotopes were found to be as follows: $B_n(^{29}Si) = 8474.2 \pm 0.5$ keV, $B_n(^{30}Si) = 10609.9 \pm 1.0$ keV, and $B_n(^{31}Si) = 6589.1 \pm 0.7$ keV. XUM

17850 THERMAL NEUTRON CAPTURE IN NATURAL ARGON. Hardell, R.; Beer, C. (Chalmers Tekniska Hogskola, Goteborg. Stockholm Univ.). Phys. Scr.; 1: 85-8(1970).

The energies and intensities of gamma rays from thermal neutron capture in natural argon have been determined by means of a Ge(Li) pair spectrometer and anti-Compton spectrometer. An internal reactor target has been used. The reaction Q-value, excitation energies and decay schemes of ^{37}Ar and ^{41}Ar have been deduced. (auth) (Sweden)

17851 DECAY OF BOUND ISOBARIC ANALOGUE STATES IN ^{28}Si AND ^{32}S USING (d,nγ) REACTIONS. Nilsson, L. (Aktiebolaget Atomenergi, Studsvik, Sweden); Nilsson, A.; Bergqvist, I. Phys. Scr.; 1: 161-8(1970).

A method has been developed for recording coincidences between neutrons and gamma-rays produced in (d,nγ) reactions. Neutron energies were measured by time-of-flight techniques, and a large NaI(Tl) crystal was used to determine gamma-ray energies and intensities. The neutron detector was placed in the forward direction to emphasize the excitation of $l_p = 0$ levels in the residual nuclei. The method was applied to the ^{27}Al(d,nγ)^{28}Si and ^{31}P(d,nγ)^{32}S reactions at the deuteron energy 4.0 MeV. The gamma-ray decay of a number of levels below 12 MeV in ^{28}Si and below 9 MeV in ^{32}S was studied. The isobaric analogue levels are prominently populated by the (d,n) reaction. The method is in particular suitable for studies of the decay of these levels. (auth) (Sweden)

17852 NUCLEAR LIFETIMES IN ^{37}K AND ^{39}K. Anttila, A.; Bister, M.; Arminen, E.; Kouki, T. (Helsinki Univ.). Phys. Scr.; 1: 169-71(1970).

The mean lives of levels in ^{37}K and ^{39}K have been measured with the Doppler-shift attenuation method through the ^{36}Ar(p,γ)^{37}K and ^{38}Ar(p,γ)^{39}K reactions. The ions ^{36}Ar (0.337%) and ^{38}Ar (0.063%) were separated and impregnated into a tantalum backing. The mean lives or their upper limits of the 2 523-keV, 3 020-keV and 7 738-keV states in ^{39}K and of the 2 750-keV state in ^{37}K were determined as $\tau_m = 32 \pm 12$ fs, 21 ± 6 fs, $.1 \pm 4$ fs, and $.1 \pm 6$ fs, respectively. The result obtained for the Q-value of the ^{38}Ar(p,γ)^{39}K reaction was 6 381.2 ± 1.2 keV. Some information concerning the decay of the ^{38}Ar(p,γ)^{39}K E_p = 1 393-keV resonance is also gained. The results on τ are compared with predictions from previous shell-model calculations. (auth) (Sweden)

17853 E_p = 1146 keV AND 1151 keV RESONANCES IN THE ^{31}P(p,γ)^{32}S REACTION. Holmberg, P.; Viitasalo, M. (Helsinki Univ.). Phys. Scr.; 1: 151-60(1970).

More evidence on the existence of resonances at E_p = 1146 keV and 1151 keV in the ^{31}P(p,γ)^{32}S reaction has been obtained. The decays of the resonances are investigated; and decay schemes, presented. Angular distributions of the strong transitions to the first excited state in ^{32}S are measured. Spin and parity 2^+ is suggested for both resonance states. (auth) (Sweden)

17854 (AD-712082) CHARGE DISTRIBUTION OF THE EVEN Nd ISOTOPES. Heisenberg, J. H.; McCarthy, H. S.; Sick, I.; Yearian, M. R. (Stanford Univ., Calif. High-Energy Physics Lab.). Jul 1970. Contract Nonr-225(67). 30p. (HEPL-615). NTIS.

High energy electron scattering was used to deduce the nuclear charge distribution of the ^{142,144,146,148,150}Nd. The measured cross sections were fitted using a two- and a three-parameter Fermi shape. A significant increase of the surface thickness between ^{142}Nd and ^{150}Nd is observed. The data for ^{142}Nd at high momentum transfer can only be fitted by introducing a modification on the charge distribution which is due to shell model effects. (auth) (USGRDR)

17855 (ANL-7678) FISSION-PRODUCT SPECTRA FROM FAST AND THERMAL FISSION OF ^{235}U AND ^{239}Pu. Varteressian K. A.; Burris, Leslie (Argonne National Lab., Ill.). Mar 1970. Contract W-31-109-eng-38. 469p. Dep. NTIS.

The yields of fission-product nuclides in irradiated uranium and plutonium, expressed as atoms per 100 atoms of ^{235}U or ^{239}Pu fissioned, were calculated, for both thermal and fast fission, as functions of irradiation time and cooling time. Fission-product yields are tabulated for irradiation and cooling times ranging from instantaneous to 10 years. Also included are tabulations of independent fission-fragment yields and of infinite-cooling-time stable fission-product yields. To make the numerous calculations possible, and to permit quick updating of data as new information on fission yields, half-lives, and decay schemes become available, computer codes known as DATAPREP and BURNUP have been developed. These, however, are by no means optimized at present and are included only as a matter of record. (auth)

17856 (CEA-CONF-1652) EFFECT OF SPIN-ORBIT TERMS OF THE OPTICAL POTENTIALS ON THE ASYMMETRY IN (p,d) EXPERIMENTS WITH POLARIZED PROTONS. Kamitsubo, H.; Mayer, B. (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). 1970. 2p. (CONF-700811-12). Dep. NTIS (U. S. Sales Only).

From 3rd International Symposium on Polarization Phenomena in Nuclear Reactions, Madison, Wis.

The effect of the spin-orbit terms in both proton and deuteron channels was studied in conjunction with the experimental results obtained for ^{118}Sn(p,d)^{117}Sn and ^{119}Sn(p,d)^{118}Sn reactions with polarized protons. The asymmetry in the ^{119}Sn(p,d)^{118}Sn reaction was shown to be very similar to that of protons elastically scattered by ^{119}Sn. D.W.B.A. calculations were in agreement with the (p,d) asymmetry when a spin-orbit term was included only in the proton channel (PSO). The contribution from the spin-orbit term in the deuteron channel did not radically change the asymmetry. The asymmetry given by a spin-orbit term in only the deuteron channel (DSO) was nearly in phase opposition with the PSO asymmetry, and the asymmetry calculated with spin-orbit terms in both channels was roughly equal to the sum of the asymmetries for PSO and DSO. D.W.B.A. calculations showed that the correlation between proton elastic scattering and (p,d) reaction disappeared at a lower energy. Opposite behavior in the asymmetry for PSO and DSO was seen in the partial-wave scattering amplitude, the spin-orbit force being more effective for lower partial waves. The effects of the spin-orbit term in the proton and deuteron channels were also shown for the case of $l_n = 2$ transfer. (France)

17857 (CEA-N-1339) SEARCH FOR A ^{238}Np FISSION ISOMER. Paya, Daniel; Katsanos, Anastasios; Leroy, Jean-Luc; Michaudon, Andre; Pranal, Yves (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). Nov 1970. 9p. (In French). Dep. NTIS (U. S. Sales Only).

An attempt was made to investigate the possibility of forming a ^{238}Np fission isomer by bombarding a ^{237}Np target with 500-keV neutrons. The results indicated the existence of an isomer with a half-life of 12 ns. (auth) (France)

17858 (COO-1716-11) THERMODYNAMIC STUDIES ON HEAVY ELEMENTS AND STUDIES IN NUCLEAR CHEMISTRY. Annual Report, February 1970-January 1971. Cobble, J. W. (ed.) (Purdue Univ., Lafayette, Ind. Dept. of Chemistry). 1 Jan 1971. Contract AT(11-1)-1716. 24p. Dep. NTIS.

Developments are given for studies on chemically bound neutrons and ternary fission of ^{232}Th and ^{197}Au with ^{4}He ions. In the case of ^{197}Au, success in measuring the formation cross section of a typical ternary product, ^{28}Mg, as low as 0.01 nanobarns (10^{-12} barns). The thermodynamic behavior of a typical actinide ion, UO_2^{++}, was determined over an extended range of temperature, 0 to 100°C from $C_{p_2}^0$ measurements. (P.C.H.)

17859 (COO-1746-53) MAGNETIC MOMENTS OF THE FIRST 2^+ STATES IN ^{192}Os AND ^{192}Pt. King, Wm. C.; Grabowski, Z. W.; Scharenberg, R. P. (Purdue Univ., Lafayette, Ind. Dept. of Physics). [1970]. Contract AT(11-1)-1746. 10p. Dep. NTIS.

PAC measurements of the magnetic moments of the first 2^+ states in ^{192}Os and ^{192}Pt give 0.797 ± 0.036 and 0.90 ± 0.11 μ_N, respectively. Results agree with the 2(Z/A) values and differ appreciably from the Kumar and Baranger model predictions. Measurements using Fe(Ir) and Ni(Ir) alloys established the unsuitability of Fe(Ir) alloys for such experiments. NMR measurements of internal fields for ^{187}Os in Fe and Ni give H(296°K) = −1093.43 ± .65 kOe and H(295°K) = −282.3 ± 1.0 kOe, respectively. (auth)

17860 (CU-1019-76) ON THE ANGULAR DISTRIBUTION OF FISSION FRAGMENTS FROM THE ^{170}Yb COMPOUND NUCLEUS EXCITED TO 107 MeV. Kowalski, L.; Zebelman, A.; Kandil, A.; Miller, J. (Columbia Univ., New York. Dept. of Chemistry). Oct 1970. 7p. Dep. NTIS.

The angular distributions of the fission products formed in the reaction of 126-MeV ^{12}C ions with ^{158}Gd and 137-MeV ^{16}O ions with ^{154}Sm, both of which give ^{170}Yb compound nuclei at an excitation of 107 MeV, were measured. It is found that the angular distribution in the ^{12}C-ion entrance channel is proportional to $(1/\sin\theta)$ from about 25° to 155° in the center-of-mass system while the corresponding range is about 15° to 165° for the ^{16}O-

ion entrance channel. The total fission cross sections are 20 ± 2 mb and 39 ± 4mb for the two entrance channels, respectively. (auth)

17861 (IN-1448(Rev.)) GAMMA RAYS EMITTED BY THE FISSIONABLE NUCLIDES AND ASSOCIATED ISOTOPES. Cline, J. E. (Idaho Nuclear Corp., Idaho Falls). Dec 1970. Contract AT(10-1)-1230. 46p. Dep. NTIS.

Data on gamma-ray energies and intensities emitted by the nuclides present in nuclear fuel material are presented. These energies and intensities were measured using a high-resolution Ge(Li) spectrometer. Gamma-ray pulse-height spectra are given for reference use. (auth)

17862 (JAERI-1199) JAERI FAST REACTOR GROUP CONSTANTS SYSTEMS. PART II-1. Katsuragi, Satoru; Ishiguro, Yukio; Takano, Hideki; Nakagawa, Masayuki (Japan Atomic Energy Research Inst., Tokyo). Dec 1970. 120p. Dep. NTIS (U. S. Sales Only).

Improvements were made for the treatment of effective cross sections of heavy nuclides in the resonance energy region, and fast reactor group constants in this energy region were produced for nuclides ^{235}U, ^{238}U, ^{239}Pu, and ^{240}Pu. These group constants are thought to be accurate compared with existing fast group constants in the following sense: (1) The resonance parameters (including those in the unresolved resonance energy region) are evaluated so as to fit measured cross sections. (2) Accurate cross sections are obtained by a calculating procedure which uses a reasonable representation of cross sections without waste of computing time. (3) The effective cross sections are obtained using exact spectra as weights, because conventional approximation methods yield less accurate results. (4) An investigation was made for the treatment of interference effects. And interference effects with ^{238}U is taken into account for shielding factors. (5) The energy variation of $\alpha(\sigma_c/\sigma_f)$ values and σ_f for ^{235}U and ^{239}Pu is properly reproduced, and an appropriate group structure is adopted taking this energy variation into consideration. 100 references. (auth)

17863 (JINR-P6-5484) MEASUREMENT OF HALF-LIVES OF THE EXCITED STATES WITH THE ENERGY OF 155.8 AND 227 keV IN THE ^{155}Tb NUCLEUS. Vavryschuk, Ya.; Morozov, V. A.; Muminov, T. M.; Razov, V. I.; Sazhinskii, Ya. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1970. 13p. (In Russian). Dep. NTIS (U. S. Sales Only).

The half-lives of 155.8- and 227-keV excited levels of the ^{155}Tb nucleus were measured by the e − γ delayed coincidence method. Intrinsic quadrupole moment and the deformed parameter of the ground state of the ^{155}Tb nucleus were calculated. The hindrance factor is determined for the single-particle model, for the Nilsson model and for the Nilsson model with the superfluid correction for the transitions discharging the 227-keV state. (auth)

17864 (NP-18596) THE DECAY OF THE ^{127}Sn ISOMERS. Helander, Elisabeth (Helsinki Univ. (Finland). Dept. of Radiochemistry). Sep 1970. 48p. Dep. NTIS (U. S. Sales Only).

Gamma- and x-rays emitted in the decay of 2.2 h and 4.1 min ^{127}Sn were investigated with the aid of Ge(Li) and Si(Li) detectors. Sources were prepared by the ^{130}Te(n,α)^{127}Sn reaction followed by chemical separation. Altogether 62 γ-rays were attributed to the decay of 2.2 h ^{127}Sn and 3 to that of 4.1 min ^{127}Sn. Gamma-gamma coincidence and anticoincidence relationships in the decay of 2.2 h ^{127}Sn were observed with various Ge(Li)-Ge(Li) and Ge(Li)-Na(Tl) detector combinations. It is suggested that the 4.1 min $3/2^+$ isomer of ^{127}Sn represents the ground state and the 2.2 h $11/2^-$ isomer the first excited state in ^{127}Sn. A level scheme of ^{127}Sb was constructed, involving levels at 0, 491, 1096, 1114, 1585, 1920, 1938, 1955, 2004, 2094, 2098, 2124, 2140, 2150, 2222, 2247, 2275, 2318, 2353, 2360, 2412, 2457, 2479, 2501, 2531, 2588, 2612, 2692, 2697, 2764, 2785, 2806, 2847 and 2881 keV. The low-lying levels of the odd-mass antimony isotopes vary smoothly through the series ^{119}Sb to ^{127}Sb. Predictions of the pairing-plus-quadrupole and core-particle-coupling model are discussed. (auth)

17865 (NP-18598) LEVEL STRUCTURE OF ^{120}Sn FROM THE DECAY OF ^{120}In AND ^{120}Sb ISOMERS. Liukkonen, E.; Hattula, J. (Jyvaskyla Univ. (Finland). Dept. of Physics). Oct 1970. 31p. Dep. NTIS (U. S. Sales Only).

Gamma rays in the decay of the 3.2 s (1^+) and 44 s (4.5^+) ^{120}In isomers and the 15.9 min (1^+) and 5.8 d (8^-) ^{120}Sb isomers have been investigated using Ge(Li) spectrometers and prompt and delayed Ge(Li)-NaI(Tl) coincidence techniques. The constructed level scheme of ^{120}Sn contains 18 levels at the following energies (keV): 0 (0^+), 1171.6 (2^+), 1875.6 (0^+), 2096.9 (1,2,3), 2160.7 (0^+), 2195.0 (4^+), 2284.8 (5^-), 2355.6 (2^+), 2421.2 (1,2,3), 2466.3 (4^+), 2482.1 (7^-), 2643.5 (4^+), 3058.6 (4^+), 3179.7 (4^+), 3349.9 (3,4^+), 3440 (3,4^+), 3447.6 (5,6^+) and 3777 (4^+). The levels are compared with the levels obtained from recent charged-particle reaction studies and the structure of ^{120}Sn is briefly discussed in view of the latest quasiparticle calculations. (auth) (Finland)

17866 (NP-18599) ENERGY LEVELS OF ^{176}Yb FROM THE DECAY OF ^{176}Tm AND ^{176m}Yb. Tuurnala, T.; Pursiheimo, V.; Liukkonen, E. (Helsinki Univ. (Finland). Dept. of Physics). Feb 1970. 23p. Dep. NTIS (U. S. Sales Only).

The decay of ^{176}Tm has been studied by means of Ge(Li) detectors and some gamma-gamma as well as gamma-beta coincidence arrangements. For the half-life of ^{176}Tm a value of 1.9 ± 0.1 min was measured. A total of 31 gamma rays were assigned to the decay of ^{176}Tm. According to the proposed level scheme these depopulate 19 levels in ^{176}Yb, of which those at 977, 1360, 1599, 1673, 2142, 2372, 2411, 2954 and 3188 keV are new. Spin and parity assignments are suggested for some of these levels and for the ground state of ^{176}Tm. In addition, four gamma transitions possibly belonging to an isomer in ^{176}Tm were found with energies 116.3, 122.3, 193.6 and 199.0 keV and with half-life 1.4 ± 0.1 min. Also the decay of ^{176m}Yb has been reinvestigated the results obtained being consistent with the previous data. (auth) (Finland)

17867 $3^- \times 3^-$ TWO-PHONON QUARTET AND THE PROTON PAIRING VIBRATION IN ^{208}Pb. Blomqvist, J. (State Univ. of New York, Stony Brook). Contract AT(30-1)-4032. Phys. Lett.; 33B: 541-4(21 Dec 1970).

The observed large quadrupole moment of the collective 3^- state in ^{208}Pb is found to imply a considerable splitting of the two-octupole-phonon quartet. The 0^+ member of the quartet is predicted to come lowest in energy, possibly as far down as 3.7 MeV. Energy considerations strongly suggest that an observed 0^+ state at 5.26 MeV is the proton pairing vibrational state. (auth)

17868 COUPLING BETWEEN SPIN-FLIP AND NON-SPIN-FLIP PARTICLE-HOLE PAIR STATES. Fujita, J. I. (Tokyo Univ.); Hirata, M.; Shoda, K. Phys. Lett.; 33B: 550-2(21 Dec 1970).

Simple models are proposed in order to explain the recent experimental data on E1 radiative widths of isobaric analog states, which were obtained from (e,e'p) reactions through isobaric analog states. It is shown that these data strongly suggest the existence of coupling interactions between spin-flip and non-spin-flip neutron-hole-proton pair states. (auth)

17869 EVIDENCE OF THE POLAR EMISSION OF ALPHA-PARTICLES IN THE THERMAL NEUTRON FISSION OF ^{235}U. Piasecki, E.; Dakowski, M.; Krogulski, T.; Tys, J.; Chwaszczewska, J. (Inst. of Nuclear Research, Swierk, Poland). Phys. Lett.; 33B: 568-70(21 Dec 1970).

The energy-angular distribution of α-particles emitted during the thermal neutron fission of ^{235}U was measured. The surprisingly high rate of α-particles registered at angles close to 0 and 180° with respect to the fragment flight direction suggests the existence of polar emission phenomena. (auth)

17870 EFFECTIVE SPIN AND ORBITAL MAGNETISM OF THE PROTON STUDIED FROM THE g-FACTORS OF THE 8^+ STATES IN ^{90}Zr AND ^{92}Mo. Nagamiya, S. (Inst. of Physical and Chemical Research, Saitama, Japan); Katou, T.; Nomura, T.; Yamazaki, T. Phys. Lett.; 33B: 574-6(21 Dec 1970).

The g-factors of the $[\pi g_{9/2}^2]$ 8^+ states of ^{90}Zr and ^{92}Mo were determined to be 1.355 ± 0.018 and 1.409 ± 0.016, respectively, with the time-differential spin rotation method in $(\alpha,2n)$ reactions. Effective g_s- and g_l-factors of the proton in the A = 88 region are discussed. (auth)

17871 DECAY OF ^{129}Sb. Ohya, Susumu (Japan Atomic Energy Research Inst., Ibaraki); Tamura, Tsutomu; Kageyama, Seizaburo. J. Phys. Soc. Jap.; 29: 1435-45(Dec 1970).

The radiations emitted in the decay of ^{129}Sb were investigated with Ge(Li), Si(Li) and NaI detectors. From various coincidence studies on these transitions, it is concluded that excited levels are populated at 105.5, 180.8, 464.9, 544.7, 634.0, 760.1, 812.8, 966.6, 1228.3, 1281.3, 1317.5, 1599.0, 1633.0, 1654.6, 1727.0, 1736.5, 1752.6, 1842.8, 1870.3, 2070.1, 2085.3, 2113.0 and 2133.2 keV. The spin-parity values are tentatively assigned for low-lying levels. The results are compared with other odd-mass tellurium nuclei. (auth)

17872 ANGULAR AND ENERGY DISTRIBUTIONS OF α PARTICLES IN LRA FISSION. Vitta, Paul B. Atlanta; Emory Univ. (1970). 74p. University Microfilms Order No. 70-22,891. Thesis.

Detailed experimental studies were made on the angular and energy distributions of the long-range α particles (LRA) emitted

from ^{252}Cf during spontaneous fission. They show that the α-particle angular distribution is peaked at an angle (made by the trajectory of the α particle with that of either of the main fragments) of about 90° and has a full-width at half-maximum of 20°–30°. The α-particle energy spectrum is peaked at about 15 MeV and has a full-width at half-maximum of 13 MeV. Computer calculations of the trajectories of the three particles produced in LRA-fission lead to predictions of angular and energy distributions which may be compared with the experimental ones. The calculations were carried out using a set of initial conditions determined by the statistical theory of nuclear fission. The comparison with experimental results therefore provides a test of the statistical theory. The calculated results show that the statistical theory leads to an energy spectrum which is in good agreement with the experimental one, and that reasonable agreement between the calculated and experimental angular distributions may be obtained if it is assumed that the α particle is emitted within a short period of time — of the order of 3×10^{-22} sec — after the instant of scission. (Diss. Abstr. Int., B)

17873 POLARIZATION AND CROSS-SECTION MEASUREMENTS OF 9.7-MeV PROTON ELASTIC SCATTERING BY NUCLEI. Sievers, Jerry Albert. Minneapolis; Univ. of Minnesota (1970). 131p. University Microfilms Order No. 70-20,237. Thesis.

An investigation is made of the applicability of the standard optical model of nucleon-nucleus elastic scattering to the description and interpretation of proton elastic scattering at an incident energy of 9.7 MeV. Measurements of relatively high accuracy were made of the differential cross section and polarization in proton elastic scattering by ^{90}Zr, ^{120}Sn, and ^{181}Ta at scattering angles from 20 degrees to 155 degrees lab. The accuracy and completeness of these data provided a means for a more sensitive test of the model at this incident projectile energy than has been possible in the past. The applicability of a matter-parameterized optical model is also investigated. In this model, the real central and spin-orbit terms are derived from the nuclear nucleon density and the two-nucleon potential. It is found that the standard optical model produces the best agreement with the experimental polarization data only when the model spin-orbit interaction is allowed to occur at an unusually small radius, or when an imaginary part is added to the model spin-orbit term. The implications of this and of a similar result found with the matter-parameterized model are discussed. Other features of the model potentials determined by this analysis are similar to those determined in other work. The effects of variations in the detailed forms of the model potentials are thoroughly investigated, and features of the model potentials are correlated with certain physical properties of the nuclei. Predictions for the observables calculated with the effective scattering potentials of either the standard or the matter-parameterized model are in good agreement with the main features of the experimental data, and properties of the model potentials may be successfully correlated with the main physical effects in the scattering. Analysis of the present relatively accurate data indicates, therefore, that a potential description is an appropriate description of the main effects in elastic scattering at 9.7 MeV and that effects not treated explicitly in the first-order matter-parameterized model are small. (Diss. Abstr. Int., B)

17874 TRANSVERSE POLARIZATION OF THE K-CONVERSION ELECTRONS FOLLOWING THE BETA DECAY OF ^{203}Hg AS A FUNCTION OF THE BETA RAY ENERGY. Froechtenigt, Joseph Frank Jr. St. Louis; St. Louis Univ. (1969). 75p. University Microfilms Order No. 70-20,388. Thesis.

As a consequence of the non-conservation of parity in weak interactions, the conversion electrons following beta decay may have some degree of polarization transverse to their momentum and lying in the plane formed by the momentum vectors of the beta particle and the conversion electron. In this experiment, the transverse polarization of the K-conversion electrons of ^{203}Hg was measured as a function of the beta ray energy. The experiment consisted of detecting the beta particle and using a thin lens spectrometer to focus the conversion electrons onto a gold scattering foil. By means of Mott scattering through the foil, the measured left-right asymmetry in the scattered electron intensity was the basis for computing the parallel component of the transverse polarization, $P_{||}(\theta)$, as a function of the beta ray energy. The results show that the transverse polarization increases with energy, and within probable error, shows a linear dependence on v/c. Neglecting the perpendicular component of the transverse polarization, $P_{\perp}(\theta)$, the transverse polarization can be written as $P_{||}(\theta) = K\, v/c \sin\theta$ where K is the polarization constant. The polarization constant $K = +0.73 \pm .02$ also agrees with other results. (Diss. Abstr. Int., B)

17875 MONOPOLE MIXING RATIO OF THE 793 keV $2^+ \rightarrow 2^+$ TRANSITION IN ^{184}W. Doubt, H. A. (Univ. of Sussex, Eng.); Hamilton, W. D.; Davies, K. E.; Grabowski, Z. W. Nucl. Phys.; A156: 353-64(1970).

The amplitude mixing ratios of the E2 to M1 and E0 to E2 components of the 2^+(793 keV) 2^+ transition in ^{184}W were obtained from $\gamma\gamma$, and gamma-conversion electron angular correlation measurements. The $\gamma\gamma$ measurements used a Ge(Li) detector in some cases; the $e\gamma$ correlations were performed using a magnetic lens spectrometer. The results obtained are: $\delta(E2:M1) = +18.7^{+\infty}_{-5}$ and $+0.38 \geq q(E0:E2) \geq -0.28$ for $+53 \geq \lambda \geq -113$. Agreement with Kumar's theoretical values for δ and q is contradictory: the former favors a 2″ assignment, the latter a 2′ assignment to the 904 keV level. (auth)

17876 THE EXCITED STATES OF ^{129}Te POPULATED IN THE β-DECAY OF ^{129}Sb. Calway, P. G.; Sharma, H. D. (Univ. of Waterloo, Ont.). Nucl. Phys.; A156: 338-52(1970).

The energies and relative intensities of the γ rays following the decay of ^{129}Sb were measured using a Ge(Li) detector. The decay of 4.35 h ^{129}Sb was found to involve 85 γ rays and to populate 32 excited states in ^{129}Te. The energy level at 464 keV is considered to be a $^9/_2^-$ three quasi-particle "intruder" level similar to those found in ^{125}Te and ^{127}Te isotopes. Spin and parity assignments (of other levels) were made. (auth)

17877 THE β^- DECAY OF ^{112}Ag. Macdonald, John A.; Sharma, H. D. (Univ. of Waterloo, Ont.). Nucl. Phys.; A156: 321-37(1970).

The γ radiation following the decay of ^{112}Ag was studied with a Ge(Li) detector. A total of 118 γ rays was observed. Gamma–gamma coincidence measurements were performed with Ge(Li)–Ge(Li) and Ge(Li)–NaI(Tl) detectors. A decay scheme is proposed, which shows that 31 excited states of ^{112}Cd are populated following the β-decay of ^{112}Ag. Spin and parity assignments for the energy levels of ^{112}Cd are made. (auth)

17878 THE DECAY SCHEME OF 7 MIN ^{169}Lu. Charvet, A.; Duffait, R.; Emsallem, A.; Chery, R. (Univ., Lyon). Nucl. Phys.; A156: 276-88(1970).

The electron-capture decay ^{169}Lu(7 min) $\rightarrow$ ^{169}Yb was investigated with Ge(Li) and Si(Li) detectors. Single, coincidence, and sum γ spectra, conversion lines, and $e\gamma$ coincidence relations were studied. The results with respect to the ground state band, and the γ- and β-vibrational bands are in good agreement with those of earlier investigations. Above the γ-vibrational band, 16 levels were established having the following energies (in keV), spin values and parities: 1479.8(3,4); 1551.2, 3 or 4^+; 1597.8, 4^-; 1650.4, 3 or 4^-; 1674.1, 5 or 6^+; 1770.1, 5^-; 1819.4, 3 or 4^-; 1842.1, 5 or 6^-; 1972.8, 5 or 6^-; 1998.7, 5^-; 2110.5, (5) 6^-; 2135.4, (4); 2203.8, (3) 4^+; 2242.9, 4^+; 2404.6, (3) 4^+; 2427.8, 4^+. The decay scheme accounts for 76 of the 110 transitions observed. The Q-value of the electron-capture decay of ^{169}Lu(7 min) was determined to be 4360 ± 80 keV. The half-life of the 1998.7 keV level was found to be 12.4 ± 1.1 ns. The structure of ^{169}Lu(7 min) and of the levels of ^{169}Yb is discussed in terms of current nuclear models. (auth)

17879 DECAY OF ^{223}Ra AND ITS DAUGHTER PRODUCTS. II. THE DECAY OF ^{219}Rn AND ^{215}Po. Davidson, W. F.; Connor, R. D. (Univ. of Manitoba, Winnipeg). Nucl. Phys.; A149: 385-91(1970).

Gamma-rays of energy 130.7, 222.0, 271.2, 294.0, 401.8, 516.5, and 677 keV and absolute intensity (%) 0.104, 0.028, 9.93, 0.059, 6.48, 0.022 and ≈ 0.006 respectively have been observed in the decay of ^{219}Rn. Conversion electron studies show the 130.7 and 271.2 keV transitions to be M1 + 25% E2 and 93.6% E2 + 6.4% M1 respectively. The 401.8, 294 and 222 keV transitions appear to be E2, M2 and E2 respectively. The 6.551 MeV α-271.2 keV γ directional correlation gave $A_{22} = -0.108 \pm 0.073$ and $A_{44} = -0.170 \pm 0.056$. The sequence $^9/_2$-$^5/_2$-$^7/_2$ is proposed. (auth)

17880 EVIDENCE FOR A FOUR-QUASIPARTICLE STATE IN THE DEFORMED NUCLEUS ^{164}Dy. Kaffrell, N.; Herrmann, G. (Univ., Mainz). Phys. Lett.; 34B: 46-8(18 Jan 1971).

An allowed-unhindered β-ray transition was observed in the decay of 3.0 min ^{164}Tb to a level of ^{164}Dy at 2206 keV energy. This level is interpreted as a rather pure four-quasiparticle configuration. (auth)

17881 ALPHA DECAY OF ^{247}Cm. Fields, P. R.; Ahmad, I.; Friedman, A. M.; Lerner, J.; Metta, D. N. (Argonne National Lab., Ill.). Nucl. Phys.; A160: 460-70(1971).

An enriched sample of ^{247}Cm(99.4%) was used to investigate the α-decay scheme of ^{247}Cm. Seven α groups with energies and intensities 5.265(13.8%), 5.210(5.7%), 5.145(1.2%), 4.983(2.0%), 4.941(1.6%), 4.868(71.0%), and 4.818(4.7%) were observed. Gamma

singles and $\alpha-\gamma$ coincidence spectra showed the presence of 278.0-, 287.5-, 346.0-, and 402.4-keV γ rays. A two-parameter coincidence experiment established that the sources of the 402.4- and the 287.5-keV γ rays were 4.868- and 4.983-MeV α groups, respectively. The multipolarity of the 287.5-keV transition was found to be M1. The K-conversion coefficient of the 402.4-keV γ ray indicates an E1 multipolarity for this transition. The levels at 287.5 and 402.4 keV were assigned to the $5/2^+(622)$ and $9/2^-(734)$ Nilsson states, respectively. The half-life of ^{247}Cm was found to be $(1.56 \pm 0.05) \times 10^7$ yr from the α pulse analysis and mass spectrometric analysis of the sample. (auth)

17882 LOW-ENERGY NEUTRON ENERGY SPECTRA FROM (p,n) REACTIONS. Cohen, B. L.; Degnan, J. H.; Fink, C. L.; Rao, G. R.; Balasubramanian, R. (Univ. of Pittsburgh). Phys. Rev. Lett.; 26: 23-7(4 Jan 1971).

Coincidence experiments indicate that (p,np) reactions on ^{90}Zr and ^{112}Sn leave the residual nuclei in their ground states, whence neutron spectra can be deduced from measurements of proton spectra. Results are very different for the two nuclei. Analysis indicates that the variation of σ_i— the cross section for the inverse process— is larger than expected and in opposite directions for the two nuclei. (auth)

17883 IMPLANTATION OF TELLURIUM IN IRON AND MEASUREMENT OF THE MAGNETIC MOMENT OF THE FIRST EXCITED STATE IN ^{123}Te. Rots, M. (Univ. of Leuven, Belgium); Coussement, R.; Van Esch, R.; Boge, M.; Dousson, S. Z. Phys.; 240: 396-402(1970).

By means of an isotope separator ^{123m}Te was implanted into iron. The attenuation of the $e-\gamma$ angular correlation was measured using a randomly oriented magnetic hyperfine interaction. From this the magnetic moment of the 159-keV first excited $3/2^+$ state was found to be $|\mu| = 0.72 \pm 0.12$ n.m. This value is in agreement with the Kisslinger–Sorensen prediction and consistent with the systematics observed for the character of the $3/2^+-1/2^+$ transitions in the odd tellurium isotopes. (auth)

17884 NUCLEAR FISSION OF ACTINIUM NUCLEI AND THE TWO-MODE HYPOTHESIS. Perry, Dennis Gordon. Seattle; Univ. of Washington (1970). 110p. University Microfilms Order No. 70-19,648.

Thesis.

Nuclear fission induced in a target of ^{226}Ra by bombardment with energetic protons and deuterons is reported. Solid-state counters were used to measure kinetic energies of complementary fission fragments, and from these energies the fragment masses could be found. In the element region near radium triple-peaked mass-yield distributions are found— these represent a superposition of contributions from several nuclear species at different excitation energies. The triple-peaked mass distributions have sometimes been interpreted in terms of two separate fission modes: a single symmetric peak, characteristic of symmetric fission, associated with higher excitation energies, and a double-peaked distribution, characteristic of asymmetric fission, associated with lower excitation energies. It is shown that by a proper choice of proton and deuteron bombarding energies, and by a proper weighting of their respective mass-yield curves, the mass distribution of a single species ^{228}Ac can be determined for a single excitation energy. At excitation energies near 25 MeV this mass distribution for ^{228}Ac is shown to be single symmetric peak, in agreement with the hypothesis of two fission modes. It is shown further that the measured kinetic-energy distributions can also be interpreted in terms of the two-mode hypothesis. Although the fundamental reason for the existence of two fission modes remains obscure, these results considerably strengthen the case for two fission modes as a working hypothesis for analyzing mass and kinetic energy distributions. Experiments on the emission of α particles during fission of radium bombarded with protons are also reported. It is found that α particles are emitted in both fission modes with no evidence for one or the other fission modes being favored. (Diss. Abstr. Int. B.)

17885 PHENOMENOLOGICAL MODEL FOR THE SIMULTANEOUS ANALYSIS OF SEVERAL ROTATIONAL BANDS. Das, T. K.; Dreizler, R. M.; Klein, Abraham (Univ. of Pennsylvania, Philadelphia). Phys. Rev. Lett.; 25: 1626-8(7 Dec 1970).

A theoretically based extension of the variable-moment-of-inertia model is proposed and applied to the simultaneous analysis of ground-state rotational and β-vibrational or γ-vibrational bands. The results are in excellent agreement with experiment. (auth)

17886 NON-STATISTICAL EFFECTS IN NEUTRON CAPTURE AT ^{98}Mo p-WAVE RESONANCES. Rohr, G.; Weigmann, H.; Winter, J. (EURATOM, Geel, Belg.). Nucl. Phys.; A150: 97-104(1970).

Neutron capture γ-ray spectra from individual ^{98}Mo + n resonances have been measured with a Ge(Li) detector. From the observation of very intense high-energy γ-rays it is concluded that several of the resonances are extraordinarily strong p-wave resonances with very large E1 strengths for decay into low-lying positive parity states in ^{99}Mo. Inspection of the ^{99}Mo γ-ray spectra themselves as well as a comparison with similar data for other nuclei in this mass region lead to results which are in contradiction to a statistical decay of the compound nucleus and suggest that nuclear structure effects like valency nucleon transitions play an important role in the decay of these resonances. Moreover, the extremely high value for the p-wave strength function computed from the ^{98}Mo + n resonances assigned as p-wave may be interpreted in terms of a strong energy dependence of the strength function due to the excitation of two-particle–one-hole doorway states. (auth)

17887 DETERMINATION OF THE E2/M1 MULTIPOLE MIXING RATIOS OF THE GAMMA TRANSITIONS IN ^{110}Cd. Krane, K. S.; Steffen, R. M. (Purdue Univ., Lafayette, Ind.). Phys. Rev., C; 2: 724-34(Aug 1970).

The multipole character and E2/M1 mixing ratios of all γ transitions following the decay of ^{110m}Ag to ^{110}Cd were determined by measuring the 1–2, 1–3, and 1–4 directional correlations, using two 30–cc coaxial Ge(Li) detectors in conjunction with a multichannel coincidence gating system. The analysis of the data clearly demonstrated the necessity for careful investigations of the effects of the Compton background on directional correlation measurements using Ge(Li) detectors. The directional correlation functions for mixed $\gamma-\gamma$ cascades are given in terms of explicitly defined reduced matrix elements and their ratios $\delta(\gamma_n)$. The analysis of the 25 measured directional correlations yielded a consistent set of E2/M1 mixing ratios for all mixed multipole transitions. The E2/M1 amplitude ratios $\delta(\gamma_n) = \langle I_{n+1}||\hat{T}_N^{E2}||I_n\rangle / \langle I_{n+1}||\hat{T}_N^{M1}||I_n\rangle$ for the ^{110}Cd γ rays are (energies are in keV): $\delta(447) = -0.45 \pm 0.20$, $\delta(620) = -0.80 \pm 0.50$, $\delta(678) = -0.25 \pm 0.20$, $\delta(687) = -1.1^{+0.4}_{-0.3}$, $\delta(707) = -1.0 \pm 0.3$, $\delta(818) = -1.20 \pm 0.15$, $\delta(1384) = -0.37 \pm 0.03$, and $\delta(1505) = -0.55 \pm 0.10$. In terms of the multipole moments $\langle I_{n+1}||M(\pi L)||I_n\rangle$ of Bohr and Mottelson, the E2/M1 moment ratios $\Delta = \langle I_{n+1}||M(E2)||I_n\rangle / \langle I_{n+1}||M(M1)||I_n\rangle$ in natural units ($\hbar = m = c = 1$) are: $\Delta(447) = -3.0 \pm 1.3$, $\Delta(620) = -3.8 \pm 2.4$, $\Delta(678) = -1.09 \pm 0.88$, $\Delta(687) = -4.7^{+3.3}_{-1.4}$, $\Delta(707) = -4.2 \pm 1.3$, $\Delta(818) = -4.3 \pm 0.5$, $\Delta(1384) = -0.79 \pm 0.06$, and $\Delta(1505) = -1.08 \pm 0.20$. (auth)

17888 SEPARATION AND PAIRING ENERGIES INVOLVING ISOTOPES OF Tb, Dy, Ho, Er, Tm, Yb, Lu, AND Hf. Whineray, S.; Macdougall, J. D.; McLatchie, W.; Duckworth, Henry E. (McMaster Univ., Hamilton, Ont.). Nucl. Phys.; A151: 377-400(1970).

Fifteen atomic mass difference determinations were combined with a large body of reaction and decay data in a recalculation of the separation and pairing energies for Hf and the heavier rare earth nuclei. The accuracy and reliability of the data are such that definite systematic trends are observed. The data have also allowed the accurate determination of three decay Q-values that were previously unknown. (auth)

17889 BETA-PARTICLE AND GAMMA-RAY ANGULAR DISTRIBUTIONS FROM ^{186}Re, ^{188}Re AND ^{194}Ir POLARIZED IN IRON AT LOW TEMPERATURES. Brewer, W. D.; Shirley, D. A. (Univ. of California, Berkeley). Nucl. Phys.; A149: 392-400 (1970).

Nuclei of ^{186}Re, ^{188}Re, and ^{194}Ir have been polarized in iron at low temperatures. The angular distributions of electrons from the first-forbidden β-decays were observed as functions of particle energy, using Li drifted germanium detectors. The anisotropies of the γ-rays which de-excite the 2^+ levels in the daughter nuclei were also measured. The information obtained is sufficient to permit an analysis for the nuclear matrix elements and possibly to use as a test of the conserved vector current hypothesis, but no detailed analysis has as yet been made. The β-particle angular distributions of the Re cases were in general agreement with previous results, but the experimental accuracy was greatly improved. (auth)

17890 NUCLEAR STRUCTURE STUDIES IN THE Te ISOTOPES: THE ^{125}Te(d,p)^{126}Te REACTION. Graue, A. (Univ. of Bergen); Lien, J. R.; Vinje, H.; Vold, P. B.; Moore, W. H. Nucl. Phys.; A160: 497-510(1971).

The reaction ^{125}Te(d,p)^{126}Te was studied at a bombarding energy of 7.5 MeV in order to get information about the ^{126}Te nuclear level scheme. Forty-two levels were observed below an excitation energy of 5.1 MeV. The angular distributions of 25 of the emitted proton groups were compared with DWBA calculations to determine the angular momentum of the captured neutrons. Contributions from more than one l_n value were observed for two of the transitions. Transition strengths were extracted and compared to pairing-theory calculations. (auth)

XUM

17891 SOME REGULARITIES IN MULTINUCLEON TRANSFER REACTIONS WITH HEAVY IONS. Artukh, A. G.; Avdeichikov, V. V.; Eroe, J.; (and others) (Joint Inst. for Nuclear Research, Dubna, USSR). Nucl. Phys.; A160: 511-16(1971).

Multinucleon transfer reactions were investigated by bombarding ^{232}Th and ^{197}Au targets with 137-MeV ^{16}O ions. An exponential yield dependence on the Q values was observed for nucleon exchange reactions. (auth)

17892 GAMMA RAYS FROM COULOMB EXCITATION OF ^{151}Eu AND ^{153}Eu. Lewis, T.; Graetzer, R. (Pennsylvania State Univ., University Park). Nucl. Phys.; A162: 145-60(1971).

De-excitation gamma rays following Coulomb excitation of ^{151}Eu and ^{153}Eu by 4.5 MeV protons and 5 to 11 MeV alpha particles were studied with a 2 cm^3 and a 50 cm^3 Ge(Li) detector. Excitation curves and reduced transition probabilities were measured. Nineteen gamma-ray transitions found in ^{151}Eu are interpreted as decay branches from levels of 195.8, 196.5, 243.0, 306.8, 500.0, 503.1, 578.0, 600.6, 719 and possibly 696, 781 and 906 keV. In ^{153}Eu ten gamma rays were found and are interpreted as decays from levels of 83.3, 151.3, 192.3, 569.0, 617.5 and 711.0 keV. The level energies are consistent with recent inelastic scattering data. In ^{153}Eu the level at 569.0 keV may be the gamma-vibrational band head with $J = \frac{9}{2}$. The levels at 617.5 and 711.0 keV may be the beta-vibrational band members with $J = \frac{5}{2}$ and $\frac{7}{2}$ respectively. (auth)

17893 MEASUREMENT OF THE STATIC QUADRUPOLE MOMENTS OF THE FIRST 2^+ STATES OF ^{108,110}Pd AND ^{110}Cd. Harper, R. P.; Christy, A.; Hall, I.; Naqib, I. M.; Wakefield, B. (Univ. of Liverpool). Nucl. Phys.; A162: 161-72(1971).

By measurement and comparison of the probabilities of Coulomb excitation by ^{4}He and ^{16}O ions of the first excited 2^+ states of ^{108,110}Pd and ^{110}Cd, the static quadrupole moments of these states were deduced. From these and earlier measurements on ^{104,106}Pd it is found that the magnitudes of the quadrupole moments increase across the Pd isotopes in the manner of a vibrator-rotor transition. (auth)

17894 THE ALPHA DECAY OF ^{179}Hg AND ^{178}Hg. Hansen, P. G. (CERN, Geneva); Jonson, B.; Zylicz, J.; (and others). Nucl. Phys.; A160: 445-8(1971).

The half-lives of the isotopes ^{179}Hg and ^{178}Hg are 1.09 ± 0.04 and 0.47 ± 0.14 s, respectively. The alpha energy for ^{178}Hg is 6425 ± 15 keV. The alpha branching ratio for the isotope ^{175}Pt was determined to be 75 ± 15%. (auth)

17895 THE ROTATIONAL SPECTRUM OF ^{161}Ho. Rensfelt, K.-G.; Johnson, A.; Hjorth, S. A. (Research Inst. for Physics, Stockholm). Nucl. Phys.; A156: 529-40(1970).

Transitions within the rotational bands built on the intrinsic states $\frac{1}{2}^+[411]$ and $\frac{7}{2}^-[523]$ in ^{161}Ho were observed when a ^{159}Tb target was bombarded with 30-MeV α particles. The observed rotational energies and relative transition probabilities indicate that the $\frac{7}{2}^-[523]$ rotational band is strongly perturbed. A calculation in which the Coriolis force mixes the orbitals $\frac{1}{2}^-[550]$, $\frac{3}{2}^-[541]$, $\frac{5}{2}^-[532]$, $\frac{7}{2}^-[523]$, $\frac{9}{2}^-[514]$ and $\frac{11}{2}^-[505]$ can successfully reproduce the experimental observations if the Coriolis interaction which is predicted by the simple rotor model is artificially reduced by about 40% for the orbitals which are close to the Fermi surface. (auth)

17896 TWO-NEUTRON DECAY OF NUCLEI. Berlovich, E. E.; Golubev, O. M.; Novikov, Yu. N. (Ioffe Inst. of Physics and Tech., Moscow). JETP Lett. (USSR) (Engl. Transl.); 12: 195-8(20 Sep 1970).

Translated from Zh. Eksp. Teor. Fiz., Pis'ma Red.; 12: 289-93(20 Sep 1970).

Double emission of neutrons from the ground state of nuclei is considered. It turns out that an even-N nucleus may be stable against the emission of one neutron but unstable with respect to two-neutron decay. It is concluded that, on the basis of energy considerations, there are over 150 nuclides which should show double-neutron decay. This process may be seen "pure," i.e., without accompaniment by successive neutron emission, if the spin of the emitted neutrons is sufficiently high. (R.W.R.)

17897 HIGH-RESOLUTION GAMMA AND X-RAY SPECTROSCOPY ON UNSEPARATED FISSION PRODUCTS. Wilhelmy, Jerry Barnard. Berkeley, Calif.; Univ. of California (1969). 369p. University Microfilms Order No. 70-17,685.

Thesis.

X-ray and γ-ray studies were made on the short-lived products formed from the spontaneous fission of ^{252}Cf. The fission fragments from an ~10-μg source of ^{252}Cf (3.7×10^8 fissions/minute) were embedded in a continually-moving belt system and transported past a detection point located some 19 inches from the source. By varying the velocity of the tape, spectra were obtained for transit times ranging from 0.27 seconds to 4.8 hours. Three individual experiments were performed: K-x-ray—γ-ray coincidence studies, high-resolution γ-ray singles studies, and high-resolution K-x-ray singles studies. In the coincidence studies it was possible to follow the decay of approximately 200 transitions and, through the x-ray energies, establish the element emitting the gamma ray for a large number of these. For the γ-ray singles studies 20,000 individual γ-ray peaks were analyzed at the various experimental transit times. From the K-x-ray singles measurements it was possible to determine the quantitative K-x-ray yields as a function of time for all the elements appreciably populated from the fission of ^{252}Cf (rubidium—europium). The data from the γ-ray singles experiment were correlated with information from the x-ray—γ-ray coincidence study, the studies on the prompt radiations from the primary fragment, and the reported literature on the decay of fission products. It was possible to assign ~250 of the observed transitions to specific isotopes. New assignments are made to 25 isotopes which were previously unreported or had only been identified by half life. By following the genetic decay of certain transitions it was possible to deduce charge distribution information on twelve mass chains. Finally, strong experimental information is presented for the existence of the proposed new region of permanent deformation near ^{110}Ru. (Diss. Abstr. Int. B.)

17898 SEARCH FOR TERNARY FISSION IN ^{197}Au, ^{209}Bi, AND ^{239}Pu INDUCED BY INTERMEDIATE ENERGY ^{4}He IONS. Uhl, Dale Lynden. Lafayette, Ind.; Purdue Univ. (1970). 206p. University Microfilms Order No. 70-18,759.

Thesis.

Absolute cross sections for the formation of ^{28}Mg, ^{66}Ni, and ^{89}Sr fission products and upper limits for ^{47}Ca and ^{38}S fission products were determined radiochemically. The ^{28}Mg cross-section data and the ^{47}Ca upper limits clearly indicate the existence of ternary fission in ^{209}Bi and ^{239}Pu. Ternary and binary mass-yield curves for ^{209}Bi and ^{239}Pu are constructed, and an excitation function for the formation of ^{28}Mg from ^{209}Bi is determined from an excitation energy of 30 to 50 MeV. No evidence is found for the ternary fission of ^{201*}Tl up to an excitation energy of 45.6 MeV. With the ^{28}Mg cross sections as a ternary-fission monitor, ternary-fission data at 35.4 and 45.6 MeV excitation energies were correlated as functions of Z^2/A and x, the fissionability parameter. The correlation with fissionability parameter indicates a linear increase in ternary fission above x = .67 and a decrease of ternary fission probability below x = .67. The decrease of ternary fission probability is compared with fission theory and may substantiate the present fission theory which predicts two types of saddle-point shapes. (Diss. Abstr. Int. B.)

17899 SHORT-LIVED DELAYED GAMMA-RAY EMISSION FROM FAST FISSION OF PLUTONIUM. Moore, Billy Merle. Albuquerque, N. Mex.; Univ. of New Mexico (1970). 90p. University Microfilms Order No. 70-19,707. Thesis.

The short-lived delayed gamma spectra from fast neutron fission of plutonium were experimentally measured by using a Ge(Li) detector. The half-lives and energies of the more prominent gamma rays in the spectra were determined for half-lives in the range 1 min $\leq t_{\frac{1}{2}} \leq$ 60 min and for energies in the range 170 keV $\leq$ E $\leq$ 1800 keV. From the delayed gamma spectra, yields were determined for the shortlived fission products ^{87}Rb, ^{92}Rb, ^{94}Sr, ^{94}Y, ^{101}Mo, ^{101}Tc, ^{131}Sb, ^{135m}Xe, ^{136}I, ^{137}Xe, ^{138}Xe, and ^{138}Cs. Minimum estimates of the yields were determined for ^{90}Y, ^{104}Tc, ^{139}Xe, ^{145}Cs, and ^{145}Ce. Also the delayed gamma spectra from fast fission of ^{239}Pu were compared to that obtained from fast fission of ^{235}U. From the results obtained, conclusions could be reached on what fission products would produce the largest differences in the two spectra at high energy. This particular information is needed to help keep fuel inventory in reactors. This will protect against the unwarranted use of nuclear fuels that are produced in reactors (safeguards). (Diss. Abstr. Int., B.)

17900 HYPERFINE INTERACTION STUDIES OF HEAVY NUCLEI IN HIGHLY IONIZED ATOMS. Ben-Zvi, I.; Gilad, P.; Goldberg, M. B.; Goldring, G.; Speidel, K.-H.; Sprinzak, A. (Weizmann Inst. of Science, Rehovot, Israel). Nucl. Phys.; A151: 401-19(1970).

A detailed and extensive study of the hyperfine interaction of nuclei with highly ionized atoms in gas is reported. Some new and unexpected features of the interaction are discussed. These relate to the pressure dependence of the perturbation, its variation with Z and dependence on recoil velocity; g-factors of 2^+ levels were determined for nuclei in the mass range: 148 $\leq$ A $\leq$ 190. (auth)

17901 THORIUM FISSION BY 4.8- AND 14-MeV NEUTRONS. Pfeiffer, E. (Univ., Tuebingen, Ger.). Z. Phys.; 240: 403-19(1970).

The fission of natural thorium by E_n = 4.8- and 14.0-MeV neutrons was investigated by measuring the kinetic energies of both fragments in surface-barrier detectors. The fragments were detected for E_n = 14.0 MeV neutron energy at 90° to the neutron beam; and for E_n = 4.8 MeV, at 0 and 90°. The results given are the distributions of mass and of energy correlative to the fragment mass, and the correlation between anisotropy and fragment mass at E_n = 4.8 MeV. The average total kinetic energy before prompt neutron emission at E_n = 4.8 and 14.0 MeV neutron energy was found to be $\overline{E_K^*}$ = 170.47 ± 0.03 and 168.1 ± 0.05 MeV, respectively. Within the limits of statistical error the anisotropy at E_n = 4.8 MeV is independent of the fragment mass. The results are analyzed in the framework of the Two-Mode-Fission-Hypothesis. It appears that the behavior of the kinetic energy is too complicated as to be well described by the Two-Mode-Fission-Hypothesis. Both the Cluster Model of fission and the Fragment Shell Theory are suited to reproduce qualitatively the observed energetics of fission. (auth)

17902 INVESTIGATION OF THE LEVEL STRUCTURE OF ^{93}Nb BY MEASUREMENT OF THE GAMMA RAYS EMITTED AFTER THE INELASTIC SCATTERING OF FAST NEUTRONS. Goebel, H.; Feicht, E. J.; Vonach, H. (Technische Hochschule, Munich). Z. Phys.; 240: 430-53(1970). (In German).

Fast neutrons from a nanosecond-pulsed D(d,n)^{3}He neutron source were scattered from ^{93}Nb. The gamma spectrum arising from inelastic scattering was measured in a high-resolution Ge(Li) spectrometer. In order to obtain low background a time gate technique was used. About 44 gamma lines could be found between 150 keV and 2.2 MeV in the singles spectrum. In addition, gamma-gamma coincidences were investigated with a NaI and a Ge(Li) detector. By these means it was possible to identify almost all gamma transitions and to construct a nearly complete level scheme of ^{93}Nb up to 2.2 MeV. The experimental cross sections for the population of the levels by the (n,n′) reaction were compared with the results of the Hauser–Feshbach theory using the optical-model transmission coefficients of Lindner and Meldner. From this and from the observed gamma transitions proposals for spin and parity assignments of the energy levels are given. (auth)

17903 g FACTOR OF THE 50-keV $3/2^-$ STATE IN ^{223}Ra AND THE INTERNAL MAGNETIC FIELDS AT Ra NUCLEI IN FERROMAGNETS. Levanoni, M.; Zawislak, F. C. (California Inst. of Tech., Pasadena). Phys. Rev., C; 2: 672-4(Aug 1970).

The γ-γ perturbed angular correlation of the 236–50-keV cascade in ^{223}Ra has been investigated, yielding $g(3/2^-, 50\ keV)$ = +0.28 ± 0.04. The magnetic hyperfine fields experienced by Ra nuclei embedded in Ni, Co, and Fe lattices were found to be –30 ± 10, –80 ± 16, and –105 ± 20 kOe, respectively. (auth)

17904 COULOMB EXCITATION OF Pt NUCLEI. Bruton, E. J.; Cameron, J. A.; Gibb, A. W.; Kenyon, D. B.; Keszthelyi, L. (McMaster Univ., Hamilton, Ont.). Nucl. Phys.; A152: 495-502(1970).

Coulomb excitation of the second excited states of ^{192}Pt and ^{194}Pt gave B(E2, $0^+ \rightarrow 2^{+\prime}$) values of 0.020(3) and 0.0111(17) $e^2 \cdot b^2$ respectively. The 199.3 keV level of ^{195}Pt was excited and assigned spin and parity $3/2^-$. The B(E2) values for other excitations in the Pt isotopes were remeasured. A comparison of the results with theoretical values and directly measured lifetimes has been made. Measured g-factors have been re-evaluated and compared with theoretical predictions. (auth)

17905 INELASTIC SCATTERING OF TRITONS AND PROTONS FROM ^{210}Pb. Ellegaard, C. (Carnegie-Mellon Univ., Pittsburgh); Barnes, P. D.; Flynn, E. R.; Igo, G. J. Nucl. Phys.; A162: 1-11(1971).

A search for collective states in ^{210}Pb was conducted utilizing inelastic scattering of 20-MeV tritons and 20.5-MeV protons. In the triton scattering, cross sections were obtained for levels at 0.795, 1.87, and 2.83 MeV. The 0.795 level is a known 2^+ level. It is excited with a cross section of one-half of that observed for the first 2^+ level of ^{208}Pb under identical conditions. The two other states are assigned as 3^- states. The cross sections obtained for these two levels are approximately $2/3$ and $1/3$ of the cross section found in the (t,t′) reaction for the first 3^- state of ^{208}Pb. In the proton scattering, the above results are confirmed and several other levels observed. The results are compared with DWBA calculations. (auth)

17906 NOTE ON THE ^{101}Tc–^{101}Ru DECAY. Siwamogsatham, B.; Easterday, H. T. (Oregon State Univ., Corvallis). Nucl. Phys.; A162: 42-8(1971).

The gamma spectrum resulting from the 14.0-min decay of ^{101}Tc to levels of ^{101}Ru has been examined. The level of ^{101}Ru at 616.3 keV not previously found in the ^{101}Tc decay but observed in Coulomb excitation has been observed in this study. In addition, evidence for new levels at 674.2, 911.9, 938.1 and 1001.1 keV is presented. Fourteen gamma transitions, which previously were not observed or were indicated only in coincidence spectra, are reported. (auth)

17907 STRUCTURE OF ^{169}Tm AND ^{171}Tm NUCLEI AND CORRECTIONS TO THE UNIFIED MODEL. Hsu, Hsiao-hua. Bloomington, Ind.; Indiana Univ. (1970). 77p. University Microfilms Order No. 70-17,956.

Thesis.

The structure of the nuclei ^{169}Tm and ^{171}Tm is studied in terms of the unified nuclear model of Bohr, Mottelson, and Nilsson. The Nilsson states [411↓], [404↓], and [523↑] were observed in both nuclei. The structures of the ground-state rotational bands (based on [411↓]) of the two nuclei resemble each other in general, but differ in detail; for example, the decoupling factors are different by about ten per cent. The single-proton energy of the [404↓] band changes dramatically from ^{169}Tm to ^{171}Tm. These changes in structure cannot be explained by the conventional unified model even if the change in deformation is taken into account. Since the major difference between these two nuclei is the two extra neutrons in ^{171}Tm, the data suggest that the interaction of the unpaired proton with these two added neutrons must play an important role in the structure of ^{171}Tm. A delta-function type proton–neutron interaction is introduced into the Nilsson-model Hamiltonian as a first perturbation term. The new Nilsson wave functions and single-particle energies are calculated, and the decoupling constant and magnetic parameters b_0 and g_k are derived. The results of the calculation agree well with the experimental results. (Diss. Abstr. Int. B.)

17908 DETERMINATION OF THE STATIC AND DYNAMIC ELECTRIC QUADRUPOLE MOMENTS OF THE FIRST 2^+ STATES IN ^{188}Os, ^{190}Os, AND ^{192}Os BY MEANS OF COULOMB EXCITATION. Pryor, Richard Joseph. Pittsburgh; Univ. of Pittsburgh (1970). 82p. University Microfilms Order No. 70-19,498.

Thesis.

The ratio of inelastically scattered ions exciting the first 2^+ state to elastically scattered ions was measured using an Enge split-pole spectrograph and position-sensitive solid-state counters. Measurements were performed at various angles and energies using ^{4}He and ^{16}O beams. The static electric-quadrupole moment Q_{2^+} and the B(E2, $0^+ \rightarrow 2^+$), which are functions of the ratios, were determined using the Winther–de Boer Coulomb-excitation program and a least-squares code. The deduced static electric-quadrupole moments of the first 2^+ state are –1.31 ± .34 eb, –.99 ± .13 eb, and –.41 ± .20 eb for ^{188}Os, ^{190}Os, and ^{192}Os, respectively. The B(E2, $0^+ \rightarrow 2^+$) values for these same nuclei are 2.90 ± .08 e^2b^2, 2.39 ± .06 e^2b^2, and 2.04 ± .06 e^2b^2, respectively. These results are compared with recent model calculations and found to be in good agreement with the predictions. (Diss. Abstr. Int. B.)

17909 MEASUREMENTS OF STATIC ELECTRIC QUADRUPOLE MOMENTS AND TRANSITION PROBABILITIES IN THE REGION OF A = 144 TO 150. Gertzman, Henry Steven. New York; Univ. of Rochester (1970). 255p. University Microfilms Order No. 70-17,881.

Thesis.

The Coulomb-excitation reorientation effect was used to measure the static electric-quadrupole moments of the first 2^+ states in ^{148}Sm, ^{144}Nd, ^{146}Nd, ^{148}Nd, and ^{150}Nd. Results were also obtained for the B(E2, $0^+ \rightarrow 2^+$) of ^{148}Sm. Assuming a positive sign for the interference term gives the results B(E2, $0^+ \rightarrow 2^+$) = 0.706 ± 0.024 e^2b^2 and Q_{2^+} = +0.28 ± 0.28 eb for the 551-keV state. A negative interference term gives B(E2, $0^+ \rightarrow 2^+$) = 0.705 ± 0.025 e^2b^2 and Q_{2^+} = –0.24 ± 0.28 eb. An analysis was made to determine the value for the static quadrupole moment of ^{150}Nd that would result in the best agreement between the relative quadrupole moments measured in the present experiment and values previously measured. Best agreement was obtained by assuming Q_{2^+} = –2.00 ± 0.51 eb for ^{150}Nd. The best values for the quadrupole moments of ^{144}Nd, ^{146}Nd, and ^{148}Nd, corresponding to the above value for ^{150}Nd, are –0.07 ± 0.15, –.78 ± .09, and –1.46 ± 0.13 eb, respectively. These correspond to 11%, 99%, 138%, and 136% (for ^{150}Nd) of the rotational values based upon previously published values for the B(E2)'s. The evidence shows a smooth transition from small quadrupole moments for nuclei near N = 82 to large negative quadrupole moments as one adds pairs of neutrons (or neutron holes). (TSS) (Diss. Abstr. Int. B.)

17910 MEASUREMENTS OF THE STATIC QUADRUPOLE MOMENT OF THE FIRST EXCITED STATE OF THE NUCLEI ^{106}Pd AND ^{110}Pd BY HEAVY ION COULOMB EXCITATION. Beyer, Robert William. Lafayette, Ind.; Purdue Univ. (1970). 226p. University Microfilms Order No. 70-18,596.

Thesis.

XUM

The static quadrupole moments of the 511.7-keV 2^+ state in ^{106}Pd and the 373.8-keV 2^+ state in ^{110}Pd were determined by employing Coulomb excitation techniques. Thin foils (~175 $\mu g/cm^2$) of separated-isotope Pd were bombarded with 25 and 30 MeV ^{16}O ions and 55 and 56 MeV ^{32}S ions. The angular distributions of the inelastically scattered ions were measured in coincidence with the de-excitation gamma rays to determine the relative excitation probability. The attenuations of the de-excitation-gamma-ray distributions were measured. The experimental data were fitted using the deBoer–Winther Multiple Coulomb Excitation Program so that the sign and magnitude of the static quadrupole moment could be extracted. The effect of higher excited states on the excitation probability on the 2^+ state is estimated using the matrix elements determined by Robinson et al. and the deBoer–Winther Program. Self consistency of the oxygen and sulfur data suggests that excitation via the giant dipole resonance must be small compared to the reorientation effect, and that the excitation via the second 2^+ states at 814 keV in ^{110}Pd and 1127 keV in ^{106}Pd interferes constructively so as to increase the excitation probability. With this choice for the interference via the second 2^+ state the values of the static quadrupole moments are $Q_{22} = -.458 \pm .059$ barns for ^{106}Pd and $Q_{22} = -.483 \pm .049$ barns for ^{110}Pd. (Diss. Abstr. Int. B.)

17911 j DEPENDENCE IN THE VECTOR ANALYZING POWER FOR ^{208}Pb(d,t)^{207}Pb. Liers, H. S.; Rathmell, R. D.; Vigdor, S. E.; Haeberli, W. (Univ. of Wisconsin, Madison). Phys. Rev. Lett.; 26: 261-3(1 Feb 1971).

A vector-polarized deuteron beam of 12.3 MeV was used to measure differential cross sections and vector analyzing powers for the reaction ^{208}Pb(d,t), leading to the $p_{\frac{1}{2}}$ ground state, $f_{\frac{5}{2}}$ first excited state, and $p_{\frac{3}{2}}$ second excited state of ^{207}Pb. The vector analyzing powers for the two l = 1 transitions differ strikingly. This j dependence is well reproduced by distorted-wave Born-approximation calculations. (auth)

17912 EXPLANATION OF SOME STRIPPING TRANSITIONS TO UNBOUND ISOBARIC ANALOG STATES. Cole, B. J.; Huby, R.; Mines, J. R. (Univ. of Liverpool). Phys. Rev. Lett.; 26: 264-6(1 Feb 1971).

Several (^{3}He,d) and (d,n) transitions on Zr and Mo targets leading to unbound isobaric analog states that have previously been reported anomalous in comparison with distorted-wave Born-approximation predictions are recalculated using a different form-factor prescription. Since broad overall agreement with experiment is obtained, both the nuclear structure and the reaction mechanism are apparently normal. (auth)

17913 PAIRING-PLUS-QUADRUPOLE MODEL CALCULATION OF BAND-MIXING ANOMALIES IN ^{152}Sm. Kumar, Krishna (Oak Ridge National Lab., Tenn.). Phys. Rev. Lett.; 26: 269-72 (1 Feb 1971).

The pairing-plus-quadrupole model is improved and extended to I = 6 states. This microscopic theory gives the parameters of the first-order band-mixing theory of Bohr and Mottelson, as well as most of the higher-order corrections revealed by the recent measurements of E2 matrix elements. The increase in the intra-ground-band transitions and the depression of the ground-band levels compared with their rotational-model values are reproduced. (auth)

17914 TOTAL CROSS SECTIONS OF HEAVY ELEMENTS FOR 100- TO 150-MeV NEUTRONS. Schneider III, Robert Julius. Medford, Mass.; Tufts Univ. (1968). 102p. University Microfilms Order No. 70-16,920.

Thesis.

The neutron total cross sections were measured to an accuracy of one percent for a series of five elements at six different incident-neutron energies. The elements were aluminum, copper, cadmium, lead, and uranium. The energies ranged from 100 MeV to 150 MeV in 10 MeV steps, with an energy resolution of one MeV. The measured total cross sections, together with published nonelastic cross sections, are analyzed in terms of the nuclear optical model. The real and imaginary parts of the central nuclear potential were determined at each energy. It was found that no single set of radial parameters was optimum for all energies. Both the cross sections and the potentials extrapolate well to the values measured previously up to 100 MeV. (Diss. Abstr. Int., B)

17915 EPICADMIUM INTEGRAL FISSION CROSS SECTION MEASUREMENTS FOR TWELVE HEAVY NUCLIDES. Draper, Ernest Linn Jr. Ithaca, N. Y.; Cornell Univ. (1970). 140p. University Microfilms Order No. 70-14,377.

Thesis.

Epicadmium energy integral fission rates given by $FR = \int_{E_{cd}}^{\infty} \sigma_f(E)\,\phi(E)\,dE$ for ^{232}Th, ^{233}U, ^{235}U, ^{236}U, ^{238}U, ^{237}Np, ^{239}Pu, ^{240}Pu, ^{241}Pu, ^{241}Am, ^{242m}Am, and ^{243}Am were measured in a neutron beam. The energy spectrum of the neutron beam was altered from the fission slowing-down spectrum used for the first set of measurements by the insertion of three different thicknesses of ^{10}B filter. The shapes and amplitudes of the four spectra were determined by the computer code SAND II to reproduce the interaction of the neutrons with a set of resonance and threshold detector foils. The fission rates were determined by counting fission-fragment tracks produced in solid-state track recorders. The measured fission rates were compared to fission rates calculated using the four SAND II spectra and differential $\sigma_f(E)$ data from the literature. The measured and calculated fission rates differed by less than 7% for ^{232}Th, ^{233}U, ^{235}U, ^{236}U, ^{238}U, and ^{237}Np. There is evidence that the ^{232}Th, ^{238}U, and ^{237}Np data need slight normalization corrections. ^{239}Pu showed positive deviations of measured from calculated activities of from about 4 to 10% depending on the spectrum. ^{240}Pu had measured fission rates from 7.5 to 12% greater than calculated while ^{241}Pu measurements ranged from about 6 to 10% lower than calculated. ^{241}Am had a substantial deviation only in the softest spectrum; this indicates a possible differential-cross-section error in the eV region. ^{242m}Am had large positive deviations of measured from calculated activities in all spectra, but nonuniformity of the deposit made it impossible to specify the reason for these deviations. ^{243}Am had measured fission rates approximately 60% higher than calculated in all spectra. This indicates either a large normalization error in $\sigma_f(E)$ or a serious mistake in the foil assay (Diss. Abstr. Int., B)

17916 INTERNAL CONVERSION PROCESSES FOR ELECTRIC QUADRUPOLE TRANSITIONS IN THE DEFORMED NUCLEAR REGION. Burton, Donald Eugene. Manhattan, Kan.; Kansas State Univ. (1970). 285p. University Microfilms Order No. 70-16,621.

Thesis.

The K-shell internal conversion coefficients, L-subshell ratios, and second-order K- and L-shell particle parameters are presented for eleven $2^+ \rightarrow 0^+$ transitions in the rare-earth and neighboring regions. These quantities are calculated in the no-penetration approximation using the relativistic Hartree–Fock atomic model in the Slater exchange approximation with the inclusion of static finite-nuclear-size effects. Results are presented for ^{152}Gd, ^{154}Gd, ^{156}Gd, ^{160}Dy, ^{166}Er, ^{170}Yb, ^{172}Yb, ^{186}Os, ^{188}Os, ^{192}Os, and ^{198}Hg. Comparison of the present calculations with the weighted averages of the available experimental values indicates that substantial discrepancies exist between the two. It is shown that most of these can be accounted for on the basis of either dynamic E2 penetration effects or parity-nonconserving nuclear forces. In the first case, it is found that the dynamic E2 penetration parameters must be several times the values predicted by the surface-current model. If, on the other hand, parity-nonconserving nuclear forces are the cause of the discrepancies, then conversion-electron longitudinal polarizations of 5 to 30 percent can be expected. (Diss. Abstr. Int., B)

17917 EMISSION OF LONG-RANGE ALPHA PARTICLES IN THE FISSION PROCESS. Bethune, Glen Roberts. Gainesville, Fla.; Univ. of Florida (1969). 157p. University Microfilms Order No. 70-14,855. Thesis.

The properties of the long-range alpha particles emitted in the thermal-neutron fission of ^{235}U (LRA fission) were examined in a three-parameter correlation experiment. Three semiconductor detectors in conjunction with triple coincident electronic equipment and a multiparameter analyzer made it possible to detect simultaneously the two fission fragments and the alpha particle from a ternary event and to analyze the energy of the three particles. Data were collected for eight values of θ_L, the angle between the alpha particle and the direction of the light fission fragment, over a range of 40 to 145 degrees. These data allowed a solution of the momentum conservation equations for the two fission fragment masses. The general characteristics of the alpha particles are presented in the form of the measured angular and energy distributions. Also shown, for each value of θ_L, are the alpha-particle kinetic-energy distributions, the fission-fragment kinetic-energy distributions, the total-kinetic-energy distributions, and the fission-fragment mass distributions, as well as average values for the alpha-particle kinetic energy, the light- and heavy-fission-fragment kinetic energy, the total fission-fragment kinetic energy, and the total kinetic energy released in the process. The results show that the average energy of the fission fragments in LRA fission is about 155 MeV and does not vary with the emission angle of the alpha particle, the total kinetic energy (alpha particle plus fission fragments) in LRA fission is about 3.5 MeV greater than the kinetic energy of the fragments in binary fission, the yield of symmetric or near-symmetric fission is more probable in LRA than in binary fission and becomes considerable at the extreme angles, and the average kinetic energy of the alpha particle increases with the extremity of the emission angle. These results are interpreted in an attempt to formulate a descriptive model for the LRA fission process. (Diss. Abstr. Int., B)

17918 FISSION BARRIERS AND TRANSITION-STATE SPECTRA FOR ^{232}Th, ^{234}Th, ^{238}U, ^{240}U, ^{242}Pu, AND ^{244}Pu FROM (t,pf) REACTIONS. Cramer, James D. Albuquerque, N. Mex.; Univ. of New Mexico (1969). 122p. University Microfilms Order No. 70-16,382.

Thesis.

Fission probabilities and the angular distribution of the fission fragments were measured for six even–even compound-nucleus systems using the (t,pf) reaction. Angular correlations of fission fragments obtained in these experiments provide information about the low-lying collective excitations or transition states at the fission barrier. The experimental data were obtained using an 18-MeV triton beam on targets of ^{242}Pu, ^{240}Pu, ^{238}U, ^{236}U, ^{232}Th, and ^{230}Th. Outgoing protons were detected at 140° relative to the incident triton beam. Excitation energies ranging from 3.0 to 9.0 MeV were obtained in these experiments. Fission-fragment angular distributions were measured at 24 angles from 0° to 140° relative to the kinematic recoil angle. The data were fitted to a series of even Legandre polynomials, $W(\theta) = A_0[1 + \Sigma/L\ g_L P_L^{(\cos\theta)}]$, and the coefficients g_2 through g_{12} and A_0 were determined as a function of excitation energy. The fission probability P_f was obtained from the ratio of A_0 to the (t,p) cross section for the target nucleus. The results exhibit well-defined structure in the angular coefficients which correlates with structure in the fission probability for most of the nuclei studied. The experimentally determined fitting parameters P_f and g_L are compared to calculated results of a microscopic model. This model takes into consideration the penetrability and angular dependence of fission through each member of the various transition bands at the saddle point and appropriately sums the results for comparison with the data. The effects of barrier penetration through a two-peaked deformation potential are incorporated into this analysis. Characteristics of transition-state spectra and fission barrier shapes determined from this analysis are presented with respect to variations of the fissility parameters. (TSS) (Diss. Abstr. Int., B)

17919 MEASUREMENTS OF TIME-DEPENDENT ENERGY SPECTRA OF BETA RAYS FROM ^{235}U FISSION FRAGMENTS. Tsoulfanidis, N.; Wehring, B. W.; Wyman, M. E. (Univ. of Illinois, Urbana). Nucl. Sci. Eng.; 43: 42-53(Jan 1971).

Absolute measurements have been reported for the time-dependent beta-energy spectra from fission fragments for electron energies >0.75 MeV. The fragments were produced in the thermal-neutron fission of ^{235}U. To obtain results for electron energies below 0.75 MeV and to provide overlap with the previous results, absolute measurements were made of the time-dependent energy spectra using an experimental system specifically designed for the electron-energy range of 0.1 to 1.0 MeV. In this system, a vacuum chamber housed a thin plastic scintillator for the detection of the low-energy electrons, a source foil which was fissioned in a thermal-neutron beam, and a surface-barrier detector for the monitoring of the fission rate. The source foil consisted of 10.4 mg/cm^2 of ^{235}U covered and sealed to form a localized source of fission fragments. A deposit of 138 μg/cm^2 of ^{235}U on the outside of this foil facing the surface-barrier detector provided the fission fragments for the monitor. Electron energy spectra were measured for the cases of spectrum build-up after initiation of a constant fission rate in a clean foil, spectrum decay after termination of 8 h of a constant fission rate, and spectrum decay following a sudden burst of fission produced by a reactor power pulse. The resulting spectra were corrected for the effects of energy resolution and source thickness by unfolding them with the use of a measured system response function. The time-dependent energy measurements for the low-energy betas were combined with the previous measurements for the high-energy betas, and the results are presented in tables and graphs. Also given are the total number of betas per fission and the total beta energy per fission for various times during the build-up or the decay of the spectra. Comparisons are made with previous experimental and theoretical work. (auth)

17920 RATIOS OF THE FAST-NEUTRON FISSION CROSS SECTIONS OF ^{235}U, ^{239}Pu, AND ^{240}Pu. Savin, M. V.; Khokhlov, Yu. A.; Zamyatnin, Yu. S.; Paramonova, I. N. At. Energ. (USSR); 29: 218-20(Aug 1970). (In Russian).

In order to clarify previously observed irregularities in the energy dependence of the fission-cross-section ratios, the dependence of $\sigma_f(^{239}\text{Pu})/\sigma_f(^{235}\text{U})$ and $\sigma_f(^{240}\text{Pu})/\sigma_f(^{235}\text{U})$ was measured in the 0.7- to 5-MeV range by the time-of-flight method. A lead target served as the neutron source; the neutron beam was directed on the specimen, placed at the center of a liquid scintillation counter. The fission events were recorded on the basis of the prompt-fission γ quanta. The experiment consisted of individual measurements with and without the lead specimen, with the effect of elastic and inelastic scattering taken into account for the first case. In the error determination the statistical errors, the instability of the neutron monitor, the presence of impurity isotopes, and similar factors were taken into account. In the case of ^{240}Pu, the results in the 1- to 2-MeV range were found to differ by ~8% from Davey's data; they agreed with the values reported by Nesterov et. al. In the 0.8- to 2.5-MeV range, this deviation repeats the previously observed irregularities in the behavior of the $^{38}\alpha_f/^{35}\alpha_f$ function. (TTT)

17921 NEW ISOTOPE ^{173}Er. Ihochi, Haruhiko. Fayetteville, Ark.; Univ. of Arkansas (1970). 75p. University Microfilms Order No. 70-17,182.

Thesis.

Irradiations of natural ytterbium and enriched ^{176}Yb samples were found to produce a new radioactive nuclide which was assigned to ^{173}Er. The following radiation characteristics were observed to belong to the decay of ^{173}Er: half-life 12.0 ± 0.3 minutes; beta-ray energies 1.8 ± 0.3 and 2.3 ± 0.3 MeV, and relative intensities 30 ± 3 and 70 ± 5, respectively; gamma-ray energies 0.087 ± 0.005, 0.100 ± 0.005, 0.115 ± 0.005, 0.128 ± 0.005, 0.155 ± 0.005, 0.182 ± 0.005, 0.197 ± 0.005, 0.205 ± 0.005, 0.278 ± 0.005, 0.300 ± 0.005, 0.365 ± 0.005, 0.380 ± 0.005, 0.395 ± 0.005, and 0.520 ± 0.005 MeV, and relative intensities 10.3 ± 1.0, 6.7 ± 0.5, 7.0 ± 3.5, 4.0 ± 0.5, 18.4 ± 2.5, 20.0 ± 2.0, 59.5 ± 4.0, 4.0 ± 0.6, 5.0 ± 0.8, 3.0 ± 0.5, 18.5 ± 2.0, 19.5 ± 2.0, 30.0 ± 5.0, and 20.0± 3.0, respectively. A decay scheme is proposed for the decay of ^{173}Er, and the K = ½ anomalous rotational bands of ^{173}Tm are investigated in terms of the unified model. (Diss. Abstr. Int., B)

17922 GAMMA-RAY SPECTROSCOPY STUDIES OF THE EXCITED STATES OF ODD PROTON (ODD MASS) NUCLEI IN THE Z = 50 TO 62, N = 64 TO 82 REGION. Beery, Dwight Beecher. East Lansing, Mich.; Michigan State Univ. (1969). 196p. University Microfilms Order No. 70-14,988.

Thesis.

The beta, gamma decay schemes of ^{141m,g}Nd, ^{139m,g}Nd, ^{137m,g}Ce, ^{133m}Ba, and ^{131m}Ba were studied in an effort to acquire information about the energy-level systematics in this region of the table of nuclides. Ge(Li) singles and Ge(Li)–NaI(Tl) coincidence spectrometers were employed to identify and establish the sequence of many new gamma-ray transitions. Some significant additions to, and changes from, previously proposed schemes are suggested by the data. Excited levels accommodating 10 gamma rays have been located at 145.4, 1126.8, 1292.5, 1298.4, 1580.0, 1607.9, and 1657.2 keV in ^{141}Pr following the decay of 2.6-h ^{141g}Nd. States in ^{139}Pr at 113.8, 405.0, 589.2, 916.8, 1074.4, 1311.8, 1328.2, 1405.5, 1449.5, and 1501.2 keV are populated by 30-min ^{139g}Nd while the decay of 5.5-h ^{139m}Nd populates levels at 113.8, 821.9, 828.1, 851.9, 1024.0, 1369.6, 1523.2, 1624.5, 1834.1, 1927.1, 2048.8, 2174.3, and 2196.7 keV. These two sets of states incorporate 17 and 38 transitions, respectively. The 19 gamma rays seen in the decay of 34.4-h ^{137m}Ce in equilibrium with 9.0-h ^{137g}Ce depopulate excited states of ^{137}La at 10.5, 447.1, 493.1, 709.1, 762.2, 781.5, 835.4, 926.6, 1004.8, and 1171.9 keV. Of these levels, only those at 762.2, 835.4, and 1004.8 keV are populated directly by ^{137m}Ce, and none of these states is populated by both isomers. Only one state of ^{133}Cs was seen to be directly populated by 38.9-h ^{133m}Ba, and an upper limit of 0.1% of the 14.6-min ^{131m}Ba disintegrations is placed on the direct feeding to high spin states of ^{131}Cs with energies >60 keV. Limits on the possible spin assignments of the states investigated are placed from calculated log-ft values and from the presence of transitions to states with known spins. A multiplet of six high-spin, odd-parity states near 2 MeV in ^{139}Pr is interpreted as a set of three-quasi-particle states. The multiplet decay pattern suggests the possibility that information can be extracted from these states that is normally available only for lower-lying levels. A survey is made of all of the energy-state systematics of the low-energy levels of odd-proton (odd-mass) nuclides in the Z = 50 to 62, N = 64 to 82 region. (Diss. Abstr. Int., B)

17923 PRECISE MEASUREMENTS OF GAMMA-RAY ENERGIES AND INTENSITIES WITH APPLICATION TO THE DECAYS OF ^{108m}Ag, ^{110m}Ag, ^{95}Zr, AND ^{99}Mo. Brahmavar, Suresh Marutirao. Nashville; Vanderbilt Univ. (1970). 95p. University Microfilms Order No. 70-16,412.

Thesis.

Measurements were made of the energies of several secondary energy standards. The measured values are 834.72 ± 0.10 (^{54}Mn), 889.21 ± 0.10 (^{46}Sc), 897.90 ± 0.10 (^{88}Y), 1115.37 ± 0.10 (^{65}Zn), 1120.42 ± 0.10 (^{46}Sc), 1274.51 ± 0.10 (^{22}Na) and 1836.07 ± 0.10 (^{88}Y) keV. The measured values include remeasurement of a primary standard in ^{207}Bi (1769.71 ± 0.13 keV) and a secondary standard in ^{212}Bi (727.1 ± 0.1 keV). A search for new gamma rays yielded gamma rays assigned to ^{110m}Ag and ^{108m}Ag decay. The energies and intensities of gamma rays obtained in the decays of ^{99}Mo are given. Measurements of internal conversion coefficients with normalized electron-peak method are included. This work establishes six new gamma rays in the decays of ^{208}Tl and ^{212}Bi as energy calibration standards and ^{110m}Ag and ^{95}Zr as energy and

intensity standard sources in the energy range of 400 to 1800 keV. (TSS) (Diss. Abstr. Int., B)

17924 SEARCH FOR NEW ISLANDS OF FISSION ISOMERISM. Bjoernholm, Sven; Borggreen, Joern; Hyde, Earl K. (Univ. of California, Berkeley). Nucl. Phys.; A156: 561-9(1970).

The spontaneously fissioning isomers of Am and neighboring elements are explained as nuclei trapped in a secondary minimum in the fission barrier profile. Some recently published calculations suggest the possible existence of another group of such shape isomers near Z = 85, N = 118. An attempt was made to produce isomers of Po, At, Rn, and Fr by bombardment of ^{197}Au with beams of ^{11}B, ^{12}C, ^{14}N, ^{16}O, from the Berkeley HILAC and to observe their fission mode with Si semiconductor detectors. The cross-section limits were set at 70 nb or less for the half-life range 2×10^{-9} to 2×10^{3} s. An attempt was also made to observe fission fragments from nuclei decaying in flight after recoiling out of targets of Ce, Pr, Tm, and Au bombarded with heavy ions. No fission fragments were observed from products in the half-life range 1 to 50 ns above a cross-section limit of ≈50 nb. The possible existence of isomers decaying primarily by γ transitions to the first minimum was not excluded in either set of measurements. The apparatus was tested with known isomers produced by the reactions ^{238}U(d, pn)$-^{238m}$U (200 ns) and ^{238}U(^{12}C,α3n)^{243m}Cm (38 ns). (auth)

17925 NEGATIVE PARITY STATES IN ODD-MASS Ir AND Au NUCLEI. Baecklin, A. (Swedish Research Councils' Lab., Studsvik); Berg, V.; Malmskog, S. G. Nucl. Phys.; A156: 647-73(1970).

The decays of ^{193}Os → ^{193}Ir, ^{191}Pt → ^{191}Ir, ^{189}Pt → ^{189}Ir and ^{193}Hg → ^{193}Au were studied in $\gamma-\gamma$ coincidences, internal conversion and electron–electron delayed coincidences. New levels with the following spin-parity assignments and half-lives are proposed: ^{193}Ir: 299.45 ± 0.09 keV, $I^{\pi} = 7/2^-$, $T_{1/2} = 0.19 \pm 0.03$ ns; 598.26 ± 0.15 keV, $I^{\pi} = 3/2^-$; 740.46 ± 0.15 keV, $I^{\pi} = 5/2^-$. ^{191}Ir: 391.14 ± 0.05 keV, $I^{\pi} = 7/2^-$, $T_{1/2} = 0.24 \pm 0.02$ ns; 659.06 ± 0.08 keV, $I^{\pi} = 3/2^-$, $T_{1/2} < 0.12$ ns. ^{189}Ir: 615.70 ± 0.08 keV, $I^{\pi} = 7/2^-$, $T_{1/2} = 0.18 \pm 0.02$ ns; 1184.54 ± 0.11 keV, $I^{\pi} = 5/2^-$, $T_{1/2} < 0.08$ ns. The 508 keV $7/2^-$ level in ^{193}Au was found to have $T_{1/2} = 0.29 \pm 0.02$ ns. In each nucleus these negative parity states and the $11/2^-$ isomeric state are strongly connected with E2 and M1 transitions and only weakly connected to the low-lying positive parity states. The B(E2) values are close to the values of B(E2; $2^+ \rightarrow 0^+$) in the neighboring even nuclei. It is proposed that these negative parity level systems are associated with an essentially spherical shape of the nuclei in contrast to the low-lying positive parity states (including the ground state) of these nuclei, which in Ir are likely to be deformed states. (auth)

17926 FISSION CROSS SECTIONS OF ^{237}Np FROM POMMARD. Brown, W. K.; Dixon, D. R.; Drake, D. M. (Los Alamos Scientific Lab., N. Mex.). Nucl. Phys.; A156: 609-15(1970).

The ^{237}Np(n,f) cross section was measured from 32 eV to 2.2 keV and from 100 keV to 2.8 MeV. Energies of neutrons from the underground nuclear explosion Pommard were determined by time-of-flight from the source to the target foil located near the surface. Signals produced by fission fragments in solid-state detectors were recorded photographically. The ^{235}U(n,f) and ^{6}Li(n,α) reactions were used to measure the neutron flux. Grouped subthreshold resonances were observed. Above threshold, the cross section reached a maximum of about 1.7 b in the vicinity of 2.2 MeV. (auth)

17927 NUCLEAR CHARGE DISPERSION IN THE FISSION OF HEAVY NUCLEI BY MEDIUM-ENERGY PROTONS. Yaffe, L. (McGill Univ., Montreal). pp 3-19 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

Fission products from the fission of ^{233}U, ^{235}U, ^{238}U, ^{232}Th, and ^{239}Pu were studied with a view to elucidating the distribution of nuclear charge in fission caused by protons of energies 20 to 85 MeV. The importance of the neutron-to-proton ratio of the fissioning species is apparent. Excitation functions are shown for fission products with mass numbers A = 130 to 140. The energy at which the excitation function of these individual fission products reaches its maximum shows the dependence on nuclear constitution. Charge distribution data show the role of the neutron-to-proton ratio of the fissioning system. In general, with increasing bombarding energy, the distribution curves become broader, and the most probable charge, Z_p, moves closer to stability. The experimental values of Z_p are compared with those obtained from calculations assuming various charge distribution postulates. Some comments are made about the numbers of neutrons emitted from the various fissioning species at different excitation energies. (auth) (UK)

17928 SEARCH FOR NEW ISOTOPES AND NEW SUPER-HEAVY ELEMENTS PRODUCED BY HEAVY-ION REACTIONS. Lefort, Marc (Institut de Physique Nucleaire, Orsay, France). pp 32-41 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

The production of new isotopes far from the line of stability by heavy-ion reactions is examined. Cross-sections for complete fusion reactions are given. It is shown that the projectile should be as heavy as possible. In order to produce transuranium elements with good yields, the bombarment of targets must also be done with very heavy ions, because the compound nucleus has to be produced as "cold" as possible. This can be achieved if the Q-value of the nuclear reaction is very negative. A brief account is given of the identification method for the reaction products. (auth) (UK)

17929 NUCLEAR CHEMISTRY WITH THE OAK RIDGE ISOCHRONOUS CYCLOTRON. Silva, R. J.; Hahn, R. L.; Mallory, M. L.; (and others) (Oak Ridge National Lab., Tenn.). pp 42-50 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

The α-decay at an energy of 7.335 ± 0.003 MeV was tentatively identified as a new californium isotope (^{241}Cf) having a half-life of 3.1 ± 1.2 min. The energy of the α-decay of ^{242}Cf was found to be 7.385 ± 0.004 MeV in agreement with a previous value obtained at Berkeley. A 7.351 ± 0.006 MeV α-peak that decays to the first excited state of ^{238}Cm was resolved. Reduction potential measurements of ^{256}Md were performed and the results indicate that the potential is less than +0.3 volts versus the normal hydrogen electrode. Preliminary experiments to produce element 104 gave results consistent with those obtained at Berkeley. (auth) (UK)

17930 GAMMA RAY SPECTROSCOPY IN NUCLEAR REACTIONS. Knipper, A. (CNRS, Strasbourg). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.19-23(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Experiments based on the observation of the gamma-ray emission from nuclear reactions yielding important nuclear spectroscopic information, are discussed. Spectacular progress was made on germanium detectors. The information obtained, which was independent of the models chosen, allowed very precise verification of the wave functions of the levels. The most interesting results are: the width of the levels or the absolute mean life, the relative widths or branching ratios, spectroscopic data and the mixing coefficients, found in general by the angular correlation method. (France)

17931 SCATTERING OF 156 MeV PROTONS ON TIN EVEN NUCLEI. Comparat, V. (Univ. Paris, Orsay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.83-4(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The inelastic scattering of 156 MeV protons on tin even nuclei was interpreted using the DWBA. The finite-range effects of the complete nucleon–nucleon interaction were taken into account. The calculations were improved. (France)

17932 PHOTONUCLEAR REACTIONS (γ,xn) IN SPHERICAL NUCLEI. Carlos, P. J.; Veyssiere, A.; Bergere, R.; Beil, H.; Lepretre, A. (CEN, Saclay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.114-15(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Structure was clearly observed in the partial $\sigma(\gamma,n)$ and total photoneutron cross sections σ_{total} (Eγ) for ^{208}Pb, ^{89}Y, Sr, and ^{93}Nb. The results were compared to the particle-hole calculations of the giant dipole states; good agreement was found with the theoretical predictions of the isobaric splitting of the giant dipole states. (auth) (France)

17933 ANALYSIS OF THE REACTIONS (^{3}He,d), (α,^{3}Hσ), (d,d') FOR A SYSTEMATIC STUDY OF In EVEN–ODD ISOTOPES. Conjeaud, M.; Harar, S.; Thuriere, E. (CEA, Saclay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.137-8(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The spectroscopic factors extracted from the analysis of the Cd(^{3}He,d) reactions give the occupation probability of the two proton-holes in the $1g_{9/2}$, $2p_{1/2}$, $2p_{3/2}$ orbitals in the Cd fundamental states. The (^{3}He,d), (d,^{3}He), (d,d') reactions leading to the same residual nucleus ^{115}In populated, up to 1.5 MeV excitation energy, three sorts of states which were essentially: spherical one proton hole states, deformed (1p-2h) and spherical due to the weak coupling of a proton hole to the 2^+ collective excitation of the core. (auth)

17934 PROBABILITIES OF M1 TRANSITIONS IN SOME ODD NUCLEI OF RARE EARTH ELEMENTS. Gerber, J.; Vivien, J. P.; Macher, A.; Dar, Y.; Armbruster, R. (CNRS, Strasbourg). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.150-1(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The mean lives of the first excited states in ^{181}Ta, ^{165}Ho and of the second state in ^{159}Tb were measured with the microwave method. The results show that the values of gK-gR are found to be in agreement with those from higher transitions in the ground state rotational bands of these nuclei. There is a possibility that the M1 transition from the first excited state in ^{159}Tb is not in agreement with a pure rotational picture. (auth) (France)

17935 HIGHER SPIN LEVELS FROM (α,2nγ) REACTIONS. Barneoud, D. (Univ., Grenoble, France); Foin, C.; Baudry, A.; (and others). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.152-3(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

By means of (α,2nγ) reactions on Tm and Lu targets the levels of ^{171}Lu and ^{177}Ta were excited. Assignments were made for the rotational bands. (auth) (France)

17936 EXPERIMENTAL EVIDENCE OF THE EFFECT OF THE DEFORMATION OF NUCLEI ON THEIR rms RADIUS. Cassagnou, Y. (CEA, Saclay, France); Foissel, P.; Lamehi-Rachti, M.; (and others). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.156-7(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The Coulomb energy differences ΔE_c for several heavy nuclei (from N = 82 to N = 126) were obtained by determining accurate analogue state resonance energies. The plot of the differences between all the experimental values of ΔE_c known in this region and the values calculated with the Anderson and Wong formula clearly shows the effect of deformation on ΔE_c; this effect can be accounted for by the increase of the r.m.s. radius for deformed nuclei. (auth) (France)

17937 STUDY OF THE ^{209}Bi(p,f) REACTION AT 30, 34, AND 40 MeV. Barjon, R.; Engelhardt, D.; Gravost, M.; Guerre-Chaley, B.; Le Prince, M. (Univ., Grenoble, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.213-14(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Fission fragment energies and angular distributions of fragments from fission of ^{210}Po* produced by the reaction ^{209}Bi(p,f) at proton beam energies of 30, 34, and 40 MeV were measured. The spectra show symmetrical mass distribution. (auth) (France)

17938 MECHANISM OF THE NUCLEAR REACTIONS INDUCED BY α PARTICLES ON HEAVY NUCLEI. Bimbot, R.; Le Beyec, Y. (Univ. Paris, Orsay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.215-16(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Cross sections for production of various isotopes of Po and Bi by (^{4}He,xn) and (^{4}He,pxn) reactions from ^{206}Pb and ^{208}Pb were measured between 60 and 150 MeV. From these the cross section for compound-nucleus formation was deduced. The existence of non-compound nucleus processes is demonstrated and various hypotheses are discussed. (auth) (France)

17939 STATISTICAL CALCULATIONS OF ALPHA PARTICLE DISTRIBUTIONS IN (α,α') REACTIONS INDUCED BY 54 MeV ALPHA PARTICLES. Demeyer, A.; Chery, R.; Chevarier, A.; (and others) (Univ., Lyon). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.225-6(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Energy and angular distributions were measured for (α,α') reactions on silver with 54 MeV alpha particles. Statistical calculations were performed with a preequilibrium component. (auth) (France)

17940 APPLICATION OF THE STATISTICAL MODEL TO THE STUDY OF (α,xn) EXCITATION FUNCTIONS OF Ho AND Tm. Demeyer, A.; Chery, R.; Chevarier, N.; (and others) (Univ., Lyon). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.227-8(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Cross sections of reactions (α,xn) induced by alpha particles on ^{169}Tm and ^{165}Ho were measured up to 150 MeV. Excitation functions were calculated in terms of statistical theory using a spin dependent level density parameter and the preequilibrium model of Griffin. (auth) (France)

17941 GAMMA-RAY DECAY SCHEMES FOR ^{142}Xe, ^{142}Cs, ^{142}Ba, AND ^{142}La. Larsen, Jon Thorsten. Ames, Iowa; Iowa State Univ. (1970). 142p. University Microfilms Order No. 70-18,888. Thesis.

Measurements are reported for gamma ray energies and intensities present in the decays of the four nuclei ^{142}Xe, ^{142}Cs, ^{142}Ba, and ^{142}La. These nuclei are all members of the isobaric decay chain beginning with ^{142}Xe, which was made available by use of an on-line isotope separator system developed for the study of gaseous fission products. Partial energy level schemes were constructed for ^{142}Cs, ^{142}Ba, ^{142}La, and ^{142}Ce with the aid of Ge(Li)-Ge(Li) coincidence data. Some spin-parity assignments were made for levels in ^{142}Ba and ^{142}Ce; comparative half-lives were calculated for the decays of ^{142}Ba and ^{142}La. An attempt is made to interpret some of the energy levels in the even-even ^{142}Ba and ^{142}Ce nuclei; these nuclei appear to exhibit vibrational-like excitations. (Diss. Abstr. Int., B)

17942 REACTION (d,^{3}He) ON EVEN-A TIN ISOTOPES. Weiffenbach, Conrad Venable. Ann Arbor, Mich.; Univ. of Michigan (1970). 127p. University Microfilms Order No. 70-21,812. Thesis.

The (d,^{3}He) reaction on the isotopes ^{116}Sn, ^{118}Sn, ^{120}Sn, ^{122}Sn, and ^{124}Sn was studied experimentally with a deuteron bombarding energy of 28.9 MeV. High-resolution spectra were recorded, and angular distributions for levels strongly excited in the odd-mass indium isotopes were recorded for scattering angles ranging from 5 to 60 degrees, using a magnetic spectrograph with nuclear emulsions and a positron-sensitive detector. Cross sections and Q-values for the levels excited by the reaction were measured. An analysis of the experimental results using distorted-wave calculations was carried out. The spectra of the odd indium isotopes are quite similar. The ground state and first and second excited states of each isotope have l = 4, l = 1, and l = 1 angular distributions, and are excited by pick-up of $1g_{9/2}$, $2p_{1/2}$, and $2p_{3/2}$ protons respectively. Levels excited by pick-up from the $1f_{7/2}$ single-particle level were not found. Levels having l = 2 angular distributions are weakly excited in each isotope at around 1.0 MeV; their interpretation is uncertain. A few levels having l = 4 and l = 1 angular distributions are excited in the range of 1.4 to 1.7 MeV of excitation in each isotope and are believed to indicate the mixing of proton hole and coupled hole-collective configurations in states of the odd indium nuclei. (Diss. Abstr. Int., B.)

17943 INVESTIGATION OF THE BETA DECAYS OF ^{115m}Cd, ^{115g}Cd, AND ^{140}La. Horgan, John Raymond Jr. Amherst, Mass.; Univ. of Massachusetts (1970). 137p. University Microfilms Order No. 70-23,035.

Thesis.

The beta decay of ^{115m}Cd (43 day) to the ground state of ^{115}In was investigated by measuring the beta ray longitudinal polarization while the beta decays of ^{115}Cd (2.3 day) and ^{140}La (40 hour) to some excited states in the respective daughter nuclei ^{115}In and ^{140}Ce were studied by means of beta-gamma directional correlation. (TSS) (Diss. Abstr. Int., B)

17944 GAMMA-GAMMA AND CONVERSION ELECTRON-GAMMA DIRECTIONAL CORRELATIONS IN ^{125}Te. Champion, James Robert. Morgantown, W. Va.; West Virginia Univ. (1970). 143p. University Microfilms Order No. 70-22,596. Thesis.

Gamma-gamma and conversion electron-gamma directional correlation measurements were made on several gamma cascades in ^{125}Te which follow the decay of 2.7 yr ^{125}Sb. The results are consistent with the spin assignments $\frac{1}{2}^+$, $\frac{3}{2}^+$, $\frac{11}{2}^-$, $\frac{9}{2}^-$, $\frac{5}{2}^+$, $\frac{5}{2}^-$, $\frac{7}{2}^+$, and $\frac{5}{2}^+$ to the ground state, 35, 145, 321, 463, 524, 642, and 670 keV levels. The multipolarity for the 428 keV gamma ray is M1 with E2 < 1%. The 635 keV gamma ray is M1 with E2 < 3%. The 320 keV gamma ray is E1 with M2 < 9% and the 202 keV gamma ray is M1 + E2 with E2 = 28 ± 2%. (Diss. Abstr. Int., B)

17945 A STUDY OF ISOBARIC ANALOGUE RESONANCES IN THE Yb ISOTOPES. Whineray, S.; Dietrich, F. S.; Stokstad, R. G. (Univ. of Copenhagen). Nucl. Phys.; A157: 529-51(1970).

Excitation functions were measured for ^{168,170,172,174,176}Yb(p,p) and isobaric analogue resonances observed. An extensive analysis was made of the ^{174}Yb(p,p) data and in this case spectroscopic factors were determined, which are in fair agreement with (d,p) data. Coulomb displacement energies were determined for five Lu–Yb isobaric pairs and the systematics of these and other data support the expected decrease in ΔE_c for deformed nuclei. The resonance data combined with a high resolution ^{174}Yb(d,p) experiment allow tentative identification of a rotational band based on the $\frac{1}{2}^+$[651] orbital in ^{175}Yb. The location of this orbital in four other Yb isotopes was deduced. (auth)

17946 TOTAL CROSS SECTIONS AND ISOMERIC CROSS-SECTION RATIOS FOR (n,2n) REACTIONS IN THE ENERGY REGION 12 TO 18 MeV. Bormann, M.; Bissem, H. H.; Magiera, E.; Warnemuende, R. (Univ., Hamburg). Nucl. Phys.; A157: 481-96(1970).

The activation method was used to measure excitation functions for total or isomeric (n,2n) cross sections in the energy region 12 to 18 MeV for ^{93}Nb, ^{96}Ru, ^{104}Ru, ^{103}Rh, ^{102}Pd, ^{110}Pd, ^{128}Te, ^{130}Te, ^{142}Nd, ^{192}Os, ^{191}Ir, and ^{198}Pt. Isomeric (n,2n) cross-section ratios were measured for ^{110}Pd, ^{128}Te, ^{130}Te, and ^{198}Pt in the whole energy region stated and were further obtained for ^{93}Nb and ^{103}Rh for two energies by combining experimental isomeric cross sections with special (n,2n) cross-section systematics. The measured total (n,2n) cross sections are discussed with respect to the dependence of this quantity on the neutron excess of the target nucleus. The results were compared with predictions from the statistical theory and special consideration given to the competition between γ and neutron emission. From the isomeric cross-section ratios spin cut-off parameters $\sigma(\hbar)$ were deduced according to the method of Vandenbosch and Huizenga. The same analysis was also applied to all isomeric (n,2n) cross-section ratios available from the literature. The resulting properties of $\sigma(\hbar)$ are compared with the theoretical predictions. (auth)

17947 A STUDY OF NUCLEAR LEVEL SPINS OF ^{142}Pr BY MEANS OF NUCLEAR ORIENTATION. Mellema, J.; Reddingius, E. R.; Postma, H. (Kamerlingh Onnes Lab., Leiden). Nucl. Phys.; A157: 577-83(1970).

Anisotropies of directional distributions of high- and low-energy gamma rays emitted after thermal neutron capture in oriented ^{141}Pr nuclei were measured. The nuclei were oriented in single crystals of $Pr_2Mg_3(NO_3)_{12} \cdot 24\ H_2O$. Conclusions concerning the spins of several excited states were drawn from the anisotropies. Definite spin values, 3 and 4, were obtained for the levels at 17.7 and 144.6 keV, respectively. (auth)

17948 DETERMINATION OF SPINS IN THE DECAY OF ^{219}Rn → ^{215}Po BY ALPHA–GAMMA LINEAR POLARIZATION MEASUREMENTS. Krien, K.; Canty, M. J.; Herzog, P. (Univ., Bonn). Nucl. Phys.; A157: 456-70(1970).

The $\alpha\gamma$ linear polarization correlation coefficients of the 271 keV and 401 keV γ transitions in the decay of ^{219}Rn were determined to be $B_2 = 0.029 \pm 0.011$, $B_4 = 0.0147 \pm 0.0042$; $B_2 = -0.093 \pm 0.0084$, $B_4 = 0.0130 \pm 0.0034$, respectively. The 130 keV γ–271 keV γ angular correlation has the coefficients: $A_2 = -0.060 \pm 0.041$, $A_4 = 0.003 \pm 0.073$. The E2/M1 mixing ratio $\delta^2 = 0.32 \pm {}^{0.07}_{0.05}$ of the 130 keV transition was derived from an L-subshell conversion coefficient measurement. The values $A_2 = -0.060 \pm 0.020$ and $A_4 = -0.157 \pm 0.020$ were measured for the α-271 keV γ angular correlation. Comparison with theoretical predictions taking mixing of α-waves into account leads to a spin assignment for the ground state of ^{219}Rn ($I_i = \frac{7}{2}$) and for the levels at 401, 271, and 0 keV in ^{215}Po [I = ($\frac{9}{2}$, $\frac{11}{2}$), $\frac{9}{2}$, $\frac{11}{2}$, respectively]. This is in contradiction to all previous assignments. An interpretation of the decay scheme is attempted. (auth)

17949 ANGULAR DISTRIBUTIONS OF FRAGMENTS IN THE FISSION OF URANIUM INDUCED BY NEUTRONS IN THE ENERGY RANGE 12 TO 18 MeV. Emma, V.; Lo Nigro, S.; Milone, C. (Univ., Catania, Italy). Nucl. Phys.; A157: 449-55(1970).

The angular distributions of fragments from neutron-induced fission of ^{238}U were measured by means of glass detectors in the range $12.2 \leq E_n \leq 18.2$ MeV. The behavior of the angular anisotropy in this energetic region, where (n,f), (n,n'f) and (n,2n'f) reactions are concurrent, was analyzed. (auth)

17950 GAMMA–GAMMA DIRECTIONAL CORRELATION AND HALF-LIFE MEASUREMENTS IN ^{128}Te. Bajaj, M. M.; Gupta, S. L.; Saha, N. K. (Univ. of Delhi). Proc. Indian Nat. Sci. Acad., Part A; 36: 176-90(May 1970).

The directional correlations of five gamma–gamma cascades in the decay of ^{128}Sb to the excited states of ^{128}Te were studied by the coincidence technique. The experimentally measured true directional correlation functions for the 206–427, 206–462, 171–427, 109–379, and 203–176 keV cascades are given. The results indicate spins of $\frac{1}{2}^+$, $\frac{3}{2}^+$, $\frac{11}{2}^-$, $\frac{1}{2}^+$, $\frac{7}{2}^-$, $\frac{5}{2}^+$, and $\frac{1}{2}^+$ (or $\frac{3}{2}^+$) for the ground state and 35-, 145-, 462-, 524-, 633-, and 668-keV levels, respectively. Half-life of the 35-keV first excited state of ^{128}Te was also measured using a fast time-to-amplitude converter and found to be (1.50 ± 0.08) nsec. Multipole characters of the 109-, 171-, 206-, and 379-keV radiations were investigated. The experimental partial lifetimes for the 35 and 206 keV radiations are estimated. (auth)

17951 CONVERSION PROBABILITY OF THE 35 keV TRANSITION IN ^{128}Te. Marelius, A.; Vaelivaara, K. G.; Awwad, Z.; (and others) (Uppsala Univ.). Phys. Scr.; 1: 91-2(1970).

The probability for K-conversion of the 35-keV M1 + E2 transition is determined from coincidences between Auger electrons and conversion electrons. The result is $\alpha_K = 0.804 \pm 0.010$. (auth) (Sweden)

17952 (BNL–50246) GROGI2: A NUCLEAR EVAPORATION COMPUTER CODE; DESCRIPTION AND USER'S MANUAL. Gilat, Jacob (Brookhaven National Lab., Upton, N. Y.). Jun 1970. 92p. Dep. NTIS.

GROGI2 is a spin dependent nuclear evaporation program designed to follow in detail the deexcitation of compound nuclei via neutron, proton, alpha, and photon emission channels. These four modes are permitted to compete with one another subject only to the phase space available to each. GROGI2 is written in FORTRAN IV for the CDC 6600 computer. (J.W.R.)

17953 (BNL-tr-368) NUCLEON–NUCLEON INTERACTION AND THE AVERAGE NUCLEAR FIELD. Babikov, V. V. (Joint Inst. for Nuclear Research, Dubna (USSR)). · Translated by S. J. Amoretty (Brookhaven National Lab., Upton, N. Y.), from report JINR–P4-4897. 29p. Dep. NTIS.

This item was previously abstracted from the original language and appeared in NSA as 24: 24609.

17954 (INR-P–1215) ON THE RESIDUAL INTERACTIONS OF PAIRING AND QUADRUPOLE-PAIRING TYPE. Stepien-Rudzka, W. (Institute of Nuclear Research, Warsaw (Poland)). 1970. 12p. Dep. NTIS (U. S. Sales Only).

The residual two-body interaction is investigated. The new term is added to the standard pairing force, and its influence on the single-particle excitation spectra in heavy nuclei (transuranic region) is examined with special attention given to the behavior of so called "energy gap," a typical parameter in spectra of even–even nuclei. (auth)

17955 (JINR–E4-5456) GRAPHICAL METHOD FOR THE DETERMINATION OF ALL RESONANCE PARAMETERS IN NUCLEAR REACTIONS. Beregi, P. (Joint Inst. for Nuclear Research, Dubna (USSR), Lab. of Theoretical Physics). 1970. 14p. Dep. NTIS (U. S. Sales Only).

A method for the graphical determination of all parameters appearing in the generalized Breit–Wigner approximation for an isolated nuclear resonance is presented. Numerical examples are given for three different kinds of resonances of asymmetric form in the case of nonconstant background. (auth)

17956 (JINR–P4-5562) ELECTROMAGNETIC TRANSITIONS FROM THE COMPOUND STATES IN DEFORMED NUCLEI. Voronov, V. V.; Soloviev, V. G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 16p. (In Russian). Dep. NTIS (U. S. Sales Only).

The matrix elements for the Eλ and Mλ transitions from the high-lying states to the ground, two-quasiparticle, and one-phonon states of even deformed nuclei and to the one-quasiparticle and more compound states of odd deformed nuclei were obtained. The matrix elements of the Eλ and Mλ transitions are necessary for studying the structure of high-lying states. (auth)

17957 (LUNP–7010) CALCULATIONS OF MESONIC CONTRIBUTIONS TO THE (γ,n)-REACTION. Andersson, G.; Forkman, B.; Friberg, B. (Lund Univ. (Sweden). Dept. of Physics. Lund Inst. of Tech. (Sweden). Dept. of Nuclear Physics). Sep 1970. 44p. Dep. NTIS (U. S. Sales Only).

The contribution to the (γ,n)-reaction from the photo-pion production process was calculated for some light nuclei using a simple nuclear model. The result is in good agreement with experimental measurements. (auth) (Sweden)

17958 (N-70-38168) STATISTICAL THEORY OF INELASTIC NEUTRON ENERGY SPECTRA. Henderson, B. J.; Wuller, C. E. Jr. (National Aeronautics and Space Administration, Huntsville, Ala. George C. Marshall Space Flight Center). 16 Sep 1969. 29p. (NASA-TM-X-53913; MSFC-IN-SSL-N-68-14). NTIS.

A statistical theory of inelastic neutron energy spectra for intermediate excitation energies is developed. The final state of the residual nucleus may be either discrete or in the continuum. Calculated neutron energy distributions for aluminum are presented. (auth) (STAR)

17959 THE DEPENDENCE OF THE TRITON BINDING ENERGY ON THE HIGH-ENERGY PHASE SHIFT. Fiedeldey, H. (Univ. of South Africa, Pretoria). Nucl. Phys.; A156: 242-56 (1970).

An investigation of the dependence of the binding energy of the model triton on the high-energy part of the phase shift was made for an interaction consisting of a second-rank separable potential. For this investigation the previous exact solution of the inverse scattering problem for a second-rank separable potential was used. It is shown that for input phase shifts obtained from either a standard separable potential or a local potential with a repulsive core this high-energy dependence of the binding energy is rather small. However arbitrary modifications in the standard phase shift at high energies produce large effects in the binding energy, presumably resulting from the "unphysical" nature of such changes. It is also found that separable potentials reproducing the same two-body data as a local potential generally produce much higher triton binding energies than the local potential. The effect of the interaction between the high-energy on-shell phase shift and the off-shell behaviour of the potential on the triton binding energy is also discussed. (auth)

17960 MICROSCOPIC ANALYSIS FOR ELASTIC SCATTERING OF DEUTERONS AND ALPHA PARTICLES. Reeves III, Mark. Knoxville, Tenn.; Univ. of Tennessee (1970). 123p. University Microfilms Order No. 70-20,314.

Thesis.

A model is presented for the elastic scattering of deuterons and alpha particles. The target is assumed to have collective states which are excited by nonspherical interactions with each nucleon of the projectile. Nonlocal potentials are derived, and the elastic-channel Schroedinger equations containing these potentials are solved numerically for a ^{58}Ni target. Inelastic effects are included for both projectiles, but contributions from stripping and breakup appear only in the deuteron case. Discussion is presented to compare this work with that of other authors and to explore possible modifications which would bring the predictions of this model into closer agreement with experimental data. (Diss. Abstr. Int., B)

17961 OSCILLATIONS OF THE NUCLEAR DENSITY. Thorpe, M. A.; Thouless, D. J. (Univ. of Birmingham, Eng.). Nucl. Phys.; A156: 225-41 (1970).

The density of nucleons in a nucleus was calculated by a semiclassical method due to Kohn and Sham, which gives corrections to the Thomas-Fermi theory. The most important corrections are oscillations of wavelength π/k_F both near the surface and near the center of the nucleus. The form of these oscillations in the limit of a very large nucleus was calculated. The results were compared with exact calculations for the density of nucleons in the nuclear shell model, but only rough agreement with semiclassical results was found. The effects of various corrections to the simple shell model are considered. (auth)

17962 EMPIRICAL RELATION FOR TOTAL STOPPING POWER OF POSITONS AND ELECTRONS. Batra, R. K.; Sehgal, M. L. (Aligarh Muslim Univ., India). Nucl. Phys.; A156: 314-20 (1970).

A simple empirical relation for the total stopping power of positons and electrons of kinetic energies <500 keV was found. Using this empirical formula, the values of the stopping power of positons and electrons were calculated for Al, Cu, Ag, and Au. These values are in good agreement with the standard values and the maximum deviation being ≈4%. A simple criterion accounting for this deviation is pointed out. The procedure for the inclusion of multiple scattering effects on the penetration is also discussed. (auth)

17963 NILSSON'S HAMILTONIAN IN THE ASYMPTOTIC BASIS. Quentin, Philippe; Babinet, Regis (Service de la Metrologie et de la Physique Neutroniques Fondamentales, Gif-sur-Yvette, France). Nucl. Phys.; A156: 365-84 (1970).

The set of eigenvectors common to the axially symmetrical deformed harmonic oscillator and to the third component of angular momentum, was used as a basis of representation (asymptotic basis). In this basis, the matrix elements of Nilsson's Hamiltonian were calculated by means of creation and destruction operators. A rather simple calculation gives, after a diagonalization, level diagrams as a function of deformation. The influence of various corrective terms, used instead of l^2 and $l \cdot s$ (particularly l_T Nilsson's term) is discussed. Within the framework of these approaches and in order to test them, total energy was calculated as a function of deformation for some nuclei. Such a more precise calculation allows also a study of pseudocrossings of levels associated with $\Delta N = \pm 2$. (auth)

17964 THEORY OF DEUTERON BREAKUP IN NUCLEAR AND COULOMB FIELDS. Rybicki, Frank John. Pittsburgh; Univ. of Pittsburgh (1970). 128p. University Microfilms Order No. 70-18,365.

Thesis.

A theory of deuteron breakup including nuclear and Coulomb interactions is developed in the spirit of direct reaction theories which use the distorted wave Born approximation; the theory was suggested by R. C. Johnson. The model for the breakup can be thought of as inelastic scattering in which the bound deuteron is excited into an unbound state. The interaction responsible for this excitation is the sum of the neutron-nucleus and the proton-nucleus optical model potentials. The final state wave function is a product of a deuteron optical model wave function and of an unbound deuteron wave function. The theory is compared to experimental breakup cross sections of 12 and 17 MeV deuterons on gold and of 12 MeV deuterons on rhodium. The theory is in disagreement with experiment. For the experiments studied, this disagreement is attributed to the treatment of the proton-nucleus Coulomb interaction in the final state. The methods developed for handling the long range tail of the Coulomb interaction are directly applicable to distorted wave Born approximation calculations of inelastic scattering in which Coulomb excitation cannot be neglected. (Diss. Abstr. Int., B)

17965 METHOD OF CALCULATING ROTATIONAL STATES USING HARTREE-FOCK-SKYRME SELF-CONSISTENCY. Ng, W. Y. (Univ. of Toronto); Trainor, L. E. H.; Wong, S. K. M. Phys. Lett.; 33B: 545-6(21 Dec 1970).

A method of treating rotational states involving a combined Hartree-Fock-Skyrme self-consistent procedure is investigated using the quadrupole-quadrupole forces model in the 2s-1d shell. (auth)

17966 PROBABILISTIC INTERPRETATION OF EXPANSION COEFFICIENTS IN THE NON-RELATIVISTIC QUANTUM THEORY OF RESONANT STATES. Berggren, T. (Lund Inst. of Tech., Sweden). Phys. Lett.; 33B: 547-9(21 Dec 1970).

It is suggested that "complex probabilities" appearing in eigenfunction expansions involving resonant states can be interpreted in terms of two real probabilities. This is shown to be consistent with identification ambiguities due to the finite lifetime of such states. (auth)

17967 COMPLETELY MICROSCOPIC DESCRIPTION OF THE 2p-1f SHELL NUCLEI. Boiti, A.; Gmitro, M.; Rimini, A.; Weber, T. (Univ., Trieste, Italy). Phys. Lett.; 33B: 553-5(21 Dec 1970).

An effective Hamiltonian for shell-model calculations of the nuclei around ^{56}Ni in the complete 2p-1f shell is derived. It is calculated in a fully microscopic way from the Tabakin potential, using the lowest order perturbation theory and including the processes due to the off-diagonal elements of the one-body part of the bare Hamiltonian. The effective Hamiltonian is used in a 2p-2h calculation of ^{56}Ni. (auth)

17968 ENERGY LEVELS ARISING FROM RESONANT TWO-BODY FORCES IN A THREE-BODY SYSTEM. Efimov, V. (Ioffe Inst. of Physics and Tech., Leningrad). Phys. Lett.; 33B: 563-4(21 Dec 1970).

Resonant two-body forces are shown to give rise to a series of levels in three-particle systems. The number of such levels may be very large. The possibility of the existence of such levels in systems of three α-particles (^{12}C nucleus) and three nucleons (^{3}H) is discussed. (auth)

17969 T = 0 AND T = 1 PAIRING IN LIGHT NUCLEI. Goodman, Alan Leonard. Berkeley, Calif.; Univ. of California (1969). 335p. University Microfilms Order No. 70-17,567.

Thesis.

A generalized quasi-particle transformation is presented which includes n-n, p-p, and n-p (T = 0 and T = 1) pairing correlations. The quasi-particle coordinates are required to be complex. The resulting gap equations for N = Z even-even nuclei are solved for the nuclei in the sd shell. To permit interaction between the Hartree-Fock (HF) and pair potentials, the Hartree-Fock-Bogoliubov (HFB) equations, including both T = 0 and T = 1 pairing, are also solved for these nuclei. Although T = 1 pairing

XUM

correlations are not significant, T = 0 pairing correlations play a very important role, rectifying many of the failures of the HF theory in this region. Evaluation of various approximations to HFB is facilitated by deriving the canonical form of the density matrix and the pairing tensor for generalized isospin-pairing. The general quasi-particle transformation is equivalent to the product of three transformations: an isospin-conserving rotation in particle space (canonical basis), an isospin-generalized "special" quasi-particle transformation, a rotation in quasi-particle space. The canonical basis often bears no resemblance to the corresponding HF basis. The third transformation may not be approximated by the unit transformation, nor is the pair potential diagonal in the canonical basis. The BCS approximation of neglecting elements of the pair potential connecting different spatial orbitals is therefore unjustified. Iterating between the HF and the BCS equations in an attempt to permit both degrees of freedom to interact with one another is an even worse approximation to HFB than merely solving the BCS equations with the trivial HF basis. The HFB equations are derived by a variational principle. The self-consistent symmetries of the HFB solutions are discussed. Usage of the same effective interaction in both the HF and the pair potential is justified. (TSS) (Diss. Abstr. Int., B)

17970 NONPERTURBATIVE STUDY OF THE ISOBARIC MULTIPLET MASS EQUATION. Lacy, Curtis Elmo. Seattle; Univ. of Washington (1970). 167p. University Microfilms Order No. 70-19,635.

Thesis.

An investigation of the isobaric-multiplet mass equation (IMME) is carried out, in which the Coulomb perturbation is not treated by perturbation theory but is included exactly in the model Hamiltonian. An estimate is made of the first non-perturbative correction to the first-order IMME, proportional to T_z^3, and is compared with results from recent experiments. Two complementary models are developed. The first is a simple one-particle model which uses a realistic average central nuclear potential, but does not include antisymmetrization effects or residual interactions between valence nucleons. The main result obtained from this simple model is that the coefficient of the T_z^3 term is much smaller than has been expected from earlier order-of-magnitude estimates. The second model consists of a closed, inert core plus valence nucleons interacting with each other via two-body potentials. The valence-nucleon wave function is fully antisymmetrized. Harmonic-oscillator wave functions are used to facilitate the calculation of the two-body matrix elements for the residual interaction. The results from this model for nuclei of mass number A = 19 confirm the conclusion from the simple model that the coefficient of the T_z^3 term is small. Charge-dependent effects other than the Coulomb interaction are also studied. Terms of order $Z\alpha^2$ or larger are estimated; and terms of order α^2, neglected. It is found that the introduction of charge dependence (while keeping charge symmetry) in nuclear forces noticeably influences the IMME, but not so much as to change the central conclusion regarding the T_z^3 term. Other charge-dependent charge effects do not materially affect the IMME. It is shown that, in second-order perturbation theory, only the valence nucleons contribute to deviations from the quadratic first-order IMME. (TSS) (Diss. Abstr. Int., B)

17971 A COUPLED CHANNEL SCHROEDINGER EQUATION MODEL FOR FOUR NUCLEONS. Hale, G. M.; Umerjee, R. K. (Texas A and M Univ., College Station). Nucl. Phys.; A156: 570-92(1970).

A charge-independent model was developed for describing the two-body scattering processes possible in a system of four nucleons. When the model wave function and Hamiltonian are inserted in Schrödinger's equation, coupled differential equations result for the radial functions associated with the two-body channels of the system. A matrix of effective potentials is specified to solve these equations, and to obtain scattering observables for all the two-body processes in the four-nucleon system. (auth)

17972 NUCLEAR CLUSTER MOTION IN A DEFORMED HARMONIC OSCILLATOR POTENTIAL. Chang, F. C. (St. John's Univ., Jamaica, N. Y.). Nucl. Phys.; A156: 641-6(1970).

A general formula for the Talmi coefficients for two particles of unequal masses in an axially symmetric oscillator potential was derived. As an example, a wave function describing an alpha cluster in such a deformed potential is expanded, by means of these coefficients, in terms of single-particle oscillator wave functions. (auth)

17973 EXTRACTION OF SPECTROSCOPIC FACTORS FROM ISOBARIC ANALOGUE RESONANCES WITH STRONG INELASTIC BACKGROUND. Ginocchio, J. N.; Schucan, T. H. (Yale Univ., New Haven). Nucl. Phys.; A156: 629-40(1970).

In cases for which the inelastic background is small, the proton partial width for populating an isobaric analog state by scattering from a particular state of the target (channel) is proportional to the spectroscopic factor for stripping a neutron in the same state of the target to form the parent of the analog state. The constant of proportionality is the single-particle width. It is shown that for cases for which the inelastic background is large, then the proton partial width for populating the analog state is a linear combination of these spectroscopic factors for populating the analog state through these strongly coupled channels. The matrix that couples the channels was obtained by solving a coupled-channels program for the proton wave function. (auth)

17974 ABSOLUTE NORMALIZATION OF TRANSFER AMPLITUDES IN THE DWBA AND VERTEX FUNCTIONS FOR LIGHT NUCLEI. Kok, L. P.; Rinat, A. S. (Weizmann Inst. of Science, Rehovot, Israel). Nucl. Phys.; A156: 593-9(1970).

A critical comparison was made of various determinations of the normalization constant for transfer amplitudes in the zero-range DWBA, when they employ wave functions. The results for (^{3}He,d) reactions are compared with an independent calculation based on dispersion relations for partial wave neutron–deuteron scattering amplitudes. A recently proposed uniform parameterization of vertex functions for (d,p), (^{3}He,d) and (α,^{3}He) reactions is discussed. (auth)

17975 EXCHANGE AND OVERLAP CORRECTIONS IN ELECTRON CAPTURE. Vatai, E. (Inst. of Nuclear Research, Debrecen, Hungary). Nucl. Phys.; A156: 541-52(1970).

The approximations made in calculations of the exchange and overlap correction coefficients were investigated. The one-electron wave functions of the final state cannot be replaced by those of the unexcited daughter atom, and the overlap of all inner s, p and d electrons is to be taken into consideration. The new approximation gives a better agreement with the experimental K/β^+, L/K and M/L capture ratios than the old approximation. (auth)

17976 APPLICATION OF THE PROJECTION METHODS TO THE STUDY OF THE STRETCH SCHEME. Raynal, J. (CEN de Saclay, Gif-sur-Yvette, France). J. Phys. (Paris); 31: 135-48(Feb-Mar 1970). (In French).

The stretch scheme introduced by Danos and Gillet for a system of neutrons and protons gives a rotational spectrum for almost any residual interaction. Simple formulas are obtained for the energies if antisymmetrization is not taken completely into account. The projection method with finite rotations enables one to obtain the spectrum with complete antisymmetrization. The results are the same as the approximate ones when the shell is large and less than half-filled. This method can also be used to compare energies for states with positive and negative intrinsic deformations. Using the method of infinitesimal rotation operators, one considers systems where an excess of neutrons is coupled in the stretch scheme or into pairs of zero angular momentum. The ground state energies are mainly a function of the number of "quartets" (two neutrons and two protons coupled in the stretch scheme). (France)

17977 RESONANT APPROXIMATION FOR SINGLE-PARTICLE RESONANCES IN THE RENORMALIZED RPA PROBLEM. Weigel, M. (Univ. of California, Berkeley). Z. Naturforsch.; 25a: 1562-7(Nov 1970).

An approximate version of the renormalized RPA treatment for scattering of nucleons on a hole nucleus is given, in which the shape resonances are treated according to a method of Balashov et al. In order to make the results more transparent the additional influence of the nonresonant part of the single-particle continuum is taken into account with the help of a separable particle-hole force. (auth)

17978 NATURE OF THE HARTREE–FOCK ENERGY GAP. Parikh, J. C. (Univ. of Rochester, N. Y.); Castel, B.; Stewart, K. W. C.; Lande, A. Nucl. Phys.; A156: 501-10(1970).

The Hartree–Fock energy gap was examined for deformed nuclei in the sd shell using a Rosenfeld interaction. It is shown that the results of self-consistent calculations are in good agreement with those obtained from a generalized Nilsson potential, implying that the energy gap may be ascribed to deformation. A many-particle description of the gap using the SU_3 scheme shows that the space symmetry effect is dominant and is responsible for the gap. It is suggested that this apparent contradiction arises as a consequence of working in a small space. (auth)

17979 THE TRANSITION SPHERICAL → DEFORMED FOR COLLECTIVE K = 0 STATES IN EVEN NUCLEI. Holzwarth, G. (Technische Hochschule, Munich). Nucl. Phys.; A156: 511-28 (1970).

A variational formulation, which takes into account both anharmonicities in the boson expansion of the Hamiltonian and angular momentum projection leads to a system of equations that describes the whole transition region of even nuclei. In terms of a model Hamiltonian the phase transition spherical → deformed is discussed in the frame of K = 0 states. For strong deformations the possibility of expansions in terms of deformed bosons is indicated. (auth)

17980 A WEAK COUPLING CALCULATION FOR THE POSITIVE PARITY STATES OF THE A = 15 NUCLEI. Lie, S.; Engeland, T.; Dahll, G. (Univ. of Oslo, Blindern, Norway). Nucl. Phys.; A156: 449-64(1970).

A calculation of the positive parity states for A = 15 was performed in a weak coupling approach. Based on particles in the sd shell and holes in the p-shell the final eigenstates are found to be admixtures of 1p−2h T_h = 0, 1p−2h T_h = 1 and 3p−4h configurations. Good agreement is obtained with the experimental energy levels below 10 MeV. In ^{15}O an additional $5/2^+$ state is predicted at 8 to 9 MeV excitation energy. The wave functions are compared with the structure information obtained from direct reactions. The electromagnetic decay properties are investigated and in most cases we find good agreement with experiment. (auth)

17981 SHELL MODEL OF THE DIPOLE STATES OF MASS-15 NUCLEI. Fraser, R. F.; Garnsworthy, R. K.; Spicer, B. M. (Univ. of Melbourne). Nucl. Phys.; A156: 489-500(1970).

Energies and absorption strengths were calculated for the dipole states of mass-15 nuclei within the space of 1h and 2p−1h states. Calculations were made for both a zero-range residual force with Soper mixture, as well as for a Gaussian force with spin and isospin exchange — the Gillet force. Comparisons of the results are made with experiments on the $^{15}N(\gamma,p_0)^{14}C$ and $^{14}N(p,\gamma_0)^{15}O$ reactions. (auth)

17982 INVESTIGATION OF THE EFFECTIVE INTERACTION BY MEANS OF A MODIFIED SHELL MODEL. Mueller, Dieter (Technische Univ., Hanover). Z. Phys.; 241: 466-72(1971).

The effective interaction U for a shell model with hamiltonian H_m is investigated by means of a "mixed" model with hamiltonian $\tilde{H}_m$. For this model the Born−v. Neumann expansion of the effective interaction $\tilde{U}$ reduces to its first two terms. Within the finite dimensional function space M_n used in the shell model calculation, the operators U and $\tilde{U}$ are exactly equivalent. This is used to show that an energy independent approximation for U, if it is possible at all, is necessarily equal to the residual interaction, i.e. to the difference between nucleon−nucleon interaction and shell model interaction. (auth)

17983 GAMMA TRANSITIONS IN THE THEORY OF FINITE FERMI SYSTEMS. Nicolai, Albert (Justus Liebig-Univ., Giessen, Ger.). Z. Phys.; 241: 423-34(1971). (In German).

The transition probability of the isometric M4-transitions $1g_{9/2} - 2p_{1/2}$, $1h_{11/2} - 2d_{3/2}$ and $1i_{13/2} - 2f_{5/2}$ in near magic nuclei is calculated on the basis of the theory of finite Fermi systems. It is shown that the constant g_0 for the spin−spin interaction of quasiparticles depends strongly on the special kind of representation for the single particle states. Using oscillator functions the value g_0 = 3.3 has to be taken, in order to get hindrance factors, which are approximately equal to one, whereas in the case of square well functions the constant g_0 = 1.4 is necessary, in order to get agreement with the experimental transition probabilities. (auth)

17984 OPTICAL POTENTIAL OF THE DEUTERON (^3H,^3He) AND THE TWO (THREE) NUCLEON VIBRATION COUPLING. Schuck, P. (Technische Univ., Munich). Z. Phys.; 241: 395-409(1971).

We present a closed expression for the exact deuteron (^3He, ^3He) optical potential in terms of higher point Green functions. This form is well suited to study its energy dependence. Intermediate resonances due to two (three) particle phonon coupling are suggested and the coupling constants are identified with the Migdal parameters. (auth)

17985 GENERALIZED TRANSLATION OPERATORS AND THE CONSTRUCTION OF POTENTIALS AT FIXED ENERGY. Coudray, Christiane (Institut de Physique Nucleaire, Orsay, France); Coz, Marcel. Ann. Phys. (N. Y.); 61: 488-529(Dec 1970).

Inverse problems either at fixed angular momentum or at fixed energy are usually solved by applying generalized translation operators (G.T.O.). It follows that most of the inverse problems are solvable when a suitable G.T.O. or a variant of it exists. When the energy E is kept fixed, such operators exist for zero-spin particle scattering by a nucleus; they exist also in the relativistic case of the Dirac equation. When spin−orbit forces are included in nucleon−nucleus scattering, some variant of them can be constructed. In the scattering of a zero-spin particle Newton's method is followed and extended to incorporate complex and Coulomb phase shifts. In both instances the existence of transparent potentials is found. (auth)

17986 PROPERTIES OF THE RPA THEORY OF NUCLEAR SCATTERING. II. PARTIAL WIDTHS AND TRANSITION RATES. Dover, Carl B.; Hahne, F. J. W. (Univ., Heidelberg). Nucl. Phys.; A150: 257-68(1970).

The influence of ground state correlations on partial widths for nucleon or γ emission from resonant states was studied within the framework of the random phase approximation (RPA), using a separable interaction. Three main points are emphasized: comparison of RPA with Tamm−Dancoff approximation (TDA), the influence of the continuum on the results for γ transition rates calculated using only the bound configurations generated by a finite shell-model potential, and the effects of the direct continuum−continuum coupling on particle escape widths. (auth)

17987 OPTICAL POTENTIAL FOR COMPOSITE PARTICLES. Samaddar, S. K. (Saha Inst. of Nuclear Physics, Calcutta); Satpathy, R. K.; Mukherjee, Suprokash. Nucl. Phys.; A150: 655-72(1970).

Optical potentials for the elastic scattering of deuterons, ^3He, and tritons were calculated in terms of the optical potentials of neutrons and protons forming the projectile. The angular distributions for the elastic scattering of these particles from various targets were calculated and compared with experimental results. (auth)

17988 CHARGE DEPENDENCE OF ONE-BOSON EXCHANGE POTENTIALS. Yalcin, C.; Yap, C. T. (Middle East Technical Univ., Ankara). Nucl. Phys.; A153: 424-32(1970).

The Fermi nuclear matrix elements M_F for the $\Delta J = 0$, $\Delta T = \pm 1$ β-decays of ^{41}Ar, ^{44}Sc, and ^{52}Mn are calculated theoretically in the jj-coupling shell model using in addition to the usual Coulomb potential one-boson exchange potentials with the mass splitting of the ρ-meson, $\delta\rho = \rho^{\pm} - \rho^0$, as a variable parameter. These results are compared with those obtained by using the Blin-Stoyle−Le Tourneux charge-dependent potential which contains parameters p and r that measure the deviation of nuclear forces from exact charge symmetry and q and s that measure the deviation of nuclear forces from exact charge independence. Comparison yields $3r - p \approx 0.1\%$ whereas $3s - q$ is dependent on $\delta\rho$. Using the well-attested relation of $3s - q \approx 1\%$, we obtain $\delta\rho$ in the range, $-1\frac{1}{2}$ to -5 MeV, which is consistent with experimental values to date. With $\delta\rho = -3$ MeV it is found that the theoretical values of M_F are consistent with the experimental ones for the decays under consideration. (auth)

17989 INVESTIGATION OF THE STATES OF 2s-1d SHELL NUCLEI BASED ON THE FOUR-PARTICLE-FOUR-HOLE STATE IN ^{16}O. Tewari, S. N.; Struble, G. L. (Univ. of California, Berkeley). Phys. Rev., C; 1: 1156-66(Apr 1970).

The four-particle−four-hole state in ^{16}O and the corresponding states in the even−even, N = Z nuclei of the 2s−1d shell are investigated in the framework of the Hartree−Fock approximation. Detailed calculations are performed in each case to determine the most stable Hartree−Fock solution. By assuming a simple model, the excitation energies of the band heads are calculated showing that ^{24}Mg is the last nucleus where a state analogous to the four-particle−four-hole state in ^{16}O might be observed. Energy levels are calculated in ^{16}O, ^{20}Ne, and ^{24}Mg using a basis of good angular-momentum states. A comparison between the predicted and the observed energy spectrum is shown In ^{16}O, calculations are performed both with phenomenological and realistic interactions and the results are compared. The accuracy of the projected angular-momentum states from the twelve-particle−four-hole solution in ^{24}Mg is estimated and shows that the projected states in this case are close to the eigenstates. It is demonstrated that one of two 0^+ states observed around 7 MeV in ^{20}Ne is an eight-particle−four-hole state. (auth)

17990 MATRIX ELEMENTS FOR RADIATIVE TRI-NUCLEON REACTIONS. Davis, R. (Dept. of Theoretical Physics, Oxford). Nucl. Phys.; A154: 113-26(1970).

Matrix elements for photodisintegration and direct-capture reactions are simplified by means of group theory, new coordinate systems and other means to yield general and relatively simple forms for the matrix elements in angular, spin, and isospin variables and to simplify the remaining radial integrations. The overall problem is thus brought to a form involving finite sums which are multitudinous, but which can readily be performed mechanically. The conversion of bound states to the new formalism and the expansion of continuum states and of the radiative Hamiltonian in it are described. (auth)

XUM

17991 COMPLETE ANGULAR MOMENTUM ANALYSIS OF FADDE'EV–LOVELACE EQUATIONS BASED ON NON-CENTRAL PAIR FORCES. Stingl, M. (Weizmann Inst. of Science, Rehovot, Israel. Technische Hochschule, Munich); Rinat, A. S. Nucl. Phys.; A154: 613-25(1970).

Assuming separable, non-central nucleon–nucleon forces a complete angular momentum analysis of the Fadde'ev–Lovelace equations is presented in closed form. Partial wave amplitudes corresponding to exchange graphs for any spin are presented in both channel spin and helicity representations. These amplitudes form the input for the Fadde'ev–Lovelace equations. (auth)

17992 PARITY-MIXED HARTREE–FOCK SOLUTIONS IN THE 2s-1d SHELL. Giraud, B. (CEN de Saclay, Gif-sur-Yvette, France); Sauer, P. U. Nucl. Phys.; A154: 587-601(1970).

Hartree–Fock calculations were carried out for an excited state of ^{16}O, for ^{19}F, and for the N = Z, even nuclei of the 2s–1d shell. The trial determinants consist of an inert ^4He core and a cloud of orbitals. Parity mixture is allowed by expanding each orbital of the cloud in orbitals of both the 1p and the 2s–1d shells. The Hamiltonian contains a Gaussian or Yukawa force with a Rosenfeld exchange mixture, and phenomenological single-particle energies. Parity-mixed Hartree–Fock solutions were found for ^{16}O, ^{19}F, ^{20}Ne, ^{24}Mg, and ^{28}Si. States of pure parity were projected out of them. Their increase in binding energy with respect to the traditional, parity-pure Hartree–Fock solutions ranged from 0.4 to 4 MeV. However, this effect seemed to result largely from the lack of translation invariance induced by the use of phenomenological single-particle energies. The pear-shaped solutions exhibit a significant dipole moment and c.m. excitation. An attempt towards reducing this c.m. drifting by means of an external constraint fails to yield spuriosity-free solutions that retain some parity admixture. (auth)

17993 MODEL OF s-WAVE POTENTIALS WITH A HARD CORE. Hal'pern, E. S.; Lyakhovitskii, V. N.; Narodetskii, I. M.; Simonov, Yu. A.; Ter-Martirosyan, K. A. (Inst. of Theoretical and Experimental Physics, Moscow). Yadern. Fiz.; 12: 287-92(Aug 1970). (In Russian).

Parameters are given for a set of static NN potentials having a form that allows analytical solution. A parameter c is taken to be from –1 (the Hulthen potential) up to high positive values $c = 10^4$ (the Woods–Saxon potential). Parameters r_c, U_0, and b are found by means of the χ^2 method, providing the best fit for the singlet and triplet s phase shifts in the energy region from 0 up to 400 MeV. The χ^2 value is found to have no sharp dependence on the potential shape (the parameter c). (auth)

17994 ON THE INTERACTION INDUCED BY THE EXCHANGE OF NUCLEONS BETWEEN TWO IDENTICAL NUCLEAR CORES. von Oertzen, W. (Max-Planck-Institut fuer Kernphysik, Heidelberg). Nucl. Phys.; A148: 529-47 (1970).

A formula for the interaction energy of a nuclear system comprised of two nuclei A and B, with B having a large probability to be represented as B = (A + c), is derived. A general formula for the interaction via the exchange of a particle c between two identical cores has been obtained. The scattering of a nucleus B on a nucleus A under the influence of the exchange interaction is discussed. Calculations for the scattering of ^{12}C on ^{13}C and ^{16}O on ^{12}C have been performed and very good agreement with experimental data has been obtained. (auth)

17995 ONE-BOSON-EXCHANGE POTENTIALS IN PROTON–PROTON BREMSSTRAHLUNG. Schiffrer, Giuliano (Univ., Frankfurt am Main); Drechsel, Dieter. Nucl. Phys.; A148: 286-98(1970).

The behavior of various one-boson-exchange potentials off the energy shell (OES) was investigated and compared to results given by the hard-core Hamada–Johnston potential. The potentials considered include the regularized potentials of Green and Ueda, the Bryan–Scott, and the Reid soft-core potential. For these potentials analytical expressions of the quasi-phases were derived in Born approximation. Cross sections for the process of proton–proton bremsstrahlung were calculated using the various potential models, and are compared to the experimental data. At an energy of about 100 MeV the OES effects of the one-boson-exchange potentials are in striking agreement among each other and differ from the hard-core Hamada–Johnston potential. The present data are compatible with both the Reid soft-core and the Hamada–Johnston potentials, though there is still a minor discrepancy between theory and experiment. (auth)

17996 11-MeV PROTON INELASTIC SCATTERING FROM EVEN–EVEN MEDIUM-WEIGHT NUCLEI. Perey, C. M.; Silva, R. J.; Dickens, J. K.; Perey, F. G. (Oak Ridge National Lab., Tenn.). Phys. Rev., C; 2: 468-77(Aug 1970).

The analysis of inelastic scattering of 11-MeV protons from quadrupole and octupole collective levels of 14 even–even nuclei between ^{48}Ti and ^{76}Ge is reported. The distorted-wave Born approximation was used to calculate the cross sections using the collective-model generalization of the optical model for inelastic scattering. The analysis was performed using both real and complex form factors for the model. A satisfactory description of all the data is obtained when a contribution due to compound-nucleus decay for most of the octupole levels and a few of the quadrupole levels is included. (auth)

17997 COMMENTS ON COHERENCE AND MIGDAL–WATSON THEORY IN nd → nnp. Aitchison, I. J. R. (Dept. of Theoretical Physics, Oxford). Nucl. Phys.; A148: 457-64(1970).

It was re-emphasized that a few low-order rescattering terms give a good fit, and a simple understanding, of the high-energy peak in the recoil proton energy spectrum at fixed angle in nd → nnp; in particular, of the narrowing of the peak as compared with Migdal–Watson theory. These terms are then used to discuss the effects of coherence and "off-shell corrections" on the phase of the partial wave amplitude in the nn channel. It was concluded that the entire amplitude carries the nn phase, but that there is an important real factor in the amplitude, multiplying the Migdal–Watson term, which is associated with the coherent sum of the low-order rescattering terms, and which is responsible for the narrowing of the peak. (auth)

17998 VELOCITY-DEPENDENT NUCLEON–NUCLEON INTERACTION. Petris, L. (Univ. of Melbourne). Nucl. Phys.; A148: 583-92(1970).

A velocity-dependent interaction of the form previously investigated by Tabakin and Davies for singlet states, was determined to fit S-, P- and D-wave nucleon–nucleon phase shifts up to 320 MeV for both singlet and triplet states. The Lippmann–Schwinger equation was solved in momentum space for the S-states using the Weinberg quasi-Born approximation. A simultaneous fit to the phase shifts, scattering lengths, deuteron binding energy, and nuclear matter results with small second-order corrections, is obtained. The results of Hartree–Fock calculations for the closed-shell nuclei ^4He and ^{16}O are also given. (auth)

17999 EFFECT OF PARTICLE-NUMBER PROJECTION ON THE DETERMINATION OF THE GROUND STATE OF SUPERCONDUCTING NUCLEI. Rimini, A.; Weber, T. (Univ., Trieste, Italy). Phys. Rev., C; 2: 324-5(Jul 1970).

The pair-distribution coefficients of the ground state of even nickel and tin isotopes are determined using both the standard BCS state and its number-projected component. The comparison of the results shows that a consistent number-conserving determination of the coefficients is, in general, necessary in the framework of the so-called projected quasiparticle Tamm–Dancoff approximations. (auth)

18000 BARYON RESONANCES IN NUCLEI WITH APPLICATIONS TO THE TWO-NUCLEON SYSTEM. Arenhoevel, Hartmuth (Max-Planck Institut fuer Chemie, Mainz); Danos, Michael; Williams, H. Thomas. Nucl. Phys.; A162: 12-34(1971).

The nonrelativistic description of the nucleus is presented which allows the possibility of excited baryon resonances within the nucleus via collision of the nucleons with exchanged mesons. A perturbative treatment for the intrinsically excited configurations is justified, and lowest order results for the wave functions of the excited configurations are derived. Detailed formulas for the two-nucleon system are presented and numerical results are given to show the effect of the baryon resonances on the magnetic moment and threshold photodisintegration of the deuteron. (auth)

18001 NUCLEAR BETA DECAY. Behrens, H. (Univ., Karlsruhe, Ger. Kernforschungszentrum, Karlsruhe, Ger.); Buehring, W. Nucl. Phys.; A162: 111-44(1971).

New formulas for nuclear beta decay are derived by using a modified expansion of the electron radial wave functions. This expansion is obtained by means of the integral equations which correspond to the Dirac radial differential equations. As a consequence new types of form factor coefficients or nuclear matrix elements occur which depend on the shape of the nuclear charge distribution. The implications of the new formulas for the analysis of experiments are discussed. The sensitivity to the detailed shape of the charge distribution turns out to be weak usually, even in the case of non-unique forbidden transitions. An elementary treatment of the induced interactions leads in a simple way to the formulae which express the form factor coefficients in terms of coupling constants and nuclear matrix elements. Ex-

pressions are given for the single-particle values of all the nuclear matrix elements in terms of radial integrals. (auth)

18002 CHARGE-DEPENDENT RADIATIVE CORRECTIONS TO THE FERMI MATRIX ELEMENT FOR PURE FERMI β-DECAYS. Jaus, W. (Univ., Zurich). Nucl. Phys.; A162: 97-110(1971).

The charge-dependent radiative corrections of order $Z^2\alpha^2$ to the Fermi matrix element for pure Fermi β-decays is calculated neglecting the effect of excited nuclear states. The calculation treats the nucleus as an elementary particle and makes use partly of the technique of dispersion relations and partly of perturbation theory. The charge-dependent corrections are free from ultraviolet divergences and the electromagnetic form factor reduces the relevant dispersion and perturbation integrals to their low-energy limit. This fact enables the application of a low-energy theorem to determine the structure-dependent terms and an approximation method to estimate the two-photon contribution. The result is a correction to the Fermi matrix element of a few hundredths of a percent which is entirely negligible. (auth)

18003 ROTATIONAL LEVELS OF DEFORMED DOUBLY EVEN NUCLEI. Abraham, P. M.; Rost, F. (Univ. of Colorado, Boulder). Nucl. Phys.; A162: 173-92(1971).

A model of deformed doubly even nuclei is described in which the nucleus is assumed to be made up of a rotating core and an even number of valence nucleons. The intrinsic motion of the valence nucleons is assumed to be strongly coupled to the nuclear rotation so that the total Hamiltonian of the system may be obtained as consisting of three parts: the rotational Hamiltonian, the intrinsic Hamiltonian and the rotational-particle interaction. Since the rotational-particle interaction gives rise to coupling between rotational bands, the eigenfunctions of the total Hamiltonian are taken to be superpositions of the usual adiabatic wave functions. The intrinsic energies are calculated by using a deformed Hamiltonian with pairing interaction and by setting up a two-quasiparticle basis for the intrinsic states. The rotational energies are obtained by setting up the total energy matrix with the help of a few collective parameters and by diagonalizing it in a truncated space of the basis states. The results of the calculations including the high-spin members of the ground state rotational band indicate that the experimental levels are well reproduced. Generalized decoupling parameters are extracted and compared with model calculations. (auth)

18004 SINGLE-PARTICLE STATES IN A SPHEROIDAL HARMONIC OSCILLATOR POTENTIAL WITH A DEFORMED SPIN-ORBIT INTERACTION AND A HEXADECAPOLE DEFORMATION. Andersen, B. L. (Univ. of Copenhagen). Nucl. Phys.; A162: 208-24(1971).

Using an anisotropic basis, a Nilsson model Hamiltonian with a spin-orbit force of the Thomas form is diagonalized. This approach is compared with the usual method. Inclusion of a P_4 deformation is shown to be important for the $\Delta N = 2$ mixing, which is very sensitive to the sign of this deformation. This fact seems to favour a better understanding of this mixing, which is thoroughly discussed. (auth)

18005 THREE-BODY MODEL FOR THE STUDY OF RESONANCE PHENOMENA. Beregi, P.; Lovas, I. (Central Research Inst. for Physics, Budapest). Z. Phys.; 241: 410-22(1971).

A three-body model suitable for the investigation of compound, quasi-compound and potential resonances is presented. The exact solution of the model based on Faddeev's method is discussed. Numerical calculations are performed for negative total energy. (auth)

18006 GAMMA-RAY MIXING RATIOS IN MIRROR NUCLEI. Glaudemans, P. W. M.; Van Der Leun, C. (Rijksuniversiteit, Utrecht). Phys. Lett.; 34B: 41-2(18 Jan 1971).

A review of the E2/M1 mixing ratios of corresponding γ-ray transitions in sd-shell mirror nuclei shows that for the 20 pairs of mirror transitions for which the mixing ratios are known to differ significantly from zero (i) the mixing ratios have opposite sign, and (ii) the ratio of the absolute values is remarkably close to unity. (auth)

18007 NUCLEAR MASS DISTRIBUTIONS FROM THE ELASTIC SCATTERING OF LOW-ENERGY α-PARTICLES. Batty, C. J.; Friedman, E. (Rutherford High Energy Lab., Chilton, Eng.). Phys. Lett.; 34B: 7-9(18 Jan 1971).

The microscopic model is applied to the elastic scattering of α particles from ^{204,206,208}Pb and ^{209}Bi below and near the Coulomb barrier. The analysis shows that the root-mean-square radii of the nuclear mass distributions do not exceed the values of the charge rms radii by more than 0.1 fm. (auth)

18008 DIAGRAMMATIC EXPANSIONS FOR ISOBARIC ANALOG STATES AND THE COULOMB DISPLACEMENT ENERGY. Wong, Chun Wa (Univ. of California, Los Angeles). Nucl. Phys.; A151: 323-30(1970).

Certain aspects of diagrammatic expansions for isobaric analog states are discussed. The effect of the charge-distortion potential of Auerbach, Kahana, and Weneser on the Coulomb displacement energy was estimated to be about 6% by relating it to the average isotope shift of the core charge distribution. (auth)

18009 LEVINSON'S THEOREM AND DISPERSION RELATIONS FOR THE COULOMB SCATTERING IN THE λ-PLANE. Lopez, C. A.; Massidda, V. (Univ. of Chile, Santiago de Chile). Nucl. Phys.; A149: 33-40(1970).

The following properties in the λ-plane, which were recently proved for Yukawa-like potentials, Levinson's theorem for the phase at r = 0 of the irregular (Jost) solution $f(\lambda, -k, r)$ and a dispersion relation for the same function, were extended to the Coulomb case. Explicit use was made of the known analytic expression of the Jost functions. (auth)

18010 INTERMEDIATE COUPLING IN THE N = 29 AND Z = 29 NUCLEI. Larner, D. (Univ. of Kansas, Lawrence). Phys. Rev., C; 2: 522-30(Aug 1970).

Levels were calculated for the N = 29 and Z = 29 nuclei, ^{51}Ti, ^{53}Cr, ^{55}Fe, ^{61,63,65}Cu. The model used is the intermediate-coupling model with quasivibrational core, as developed by True and Thankappan. A pattern search routine was used to fit the five parameters to the levels and stripping strengths. Except for the case of ^{53}Cr, levels and strengths were fitted fairly well. In particular, in ^{55}Fe the states at 1.917 and 2.051 MeV were identified as $\frac{3}{2}^-$ and $\frac{1}{2}^-$ states, respectively. B(E2) values for transitions to the ground state were calculated, and the comparison with data for ^{63}Cu and ^{65}Cu shows good agreement. However, there are no experimental B(E2) data available for the other nuclei. (auth)

18011 ON THE NORMALIZATION OF GAMOW FUNCTIONS. Gyarmati, B.; Vertse, T. (Inst. of Nuclear Research, Debrecen, Hungary). Nucl. Phys.; A160: 523-8(1971).

It is proved that the definitions of the norm given by Berggren and Romo are identical. Regularization by the method of Berggren (Nucl. Phys., A109: 265(1968)) with any convergence factor of the form $\exp(-\epsilon r^n)$ $[1 < n < \frac{1}{2}\pi/\text{arctg}(\gamma/\kappa)]$ leads to the same result. The existence of the norm is also established for the proton. The norm for neutrons is analytically given. (auth)

18012 EFFECT OF THE JASTROW CORRELATION FACTOR ON NUCLEAR CHARGE DISTRIBUTIONS. Ripka, G.; Gillespie, J. (Centre d'Etudes Nucleaires de Saclay, Gif-sur-Yvette, France). Phys. Rev. Lett.; 25: 6124-5(7 Dec 1970).

It is shown that for nuclear charge distributions the dominant effect of the Jastrow correlation factor is to produce a new uncorrelated Slater determinant, which is calculated explicitly. This is related to the absence of the Brueckner–Pauli operator in the Jastrow correlation factor. (auth)

18013 RELATIONSHIP BETWEEN THE TRITON ENERGY AND THE NEUTRON–DEUTERON DOUBLET SCATTERING LENGTH. Brady, T.; Harms, E.; Laroze, L.; Levinger, J. S. (Rensselaer Polytechnic Inst., Troy, N. Y.). Phys. Rev., C; 2: 59-63(Jul 1970).

Phillips found a linear relation between the triton energy E_t and the doublet n–d scattering length ^2a for a variety of separable tensor potentials. We have treated many more separable potentials, and also the Tabakin and Mongan rank-two separable potentials. The linear relation holds well for two-body potentials that fit the energies of the two-body triplet bound and singlet antibound states. (auth)

18014 CALCULATION OF NUCLEAR ROTATIONAL ENERGIES. Krumlinde, J. (Lund Inst. of Tech., Sweden). Nucl. Phys.; A160: 471-81(1971).

Rotational energies are calculated for nuclei in the deformed regions both at the ground state and at very high deformations. The single-particle Hamiltonian includes both quadrupole and hexadecapole deformations. (auth)

18015 CONFIRMATION OF STRONG SECOND ORDER PROCESSES IN (p,t) REACTIONS ON DEFORMED NUCLEI. Ascuitto, R. J. (Yale Univ., New Haven); Glendenning, N. K.; Soerensen, B. Phys. Lett.; 34B: 17-20(18 Jan 1971).

The (p,t) reaction on deformed nuclei has been computed with the inclusion of indirect transitions that go through intermediate rotational states. The indirect transitions are almost as large as the direct for the 2^+ state and their inclusion is essential to bring about agreement with the shape and magnitude of the differential cross section. (auth)

XUM

18016 DIVERGENCE OF THE LIQUID DROP MODEL FROM MASS RELATIONS OF GARVEY ET AL. Sorensen, R. A. (Research Inst. for Physics, Stockholm). Phys. Lett.; 34B: 21-3(18 Jan 1971).

The Garvey et al. mass formula is found to diverge from the expected behavior of a liquid drop, and a correction is proposed and computed. (auth)

18017 SPECTROSCOPIC ANALYSIS OF STRIPPING INTO RESONANCES. Bunakov, V. E. (Ioffe Inst. of Physics and Tech., Leningrad); Gridnev, K. A.; Krasnov, L. V. Phys. Lett.; 34B: 27-30(18 Jan 1971).

The DWBA spectroscopic factor S is shown to retain its physical meaning in stripping to resonances. The validity of the relation between S and the resonance width is discussed. A DWBA analysis is carried out of (dp) reaction for a number of resonant states. (auth)

18018 EVALUATION OF UNKNOWN EXCITATION FUNCTIONS FOR (α,xn) AND (d,xn) REACTIONS. Muenzel, H.; Lange, J. (Gesellschaft fuer Kernforschung mbH, Karlsruhe, Ger.). pp 373-82 of Uses of Cyclotrons in Chemistry, Metallurgy, and Biology. /Amphlett, C. B. (ed.). London; Butterworth and Co. Ltd. (1970).

From International Conference on the Use of Cyclotrons in Chemistry, Metallurgy, and Biology, Oxford, England. See CONF-690924.

In order to evaluate the best irradiation conditions for the cyclotron production of radionuclides the excitation function for the reaction has to be known. Unfortunately, excitation functions for (α,xn) (α,pxn), (d,xn), and (α,pxn) reactions are known only for a few target-projectile combinations. In most cases therefore, a rather arbitrary guess is made about optimal target thickness and projectile energy. Therefore the possibility of estimating unknown excitation functions by interpolation was investigated. It can be shown that the influence of the charge and mass number of the target nucleus on characteristic data such as position, height, and shape of the known excitation functions can be explained by qualitative theoretical arguments. (auth) (UK)

18019 CONFERENCE ON NUCLEAR REACTION MECHANISM, MARCH 16-18, 1970, GRENOBLE, FRANCE. J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.1-240(May-Jun 1970). (In French and English). (CONF-700313).

Separate abstracts were prepared for each of the 81 papers presented. (France)

For abstracts of individual papers see: 16744, 17362–17364, 17367, 17652, 17699–17706, 17739–17766, 17825–17839, 17930–17940, and 18020–18032.

18020 SELECTED TOPICS IN NUCLEAR PHYSICS AT 1 GeV. Kofoed-Hansen, O. (European Organization for Nuclear Research, Geneva). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.11-18(May-Jun 1970).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Some of the conditions for the interpretation of elastic and sum nuclear inelastic scattering of high energy particles on nuclei are reviewed. The possibility of investigating short and long-range nuclear correlations is treated to some extent and measurements are proposed for the determination of short range correlations, Pauli correlations, specific aspects of nuclear deformation and of possible differences between neutron and proton distributions. (auth) (France)

18021 PHENOMENA RELATED TO COMPOUND NUCLEI. Bloch, C. (CEA, Saclay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.24-34(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Problems related to the formation and the decomposition of compound nuclei are studied. The shell model and the idea of a hierarchy of nuclear states are used. Experimental results concerning the formation of a compound nucleus are given. Statistics are then introduced into the theory of nuclear reactions and certain fundamental questions studied. A review of recent studies on the highly deformed states of heavy nuclei is given. (France)

18022 PHOTONUCLEAR REACTIONS. Schuhl, C. (CEA, Saclay, France); Argan, P. J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.35-45(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The present state of research on photonuclear reactions with real photons is discussed. The following points are reviewed: giant resonances, photonuclear reactions at the highest energies (in the 300 MeV region), and the photodisintegration of ^{2}D, ^{3}He and ^{4}He. (France)

18023 MICROSCOPIC THEORY OF NUCLEAR REACTIONS AND OPTICAL POTENTIAL. Vinh Mau, N. (Univ. Paris, Orsay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.52-7 (May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Scattering in a system consisting of a simple particle and a nucleus was studied. The non-antisymmetrized Feshbach approximation was used. A microscopic derivation exactly antisymmetrized to the optical potential was then sought. At the expense of introducing a certain number of approximations, the imaginary part of the optical potential in the scattering of 14 to 60 MeV nucleons by ^{40}Ca was calculated. Optical potentials were compared with non-local phenomenological potentials. (France)

18024 ELASTIC, INELASTIC, AND QUASI-ELASTIC SCATTERING. Marty, N. (Univ. Paris, Orsay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.58-64(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

A review is presented on all the recent experiments made on elastic, inelastic, and quasi-elastic scattering. Only experiments made at energies producing direct interaction processes are considered. (France)

18025 DIRECT INTERACTION TRANSFER REACTIONS. Faraggi, H. (CEA, Saclay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.65-78(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Direct transfer reactions in the framework of the D.W.B.A. are studied. The limits to the use of this approximation and the possible improvements made by considering the effect of mechanisms other than direct transfer are considered. The usefulness of the selective character of transfer reactions in the transfer of several nucleons induced by a heavy ion beam is emphasized. (France)

18026 EFFECTS OF THE NUCLEON-NUCLEON $\vec{L}\cdot\vec{S}$ INTERACTION ON THE ASYMMETRY OF PROTON INELASTIC SCATTERING. Raynal, J. (CEN, Saclay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.92-3(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The nucleon-nucleon $\vec{L}\cdot\vec{S}$ interaction exhibits the same features in a microscopic description that the deformed $\vec{L}\cdot\vec{S}$ coupling introduced by Blair and Sherif exhibits in the macroscopic description. In the zero-range limit, this interaction is purely T = 1 and is more important for nuclei with open shell for protons (^{90}Zr) than for nuclei with open shell for neutrons (^{62}Ni). (auth) (France)

18027 NON-LOCAL FORCES AND PHOTONUCLEAR REACTIONS IN HEAVY NUCLEI. Hammann, T. (Univ. of Laval, Quebec. Institut d'Etudes Nucleaires, Algiers). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.116-17(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The increasing of the cross section of the electric dipole transition due to the non-locality of the nuclear forces was computed in the plane-wave approximation for two realistic potentials, both non-local and separable. It appeared that a strong non-locality was necessary for the correct interpretation of the experimental photonuclear reaction data. (auth) (France)

18028 REACTION MECHANISM AND DIRECT INTERACTION FEYNMAN DIAGRAMS. Nalda, J. (Univ., Valladolid, Spain). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.123-4(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

Different mechanisms of reactions are explained through the theory of direct interaction accordingly with the associated diagrams. That may be very important for the determination of possible cluster structures of the nucleus. Calculations of the (d,α) and (n,x) reactions on light nuclei are presented. (auth) (France)

18029 WIDTHS OF ANALOG STATES. Cassagnou, Y.; Foissel, P.; Lamehi-Rachti, M.; (and others) (CEA, Saclay, France). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.131-2 (May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

A systematic study of the observed total widths of isobaric analog resonances is presented together with the behavior of the spreading width from calcium to lead. (auth) (France)

18030 STUDY OF THE FINITE RANGE INTERACTION IN THE TWO-NUCLEON TRANSFER REACTIONS. Joseph, J.; Fayard, C.; Lamot, G. H.; El Baz, E. (Univ., Lyon). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.170-1(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The two nucleon transfer reaction was studied in the frame of DWBA method, with a finite range interaction. It appeared that this effect is quite important in the evaluation of spectroscopic factors. (auth) (France)

18031 TARGET EXCITATION BY STRIPPING BELOW THE COULOMB BARRIER IN REACTIONS BETWEEN HEAVY IONS. Nakamura, Kosuke (Univ., Brussels). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.180-1(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

The analytic formulation of the stripping reaction below the Coulomb barrier between complex nuclei is presented using the theory of the Coulomb excitation. The importance of the effect of the Coulomb stripping without the target excitation is emphasized. With a proper choice of the closest approach distance the transition amplitude with the Coulomb excitation of the target nucleus becomes comparable with that without the Coulomb excitation. (auth) (France)

18032 APPLICATION OF THE SHAPIRO MODEL AND OF THE THREE-BODY THEORY TO $(\alpha,2\alpha)$ REACTIONS. Burdet, G.; Perrin, M. (Univ., Lyon). J. Phys. (Paris), Colloq.; 31: Suppl. No. 5-6, C2.190-1(May-Jun 1970). (In French).

From Symposium on the Mechanisms of Nuclear Reactions, Grenoble, France. See CONF-700313.

From the three-body theory, it is shown that the pole graph and the triangular graph of the dispersion model must appear always together in the meaningful transition amplitude describing the $(\alpha,2\alpha)$ break-up reactions. (auth) (France)

18033 ON A POSSIBLE CONSISTENCY CHECK FOR THE BOHR VIBRATIONAL MODEL. Miranda, A. (Univ. of Aarhus, Denmark). Nucl. Phys.; A157: 404-16(1970).

From an interpretation of what is meant by a vibrational band in a nucleus, fully consistent with the Bohr vibrational model, and indeed implied by this model, a dispersion formula is obtained. This establishes a relationship between certain measurable quantities. When the available relevant information for Pb and Hg isotopes is inserted into this formula, it is nearly satisfied in one important case, but it fails in all the other cases considered. (auth)

18034 A COMPARISON BETWEEN TWO METHODS FOR ISOBARIC ANALOGUE RESONANCES. Bund, G. W. (Instituto de Fisica Teorica, Sao Paulo, Brazil). Nucl. Phys.; A157: 369-84(1970).

The models of Toledo Piza and Kerman (OC) and Blair and Bund (NOC) were compared analytically as well as numerically, the former being here generalized to include the inelastic channels. These models are very similar and differ mainly in that OC requires orthogonality between the channel part and the analogue part of the wave function. Both methods were applied to elastic and inelastic proton scattering at the IAR of the ground state of ^{208}Pb and to elastic scattering at several IAR of ^{91}Zr. A further comparison was made if OC is generalized by including the appropriate anti-analogue states. The resonance widths obtained were also compared to experiment. (auth)

18035 REMARK ON THE RELATION BETWEEN THE GENERATOR-COORDINATE METHOD AND THE RANDOM-PHASE APPROXIMATION. da Providencia, J. (Univ., Coimbra, Portugal). Nucl. Phys.; A157: 358-62(1970).

The equivalence between the generator-coordinate method and the random-phase approximation was established by several authors. It is shown that a trial wave function $\phi(x;a)$, dependent on the time by the parameter $a = a(t)$, oscillates in time with a frequency that is also given by the equations provided by both the generator-coordinate method and the RPA for the excitation energy. (auth)

18036 PROCEEDINGS OF THE AMERICAN POWER CONFERENCE. VOLUME 32. Thirty-Second Annual Meeting, Chicago, April 21, 22, 23, 1970. Chicago; American Power Conference (1970). 1191p. $15.00. (CONF-700426).

The technical, economic, and social aspects of the generation, transmission, distribution, and utilization of electric power are discussed. A separate abstract was prepared for each of 28 papers on the application of nuclear energy for power production. (H.D.R.)

For abstracts of individual papers see: 15745, 18037–18046, 18066–18073, 18102–18106, 18145, 18149, 18158, and 18164.

18037 NUCLEAR POWER: STATUS AND OUTLOOK. Seaborg, Glenn T. (Atomic Energy Commission, Washington, D. C.). Proc. Amer. Power Conf.; 32: 25-37(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The status and outlook for the operation of nuclear power plants in the U. S. are discussed. Emphasis is placed on the program for development of a Liquid Metal Fast Breeder Reactor and its implications to future power production capacity. Environmental aspects of electricity production from both nuclear and non-nuclear plants are examined. (H.D.R.)

18038 ELECTRIC POWER PHILOSOPHY FOR THE 1970s. Hamil, David A. (Dept. of Agriculture, Washington, D. C.). Proc. Amer. Power Conf.; 32: 38-44(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

A philosophy of cooperation and joint planning between U. S. power utilities in installing future capacity is presented. This joint planning is predicted to provide both protection of the environment and maximum economic usage of costly new facilities. (H.D.R.)

18039 MAJOR ELECTRIC POWER FACILITIES AND THE ENVIRONMENT. Coe, Robert N. (Southern California Edison Co., Los Angeles). Proc. Amer. Power Conf.; 32: 52-60(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The environmental considerations applied to the planning and installation of U. S. electric power facilities are summarized. (H.D.R.)

18040 DAVIS–BESSE NUCLEAR POWER STATION. Roe, L. E. (Toledo Edison Co.); McFarland, J. Proc. Amer. Power Conf.; 32: 210-23(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The Davis–Besse power station site and general plant layout are described, and the personnel training and project schedules are presented. The pressurized water reactor steam supply system, the engineered safety features, and the nuclear instrumentation and control system are described. (H.D.R.)

18041 PALISADES PLANT: DESIGN AND CONSTRUCTION. Swarts, K. A. (Consumers Power Co., Jackson, Mich.); Hall, V. C. Jr.; Rumbaugh, E. A. Proc. Amer. Power Conf.; 32: 224-32(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The basic layout of the Palisades plant is described, and the steam and power conversion system is examined. Design parameters of the pressurized water reactor and safety systems are discussed. (H.D.R.)

18042 INFORMATION REQUIREMENTS AND THEIR IMPACT ON NUCLEAR POWER PLANT DESIGN AND CONSTRUCTION. Lester, William (Westinghouse Electric Corp., Pittsburgh). Proc. Amer. Power Conf.; 32: 267-75(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

Requirements for management tools to accomplish the complex tasks of nuclear power plant design and construction are discussed. The key elements in a properly planned and managed nuclear project are the establishment of an integrated management team to avoid delays in engineering, licensing, and procurement and the standardization of design, licensing, and startup procedures. (H.D.R.)

18043 NUCLEAR WASTE MANAGEMENT PRACTICES AND TRENDS. Jason, R. H.; Ward, J. E. (Sargent and Lundy, Engineers, Chicago). Proc. Amer. Power Conf.; 32: 276-85 (1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

Methods employed in light-water reactors to process radioactive wastes are discussed. Sources of wastes are examined, and management systems for both gaseous and liquid wastes are described. (H.D.R.)

18044 POWER AND THE ENVIRONMENT. Wright, J. H. (Westinghouse Electric Corp., Pittsburgh). Proc. Amer. Power Conf.; 32: 487-98(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The environmental impact of both pressurized-water reactor and fossil-fuel types of steam electric power plants is briefly discussed. The potential problems from radioactive emissions, air pollution, and heat discharges are described. (H.D.R.)

18045 AIR POLLUTION AND POWER GENERATION. Wetch, Joseph R. (North American Rockwell Corp., Canoga Park, Calif.). Proc. Amer. Power Conf.; 32: 504-11(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The estimated levels of air pollutants released in the U. S. from all sources are presented. Projections for emission levels of sulfur and nitrogen compounds from fossil-fueled power plants are made, and the effects of emission control methods are discussed. Some promising control methods under development are described. (H.D.R.)

18046 PRODUCING LOW CHLORIDE EFFLUENT WITH LOW REGENERANT WASTE VOLUMES BY CONDENSATE MIXED-BED POLISHERS IN NUCLEAR CYCLES. White, Jacqueline V.; Crits, George J. (Crane Co., King of Prussia, Pa.). Proc. Amer. Power Conf.; 32: 771-85(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

Operating high-rate hydrogen-cycle mixed-bed condensate polishing plants at the Oyster Creek Nuclear Power Plant, Unit 1 and at a fossil fuel power plant were evaluated. The effectiveness of these plants for producing high purity effluents is described. (H.D.R.)

18047 GAMMA-CHAMBERS APPLICATION TO POWER MEASUREMENTS OF REACTOR FUEL CHANNELS OF THE I. V. KURCHATOV BELOYARSK NUCLEAR POWER STATION. Emel'yanov, I. Ya.; Alekseev, V. I.; Konstantinov, L. V.; (and others). At. Energ. (USSR); 29: 327-30(Nov 1970). (In Russian).

The gamma-intensity method to measure power density distribution in the reactor core is described. Calculations and experimental results are given. Ionization gamma-chambers have been used as sensing elements to measure fuel channel power of the reactor. Measurement errors are evaluated. The analysis of test gamma-chambers operation makes it possible to recommend them as promising sensing devices of operation control systems for power density distribution measurement in tube-type reactors. (12 references) (auth)

18048 ECOLOGY AROUND A REACTOR. Auerbach, S. I. (Oak Ridge National Lab., Tenn.). Oak Ridge Nat. Lab. Rev.; 3: No. 5, 23-8(Fall 1970).

Some of the studies in progress and some results from these studies on the environmental impact of low-level releases of radionuclides and thermal effluent releases are described. The effects of these environmental factors on the design and siting of nuclear power plants are discussed. (H.D.R.)

18049 1971 NUCLEAR POWER SALES OUTLOOK. Nucl. Ind.; 18: 3-6(Jan 1971).

18050 PLANNING FOR NUCLEAR POWER IN PAKISTAN. Usmani, Ishrat Husain. Com. Naz. Energ. Nucl., Notiz.; 16: No. 11, 41-56(Nov 1970). (In Italian).

The situation of nuclear power now and in the seventies in Pakistan is reviewed. (auth)

18051 CONSIDERATIONS ON THE APPLICATION AND ADAPTABILITY OF COMPUTER CONTROL TO NUCLEAR POWER PLANTS. Keddar, A. (International Atomic Energy Agency, Vienna). At. Energy Rev.; 8: 957-66(Dec 1970).

Because of their adaptability, economy and reliability, digital computers are becoming of increasing interest in the control and operation of nuclear power plants. The following aspects of their application are discussed: safety and control, their functions; performance and their reliability; economy; operator's role; comparison with analog computers. (16 references) (auth)

18052 ILLUMINATION OF MIHAMA NUCLEAR POWER PLANT MACHINE NO. 1. Kaneseki, Isamu (Mitsubishi Electric Corp., Osaka). Mitsubishi Denki Giho; 44: 1478-84(Nov 1970). (In Japanese).

Mihama nuclear power plant No. 1 of the Kansai Electric Power Co., where Mitsubishi participated in the design of the illumination and delivered lighting fixtures, has been completed and scheduled to enter into commercial operation. The illumination of the nuclear power plant is not basically different from that of thermal power plants except for the primary system. With the primary system, it needs thorough consideration on the construction, finish, and performance against earthquake, corrosion, and other failures. The illumination of the whole installation of the PWR power plant is described with emphasis on the illumination of the containment. (auth) (Japan)

18053 STARTUP OF POWER STATIONS IN EXCESS OF 100 MW IN THE FEDERAL REPUBLIC OF GERMANY FOR THE YEARS 1969 TO 1974. Atomwirt., Atomtech.; 15: 591(Dec 1970). (In German).

Fossil fueled and nuclear power plants are tabulated by year of startup, owner/contractor, power level, and fuel type. (H.D.R.)

18054 INFLUENCE OF TECHNOLOGICAL INNOVATIONS ON THE INDUSTRIAL DEVELOPMENT OF VARIOUS PHASES OF THE NUCLEAR FUEL CYCLE. Girotti, R. (ENI, Rome). pp 337-42 of Nuovi Orizzonti per l'Energia Nucleare. Roma; Comitato Nazionale Energia Nucleare (1970). (In Italian).

From 14th Nuclear Conference, Rome, Italy. See CONF-690325.

18055 SURVEY SHOWS NUCLEAR PLANTS WILL LIMIT POLLUTING EFFLUENTS. Schwieger, Robert G. Power; 115: No. 1, 49-53(Jan 1971).

Worldwide nuclear power plants that were planned, under construction, or operating as of the end of 1970 are tabulated. Many of the design features of the plants are listed with emphasis on methods for control of releases of thermal and radioactive effluents. (H.D.R.)

18056 CONSTRUCTION OF THE NUCLEAR POWER PLANT. THE PROBLEM OF CONSTRUCTION OF THE NUCLEAR POWER PLANT. Takemura, T. (Japan Atomic Power Co., Tokyo). Genshiryoku Kogyo; 16: No. 8, 6-10(Aug 1970). (In Japanese).

Problems in the civil engineering and construction works in nuclear power stations are described in the following: the site and associated investigations, including plant location, and geological (seismic), water-supply, and surveys; safety of the power station, involving earthquake, shielding, environmental contamination and containment vessel; the schedule for construction works; utilization of prestressed concrete; construction works, including structural design and cooling-water intake from the sea and its release; and combination with a pumping-up power plant. (Japan)

Operation and Economics

18057 (BNL-50235) POWER PLANT OPERATING AND MAINTENANCE COSTS. Susskind, H.; Raseman, C. J. (Brookhaven National Lab., Upton, N. Y.). Apr 1970. 90p. Dep. NTIS.

Power plant operating and maintenance cost data are presented for a number of reactor systems — LWR, HTGR, MSBR, LMFBR, and GCFR. Also presented for comparison purposes are similar data for fossil-fueled plants. The cost data are reviewed and the unique features of each reactor system influencing the operating and maintenance costs are identified. The results are summarized and tentative conclusions drawn. 25 references. (auth)

18058 (DOCKET-1155-8) LA CROSSE BOILING WATER REACTOR. Monthly Operational Report No. 26, August 1969. (Allis-Chalmers Mfg. Co., Bethesda, Md. Atomic Energy Div.). Oct. 10, 1969. 50p. (ACNP-69508). Dep. CFSTI.

18059 (DOCKET-1155-9) LA CROSSE BOILING WATER REACTOR. Twenty-Eight Day Warranty Operation Report. (Allis-Chalmers Mfg. Co., Bethesda, Md. Atomic Energy Div.). Oct. 1969. 13p. (ACNP-69509). Dep. CFSTI.

18060 (DOCKET-1155-99) LA CROSSE BOILING WATER REACTOR. Inspection of Fuel in November 1970. (Dairyland Power Cooperative, La Crosse, Wis.). Jan 1971. 51p. (DPC-851-20). Dep. NTIS.

18061 (DOCKET-50171-77) PEACH BOTTOM ATOMIC POWER STATION, UNIT 1. Monthly Operations Report No. 58, December 1970. (Philadelphia Electric Co., Pa.). 10 Feb 1971. 12p. Dep. NTIS.

18062 (DOCKET-50219-122) OYSTER CREEK NUCLEAR POWER PLANT, UNIT NO. 1. Surveillance Test Failure of Vacuum Breaker Block Valves. (Jersey Central Power and Light Co., Morristown, N. J.). 8 Feb 1971. 3p. Dep. NTIS.

18063 (GA-10400) 40-MW(E) PROTOTYPE HIGH-TEMPERATURE GAS-COOLED REACTOR POSTCONSTRUCTION RESEARCH AND DEVELOPMENT PROGRAM. Quarterly Progress Report for the Period Ending October 31, 1970. (Gulf General Atomic, Inc., San Diego, Calif.). 30 Nov 1970. Contract AT(04-3)-314. . 46p. Dep. NTIS.

FISSION PRODUCTS — release rates in helium cooled reactor
PEACH BOTTOM POWER REACTOR, UNIT 1 — operations during August to October 1970
— physics measurements for Core 2
— control rods for Core 2, reactivity worth measurements of
— coolant purification system for, performance of helium
REACTOR CONTROL ELEMENTS — reactivity worth of gas cooled rod type (D.C.C.)

18064 (LIB/Trans-322) DEFECTS IN NUCLEAR POWER STATIONS: AN ANALYSIS. Feldman, J. Translated by Fritz Hille for Australian Atomic Energy Commission, from Atomwirt. [Atomtech.]; 14: 446-8(Sep-Oct 1969). 8p. Dep. NTIS (U. S. Sales Only).

Failure data on components and systems of 43 nuclear power plants are analyzed. The plants surveyed included 16 light water reactors, 6 heavy water reactors, 16 gas cooled reactors, and 5 sodium cooled reactors. Failures resulting in repair costs of more than $10,000 or a plant down-time of over 4 days are tabulated for fuel elements, control rods, pressure vessels, heat exchangers, pumps, blowers, and conventional power plant components. (H.D.R.)

18065 (TID-25663) GUNDREMMINGEN NUCLEAR POWER PLANT MONTHLY REPORT, NOVEMBER 1970. (Kernkraftwerk RWE-Bayernwerk G.m.b.H., Gundremmingen (West Germany)). 21 Dec 1970. 42p. (In German). Dep. NTIS.

The plant was operated at full load without limitation. Half way through the month the load had to be reduced briefly to change the control rod withdrawal sequence. The shipment of irradiated fuel elements was initiated. In addition, the first tank of active sludge was taken to Karlsruhe. Certain difficulties in connection with the decontamination of the element transport container were overcome. The activity of the reactor water and waste gas remained constantly low. (auth)

18066 SIMULATION OF THE UNITED STATES POWER ECONOMY. Deonigi, D. E. (Battelle-Northwest, Richland, Wash.). Proc. Amer. Power Conf.; 32: 105-15(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The potential for various power reactor systems in the U. S. electrical power economy is examined. A computer model developed for simulating the power economy and some results of simulated systems are described. (H.D.R.)

18067 FITTING NUCLEAR CAPACITY INTO UTILITY PLANNING. Gilleland, J. E. (Tennessee Valley Authority, Chattanooga); Hoskins, R. E.; Kiefer, W. M.; Koncel, E. F. Proc. Amer. Power Conf.; 32: 116-22(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

Some of the basic considerations in advance planning of electric utility operation to include nuclear units are discussed. (H.D.R.)

18068 METHODS OF PLANNING GENERATING UNIT OPERATION. Anderson, S. W. (Commonwealth Edison Co., Chicago); Jenkins, R. T.; Joy, David; Merrill, E. T.; Wolsko, T. D. Proc. Amer. Power Conf.; 32: 123-30(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

Dynamic and linear programming techniques were applied to the problem of loading generating units for a typical week. The efficiency and flexibility of these techniques were evaluated and compared to other production cost methods. (17 references) (H.D.R.)

XUM

18069 BWR STARTUP EXPERIENCE IN 1969. Christfanson, R. C.; Keller, J. M.; Willett, D. K. (General Electric Co., San Jose, Calif.). Proc. Amer. Power Conf.; 32: 164-9(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The startup test programs and results are summarized for the Oyster Creek, Tarapur, Nine Mile Point, and Tsuruga boiling water reactors. (H.D.R.)

18070 STARTUP AND POWER ESCALATION AT THE R. E. GINNA NUCLEAR POWER PLANT. Koprowski, Robert R. (Rochester Gas and Electric Corp., N. Y.); White, Leon D.; Powell, Edward U.; Cameron, Paul M. Proc. Amer. Power Conf.; 32: 170-87(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The basic design and performance characteristics of the Ginna plant Unit 1 are reviewed. The startup program is described, and the role of the owner in plant construction and startup is discussed. (H.D.R.)

18071 STARTUP AND OPERATION OF THE SAN ONOFRE NUCLEAR GENERATING STATION UNIT ONE. Haynes, J. G. (Southern California Edison, San Clemente, Calif.). Proc. Amer. Power Conf.; 32: 188-93(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The startup test program for the San Onofre plant is reviewed and the initial operating history is presented. Performance of the steam generators and in-core instrumentation is discussed. (H.D.R.)

18072 SAN ONOFRE PWR CORE OPERATIONS FOLLOW. Hughes, F. R.; Langford, F. L. Jr. (Westinghouse Electric Corp., Pittsburgh). Proc. Amer. Power Conf.; 32: 194-9(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The surveillance of reactor core performance over the first 10,000 MWd/MTU of operation is described. Results of determinations of the reactivity coefficients and core power distribution are presented. (H.D.R.)

18073 CANADIAN OPERATING EXPERIENCE WITH HEAVY-WATER POWER REACTORS. Lewis, W. Bennett (Atomic Energy of Canada Ltd., Chalk River, Ont.); Foster, John S. Proc. Amer. Power Conf.; 32: 200-9(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

Operating experience with the NPD and Douglas Point reactors is briefly reviewed. Performance of fuel elements, heavy-water and tritium release control measures, on-line refueling machines, heat exchangers, and pumps is discussed. (H.D.R.)

18074 STUDIES ON THE OVERLOAD OPERATION OF RHEINSBERG NUCLEAR POWER PLANT. Schoenherr, A.; Maresch, W. (VEB Kernkraftwerk, Rheinsberg, Ger.). Kernenergie; 13: 355-60(Nov 1970). (In German).

Power reserves of the main aggregates and systems of the Rheinsberg nuclear power plant were obtained aiming to an increase of electrical power with low additional investment. Both theoretical and practical methods of investigation and results are presented. Taking the power-limiting plant components into account, an increase of electrical power from 70 up to 80 MW has been made possible. An evaluation of the experimental operation with increased power realized so far was made. (5 references) (auth)

18075 OPTIMIZATION OF DEVELOPING ATOMIC POWER PLANT SYSTEM TAKING INTO ACCOUNT LOAD FACTOR CHANGE. Frankovski, V. (Inst. for Nuclear Research, Swierk, Poland). At. Energ. (USSR); 29: 330-7(Nov 1970). (In Russian).

Optimization of the structure of nuclear power systems considering the load factor changes can be resolved using linear programming methods in the cases in which the established nuclear power does not exceed 25 to 30% of the total established power. However, in the event the established nuclear power exceeds a certain fraction of the established total power it becomes necessary to use the nuclear power system in alternating regime during the period of load changes. A mathematical model is suggested for resolving such problems. (R.V.J.)

18076 INDIA IS INTENDING TO USE NUCLEAR ENERGY. Friese, J. VDI (Ver. Deut. Ing.) Nachr.; 24: No. 32, 1(12 Aug 1970). (In German).

The development of nuclear power plants in India is reviewed. Economic production of electricity is analyzed. (INIS)

18077 IMPACT OF THE NEW DEVELOPMENTS ON ECONOMICS AND INDUSTRIAL PROGRESS. Lloyd, B. C. J. (Rio Tinto-Zinc Corp. Ltd., London). pp 317-24 of Nuovi Orizzonti per l'Energia Nucleare. Roma; Comitato Nazionale Energia Nucleare (1970).

From 14th Nuclear Conference, Rome, Italy. See CONF-690325.

Economic factors related to the development and operation of nuclear power plants are analyzed. (D.C.C.)

18078 OPERATING EXPERIENCES WITH NUCLEAR POWER STATIONS IN THE MEMBER COUNTRIES OF UNIPEDE. Sani, Luciano (ENEL, Rome); Stolz, Jean; Weeks, Robert. At. Strom; 16: 152-6(Oct 1970). (In German).

After summarising operating experiences with nuclear power stations on the basis of an investigation by the study committee for thermal generation, general hints relating to experiences with the efficiency of the primary circuit, fuel efficiency and the monitoring of radiation and contamination are presented. (auth)

18079 NUCLEAR POWER GENERATION FACES SERIOUS PROBLEMS AS TO ECONOMIC TREND IN THE U.S.A. Takei, Mitsuo (Japan Energy Economic Research Inst., Tokyo). FAPIG (Tokyo); No. 56, 216-23(Mar 1970). (In Japanese).

It is reported that the nuclear power economy in the U.S.A. faces serious problems. Some of the principal reasons for the downtrend in the order for nuclear power plants during the past few years are rising construction cost, the delayed delivery of large machinery, the delay of on-site construction, and the escalation of labor and material costs. At the same time, the added cost for the increasing requirement of safety and the prevention of public nuisance must not be overlooked. The situation is particularly difficult to simplify, because the inherent status of nuclear power is connected tightly with energy problems and the other factors in economics. (Japan)

Safety and Siting

18080 (BNWL-SA-3665) NUCLEAR POWER AS A SOURCE OF CONTAMINATION ON A GLOBAL SCALE. Unruh, C. M. (Battelle-Northwest, Richland, Wash. Pacific Northwest Lab.). Dec 1970. Contract AT(45-1)-1830. 16p. (CONF-701205-2). Dep. NTIS.

From Washington Ecological Commission Conference, Richland, Wash.

The anticipated growth in electricity generation requirements between 1970 and 2000 is discussed and the increasing role of nuclear power in meeting these requirements is described. The two radionuclides generated by nuclear power plants that would contribute most to global contamination under present release practices are tritium and ^{85}Kr. Levels of production of these two radioisotopes are projected, and doses resultant to man are tabulated. Areas of study needed to indicate the degree of containment required for tritium and krypton are outlined. 14 references. (H.D.R.)

18081 (BRH/OCS-70-1) RADIATION EXPOSURE OVERVIEW: NUCLEAR POWER REACTORS AND THE POPULATION. Oates, William H. Jr. (Bureau of Radiological Health, Rockville, Md.). Jan 1970; Reprinted Aug 1970. 30p.

The overview provides information regarding the radiological health aspects of nuclear power reactors. In addition to broadly documenting the exposures associated with this source of radiation, information presented may be useful for comparing the estimated radiation exposure of the public with that from other sources of environmental exposure. Data are included on the quantities of radioactivity discharged from nuclear power reactors to the environment and comparisons are made with applicable radiological health standards. 43 references. Information on Crystal River Power Reactor Unit 3 is presented under the following headings: safety analysis; iodine removal capabilities of reactor building spray system; and post-accident purging for reactor building hydrogen control. (D.C.C.)

18093 (DOCKET-50331-13) DUANE ARNOLD ENERGY CENTER. Preliminary Safety Analysis Report, Amendment 7. (Iowa Electric Light and Power Co., Cedar Rapids). Oct. 14, 1969. 115p. Dep. CFSTI.

Revised design parameters of the Duane Arnold Power Reactor are presented. Included also are additional data on the reactor requested by the Division of Reactor Licensing. (D.C.C.)

18094 (NP-18622) CONTROL OF RADIOACTIVE WASTE FROM NUCLEAR FACILITIES. Aurand, K.; Arndt, J.; Ruehle, H.; Wolter, R. (Bundesgesundheitsamt, Berlin (West Germany). Institut fuer Wasser-, Boden- und Lufthygiene). Aug 1970. 26p. (In German). Dep. NTIS (U. S. Sales Only).

The research showed that the radioactive waste in the discharge building at Obrigheim was completely mixed with the coolant water. This waste is mixed under the research conditions with the strongest in the first 500 m flow stretch in flowing water; after about 4 km the dilution corresponds to that expected from the calculations; from 11.5 km up to the dam stage Rockenau only a slight additional dilution occurs. About 40% of the ^{133}Xe escapes in the first 600 m flow length and 50% within the first 2.5 km. The degassing is then delayed and increases first in the passage through the Guttenbach power plant (72.2 km). At the Rockenau Dam 75% of the ^{133}Xe had escaped. The activity registered at the Rockenau Dam consists of 95% from ^{133}Xe. The increased activity measured in the spring of 1969 in Rockenau was attributed to the drainage of radioactive rare gases with the wastes. (tr-auth)

18095 (WHAN-SA-38) PREVENTION OF FAILURE. Norris, J. M. (WADCO Corp., Richland, Wash.). 8 Sep 1970. Contract AT(45-1)-2170. 42p. (CONF-700904-3). Dep. NTIS.

From Conference on Power Reactor Systems and Components, Williamsburg, Va.

The requirements of a quality assurance program for construction and operation of a nuclear power plant are reviewed. (D.C.C.)

18096 THERMAL INVESTIGATIONS IN CALIFORNIA. Adams, J. R.; Gormly, H. J.; Doyle, M. J. (Pacific Gas and Electric Co., San Francisco). Mar. Pollut. Bull.; 1: 140-2(Sep 1970).

Many of the conflicting statements concerning effects of thermal effluents are brought about by discrepancies between laboratory projections and field evidence. Research techniques used at fourteen nuclear power plants from Humboldt Bay to Morro Bay are considered. Current measurements by dye dispersion, research into the thermal tolerance of fish, and quantification of fauna are described. Thermal dispersion measurements by an infrared airborne radiometer are discussed and a benthic survey made of Monterey Bay by PONAR grab systems described. The effects of the Diablo Nuclear Power Plant are predicted based on laboratory models and field studies at a similar nuclear power plant, and were verified at Morro Bay. The effects of thermal influence were found to be measurable only in the immediate vicinity of the discharge and were dissipated within a short distance. Investigations at other similar sites are also considered. (UK)

Steam and Power Conversion Systems

18097 TRACER TESTS FOR NUCLEAR POWER PLANT STEAM TURBINES. Cotton, K. C. (General Electric Co., Schenectady, N. Y.); Herzog, W. G.; Gilbert, R. S.; Holloway, J. H.; Morris, F. S. Mech. Eng.; 93: 15-19(Jan 1971).

The application of tracer techniques to the measurement of either the water phase or the wetness fraction of a two-phase vapor-water flow is discussed. Tests conducted on the turbines of the Dresden plant are described. The feasibility of using such radioactive tracer techniques for accurate, less expensive determinations of wet steam enthalpy was proven. (H.D.R.)

REACTORS, WATER MODERATED—reactivity of mixed oxide fueled, effects of plutonium oxide (PuO_2) particle size on
URANIUM OXIDES UO_2—PuO_2–UO_2, irradiation testing of recycle fuels of (H.D.R.)

18099 (GA–10313) PUBLIC SERVICE COMPANY OF COLORADO 330-MW(e) HIGH-TEMPERATURE GAS-COOLED REACTOR RESEARCH AND DEVELOPMENT PROGRAM. Quarterly Progress Report for the Period Ending September 30, 1970. (Gulf General Atomic, Inc., San Diego, Calif.). 30 Oct 1970. Contract AT(04-3)-633. 234p. Dep. NTIS.

BOILERS—development of gas cooled reactor
BORON—removal from boronated Type 304 stainless steel, effects of steam on
FISSION PRODUCTS—release from coated particle fuels, (E)
FORT ST. VRAIN POWER REACTOR, UNIT 1—remote viewing equipment for, temperature testing of television
—thermal insulation for, performance of
—fuel cycle management program for, development of
—physics parameters analysis for
—fuel element design and testing for
—fuel element for, properties and irradiation stability of graphite in
—core for, properties and irradiation stability of graphite in
—fuels for, preparation and testing of coated particle
—control materials for, shattering characteristics of boronated graphite spheres
—shielding materials for, effects of steam on boron loss from boronated Type 304 stainless steel
—loading machine for, development of
—boiler for, development and testing of
GRAPHITE—tensile properties of H-327 and HLM 85
—radiation effects on, fast neutron, (E)
—structural stability of boronated spheres of
NEUTRONS, FAST—effects on coated particle fuels, (E)
—effects on properties of graphite, (E)
REACTOR FUELS—fabrication methods for coated particle type, (E)
—radiation effects on coated particle type, fast neutron, (E)
REACTOR LOADING MACHINES—development of gas cooled reactor
STAINLESS STEEL—corrosion of boronated Type 304, effects of steam on boron loss during
STEAM—corrosive effects on boronated Type 304, stainless steel
TELEVISION EQUIPMENT—development for in-vessel viewing of gas cooled reactor
THERMAL INSULATION—development of gas cooled reactor pressure vessel
THORIUM CARBIDES—ThC_2–UC_2, irradiation testing of coated particles (D.C.C.)

18100 (ORNL–4622) MOLTEN-SALT REACTOR PROGRAM. Semiannual Progress Report for Period Ending August 31, 1970. (Oak Ridge National Lab., Tenn.). Jan 1971. Contract W-7405-eng-26. 230p. Dep. NTIS.

Progress during March to September 1970 in the operation of the Molten Salt Reactor Experiment, design and development of the Molten Salt Breeder Reactor, molten salt chemistry, materials development, and molten salt processing and preparation is reported. A separate abstract was prepared for each of 5 sections. (H.D.R.)

For abstracts of individual sections see: 15625, 15726, 16399, 18101, and 18148.

18101 (ORNL–4622, pp 7-59) MSBR DESIGN AND DEVELOPMENT. (Oak Ridge National Lab., Tenn.).

From Molten-Salt Reactor Program.

FISSION PRODUCTS—removal from molten salt reactor fuels, development of system for gaseous
GLYCEROL—glycerol–H_2O, mass transfer coefficients for helium bubbles in, (E/T)
HELIUM—mass transfer coefficients for bubbles of, in glycerol-water mixtures, (E/T)
LOOPS—operation of sodium fluoroborate salt circulation, detection of water additions in, (E)
MOLTEN SALT BREEDER EXPERIMENT—steam generator development for
—heat exchangers for, afterheat temperatures in empty, (T)
—fuel salt for, neutron capture to absorption ratio for uranium-233 in, (E/T)
MOLTEN SALT BREEDER REACTOR—design concept for 300 MW(e) prototype
—physics parameters of, effects of thorium concentration in fuel salt on, (T)
—fuel cycle costs for, effects of thorium concentration in fuel salt on, (T)
—performance of 300 MW(E) fixed-moderator, with batch fuel processing and plutonium feed, (T)
—fuel salt for, development of gaseous fission product removal system for
—operation at part-load, steady-state characteristics during, (T)
—fuel salt for, heat transfer and thermophysical properties of, (E/T)
NEUTRONS—capture to absorption ratio for uranium-233 in circulating molten salt reactor fuel, (E/T)
URANIUM-233—neutron capture to absorption ratio for, in circulating molten salt reactor fuel, (E/T)
WATER—glycerol–H_2O, mass transfer coefficients for helium bubbles in, (E/T)
WELDING—development of automatic, for remote fabrication and maintenance of reactor components (H.D.R.)

18102 FAST-BREEDER REACTOR DEVELOPMENT IN THE UNITED STATES FROM A UTILITY POINT OF VIEW. Staszesky, Francis M.; Pursel, Claude A. (Boston Edison Co.). Proc. Amer. Power Conf.; 32: 131-43(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The U. S. Liquid Metal Fast Breeder Reactor (LMFBR) Program is examined from the standpoint of a cost comparison with a light water reactor. Various alternate approaches to the LMFBR demonstration plant program are presented, and the role of the utility companies in the program is evaluated. (H.D.R.)

18103 EUROPEAN FAST BREEDER REACTOR PROGRAMS. Nims, John B. (Atomic Power Development Associates, Inc., Detroit). Proc. Amer. Power Conf.; 32: 144-53(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The status of the fast breeder reactor development programs in the United Kingdom, France, Germany, and Italy is briefly examined. (H.D.R.)

18104 LMFBR COMPONENT TECHNOLOGY IN PERSPECTIVE. Koch, L. J. (Argonne National Lab., Ill.); Zitek, C. B. Proc. Amer. Power Conf.; 32: 154-63(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

Progress in the design and development of LMFBR core components, shutdown cooling systems, fuel handling components, heat exchangers, pumps, and instrumentation is reviewed. (H.D.R.)

18105 LARGE HTGR POWER PLANTS. Johnston, T. A. (Gulf General Atomic, San Diego, Calif.). Proc. Amer. Power Conf.; 32: 233-45(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The nuclear steam system availability of the Peach Bottom plant and the major design parameters of the Fort St. Vrain plant are presented. Design and performance characteristics of a typical 1100 MW(e) high-temperature gas-cooled reactor power plant are described. (H.D.R.)

18106 RECENT DEVELOPMENTS IN MOLTEN-SALT REACTORS. Opstad, Melford T. (Northern States Power Co., Minneapolis); Schafer, Karl. Proc. Amer. Power Conf.; 32: 260-6(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

Developments which indicate the potential for building a high-

performance molten salt breeder reactor are reviewed. The developments discussed include: (1) processing of fuels to remove fission-product poisons; (2) improvements in reactor vessel and piping materials; (3) testing of equipment for remote maintenance; (4) use of plutonium fuel; and (5) successful conclusion of the Molten Salt Reactor Experiment operations. (11 references) (H.D.R.)

18107 DEVELOPMENT WORK ON MOLTEN-SALT REACTOR IN THE USA. Com. Naz. Energ. Nucl., Notiz.; 16: No. 11, 99-102 (Nov 1970). (In Italian).

The status of the work started in 1950 in the U.S.A. on the concept of a molten-salt reactor, on which an experiment has been in operation since 1965, is reviewed. (auth)

18108 NUCLEAR REACTORS. Perrett, Robert James; Mackinnon, James Milne; Parker, James Malcolm (to English Electric Co. Ltd.). British Patent 1,217,141. 31 Dec 1970. Filed 7 Feb 1967.

Reference is made to reactors having concrete pressure vessels containing a moderator assembly comprising a stack of graphite blocks arranged in columns, with a side restraining structure encircling the stack. In the arrangement described the stack assembly is supported by bottom support means and by keying means to an internal side wall of the pressure vessel, so as to locate the stack assembly circumferentially relative to the vessel. The bottom support means may be arranged for limited tilting movement, and the restraining structure may include a ring beam around the upper part of the stack, with a member near the bottom of the stack joined rigidly to the ring beam by longitudinal stanchions connected with the stack through link means arranged for limited pivotal movement in a longitudinal plane so as to permit differential movement between the stack and restraining structure in only the longitudinal direction, the keying means being fixed to the ring beam and bottom member. The keying means are preferably arranged for limited movement in a longitudinal plane in response to longitudinal movement between the stack assembly and pressure vessel. The bottom member may be a plate structure that also constitutes part of the bottom support means. (UK)

18109 FAST SODIUM-COOLED REACTOR CORE STRUCTURE. Germer, John H. (to United States Atomic Energy Commission). U. S. Patent 3,549,493. 22 Dec 1970. Filed 22 Jan 1969.

Described is a reactor core structure for a liquid metal cooled fast reactor made up of closely packed hexagonal fuel, blanket and reflector bundles which are held tightly together by an orificing pattern which imposes a higher internal pressure in the outer bundles than in the inner bundles, and which is provided with a hydraulic balancing arrangement whereby a separate unclamping arrangement for refueling is eliminated. Two types of inlet plenums are disclosed; the first with the lower end of the bundle casing apertured for forming the plenum; the second with the bundle casing being removed at the lower end. (auth)

18110 RELIABILITY ANALYSES FOR THE JUDGEMENT OF REACTOR SYSTEMS. Maurer, Hans A. (Generaldirektion Gewerbliche Wirtschaft, Brussels). Tech. Ueberwach.; 10: 412-14(Dec 1969). (In German).

The reliability analysis is a useful means for comparing systems in order to find out possible constructive defects in the design of a circuit and to point out measures of improvement. Due to the errors in empirically determined data no quantitative data can be obtained yet. When using calculating formulas care must be taken to make sure that the simplifications made are also practicable for the case in question. It is considered necessary to collect a large number of representative data. Since no quantitative information concerning the safety of a system or a total analysis is possible yet with the means available a reliability analysis cannot yet be used as a basis for an authorization procedure. (auth)

18111 TWO-DIMENSIONAL BURNUP ANALYSIS OF FUEL ASSEMBLY IN A BOILING WATER REACTOR. Yata, Minoru; Watanabe, Takao; Kawamoto, Tadao. Sumitomo Elec. Tech. Rev.; No. 14, 126-30(Nov 1970).

An assembly of a boiling water reactor has local compositions such as burnable poisons, several kinds of fuel rods with different enrichment, and wide water gaps surrounding the fuel rods. Because of these compositional influences, the neutron energy spectrum changes considerably as a function of position in an assembly. The effects on the neutron energy spectrum of the complex geometry and various compositions were estimated. The average nuclear constants were obtained, taking into consideration the effects of neutron energy spectrum with position and flux depression in the presence of strong absorption such as burnable poison. Using these constants, the burnup characteristics of an assembly with a two-dimensional burnup diffusion equation were analyzed. A method of calculating a two-dimensional burnup equation in an assembly was formulated. By this method, it is possible to estimate an assembly with poison curtain. Calculation of the whole core burnup performance is relatively easy and the inventory of fertile materials such as uranium and plutonium can be obtained with reasonable accuracy. This method has been applied to certain reactors in Japan. The few experimental results obtained show good agreement with calculations. (auth)

18112 FEASIBILITY STUDY OF SHEATHED-THERMOCOUPLE-ELECTRODE FLOWMETER FOR LMFBR INDIVIDUAL SUBASSEMBLY. Kuwabara, Jun; Kato, Yoshio (Japan Atomic Energy Research Inst., Tokai). J. Nucl. Sci. Technol. (Tokyo); 8: 27-33(Jan 1971).

A unique proposal of sheathed-thermocouple-electrode flowmeter is presented. A pair of magnets and pole-pieces mounted inside a subassembly shell gives a transverse magnetic field in the outlet open channel. A pair of grounded type sheathed CA thermocouples is inserted into this field. The electromotive forces emerging from the four wires of the thermocouple pairs, by combination, should provide useful information on the outlet temperature, channel flow rate, sodium boiling, fission gas release resulting from pin failure, and cover gas entrainment. Essentially it requires no additional sacrifice on the part of reactor and fuel-handling designs compared with current outlet thermocouple installations. A preliminary feasibility study was made of this new type of flowmeter, and ample proof was obtained of its practicability. (11 references) (auth)

18113 DEVELOPMENT OF MAJOR COMPONENTS FOR FBR. THE DEVELOPMENT OF MECHANICAL FEATURES. Abe, Yasuhiro (Power Reactor and Nuclear Fuel Development Corp., Tokyo). Genshiryoku Kogyo; 16: No. 9, 10-14(Sep 1970). (In Japanese).

The Fast Breeder Reactor being developed in Japan is described. The reactor core, thermal bowing and seismic design, and holding-down of the fuel assemblies and flow-rate control in the reactor core are discussed. The reactor body, including the loop and pool types and upper reactor portions, is described. Merits and demerits of the two types are indicated. The hot-cell and the plug technique are explained with regard to the fuel exchange. Reactor components are presented. (Japan)

18114 OVERSEAS GENERAL TRENDS OF MULTI-PURPOSE HTR DEVELOPMENTS. Nozawa, Masao (Japan Atomic Energy Research Inst., Tokai). Genshiryoku Kogyo; 16: No. 10, 6-9(Oct 1970). (In Japanese).

The high-temperature gas cooled reactor is most suitable for the multipurpose applications of a nuclear reactor; the fuel is generally a ceramic one, clad with graphite, and the coolant is helium gas, these combined providing the high temperature of coolant. Developments of the multi-purpose HTGRs, overseas and also in Japan, are described in the following. (1) Oversea trends of the development. Based on the results of a study team, the trends in West Germany OECD (Dragon project) and the United States are explained. (2) Technological problems. The problems to be encountered in raising the current 700°C–800°C to over 1,000°C in coolant are reviewed in fuel, piping, and heat exchanger. (3) Experimental, multi-purpose reactor envisaged by JAERI, with 35 MW(t), outlet helium temperature 1,000°C, and three coolant loops. (Japan)

18115 DEVELOPMENT OF MAJOR COMPONENTS FOR FBR. THE DEVELOPMENTAL PROBLEMS OF COMPONENTS. Miki, Ryohei (Power Reactor and Nuclear Fuel Development Corp., Tokyo). Genshiryoku Kogyo; 16: No. 9, 6-9(Sep 1970). (In Japanese).

Major components of the Fast Breeder Reactor being developed in Japan are explained. Some features of the prototype FBR are: Na-cooled and three loops; 750 MW(t); PuO_2–UO_2, and UO_2 (blanket); and controlled with B_4C. The following are described, indicating various problems encountered: reactor, including the vessel (loop type), shielding plug (plug type for fuel exchange) and control rod; cooling system, a steam generator (helical-coil or straight tubes), intermediate heat-exchanger, large pumps and valves; and the fuel exchange system, including a fuel exchanger, insertion and cask, and cask-transfer mechanism. (Japan)

18116 DESIGN OF A POWER PLANT WITH A PRESSURIZED WATER REACTOR. Yoshikawa, Hideo (Mitsubishi Atomic Power Industries, Inc., Tokyo). Nippon Kikai Gakkaishi; 73: 570-7(Apr 1970). (In Japanese).

The continuing advance of pressurized water reactor technology made feasible the design and construction of very large nuclear

XUM

power plants, of which capital and operating costs have decreased corresponding to the increase in plant size. Such improved PWR technology was achieved by such factors as: demonstration of the inherent stability and mechanical integrity of very large PWR cores; and design improvement that permits lower hot channel factors, the uniform distribution of output in a core, and the attainment of maximum performance. One of the predominant features of the PWR is the chemical shimming for reactivity which prolongs fuel life, reduces the number of control rods required, improves core performance, and also allows the operator to take advantage of the future increase in burn up. Low fuel cost can be achieved by extracting more megawatt days of energy per metric ton of uranium. With the accumulation of experience in construction and operation, the design of PWR has come to the stage that an economical and reliable nuclear power station can be constructed. (Japan)

Kinetics and Dynamics

18117 (CEA-CONF-1726) EL-600 SPACE-DEPENDENT KINETIC PROBLEMS. Goldstein, S. (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). 1970. 22p. (In French). (CONF-701019-4). Dep. NTIS (U. S. Sales Only).

From CREST Meeting on Reactivity Effects in Large Power Reactors, Ispra, Italy.

Two problems in spatial kinetics encountered and solved in the EL-600 project are presented. The first problem concerns the safety aspects associated with the rapidly occurring phenomena resulting from a break in the large primary piping: boiling in the channel (the increase in reactivity throughout the reactor core being essentially constant and the void coefficient of the coolant being positive); the dropping of the control rods after a given dead time. The second problem concerns slow xenon poisoning phenomena. (UK)

18118 EFFECT OF PHOTO-REACTIONS ON THE EFFECTIVE YIELD OF DELAYED NEUTRONS IN THE PRESSURE TUBE TYPE HEAVY WATER REACTOR. Kaneko, Yoshihiko (Japan Atomic Energy Research Inst., Tokai). J. Nucl. Sci. Technol. (Tokyo); 8: 34-40(Jan 1971).

A theoretical study with use made of the collision probability method was undertaken on the effect of photo-reactions upon the effective yield β of delayed neutrons in a pressure tube type heavy water reactor loaded with ^{235}U. It is concluded that the shielding effect of the reactor structural materials for the hard γ-rays emitted from fission products reduces the contribution of the photo-neutrons to β from the currently used value of 1.00×10^{-3} to 2.2×10^{-4}. 18119 ANALYSIS OF DYNAMIC CHARACTERISTICS OF A PWR NUCLEAR PLANT. Obinata, Sumiko; Koyama, Shigeo; Wakamatsu, Seiji. Denki Shikensho Iho; 34: 619-38(1970). (In Japanese).

The dynamic characteristics of the Yankee-type PWR plants were analyzed from the standpoint of the power system through the use of a digital computer. The transient behavior of plant parameters such as the reactivity, the neutron density and the temperatures of fuel and coolant are given in the two cases of step and periodic changes of the power demand, with rod-control and without control. The effects of the neutron life time and the number of delayed neutrons, and the validity of the prompt jump approximation are also discussed in regard to plant parameters. It is confirmed that it is possible to improve the behavior of the plant parameters remarkably by using a suitable rod-control system. (9 references) (auth)

Control Systems

18120 DEVELOPMENT OF MAJOR COMPONENTS FOR FBR. THE DEVELOPMENT OF CONTROL EQUIPMENT. Hada, Mikio (Tokyo Shibaura Electric Co. Ltd., Kawasaki, Japan). Genshiryoku Kogyo; 16: No. 9, 15-21(Sep 1970). (In Japanese).

The control of a fast breeder reactor plant is divided in the control of the reactor-core power (i.e. reactivity), and the overall control for the whole plant, including the three loops with intermediate and terminal (steam) heat exchangers. The following are described in connection with the Fast Breeder Reactor being developed in Japan: characteristics of the fast-reactor reactivity control, including neutron behavior, control procedure, past developments, and engineering; and instances of the fast-reactor control. (Japan)

Cooling Systems

18121 (ANL-6922) DESIGN, ANALYSIS, AND CONSTRUCTION OF EBR-II PRIMARY TANK AND ASSOCIATED STRUCTURES. Seidensticker, R. W. (Argonne National Lab., Ill.). Sep 1970. Contract W-31-109-eng-38. 99p. Dep. NTIS.

The entire EBR-II primary coolant system and fuel-handling system are submerged in about 80,000 gal of sodium at 700°F, all contained in a large double-walled vessel (primary tank). The design, fabrication, and erection of the primary tank and its support structure are described. Special features of the design peculiar to this system are emphasized, particularly the fabrication and erection of the several large machined weldments employed in the system. Design philosophy for the structural system is developed, and typical design calculations presented. The thermal deformations of the primary tank at elevated temperatures are treated theoretically. Elevated temperature tests performed both before and after filling the tank with sodium are described, and test results summarized. The thermal design of the primary tank is discussed. 11 references. (auth)

18122 (EURFNR-863) OPTIMIZATION OF REACTOR THERMAL DESIGN BY STATISTICAL HOT SPOT ANALYSIS. Amendola, A. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Reaktorentwicklung). Nov 1970. 22p. (KFK-1284; EUR-3682). Dep. NTIS.

Work performed under United States-Euratom Fast Reactor Exchange Program.

The influence of temperature and power flattening on the hot channel factor is examined for uniform slab and cylindrical cores. It is shown that, at constant hot channel probability, the maximum available power and maximum average coolant temperature do not coincide with the condition of complete flattening; this is due to the consequent increase in the overall hot channel factor. However the difference between optimum condition and complete flattening is small. This result is applied to the optimization of the distribution of the coolant flow rate among the several subassemblies of a sodium-cooled fast reactor. By a comparison between different design criteria, it is shown that, for given power distribution and inlet temperature, distributing the coolant in such a way, that the probability of hot spots is constant in each subassembly, results in a higher average coolant temperature at core outlet, that is in a better reactor efficiency. However the advantage of this criterion is in general small, it increases if the uncertainties are not constant along the core radius. (8 references) (auth)

18123 FLOW MEASURING DEVICE FOR SODIUM-COOLED REACTORS. Germer, John H. (to United States Atomic Energy Commission). U. S. Patent 3,549,494. 22 Dec 1970. Filed 8 Aug 1968.

An apparatus for measuring the coolant flow at the entrance of fuel bundles in a liquid sodium-cooled nuclear reactor is described. The apparatus works on the principle of a flow venturi transmitting a pressure signal to a differential manometer with electrical level sensors, and is constructed such that parts thereof requiring maintenance are readily accessible. (auth)

18124 VESSEL FOR A SODIUM-COOLED REACTOR. Germer, John H.; Boardman, Charles E. (to United States Atomic Energy Commission). U. S. Patent 3,548,931. 22 Dec 1970. Filed 30 Oct 1968.

A vessel construction or arrangement for a sodium-cooled nuclear reactor which includes a sealing arrangement permitting leakage between the inert cover gas of a hot sodium tank and an insulated outer vessel, and a system for circulating and cooling the inert gas to prevent migration of sodium vapor to the cold surfaces of the outer vessel are described. (auth)

18125 TURBULENT MIXING AND THE THERMAL DEFLECTION OF FUEL PINS: A PROCEDURE WITH APPLICATION TO THE LMFBR. Ginsberg, T. (Argonne National Lab., Ill.). Nucl. Eng. Design; 14: 191-7(Nov 1970).

A procedure for evaluating the influence of turbulent mixing on the thermal deflection of fuel pins is presented. The deflection of a single edge row fuel pin in a 19 pin liquid sodium cooled fuel subassembly is considered in a specific problem. HECTIC-III was used to do the thermal-hydraulic calculations; a relatively simple bowing model was chosen to simplify the thermal stress calculation. The uncertainties involved in the computation resulting from limitations of current technology are discussed. (12 references) (auth)

18126 NUCLEAR COMPARISON OF COOLANTS IN HEAVY WATER PRESSURE-TUBE REACTORS. Schludi, H. N. Atomkernenergie; 16: 225-9(1970).

Heavy water pressure tube reactors having reached the stage of power reactors or at least of power demonstration. Reactors use heavy water, CO_2 and boiling light water as coolant. These three coolant variants are briefly described and evaluated as far as their nuclear characteristics are concerned. The evaluation shows a superiority of the coolants with low neutron absorption, namely, D_2O and CO_2 for higher values of the ratio $N(D_2O)/N(U)$. (7 references) (auth)

18127 CONCRETE VESSEL TECHNOLOGY. Southwood, J. R. M. (Nuclear Power Group Ltd., Knutsford, Eng.). At. Energy Rev.; 8: 889-948(Dec 1970).

The prestressed pressure vessel has become the established choice for the primary containment of gas-cooled reactors. It is also being used as the secondary containment for water-reactor designs and is being considered for water-reactor primary containment. Its development since it was first used for the Marcoule reactors in France is reviewed. Although Marcoule was the first application of prestressed concrete for reactor containment, the technique was not generally used after that until the development of the Oldbury reactor in the United Kingdom where, for the first time, the integral concept was introduced. The concrete vessel has certain advantages with regard to safety, economy and development potential. Reactor development at the time the Oldbury reactor was being designed illustrates the transition point between steel vessels and concrete vessels. Not only does the concrete vessel offer economy but, in addition, it gives a greater integrity since gross failure is not conceivable and the stressing tendons can be inspected and replaced at any time. The massive structure also minimizes the chance of extensive damage. These factors, which are discussed, lead to the elimination of secondary containment for the more highly rated reactors which provides further cost saving. A number of reactor vessels completed or under construction are described. As many of the features are similar in principle, the Oldbury reactor was selected for detailed description to establish these principles since it represents a new generation in reactor-vessel design. Other designs can then be compared with Oldbury to indicate changes. The development of suitable liners for the inner face and new forms of insulation on this inner face are discussed as these represent the more difficult problems associated with concrete vessel technology. (66 references) (auth)

18128 PROBLEMS OF KEEPING CLEAN THE SODIUM COOLANT IN FAST REACTORS. Ullmann, H. (Zentralinstitut fuer Kernforschung, Rossendorf, Ger.). Kernenergie; 13: 341-6 (Nov 1970) (In German).

The chemical properties of sodium require special arrangements for keeping the coolant clean. These arrangements consist of excluding sources of impurities, in purifying the sodium during operation, and permanent monitoring the content of impurities. The requirements of purity to be observed are based on the detrimental effects of the impurities. The state in the development of purifying techniques and devices is presented, the trends of evolution are evaluated. (8 references) (auth)

18129 EXPERIMENTAL INVESTIGATION ON VIBRATION OF A 19-ROD CLUSTER FUEL ELEMENT COOLED BY TWO PHASE (GAS + LIQUID) FLOWING MIXTURE. Cedolin, L.; Hassid, A.; Rossini, T. (CISE, Milan). Termotecnica (Milan); 24: 488-94(Nov 1970). (In Italian).

For the fuel element development of the CIRENE nuclear reactor a detailed investigation was undertaken on all channel vibrational characteristics. The power channel consists of a vertical pressure tube (10.61 cm ID) containing eight 19-rod closely spaced rod (2.0 cm OD) bundles. Each bundle is 50 cm long and simply rests over the lower one. The coolant conditions (~50 bar pressure) vary between a few °C subcooling at the entrance and ~25% (by weight) steam quality at the exit. The investigation was mainly carried out with a two-phase two-component mixture (simulating the behavior of steam-water mixture) flowing in an adiabatic out-of-pile circuit. The work mainly focused the following items: development of the appropriate instrumentation to detect vibrations of pressure tube and fuel element; systematic measurement of vibrations and effect of flow conditions. A detailed description of instrumentation and some experimental data obtained are presented. (auth)

18130 SOME ASPECTS OF BOILING NOISE DETECTION IN SODIUM REACTORS BY MEANS OF A MECHANICAL WAVEGUIDE. Woodward, B. (Guys Hospital Medical School, London); Stephens, R. W. B. Ultransonics; 9: 21-5(Jan 1971).

Some of the problems associated with the detection of boiling in a liquid-metal reactor are presented. A possible method of detecting the boiling lies in the use of a stainless steel waveguide as an acoustic transformer which vibrates in response to boiling noise signals. The design of a laboratory apparatus for simulatory experiments is discussed and results reported which were obtained using waveguides in the form of solid rods, tubes and wires, in a variety of configurations as well as for several materials. (auth) (UK)

18131 HIGH-TEMPERATURE AND HIGH-PRESSURE PIPING FOR NUCLEAR POWER REACTORS: THE DESIGN, AND ACCIDENT COUNTERMEASURES. Yoshikawa, Hideo (Mitsubishi Atomic Power Industries, Inc., Tokyo). Haikan Gijutsu; 12: 146-54(Mar 1970). (In Japanese).

High-temperature and high-pressure piping systems in light-water power reactors are described for design and accident countermeasures. The fundamental principles of design of the piping are explained from the standpoint of radiation protection. Descriptions include: design of the safety-countermeasure piping; valves in the high-temperature and high-pressure piping, including motor valve, manual valve and safety valve; valves at the penetrations through the reactor containment vessel; and the (liquid) waste treatment facilities. (Japan)

18132 DEVELOPMENT OF MAJOR COMPONENTS FOR FBR. THE DEVELOPMENT OF PUMP, PIPING, AND VALVE. Aoki, Naoji (Hitachi Ltd., Ibaraki, Japan). Genshiryoku Kogyo; 16: No. 9, 22-5(Sep 1970). (In Japanese).

In a Na-cooled fast breeder reactor plant, pumps play the role of circulating coolant in the two loops, and the piping and valves are main members constituting the coolant loops. The following are described in connection with the Fast Breeder Reactor being developed in Japan: characteristics of the pumps, piping and valves for a fast breeder reactor; pumps electromagnetic and (ordinary) mechanical pumps; piping; and valves. (Japan)

18133 DEVELOPMENT OF MAJOR COMPONENTS FOR FBR. THE DEVELOPMENT OF INTERMEDIATE HEAT EXCAHNGERS AND SODIUM HEAT STEAM GENERATORS. Nakai, Yasushi (Mitsubishi Atomic Power Industries, Inc., Tokyo). Genshiryoku Kogyo; 16: No. 9, 26-34(Sep 1970). (In Japanese).

The intermediate heat exchanger is used for sodium to sodium in the first and second loops, respectively, and a steam generator in the third loop, in a fast breeder reactor plant. The steam generator is the key point in success of this type of reactor plant. The following are described in connection with the Fast Breeder Reactor being developed in Japan: intermediate heat exchanger; and steam generator. (Japan)

18134 COOLING SYSTEM OF HTGCR. Muto, Yasushi (Japan Atomic Energy Research Inst., Tokai). Genshiryoku Kogyo; 16: No. 10, 21-6(Oct 1970). (In Japanese).

In connection with the cooling system for HTGCRs, the following are described: HTGCR reactor vessel; primary cooling system of HTGCR; and the secondary cooling system of HTGCR. The applications of HTGCR are explained. (Japan)

Fuels

18135 (EUR-4477) NEUTRON STUDIES ON PLUTONIUM IN THERMAL REACTORS. Final Report. Bir, R.; Vidal, R.; Livolant, M.; (and others) (Commissariat a l'Energie Atomique, [Saclay] (France). Centre d'Etudes Nucleaires). Nov 1970. 233p. (In French). Dep. NTIS (U. S. Sales Only). EUR FF 33,40.

The survey of the work made since 1958 by the C.E.A. on plutonium-bearing fuels and fuel irradiated in nuclear power plants is reviewed. Methods used for fuel analyses are described: isotopic dilution method and its recent improvements, physical methods based on the counting of neutrons from the spontaneous fission of ^{240}Pu, or of alphas emitted by plutonium. An accuracy of about 0.4% has been achieved. Codes for cell computations have been developed. They use simultaneously a special space treatment (zones source method) and the secondary thermalization model (Cadilhac model). These time-saving codes are used for routine computations. For more refined calculations, an improved THERMOS code is used. Experimental studies on U–Pu alloys and on irradiated samples were made by replacement and oscillation techniques. Their interpretation has led to recommend values for constants of Pu-bearing fuels. (auth)

18138 (ORNL-TM-3137) ENGINEERING DEVELOPMENT STUDIES FOR MOLTEN-SALT BREEDER REACTOR PROCESSING NO. 2. McNeese, L. E. (Oak Ridge National Lab., Tenn.). Feb 1971. Contract W-7405-eng-26. 102p. Dep. NTIS.

A molten-salt breeder reactor (MSBR) will be fueled with a molten fluoride mixture that will circulate through the blanket and core regions of the reactor and through the primary heat exchanger. Processing methods for use in a close-coupled facility for removing fission products, corrosion products, and fissile materials from the molten fluoride mixture are described. Several operations associated with MSBR processing are discussed. Topics described include: a proposed reductive-extraction flow sheet for a single-fluid MSBR; material-balance calculations that show the effects of the removal time for zirconium, alkali metals and alkaline earths, europium, and protactinium on reactor performance and that indicate the magnitudes of the heat generation and mass flows associated with the reactor off-gas; calculated results showing the steady-state performance of a protactinium isolation system; an evaluation of the use of the protactinium isolation system to limit the uranium concentration in the blanket of a single-fluid MSBR; calculations to predict the steady-state performance of a rare-earth removal system based on reductive extraction; preliminary testing of the semicontinuous reductive-extraction facility; experiments related to the development of electrolytic cells for use with molten salt and bismuth; and installation of equipment at the MSRE for demonstrating low-pressure distillation of molten salt, using irradiated MSRE fuel carrier salt. 5 references. (auth)

18139 (WCAP-7379(Vol.2)) PERFORMANCE OF ZIRCALOY CLAD FUEL RODS DURING A SIMULATED LOSS-OF-COOLANT ACCIDENT: SINGLE ROD TESTS. VOLUME II. (Westinghouse Electric Corp., Pittsburgh, Pa. Atomic Power Div.). 15 Sep 1969. Contract AT(30-1)-3017. 21p. Dep. CFSTI.

Methods of testing and results of testing irradiated Zircaloy tubes are described. The test samples were taken from the spent fuel of the Yankee power plant. The tube dimensions were nominally eight inches long with a 0.362-inch OD and a 0.022-inch wall. Twenty tests were performed on these irradiated tubes; sixteen were tested to failure at various internal pressure and heating rate conditions (these tests were run with Al_2O_3 pellets and a plenum assembly to simulate fuel pin conditions) and four were quench tests run to assess tube stability. An additional twelve tests were run on unirradiated tubes of 0.422-inch OD and 0.027-inch wall thickness (using Zircaloy tubes supplied by the Oak Ridge National Laboratory). Details of the test conditions and the test rigs are given. (auth)

18140 (WHAN-SA-7) EVALUATION OF PuO_2 HOMOGENEITY IN PuO_2–UO_2 FAST REACTOR FUEL BY SCANNING ELECTRON MICROPROBE. Stranik, D. A.; Powers, H. G.; Last, G. A. (Battelle-Northwest, Richland, Wash. Pacific Northwest Lab. WADCO Corp., Richland, Wash.). [1970]. Contracts AT(45-1)-1830; AT-(45-1)-2170. 13p. (CONF-701102-17). Dep. NTIS.

From Meeting of the American Nuclear Society, Washington, D. C.

The theory and the experimental data for measuring homogeneity of fuel pellets based on the functional performance requirements of the fuel in the reactor are presented. The functional performance is the thermal response of the mixed oxide fuel under transient conditions. Two tests were designed in order to derive the homogeneity model. The first test was designed to determine quantitatively by use of the scanning electron microprobe PuO_2 concentrations, sizes of PuO_2 enriched or depleted zones and the frequency of occurrence. The pellets were irradiation test pellets taken from 23 sintering batches. From the data, a theoretical homogeneity model was established based on heat generation rates and energy disposition within the UO_2–PuO_2 pellets. A second test was designed to verify the model and to determine the homogeneity of several pellets with a wide range of homogeneities based on alpha-autoradiographs. 5 references. (auth)

18141 FUEL RODS WITH INTERNAL FINS. Ihle, P.; Rust, K. (Kernforschungszentrum, Karlsruhe, Ger.). Atomkernenergie; 16: 231-2(1970). (In German).

Fuel rods are equipped with internal fins or cams to increase the rod power and, hence, reduce the fissile material inventory. Such an internal fin geometry increases the thermal conductivity of the outer fuel zone considerably. Calculations have shown this measure to increase the rod power of oxide fuel rods by 25 to 50% relative to the power of fuel rods with a smooth inner surface. (auth)

18142 LMFBR FUEL ROD DESIGN LIMITS AND TRANSIENT SURVIVAL CRITERIA. Carelli, M. D.; Anderson, C. A. Jr.; Markley, R. A. (Westinghouse Electric Corp., Madison, Pa.). Atomwirt., Atomtech.; 16: 84-5(Feb 1971).

The results of an evaluation of the operational and off-normal transients occurring during fuel element lifetimes, their frequency, their thermal and mechanical effect on cladding and fuel, and the rod failure limits are summarized. The effects of expected characteristics of large LMFBR plants on maximum allowable cladding and fuel temperatures and the tolerable amount of molten fuel were calculated. (H.D.R.)

18143 OPERATIONAL PROSPECTS OF A PLUTONIUM CYCLE IN THERMAL REACTORS. Tweedy, John Noel (Scotland Electricity Board, Glasgow); Castelli, Gianfranco. At. Strom; 16: 147-8(Oct 1970). (In German).

The operational prospects of the use of plutonium instead of U-235 enriched fuel in present-generation thermal reactors are analyzed. Economic factors are not discussed. (auth)

18144 FUEL AND CORE STRUCTURE OF HTGCR. Miyamoto, Yoshiaki (Japan Atomic Energy Research Inst., Tokai). Genshiryoku Kogyo; 16: No. 10, 17-20(Oct 1970). (In Japanese).

The fuel for a HTGCR consists of Py C coated fuel particles embedded in the graphite matrix, constituting a fuel element. The following are explained. (1) Coated fuel particles, dealing with the forms of particle, the production, and characteristics. The fuel particles, 0.2–1.1 mm in diameter, have coatings to retain FP gas. To produce them, powder metallurgical and sol-gel methods are available. Then, carbide and oxide fuels are compared; and, the damage of particles and FP release are treated. (2) Fuel elements. Based on the loose, strong and intermediate bondings of fuel particles in the graphite matrix, the fuel elements in rod, block, sphere, etc., are described. (3) Structure of the HTGCRs. The cases of DRAGON, Peach Bottom, AVR, and Fort St. Vrain reactors are explained. (Japan)

18145 CONDENSATE TREATMENT CONSIDERATIONS FOR BOILING-WATER REACTOR SYSTEMS. Ryan, Leo F.; Limon, L. (Graver Water Conditioning Co., Union, N. J.). Proc. Amer. Power Conf.; 32: 757-70(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The evaluation factors affecting the choice of condensate treatment systems are discussed. Economic factors, the effects of radioactive waste disposal, and the effects of operating with condenser leaks are examined. (7 references) (H.D.R.)

18146 SYSTEM FOR DETECTING SODIUM BOILING IN A REACTOR. Pluta, Philip R. (to United States Atomic Energy Commission). U. S. Patent 3,549,489. 22 Dec 1970. Filed 22 Oct 1968.

A system for detecting and controlling sodium boiling in a sodium cooled nuclear reactor is described. Frequency analysis of the neutron flux signal from in-core or out-of-core detectors indicates the onset of incipient sodium boiling before there is any noticeable net power change which would otherwise require corrective action to be taken. Since incipient sodium boiling has a characteristic frequency associated with the collapse of the sodium bubbles, the collapse rate or boiling frequency of the bubbles is communicated to the flux noise as a coherent signal whose amplitude is determined by filtering means. This signal is then transmitted through appropriate electronics for actuating the control rod system of the reactor for controlling the reactivity thereof, thereby providing a reactor safeguard system. (auth)

18147 SEPARATION OF RADIOIODINE FROM THE EXHAUST AIR OF NUCLEAR REACTOR FACILITIES. Strauss, H.-J.; Winter, K. (Concordia Elektrizitaets AG, Dortmund, Ger.). Kerntechnik; 12: 491-5(Nov 1970). (In German and English).

Filters against radioactive iodine-isotopes in nuclear power plants are the last barrier which prevents escaping of these isotopes (which may be set free in case of a failure) into the free atmosphere. The iodine-removal by adsorption or chemisorption is reduced by the formation of organic iodine components with low bp and high vapor pressure (e.g., methyl iodide), especially at high humidity. Due to the application of an isotope exchanging process (still unusual in the air cleaning techniques), it is possible to decisively improve the efficiency of these filters (which are parts of the MCA filter) against methyl iodide under extremely high humidity. The underlying principles of this process are described and two examples for the application of such filters for cleaning the exhausted air of a "ring-slot-system" of a reactor are given. 8 references. (auth)

Operation and Economics

18148 (ORNL-4622, pp 1-6) MOLTEN-SALT REACTOR EXPERIMENT. (Oak Ridge National Lab., Tenn.).

18149 POWER REACTORS FOR THE FUTURE: AN EVALUATION. Carlsmith, R. S.; Lane, J. A. (Oak Ridge National Lab., Tenn.). Proc. Amer. Power Conf.; 32: 98-104(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

An overall review of the U. S. nuclear power program is summarized. Performance characteristics for each reactor type were developed to give fuel usage and separative work requirements. Estimates were prepared of the capital, operating, fuel, and total power costs for each reactor type. (16 references) (H.D.R.)

18150 INTEGRATED MODEL FOR TIME-DEPENDENT AND EQUILIBRIUM FUEL COMPOSITIONS IN FAST BREEDER REACTORS. Terrell, Charles William. Lafayette, Ind.; Purdue Univ. (1970). 135p. University Microfilms Order No. 70-18,751.

Thesis.

A mathematical model is developed to determine the isotropic composition of a fast-reactor fuel as a function of time. The model then is used to investigate the effect of several parameters on the equilibrium plutonium composition, the time dependence of the core composition, and the composition of discharge and feed, as well as the surplus plutonium resulting from breeding. Closed recycle with joint reprocessing of core and blanket fuel was assumed for a 25-year reactor operating lifetime when the model was applied to a reference reactor. The model incorporates both internal and external fuel management and finite burnup and accounts for reprocessing and fabrication losses and total out-of-pile time. Loading of fresh fuel is treated as a continuous feed current and unloading of spent fuel as a continuous removal current. A 1000 MW(e), liquid-metal-cooled, mixed-oxide reference reactor was defined; and the equilibrium plutonium composition was calculated to be 77.50% ^{239}Pu, 19.00% ^{240}Pu, 3.11% ^{241}Pu, and 0.39% ^{242}Pu. Application of the model to the reference reactor indicates that for a closed fuel cycle, the time required to reach equilibrium in the fuel composition depends upon the start-up composition, residence time in the external fuel cycle, amount of burnup in core and blankets, and reactor design. In contrast, it is found that the equilibrium plutonium composition itself depends only on core and blanket burnups and reactor design characteristics. The model also was employed to investigate effects of out-of-pile time and losses, finite burnup, scatter loading fuel cycle parameters and start-up composition on the amount and composition of surplus plutonium. The total quantity of surplus plutonium produced over the operating lifetime was shown to be significantly dependent on the start-up composition. (TSS) (Diss. Abstr. Int., B)

18151 REAL-TIME SIMULATION OF CORE PERFORMANCE CALCULATION FOR BWR POWER PLANT. Miyagaki, H. (Hitachi Ltd., Kawasaki, Japan). Genshiryoku Kogyo; 16: No. 9, 42-6(Sep 1970). (In Japanese).

The monitoring system, which is important for the economical and reliable operation of a BWR power plant, was developed and tested by real-time simulation. The program system comprises the periodic program ich starts calculation by the periodical control with a digital c puter, and is composed of hourly, daily and monthly programs, and the on-demand program, which is started by an operator. The major calculations with the hourly program are described. The daily and the monthly programs calculate the average or the integration of hourly data. The function of on-demand program is discussed. For simulation, the reactor plant simulator of a 460 MW BWR composed of 2 analog computers, in-core monitor signal simulator, the reactor control panel simulator composed of control rod selection switch, LRPM indicator etc., were used. Process computer system comprises a digital computer, a process input-output device, and peripheral units. The peripheral units comprise an operator console, a console input-output device, a log typer and the CRT color display unit to display graphs and alphanumeric letters with seven colors. (Japan)

18152 OPTIMAL REACTOR STRATEGY FOR MINIMIZING NATURAL URANIUM REQUIREMENT. I. SYSTEM MODEL AND COMPUTATIONAL ASPECTS. Shinohara, Yoshikuni; Yasukawa, Shigeru; Shimazaki, Junya (Japan Atomic Energy Research Inst., Tokai). J. Nucl. Sci. Technol. (Tokyo); 7: 615-22(Dec 1970).

An optimization problem of nuclear power system economics is formulated and solved numerically with the application of linear programming technique. The problem treated here is to determine the optimal long-range reactor strategy that minimizes the total requirement of natural uranium under a restriction imposed on the quantity of excess plutonium. The optimization model and the problem formulation as a linear programming problem are described, accompanied by some examples of numerical solution. 10 references. (auth)

Safety and Siting

18153 (AHSB(S)R-189) EFFECT OF DELAYED BUBBLE GROWTH ON THE DEPRESSURISATION OF VESSELS CONTAINING HIGH TEMPERATURE WATER. Hunt, D. L. (United Kingdom Atomic Energy Authority, Risley (England). Authority Health and Safety Branch). Nov 1970. 22p. Dep. NTIS (U. S. Sales Only).

A method has been developed for calculating bubble growth in a rapidly depressurizing vessel initially filled with water and steam at saturation temperature. The theory is based on convective heat transfer to moving bubbles and predicts the correct trends in early stages of blowdown. The theory implies restrictions in the use of models to represent full-scale blowdown. 7 references. (auth)

18154 (ANL-7657) SAFETY PROBLEMS OF LIQUID-METAL-COOLED FAST BREEDER REACTORS. Kelber, C. N.;

XUM

Judd, A. M.; Cinelli, G. Jr.; (and others) (Argonne National Lab., Ill.). Feb 1970. Contract W-31-109-eng-38. 216p. Dep. NTIS.

The safety problems related to the design of cores for liquid-metal-cooled fast breeder reactors are reviewed. A phenomenological representation is related to potential accidents, and this representation is used to describe the program of work needed to develop adequate design principles. Some of the program requires massive in-pile installations for execution, and some is typical of work carried out in many university and industrial laboratories. 308 references. (auth)

18155 (BMI–1897) EVALUATION OF THE APPLICABILITY OF EXISTING DATA TO THE ANALYTICAL DESCRIPTION OF A NUCLEAR-REACTOR ACCIDENT. Quarterly Progress Report, October–December 1970. Carbiener, Wayne A.; Ritzman, Robert L. (Battelle Memorial Inst., Columbus, Ohio). Jan 1971. Contract W-7405-eng-92. 32p. Dep. NTIS.

The analytical description of the course and consequences of a nuclear-reactor accident is essential to the continued development of commercial atomic power. Such descriptions form the basis for estimating the degree of safety embodied in the design and construction of every nuclear power plant. They are also of major significance in fixing the cost of electricity produced by a specific power plant because they assist in defining both the extent of engineered safety features and containment inherent in the plant design and the siting requirements. To obtain maximum use of the data being developed in a number of widely scattered and diverse programs conducted within the nuclear industry as well as relevant programs from other technologies, it is necessary to evaluate them in terms of their applicability to the ultimate prediction of the space-time distribution of radioactive material following a nuclear-reactor accident. Such an evaluation will serve three purposes, each important to the safe and orderly development of the nuclear-power industry: Expose inadequacies of existing data and consequently show where data are needed; serve to refine the techniques of mathematical analysis as applied to this problem; and provide more accurate descriptions of the course and consequences of nuclear accidents, allowing more efficient use of precautionary measures. To accomplish the task, it is necessary to combine pertinent methods of analytical description with the scientific and engineering data available as input for such techniques. This study is restricted to pressurized-water and boiling-water nuclear steam supply systems, in which the limiting postulated accident considered for safety analyses is the loss-of-coolant or "blowdown" situation. 27 references. (auth)

18156 (ORO–3822-7) STRUCTURE–FOUNDATION INTERACTION OF NUCLEAR POWER PLANTS: PHASE I FINAL REPORT. Scavuzzo, R. J. (Toledo Univ., Ohio. Research Foundation). Dec 1970. Contract AT(40-1)-3822. 53p. Dep. NTIS.

The extent to which large reactor structures interact with free-field seismic ground motion so as to alter the base motion from free-field values is analyzed. The significance of soil-structure interaction including rocking effects and consequent response spectra for a range of relatively idealized simulations of the structure, the foundation conditions and the input seismic wave form is determined. A finite element stress wave propagation program, SLAM, was employed at IITRI to study interaction effects. Results of these studies showed that interaction effects are often very significant and should be considered in the seismic design of nuclear power plants. The significance of interaction effects on dynamic loads caused by earthquakes depends upon the soil stiffness, the structure weight and modal properties, and the frequency characteristics of the input wave. 12 references. (auth)

18157 (WHAN-SA–43) APPROACHES TO REACTOR SAFETY. Hofmann, P. L.; Peterson, R. E.; Simpson, D. E. (WADCO Corp., Richland, Wash.). Oct 1970. Contract AT(45-1)-2170. 35p. (CONF-701035–2). Dep. NTIS.

From Meeting on Education and Research in the Nuclear Fuel Cycle, Norman, Okla.

The two basic approaches to reactor safety for water cooled reactors are: (1) reliance on accident prevention features and (2) reliance on consequence limiting features. These approaches are summarized and compared with the similar procedures used to treat liquid-metal-cooled fast breeder reactor safety questions. 12 references. (H.D.R.)

18158 LMFBR SAFETY. Dieckamp, H. M.; Ash, E. B.; Sevy, R. H. (Atomics International, Canoga Park, Calif.). Proc. Amer. Power Conf.; 32: 246–59(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

The basic safety-related features of liquid-metal-cooled fast-breeder reactors (LMFBR) are compared with those of light-water reactors. The safety differences are emphasized and safety design options of LMFBR plants are discussed. (H.D.R.)

18159 PROBLEMS CONCERNING SITES FOR NUCLEAR POWER STATIONS. Ailleret, Pierre. At. Strom; 16: 149–52 (Oct 1970). (In German).

The limitations extending to the sites of different types of thermal power station (conventional steam power stations, nuclear power stations with light-water reactors, nuclear power stations with breeder reactors) are described, as related to the heating of rivers. (auth)

18160 STRUCTURE-FOUNDATION INTERACTION OF A NUCLEAR POWER PLANT WITH A SEISMIC DISTURBANCE. Miller, C. A.; Costantino, C. J. (City Coll., New York). Contract W-7405-eng-26. Nucl. Eng. Design; 14: 332-42(Nov 1970).

Structure-foundation interaction effects were investigated to determine their influence on the dynamic response of a nuclear power plant to a seismic disturbance. The horizontal, vertical and rotational motion history of the facility is determined by means of a computer program, termed the SIM (Structure-In-Medium) code, which incorporates interaction effects by means of an approximate interaction law. The facility studied is the BONUS plant and the seismic disturbance applied to the site is the 1957 Golden Gate earthquake record. The response of the center of gravity of the BONUS facility was found to be less than that of the free-field disturbance, with peak acceleration attenuation varying inversely as soil stiffness. The rotational motion of the facility, however, was found to have a major influence on the motion of points far removed from the center of gravity. At these locations, the motion in the facility can be more severe than the free-field disturbance. 16 references. (auth)

18161 INITIAL SIZE DISTRIBUTIONS OF AEROSOLS. Lindauer, George C.; Castleman, A. W. Jr. (Brookhaven National Lab., Upton, N. Y.). Nucl. Sci. Eng.; 43: 212-17(Feb 1971).

The use of digital computer programs to determine the size distribution of an aerosol as a function of time requires knowledge of the initial size distribution. The results of an analytical investigation made to determine whether an aerosol produced as an instantaneous source approaches a self-preserving shape are presented. For high number density aerosols, calculations indicate that the initial size distribution rapidly approaches a self-preserving shape which can be represented by a log-normal distribution with a standard geometric deviation between 1.34 and 1.40. This log-normal distribution is utilized to calculate a pseudo-initial particle size distribution for use as the initial condition in digital computer programs. (auth)

18162 CONTROL AND SAFETY ASPECTS OF HTGCR. Shinoda, W. (Japan Atomic Energy Research Inst., Tokai). Genshiryoku Kogyo; 16: No. 10, 27-32(Oct 1970). (In Japanese).

Reviewing the control and safety of HTGCRs, the following are described. (1) Control and safety characteristics of HTGCRs. The characteristics common in the types of HTGCR are indicated in reactor physics, helium coolant, fuel and materials, high-temperature operation, FPs, PCRV, chemical reactions at an accident, etc. (2) Control of the HTGCR plant systems. The two cases are dealt with, viz. an indirect-cycle, steam turbine and a direct-cycle, gas turbine. (3) Release and movement of FPs. It is essential to minimize FPs release; FP generation in the fuel, the release into the primary coolant system, and then the settlement in the system. (4) Accidents in the HTGCR, including reactivity, sub-header rupture in the secondary coolant system, the rupture of a helium-purification system and a pressure reduction in the primary coolant system. (5) Safety countermeasures, viz. scrams, suspension of the primary-coolant system operation, PCRV, etc. (6) Control and safety of a multi-purpose reactor system. (Japan)

18163 STUDIES FOR SAFETY ANALYSIS OF LOSS-OF-COOLANT ACCIDENTS IN LIGHT-WATER POWER REACTORS. Fujie, Hideo; Yamanouchi, Atsuo; Sagawa, Norihiko; Ogasawara, Hideo (Hitachi Ltd., Ibaraki, Japan). Hitachi Hyoron; 52: 361-7(Apr 1970). (In Japanese).

The radioactive material released from the container vessel by a light-water power reactor accident was analyzed. As the Maximum Credible Accident, the loss-of-coolant accident was considered. The core spray cooling effect, coolant flow-out velocity (including the study of the critical flow), condensation heat transfer in the container vessel, and spray cooling effect in container were examined. Model experiments and theoretical computations were compared. The relations of heat flux to wall-temperature and heater wall temperature to time in the core spray cooling effect experiment were in good agreement with the theoretically computed results. The allowance for safety against a radioactivity accident was concluded to be sufficient. (Japan)

18164 GAS TURBINES FOR SUPERHEAT IN A NUCLEAR POWER PLANT. Buscemi, V. P.; Hanton, C. E. (Westinghouse Electric Corp., Pittsburgh). Proc. Amer. Power Conf.; 32: 404-12(1970).

From 32nd Annual Meeting of American Power Conference, Chicago, Ill. See CONF-700426.

Combined-cycle technology, interlocking the steam and gas turbines, is surveyed. In nuclear power plants this concept also involves the addition of superheat to the primary steam supply. The combined-cycle concept is applied to a reference study, and performance and evaluation factors are discussed. (H.D.R.)

18165 SKODA STEAM TURBINES FOR NUCLEAR POWER STATIONS. Drahy, J. (SKODA Works, Plzen, Czech.). Jad. Energ.; 16: 361-6(Nov 1970). (In Czech).

The possibilities of draining of the through-flow part of the nuclear power station turbine with respect to the use of hollow guide blades having exhausting slots near the trailing edge are summarized. The active and passive methods of blade protection against erosion in wet steam are combined. The use of titanium alloys for blades is examined, the main problem being the protection against erosion. Further, particularities of turbines for nuclear power stations with gas cooled and water cooled reactors are enumerated. A 226 MW saturated steam turbine is being constructed. The so-called building-block system with limited number of LP-parts and end stages has been applied utilizing the experience with conventional turbines to nuclear power stations. In the case of 300 to 400 MW saturated steam turbines, a half turbine speed, i.e., 1500 liter/min, must be used. 11 references. (auth)

18166 (ANL-7687) CODE FOR CALCULATING EFFLUENT AIR TEMPERATURES FROM A SAND FILTER. Rusch, G. K. (Argonne National Lab., Ill.). Nov 1970. Contract W-31-109-eng-38. 35p. Dep. NTIS.

A code that can be used to calculate the quantity of heat transferred to the sand and gravel comprising a ZPR-6 or -9 type sand filter and the temperature of the effluent air is described. A detailed listing of the code, a glossary of code terms, code input requirements, and code output are included. 3 references. (auth)

18167 (ANL-7708) SPECIFICATION AND PROCUREMENT OF CP-5 FUEL TUBES. Shuck, A. B.; Haugen, J. C. (Argonne National Lab., Ill.); Isserow, S.; Huber, R. F. (Whittaker Corp., West Concord, Mass. Nuclear Metals Div.). Aug 1970. Contract W-31-109-eng-38. 61p. Dep. NTIS.

Fuel assemblies for the Argonne National Laboratory Research Reactor CP-5 consist of concentrically nested, Al-clad, Al–U alloy fuel tubes. The fuel is prepared by dissolving fully enriched U in molten Al and casting hollow cylindrical billets. The billets are extruded as tubes from which cylindrical cores are machined. These are clad inside and outside in sealed Al jackets, which are bonded to the cores by coextrusion. The resulting Al-clad fuel tubes are radiographed, cut to length, blister-tested, cleaned, inspected, and sent to Argonne National Laboratory for construction of CP-5 fuel assemblies. Data from manufacture and inspection of 37 sets of the fuel tubes were evaluated, and a detailed procurement specification was prepared for future procurement of the tubular elements. (auth)

18168 (ANL-7752) MELTDOWN ANALYSIS OF VARIOUS EBR-II CORE CONFIGURATIONS USING THE MELT-II CODE. Golden, G. H.; Shum, R. H. (Argonne National Lab., Ill.). Nov 1970. Contract W-31-109-eng-38. 29p. Dep. NTIS.

Effects of unbounded input-reactivity ramps on three types of EBR-II core configurations were studied with the MELT-II code. One core contained only metal fuel and was similar to the wet-critical configuration; a second was a hypothetical mixed-oxide configuration; and a third contained both fuels in amounts typical of a recent irradiation configuration of the reactor. Feedback reactivity was assumed to be due to axial expansion of fuel, and, after melting, to gravity-induced fuel collapse. Collapse was taken to begin at a given point in the reactor when one of four specified input temperatures was exceeded; these temperatures were related to the fuel and cladding melting points or eutectic temperature and the normal boiling point of the coolant. The resulting model for noncoherent collapse resulted in much smaller collapse reactivity rates than those predicted earlier by use of a model for simple, coherent collapse. Also, the metal-fuel core would approach a disassembly condition only for input-reactivity ramps of about $20/sec or greater; the oxide-fuel core would approach disassembly for input ramps as low as $1/sec; and the mixed-fuel core would behave like the metal-fuel core. The results indicate that the EBR-II core should always have some metal fuel to protect it from rapid disassembly. 17 references. (auth)

18169 (BNWL-1395) PRELIMINARY ANALYSES FOR FFTF HEAT TRANSPORT CONTROL SYSTEMS. Harvey, R. A.; Hunt, S. A. (Battelle-Northwest, Richland, Wash. Pacific Northwest Lab.). Sep 1970. Contract AT(45-1)-1830. 172p. Dep. NTIS.

A study was conducted to determine the effect of the Fast Flux Test Facility main heat transport control system on the plant behavior. A high-speed simulation of the facility was used. The study was conducted to gather data concerning plant stability, characteristics of several control configurations, and effects of various operating conditions. Transient responses and frequency analysis were used to determine the controlled plant behavior. The data gathered and some conclusions on the basis of the data are presented. (auth)

18170 (BNWL-1481) CRITICAL EXPERIMENTS IN AN MTR MOCKUP USING PHOENIX FUEL. Davis, E. C. Jr.; Smith, R. I.; Williams, L. D. (Battelle-Northwest, Richland, Wash. Pacific Northwest Lab.). Jun 1970. Contract AT(45-1)-1830. 90p. Dep. NTIS.

Utilization of ^{240}Pu as a convertible poison in plutonium-fueled systems is being studied under the Phoenix Fuel Reactor Program at Pacific Northwest Laboratory. An extensive experimental program using Phoenix fuel in a critical mockup of the Materials Testing Reactor (MTR) has been completed in the Plutonium Recycle Critical Facility. The PRCF-Phoenix mock-up duplicated as closely as possible the physical configuration of the MTR in order to determine the characteristics of such a core. The experiments performed in this mock-up provided information on the reactivity effects and power distributions to be expected of an MTR-Phoenix fuel core prior to the loading of a full core in the MTR. These data have provided an excellent test of the computational methods currently being applied to Phoenix Fuel cores. The results of the PRCF experiments are presented. 30 references. (auth)

18171 (CEA-N-1386) EXPERIMENTAL STUDY OF THE ATTENUATION OF NEUTRONS IN VARIOUS PROTECTIVE MATERIALS USING THE NAIADE I DEVICE OF THE ZOE REACTOR. Lott, Michel; Pepin, Pierre; Bourdet, Lucien; Cabaret, Guy; Capsie, Jacques; Dubor, Monique; Hot, Michel; Goulet, Claude (Commissariat a l'Energie Atomique, Fontenay-aux-Roses (France). Centre d'Etudes Nucleaires). Dec 1970. 100p. (In French). Dep. NTIS (U. S. Sales Only).

The principal experiments made in the Naiade I device installed in the Zoe reactor are described. The propagation of neutrons in a great number of protective materials (iron, graphite, concrete, and water) was studied. The appropriate constants, in particular for the application to the theory of one or two group diffusion, were determined. 12 references. (auth)

18172 (DOCKET-50231-70) SOUTHWEST EXPERIMENTAL FAST OXIDE REACTOR. License No. DR-15; Technical Specifications Change No. 2. (Division of Reactor Licensing (AEC), Washington, D. C.). 12 Feb 1971. 39p. Dep. NTIS.

Revised technical specifications are presented concerning: safety limits for operating at 20 MW(t) with guinea pig fuel rods; operations with fuel clad failures; and surveillance requirements for failed fuel cladding. (D.C.C.)

18173 (EURFNR-861) FAST REACTOR LATTICE EXPERIMENT FOR INVESTIGATION OF k_∞ AND REACTION RATE RATIOS IN SNEAK, ASSEMBLY 5. Boehnel, K.; Meister, H. (Kernforschungszentrum, Karlsruhe (West Germany)). Jun 1970. 56p. (KFK-1176; CONF-690654-1). Dep. NTIS (U. S. Sales Only).

From Meeting of Specialists on the Value of Plutonium Alpha, Winfrith, England.

Work Performed under United States–Euratom Fast Reactor Exchange Program.

A fast reactor lattice experiment was carried out in the zero-power facility SNEAK, assembly 5, to determine k_∞ and reaction rate ratios. The assembly consists of a central test zone surrounded by axial and radial driver regions. The test zone contains platelets of mixed PuO_2–UO_2, depleted and natural U metal, and graphite as a moderating material. Its composition was chosen to render a k_∞ close to unity. The k_∞-values of systems with different $C/^{235}U$-ratio were determined by voiding a central region of the test zone and measuring the associated reactivity

XUM

change. Fission rates of ^{235}U and ^{238}U inside the lattice cell were measured with solid state track detectors, the ^{238}U-capture rate by activation of depleted uranium foils and subsequent γ-x-ray coincidence counting. The experimental results are compared with 26-group calculations using different methods and cross section sets. 19 references. (auth)

18174 (IS–2300) CERAMIC ENGINEERING, CHEMICAL ENGINEERING, CHEMISTRY, MATHEMATICS AND COMPUTER SCIENCE, METALLURGY, PHYSICS, AND REACTOR DIVISIONS ANNUAL SUMMARY RESEARCH REPORT, JULY 1969–JUNE 1970. (Ames Lab., Iowa). Nov 1970. Contract W-7405-eng-82. 273p. Dep. NTIS.

Research and development programs undertaken by the Ames Laboratory during July 1969 to June 1970 are reviewed. Research divisions presented include: ceramic engineering; chemical engineering; chemistry; mathematics and computer; metallurgy; physics; and reactor. Separate abstracts are included for each of the 7 sections presented. (D.C.C.)

For abstracts of individual sections see: 15561, 15562, 16398, 16569, 17326, 17403, and 18175.

18175 (IS–2300, pp 253–73) REACTOR DIVISION. Crudele, J. S.; Gurganus, E. K.; Lessly, R. E.; (and others) (Ames Lab., Iowa).

From Ceramic Engineering, Chemical Engineering, Chemistry, Mathematics and Computer Science, Metallurgy, Physics, and Reactor Divisions annual summary research report, July 1969–June 1970.

Design modifications and additions to the Ames Research Reactor are described. Fuel cycle management procedures and schedule are presented. Experimental programs in the reactor are reviewed. Operations during July 1969 to June 1970 are described. (D.C.C.)

18176 (ORNL–4502) FISSION PRODUCT TRANSPORT AND BEHAVIOR IN THE STAINLESS STEEL LINED CONTAINMENT RESEARCH INSTALLATION (CRI). Parker, G. W.; Creek, G. E.; Martin, W. J. (Oak Ridge National Lab., Tenn.). Feb 1971. Contract W-7405-eng-26. 106p. Dep. NTIS.

The tests conducted in the ORNL LOFT Assistance Program to date are summarized for 15 release experiments conducted in the CRI with the stainless steel liner. The experiments are listed in chronological order along with the conditions of the release. The runs included direct release of radioiodine tracer, release of the CSE simulant, fission product release from melted irradiated fuel, and prompt release on cladding failure. These release experiments completed the initial phase of the LOFT Assistance Program, and salient facts are presented concerning those phases of the experiments which are thought to be of most interest. Data concerning conditions of temperature, pressure, condensation, and time in the containment vessel together with the results of gas sampling, particle sizing, spraying, and deposition testing are given for the experiments. 17 references. (auth)

18177 (RFP–1314) CRITICAL PARAMETERS OF A URANIUM SOLUTION SLAB–CYLINDER SYSTEM. Tuck, Grover; Clark, Harold E. (Dow Chemical Co., Golden, Colo. Rocky Flats Div.). 16 Dec 1970. Contract AT(29-1)-1106. 15p. Dep. NTIS.

Critical parameters are presented for a 490-gram per liter uranyl nitrate (93.2 weight-percent uranium-235) system which consisted of an array of vertical cylinders resting on and interacting with a 120-centimeter square horizontal slab. The parameters varied were the array solution height, the number of cylinders, the cylinder diameter, and the slab thickness. The slab-array system, having nine and sixteen 13.6-centimeter diameter cylinders, was also reflected with a 10.2-centimeter thick reflector. All other measurements were essentially unreflected. The critical thickness of the slab alone was measured also. The effect of two 2-liter bottles of solution near the center of a 16-cylinder array and the effect of vertical separation between the array of cylinders and the solution slab are also described. (auth)

18178 (TID–25646) RESEARCH IN REACTOR CORE PHYSICS. Final Report, January 1960–August 1968. Robeson, Andrew (Virginia Polytechnic Inst., Blacksburg. Dept. of Physics). Contract AT(40-1)-2686. 14p. Dep. NTIS.

A review of research programs carried out in the Virginia Polytechnic Institute Cockcroft-Walton accelerator and research reactor during January 1960 to August 1968 is presented. Technical papers resulting from the research programs are listed. (D.C.C.)

18179 (WHAN-FR–36) PROGRAM STATUS REPORT: SAMPLING OF RADIOACTIVE SODIUM FROM FFTF. Knoll, K. C.; Scott, F. A. (WADCO Corp., Richland, Wash.). Dec 1970. Contract AT(45-1)-2170. 40p. Dep. NTIS.

A technique for sampling the coolant Na of the Fast Flux Facility for impurity analysis is demonstrated. It overcomes the problems presented by the reactivity and radioactivity of the Na. The sample tubes are installed, checked for leaks, filled with Na and sealed by crimping. The samples are cooled rapidly and uniformly to minimize impurity segregation and removed from the sampler. All these operations are performed remotely by using master-slave manipulators. Na flow was regulated and the temperature maintained at the desired levels. Analysis of Na taken from three sections along the sample tube gave no evidence of longitudinal segregation of O_2. Na sealed in tubes by crimping showed no detectable leakage of air through the crimps after as much as 35 days of storage in air. (auth)

18180 (WHAN-FR–50) WADCO QUARTERLY TECHNICAL REPORT, JULY–SEPTEMBER 1970. (WADCO Corp., Richland, Wash.). Jan 1971. Contract AT(45-1)-2170. 552p. Dep. NTIS $10.00.

BORON CARBIDES—radiation effects on microstructure of, in-pile
FAST FLUX TEST FACILITY—safety analysis for
—core design for, progress during July to September 1970
—physics analysis of

18181 (WHAN-SA–11) COMPARISON OF TWO-DIMENSIONAL AND THREE-DIMENSIONAL NEUTRONICS CALCULATIONS FOR THE FTR. Hardie, R. W.; Little, W. W. (WADCO Corp., Richland, Wash.). 9 Sep 1970. Contract AT(45-1)-2170. 5p. (CONF-701102–10). Dep. NTIS.

From Meeting of the American Nuclear Society, Washington, D. C.

Although most survey fast reactor physics calculations are performed using either one- or two-dimensional models, certain detailed design computations may require a three-dimensional model. To assess differences between two-dimensional and three-dimensional diffusion calculations, 2DB and 3DB runs simulating the Fast Test Reactor (FTR) were performed. The items investigated include k_{eff}, burnup, fuel worth, poison rod worth, and power peaking. 3 references. (auth)

18182 (WHAN-SA–12) COMPARISON OF CALCULATED AND EXPERIMENTAL WORTHS OF LARGE SAMPLES IN ASSEMBLIES FTR-1 and 2. Omberg, R. P.; Bennett, R. A.; Nelson, J. V. (WADCO Corp., Richland, Wash.). 9 Sep 1970. Contract AT(45-1)-2170. 6p. (CONF-701102–15). Dep. NTIS.

From Meeting of the American Nuclear Society, Washington, D. C.

It has been suggested that sample size may be responsible for the discrepancy between calculated and measured worths in fast assemblies. Whether this is true can be determined from a set of experiments performed in Critical Assemblies FTR-1 and FTR-2 in which the reactivity worths of large samples of fuel and B_4C control material were measured. The assemblies were constructed in the Zero Power Plutonium Reactor. A comparison between calculation and experiment for all the large sample measurements in Assemblies FTR-1 and FTR-2 is presented. 3 references. (auth)

18183 (WHAN-SA–39) LARGE SCALE AIR CLEANING TESTS IN THE CONTAINMENT SYSTEMS EXPERIMENT. McCormack, J. D.; Hilliard, R. K. (WADCO Corp., Richland, Wash.). 11 Nov 1970. 24p. (CONF-700816–7). Dep. NTIS.

From 11th AEC Air Cleaning Conference, Richland, Wash.

Results of five CSE experiments in which an internal recirculating air cleaning loop was run in steam-air atmospheres are presented. The loop was composed of a commercial sized heat exchanger, demister, filters, and charcoal beds. Variables in-

vestigated were loop flow, atmospheric temperature, component arrangement and aerosol source term. The observed removal of iodine, cesium, uranium, and methyl iodide from the typical water cooled reactor post-accident atmospheres is compared to a mathematic model. 14 references. (auth)

18184 DEVELOPMENTS IN NEUTRON SCATTERING AT THE MTR. Brugger, R. M. (Idaho Nuclear Corp., Idaho Falls). pp 197-210 of Instrumentation for Neutron Inelastic Scattering Research. Vienna; International Atomic Energy Agency (1970).

From Meeting on Instrumentation for Neutron Inelastic Scattering Research, Vienna, Austria. See STI/PUB-275; CONF-691220.

Development of several new pieces of equipment and several new methods has been realized recently in the MTR programs of neutron scattering. These developments include samples at high pressures, detection of molecular vibrations, use of correlation choppers, small digital-computer interfacing and intense sources. With the termination of the MTR this fiscal year these programs and future developments will be seriously curtailed. (auth)

18185 UTILIZATION OF NEUTRON GUIDE TUBES FOR NEUTRON INELASTIC SCATTERING. Jacrot, B. (Institut Max von Laue-Paul Langevin, Grenoble, France). pp 225-47 of Instrumentation for Neutron Inelastic Scattering Research. Vienna; International Atomic Energy Agency (1970).

From Meeting on Instrumentation for Neutron Inelastic Scattering Research, Vienna, Austria. See STI/PUB-275; CONF-691220.

Neutron guide tubes which have proved to be very efficient devices now play an important role for the instrumentation around nuclear reactors. The following terms will be reviewed: 1. General principles of conducting tubes; 2. Technical problems in the building of conducting tubes; 3. Description of existing installations with their performance (mostly installations in Munich and Saclay); 4. Specific interest of these tubes for inelastic scattering experiments; and 5. Project of conducting tubes for the High-Flux Reactor at Grenoble. (auth)

18186 REVIEW OF HOT NEUTRON SOURCES. Egelstaff, P. A. (Atomic Energy Research Establishment, Harwell, Eng.). pp 249-68 of Instrumentation for Neutron Inelastic Scattering Research. Vienna; International Atomic Energy Agency (1970).

From Meeting on Instrumentation for Neutron Inelastic Scattering Research, Vienna, Austria. See STI/PUB-275; CONF-691220.

The principles for the design and construction of hot neutron sources in conventional reactors are reviewed and existing neutron sources are described. Sources made of beryllium oxide and graphite have been put into practical use and the performance of these sources is considered. The uses of hot sources are discussed and it is concluded that with present fluxes, their use is limited. However, a wider field of application for hot neutron sources seems likely with the advent of high-flux beam reactors. (auth)

18187 ON-LINE SEPARATION OF ISOTOPES AT A REACTOR IN STUDSVIK (OSIRIS). Borg, S. (Research Inst. for Physics, Stockholm); Bergstroem, I.; Holm, G. B.; (and others). Nucl. Instrum. Methods; 91: 109-16(1971).

An on-line isotope separator system for the study of fission products has been constructed. The ion source, which is placed close to the core of the 1 MW R2-0 reactor, contains the ^{235}U target in order to minimize the transport time of the fission products and to avoid a heated pump line. By keeping the source at a high temperature a wide range of elements are released from the target and subsequently mass separated. So far Zn, Ga, Ge, As, Br, Kr, Rb, Sr, Ag, Cd, In, Sn, Sb, Te, I, Xe, Cs and Ba appear to have been observed. The system has been in operation since the middle of 1968 and has performed most satisfactorily. A large number of nuclides thus has been made available for study, the most short-lived ones, observed so far, having half-lifes in the region of 0.2 to 0.5 sec. (auth)

18188 HIGH FLUX STATIONARY RESEARCH REACTORS AND THEIR PERSPECTIVES. Feinberg, S. M. At. Energ. (USSR); 29: 162-8(Sep 1970). (In Russian).

During the last decade considerable progress has been achieved in nuclear technology, which permits an increase of neutron flux in research reactors. Progress is pointed out in the field of stationary research intermediate reactors with a thermal neutron trap. Additional increase in the neutron flux is discussed. Comparison is made with a project of the fast nucleon accelerator, used as an intensive thermal neutron source. 11 references. (auth)

18189 CAPSULE SYSTEMS FOR MATERIAL IRRADIATION IN HIGH FLUX SM-2 REACTOR. Tsykanov, V. A.; Samsonov, B. V.; Timchenko, R. A.; Shulimov, V. N.; Lobanov, G. P. At. Energ. (USSR); 29: 169-74(Sep 1970). (In Russian).

To irradiate materials in research reactors various devices are used in accordance with objectives and conditions of experiments. Special attention is given to capsule systems developed for high flux SM-2 reactor irradiation of materials. Described are the ampule systems with specimen temperature being measured and controlled during irradiation, those designed for high and intermediate temperature operation. (auth)

18190 MEASUREMENT OF CELL-DEPENDENT NEUTRON SPECTRA IN FAST CORE WITH NUCLEAR EMULSION. Nomoto, Shoji (Japan Atomic Energy Research Inst., Tokai). J. Nucl. Sci. Technol. (Tokyo); 8: 45-7(Jan 1971).

Neutron spectra were measured in the centers of fast critical assemblies in the FCA facility by means of nuclear emulsions. The neutron spectra averaged for the center cells of the cores indicate some differences due to cell arrangement when compared to calculations. (H.D.R.)

18191 INTERCOMPARISON OF REACTOR CALORIMETERS. REPORT OF INTERNATIONAL MEASUREMENTS MADE IN REACTOR MELUSINE, MARCH 1970. Boyd, A. W. (Atomic Energy of Canada Ltd., Chalk River, Ont.); Keddar, A. At. Energy Rev.; 8: 949-55(Dec 1970).

Calorimeters of eight reactor dosimetry groups from six member states of the International Atomic Energy Agency were compared in the reactor MELUSINE in March 1970. The average deviation of the results was 3 to 4% and the maximum difference 10 to 12% for measurements at absorbed dose-rates of 100 to 400 mWg^{-1}. The methods of operation included adiabatic and steady-state operation and calibration was done by electric heating or by measurement of the cooling curve. The results confirm the accuracy and validity of reactor calorimetry, thus providing a firm basis for chemical and other methods of reactor dosimetry. 11 references. (auth)

18192 HELIUM HIGH PRESSURE IRRADIATION FACILITY FOR BREEDER FUEL PINS IN THE FR2 REACTOR. Deckers, H.; Lehning, H.; Reiser, H. (Kernforschungszentrum, Karlsruhe, Ger.). Nucl. Eng. Design; 14: 343-8(Nov 1970).

A helium test loop with 30 kp/cm^2 coolant pressure has been operating in the Karlsruhe research reactor FR2 since 1966 for irradiation of fuel pin specimens. This loop is to be extended by a high pressure irradiation facility. On the one hand, this supplies the high heat transfer numbers which are necessary for testing high power fuel pins for sodium cooled breeders. On the other hand, it permits irradiation tests to be carried out with respect to gas cooled breeders under highly realistic conditions. The expansion covers in particular the construction of a special irradiation rig with an independent high pressure helium cooling circuit of a maximum operating pressure of 150 kp/cm^2. The compressor for circulating the coolant is flanged right onto the irradiation rig. With a gas flow of about 250 kg/h the maximum thermal power of the fuel test pins is about 40 kW. The existing cooling system of 30 kp/cm^2 is used as a secondary circuit for heat removal. The components of that cooling system, especially the purification system and the safety system, retain their previous functions almost unchanged. The high pressure irradiation facility was set up for out-of-pile testing at the Institute of Reactor Development. (auth)

18193 REGIONAL-DEPENDENT REACTOR KINETICS FOR THE UNIVERSITY OF MISSOURI RESEARCH REACTOR: A MODEL DESCRIPTION AND AN EXPERIMENTAL DETERMINATION. Gooden, David Samuel. Columbia, Mo.; Univ. of Missouri (1970). 194p. University Microfilms Order No. 70-20,779.

Thesis.

The University of Missouri Research Reactor consists of several distinct regions which have markedly different nuclear characteristics. The primary regions are the light water flux trap, the core, and the concentric reflectors of beryllium and graphite. A three-node model which predicts the influence of the various regions on the kinetics of the system is presented. The kinetic behavior for each of the regions and their kinetic relationship to one another is obtained. Results of an experimental kinetics study using two-detector, digital noise analysis techniques are also presented. The experimental results show the influence of a combination of regional effects and spatial effects. A qualitative evaluation of the relative influence of regional effects and spatial effects is made by comparing the results obtained for the regional model with the results of the experimental study. The general kinetic behavior of MURR is described well by a three-node model. Differences in the kinetic response of the various regions of MURR are demonstrated conclusively. The experimental values for α, 15.7 ± 0.5 $seconds^{-1}$ is quite closely approximated by the model value of 12.7 $seconds^{-1}$. The experimentally determined and model predicted coherence functions are in excellent agreement. Both show the kinetic behavior of MURR beginning to depart from funda-

XUM

mental mode behavior at approximately 20 cycles/second. (Diss. Abstr. Int., B)

18194 EXPERIMENTAL STUDIES OF EXPERIMENTAL REACTOR IR-100. Konstantinov, L. V.; Martem'yanov, I. N.; Nikolaev, V. A.; (and others). At. Energ. (USSR); 29: 453-4 (Dec 1970). (In Russian).

Results are given of measurements obtained during the startup and operation of IR-100 reactor and the feasibility of increasing its output. Tabulated data are given on the thermal neutron flux and γ-dose in the vertical experimental channels at the nominal reactor power of 100 kW. The thermal and fast neutron fluxes and the γ-radiation dose at the outlet of the horizontal experimental channels at 100 kW are given. The operations of the reactor showed that the cooling system had a large reserve and the reactor power could be increased up to 200 to 300 kW without any significant increase of the active zone load. (R.V.J.)

18195 REACTOR CORE STRUCTURE. Ide, Akira (Fuji Electric Co. Ltd., Tokyo); Hosonuma, Satoshi. FAPIG (Tokyo): No. 56, 245-9(Mar 1970). (In Japanese).

The core structure of DCA is composed of pressure tubes, calandria tubes, a core tank, upper and lower grids, the lower absorber for the realization of bare core, the pipes for supplying and exhausting D_2O or cover gas, and insert pipes. As the structural material, aluminum is mostly used. Starting neutron source and PNS are inserted through the side wall of the tank. The production of aluminum core tank is very difficult, and new techniques were required. For example, because of the thick plate structure, welding was the first problem. Various tests were performed under varying conditions of gas, torch, edge preparation shape, etc. As the welding defect, blow holes were conspicuous, and the parts where one structural element is welded to others are problematical. For cutting thick plates, plasma arc was used. Moreover, because of the high accuracy and complexity of fabrication and the multiplicity of inspection, various production techniques were used. (Japan)

18196 EXPERIMENTAL D_2O CRITICAL ASSEMBLY (DCA). Ando, Tetsuya; Ide, Akira (Fuji Electric Co. Ltd., Tokyo). FAPIG (Tokyo): No. 56, 237-41(Mar 1970). (In Japanese).

Experimental D_2O Critical Assembly (DCA), for the development of an Advanced Thermal Reactor (D_2O moderated and light-water cooled), was constructed and went critical in December 1969. The purpose of DCA is to obtain information on the ATR, including D_2O level reactivity worth, neutron-flux distribution, bucking and control-rod equivalent reactivity. It consists of the core tank, made up of calandria tubes and tank; fuel rods in pressure tubes are inserted in the calandria tubes, and the tank is filled with D_2O. Then in association with this are installed the reactor-control mechanism, heavy water, light water and gas systems, fuel-handling equipment, nuclear and process instrumentation, and experimental facility. (Japan)

18197 HEAVY-WATER CRITICAL ASSEMBLY. Ide, Akira; Yoshida, Noriaki; Isozaki, Osamu (Fuji Electric Co. Ltd., Tokyo). Fuji Jiho; 43: 397-406(Apr 1970). (In Japanese).

The Heavy Water Critical Assembly to study the nuclear characteristics of the ATR being developed in Japan is described. The studies include the reactivity worth of D_2O level, neutron flux distribution, buckling, control-rod reactivity equivalent, etc. HWCA consists of the calandria tank and calandria tubes; D_2O fills the tank, and fuel is in pressure tubes. Criticality is attained by means of the level of D_2O moderator. The core lattice pitch can be in three patterns by exchanging the grid plates; the control is by control rods. Light-water (for core cooling) system with temperature regulation and gas system to prevent D_2O deterioration and to dry the tank are also installed. Finally its construction on the site is described. (Japan)

Rocket and Space Reactors

18198 (GESR-2123) TECHNICAL INFORMATION IN SUPPORT OF THERMIONIC REACTOR EXPERIMENT FACILITY COST ESTIMATE. (General Electric Co., Pleasanton, Calif. Nuclear Thermionic Power Operation). Feb 1970. Contract AT(04-3)-771. 416p. Dep. NTIS.

The technical description and accompanying backup data used to generate the Thermionic Reactor Experiment (TREX) cost estimate are presented. Guidelines for the facility include: reactor power level at least 100 kW(e); ^{235}U fueled thermionic fuel elements; a fast neutron spectrum; and a reflector which mocks up a 4 π shieldable flight reference design. The concept is described beginning with the fuel element and including the core structure, reactor vessel and dome, reflector cup and lift, and reactor design. The TREX control philosophy, power conditioning equipment, and instrumentation and control are discussed. Sections are included describing coolants, the overall facility and proposed modifications, safeguards, and schedule. 33 references. (H.D.R.)

18199 (N-70-36660) CRITICALITY STUDY OF MELTDOWN CONFIGURATIONS FOR NUCLEAR AIRCRAFT REACTORS. Lennon, Conrad J.; Hyland, Robert E. (National Aeronautics and Space Administration, Cleveland, Ohio. Lewis Research Center). Aug 1970. 20p. (NASA-TM-X-2068; E-4973). NTIS.

As part of a containment system study for the nuclear aircraft reactors, a description of the meltdown problem is presented along with curves of reactivity for reflected and unreflected slabs, spheres, and cylinders as a function of UO_2 fuel loading, composition and size. These are presented to help the early design concepts avoid configurations that would cause excursions in the event of a core meltdown and thereby obtain a feasible containment system. Results are presented which indicates that masses that have melted down from reactors can be kept subcritical provided certain geometrical dimensions for specific dilutions of fuel are not exceeded within the containment system. (auth) (STAR)

18200 (N-70-39389) NEUTRON KINETICS OF A FAST, HOT, CRITICAL ASSEMBLY IN THE STARTUP MODE. Niederauer, George F. (National Aeronautics and Space Administration, Cleveland, Ohio. Lewis Research Center). Sep 1970. 45p. (NASA-TM-X-2078; E-5289). NTIS.

A reactor for auxiliary power in space was designed using ^{235}UN fuel in a tantalum structure with ^{7}Li coolant. The kinetics of a hot critical assembly of the same design with and without coolant was parametrically studied in the startup mode to determine safe operating ranges of ramp reactivity inputs. The main parameters considered were wide ranges in the magnitudes of the Doppler and thermal expansion reactivity coefficients and several kinds of expansion effects. (auth) (STAR)

18201 NUCLEAR AIRPLANE NOW! Miller, M. M. (Lockheed-Georgia Co., Marietta). Ind. Res.; 12: No. 3, 48-50(Mar 1970).

Advances in the technology of nuclear reactors, heat transport systems, shielding and containment materials, and engine efficiency are described. The potential for successful development of nuclear airplanes is discussed. (H.D.R.)

18202 OPTIMIZATION OF THE CELL DIMENSIONAL PARAMETERS OF AN IN-CORE THERMIONIC FUEL ELEMENT. Wolf, E.; Haug, W. (Univ., Stuttgart). Atomkernenergie; 16: 213-18(1970). (In German).

Performance data of in-core thermionic fuel elements with series-connected converters are determined by means of a theoretical model in a wide range of operational and geometrical parameters and used to optimize several of such parameters. In general the single cells are differently heated in the reactor core. The effect of this nonuniform heat generation on the total output data is investigated. A method for power enhancement by means of variation of converter lengths or interconnection lead geometries in the fuel elements is discussed. 11 references. (auth)

18203 MUTUAL NEUTRON INTERCHANGE THROUGH VACUUM BETWEEN BOUNDARY SURFACES OF REACTOR PARTS. Speidel, V.; Wolf, E. (Univ., Stuttgart). Atomkernenergie; 16: 196-200(1970).

A theoretical model for studying the mutual neutron interchange through vacuum between arbitrarily arranged parts of reactor medium is presented. For the special case of plane polar coordinates the model is formulated in the form of boundary conditions of the diffusion theory and compared to experimental data of SNAP Experimental Reactor. The method is suitable for reactor physical calculations of reactors having movable reflector parts for control purposes. 11 references. (auth)

Process Heat and Desalination Reactors

18204 (ORNL-4293) DATA OBTAINED ON SEVERAL POSSIBLE LOCALES FOR THE AGRO-INDUSTRIAL COMPLEX. Tamura, T.; Young, W. J.; Yarosh, M. M. (Oak Ridge National Lab., Tenn.). Feb 1971. Contract W-7405-eng-26. 45p. Dep. NTIS.

Supplementary information to Chapter 8 of ORNL-4290, Nuclear Energy Centers: Industrial and Agro-Industrial Complexes is

presented. Information collected on the several locales chosen as representative of those which might have potential for future development of the energy center concept is discussed and documented. In addition to the data given for specific locales, principally in developing countries of the world, an appendix contains selected data on the 37 countries having coastal deserts. (auth)

18205 (ORNL-TM-3149) ORVE: A FORTRAN CODE FOR THE CALCULATION OF A DESALINATION PLANT COMBINING VERTICAL EVAPORATORS WITH MSF FEED HEATING. Friedrich, R. O.; Hafford, J. A. (Oak Ridge National Lab., Tenn.). Sep 1970. Contract W-7405-eng-26. 217p. Dep. NTIS.

A program was written for the IBM-360 system which designs a vertical evaporator desalination plant. All pertinent plant parameters such as temperatures, flows and concentrations are calculated, along with a detailed cost analysis of the various plant components. Costs are based on third quarter 1967 dollars. The plant consists of a vertical-tube portion physically located above an MSF feed heater. Both are enclosed in a steel and concrete shell. A reactor plant supplies heat and electricity on an optional basis. The output from the program contains all necessary plant operating parameters, along with a detailed cost output. (auth)

18206 POSSIBILITIES OF NUCLEAR ENERGY FOR METALLIC AND CHEMICAL PROCESSES. Wenzel, Werner (Technische Hochschule, Aachen). Tech. Ueberwach.; 10: 407-11(Dec 1969). (In German).

By means of nuclear power stations integrated into metallurgical plants it will be possible to reduce the cost of iron and steel production. The heat required for the reduction of iron ore can be directly drawn from a high-temperature pile and led via heat exchangers to the reduction process during the first step towards the production of iron sponge. The useful heat still remaining in the reactor coolant will be used for the generation of electrical energy for the metallurgical plant. (auth)

18207 NUOVI ORIZZONTI PER L'ENERGIA NUCLEARE. Atti del XIV Congresso Nucleare, Roma, 20–21 Marzo 1969. (Nuclear Conference on New Horizons for Nuclear Energy. Proceedings of the 14th Conference, Rome, March 20–21, 1969). Serie Simposi. Roma; Comitato Nazionale Energia Nucleare (1970). 352p. (In several languages). (CONF-690325).

Information on the development of dual purpose desalination and power reactors is presented. Separate abstracts are included for 15 of the 16 papers presented. One paper on radiation chemistry has been previously abstracted and listed in NSA. (D.C.C.)

From 14th Nuclear Conference, Rome, Italy. See CONF-690325.

A review of development programs for nuclear power plants and for dual purpose desalination and power reactors is presented. Other peaceful uses of atomic energy are briefly described. (D.C.C.)

18220 FEASIBLE NON-UTILITY NUCLEAR POWER PLANTS. Yabe, Goro (Asahi Chemical Industry Co. Ltd., Osaka). Ohm (Elec. Mag.); 57: No. 8, 34-9(Aug 1970). (In Japanese).

XUM

A nuclear power plant is the most suitable as a non-utility, i.e., enterprise-owned, means of producing electricity and also steam; it is economical and without public hazards. Even a medium light-water reactor plant is competitive with the thermal power plant. First, the environment to make economically possible non-utility power plants in general is outlined. In producing both electricity and process steam in a non-utility nuclear plant, the allocation of the respective costs is important. The procedure in this connection, based on the "exergie" concept, is explained. Then, the site conditions necessary for a non-utility nuclear power plant are listed. Finally, as an example of the non-utility nuclear power plant, one for producing 200,000 tons per year of aluminum is taken up; the steam requirement is 300 tons/hr and the electrical power is 450,000 kW. (Japan)

18221 NUCLEAR DESALINATION APPROACHING ITS PRACTICAL APPLICATIONS. Suetsuna, Ichiro (Japan Atomic Industrial Forum, Inc., Tokyo). Ohm (Elec. Mag.); 57: No. 8, 55-62(Aug 1970). (In Japanese).

To cope with the problem of water-supply shortage, nuclear desalination by a multi-purpose reactor is attracting increasing interest. The general methods of desalination are explained: evaporation, membrane, and freezing. As the advantages of nuclear desalination, there are the large scale of desalination, benefit in the usage of enthalpy, relative freedom in the desalination sites, and stabilized electric-power generation. In the calculation of desalination and power costs in a dual-purpose reactor plant, a procedure is presented: the cost of common facilities for desalination and power generation is shared according to the respective enthalpies, and then the cost of separate facilities is obtained accordingly. To improve the economy of the dual-purpose plant, its operation with as full loads as possible is necessary. Problems of a desalination-plus-power plant in the industrial complex are indicated. (Japan)

18224 (BNWL-SA-3679) EFFECTS OF HANFORD REACTORS ON COLUMBIA RIVER AND ADJACENT LAND AREAS. Foster, R. F. (Battelle-Northwest, Richland, Wash. Pacific Northwest Lab.). [1970]. 48p. (CONF-701205-1). Dep. NTIS.

From Washington Ecological Commission Conference, Richland, Wash.

The history of the plutonium production reactors at Hanford is presented, and the early environmental studies in the plant area are described. The means by which the reactor operations contribute radionuclides and thermal effluents to Columbia River and the effects of these effluents on the ecology of the area are discussed. Comprehensive studies over more than 25 years indicate radiation doses to the public have been well within the guidelines and that no discernible radiation or thermal effects have occurred to the fish and wildlife populations. (H.D.R.)

18225 (TID-25634) SUMMARY OF STUDIES ON THE SAVANNAH RIVER, 1951-1970 FOR E. I. du PONT de NEMOURS AND COMPANY. (Academy of Natural Sciences of Philadelphia, Pa. Dept. of Limnology). Nov 1970. 106p. Dep. NTIS.

During 1951 and 1952, a base line study of the Savannah River was conducted. It took into consideration all of the major groups of aquatic organisms, protozoa, lower vertebrates, insects, fish, and algae, together with the general chemical and physical characteristics of the river. Conducted in the vicinity of the Savannah River Plant, the study was designed to provide a comprehensive picture of the river so that future changes that might occur in the river could be determined. Subsequent surveys were conducted in 1956, 1960, 1965, and 1968 and the results compared to the base line data. The results of the studies, the comparisons made with the base line data, and conclusions based on these comparisons are presented. Of interest concerning the Savannah River Plant, it was concluded that there was no evidence, in any of the areas studied, of the effects of increases in temperature in the river caused by activities of the Savannah River Plant. (E.R.B.)

18227 (EURFNR-864) FAST NEUTRON SCATTERING MODELS, SLOWING DOWN AND FORMATION OF REACTOR SPECTRA. Kuesters, H. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Neutronenphysik und Reaktortechnik). Sep 1970. 41p. (KFK-1295). Dep. NTIS (U. S. Sales Only).

Work performed under United States-Euratom Fast Reactor Exchange Program.

A review is presented covering the models of neutron slowing down calculations in both thermal and fast reactors. To understand the physical nature of the processes which form the reactor spectrum, slowing down is investigated in an infinite medium. The performance of space dependent calculations in homogeneous as well as in heterogeneous media is outlined. (31 references) (auth)

18228 (HUX-3971-5) ANGULAR SINGULARITIES OF ELLIPTIC PROBLEMS. Birkhoff, Garrett (Harvard Univ., Cambridge, Mass.). [1970]. Contract AT(30-1)-3971. 20p. Dep. NTIS.

Criticality calculations for nuclear reactors are commonly based on low-order difference approximations to the multigroup diffusion equations in plane sections. The results reported here concern the possibility of developing "finite element" variational methods having higher-order accuracy. Typically, plane sections of nuclear reactors refer to piecewise homogeneous media separated by interfaces with corners, where the "flux" becomes non-analytic and has what may be called an angular singularity. If one wishes to apply methods having a high order of accuracy to the approximate solution of such problems, one must know the analytical nature of the angular singularities which the solution (flux) has near such corners. The objective of the paper is algorithmic in nature: to find the simplest possible singular basis functions which will achieve a given order of accuracy. In particular, the explicit solution of one-group diffusion equations near simple angular singularities is examined. (R.W.R.)

18229 (ORNL-TM-2580) CODE XITRAN-2: DESCRIPTION AND INSTRUCTIONS FOR USE. Wilson, J. V. (Oak Ridge National Lab., Tenn.). 8 Jan 1971. 51p. Dep. NTIS.

XITRAN-2 is a Fortran 4 code for determining the time constants and spatial shapes of the noninteracting linearized perturbation modes of xenon instability in nuclear reactors with one or two neutron groups, and flux-dependent feedback. The method of harmonic expansion is used in slab, spherical, infinite cylinder, XY, RZ, or Rθ geometry. This method is not recommended for calculating steady-state flux distributions, or for calculating a history of reactor states. 3 references. (auth)

18230 SPATIALLY DEPENDENT STOCHASTIC BEHAVIOR OF COUPLED CORE REACTORS. Nagy, Mohamed El-Sayed. Ames, Ia.; Iowa State Univ. (1970). 111p. University Microfilms Order No. 70-18,896.

Thesis.

An analysis of the behavior of the space-dependent spectral-density functions for the thermal group flux of a two-energy group approximation for a one-dimensional model of an Argonaut-type reactor is presented. The input function is assumed to be white noise generated by volume-distributed fission sources. The work describes the effect of changing the thickness and material of the coupling region (internal reflector) on the behavior of the spa-

tially-dependent spectral-density functions and the corresponding coherence function. Graphite, heavy water, and beryllium are considered as internal reflectors. The effect of the fast-removal and thermal-absorption cross sections of the coupling region on the behavior of the spectral-density functions is also investigated. A neutron-wave model is developed and used to explain the trends predicted by the noise model. The results provide a description of the behavior of the "sink frequency" associated with the cross spectrum as a function of the coupling-region parameters. The sink frequency is defined, for a symmetrical reactor, as the frequency at which the cross spectrum passes through zero. For a symmetrical reactor and observation points the cross spectrum is real. It is shown that the sink frequency is sensitive to the size and nuclear properties of the coupling region, decreasing with an increase in size and in removal and absorption cross sections. (Diss. Abstr. Int., B)

18231 NUMERICAL SOLUTION OF THE LINEAR INTEGRAL BOLTZMANN EQUATION. Cullen, Dermott Edward. New York; Columbia Univ. (1969). 364p. University Microfilms Order No. 70-16,998.

Thesis.

The linear integral Boltzmann equation as applied to neutron and photon transport problems normally encountered in reactor core and shield design is investigated. The multi-group approximation is introduced in order to reduce the energy-dependent Boltzmann equation to a set of coupled group-averaged equations. The original problem is then demonstrated to be equivalent to a coupled set of integral equations in which the kernels may be physically related to a noncollision probability. The kernels for the integral equations are studied in detail for the special case of plane and spherical geometries. It is demonstrated that in these cases the kernels are simply related to the well-known exponential integral functions. Numerical techniques for evaluating these kernels are outlined. The kernels are used to obtain numerical solutions to critical and source problems in plane and spherical geometries. By using an iteration technique that is equivalent to a successive collision method, an asymptotic behavior for the flux is demonstrated. This asymptotic form is used to optimize the iteration procedure and to extend analytically the methods outlined to energy-dependent problems. Consideration is then given to further optimizing the method outlined by the use of relaxation techniques. Methods of selecting optimum relaxation factors are considered. Computer codes developed in the course of this work include not only monoenergetic codes involving inhomogeneous media, but also a 100-group anisotropic scattering code. (TSS) (Diss. Abstr. Int., B)

18232 IMPROVED FAST REACTOR SPACE–ENERGY SYNTHESIS. Cockayne, John Edwin. Lafayette, Ind.; Purdue Univ. (1970). 112p. University Microfilms Order No. 70-18,615.

Thesis.

Space–energy synthesis of multigroup diffusion theory is improved by using "realized" spectra, developing a procedure to calculate "realized" spectra, and devising a successive synthesis to yield highly accurate results for two-region fast-reactor problems. Extensive study of a set of spectra representing the blanket showed that accurate results are possible only if the second spectrum in the synthesis is closely realized at some point in the blanket. For two-mode synthesis in a simple core-and-blanket configuration, this spectrum is calculated a priori as the solution of an inhomogeneous zero-dimensional problem. This spectrum is approximately realized at 17 cm into the blanket from the core–blanket interface. The remaining inaccuracies for the good two-mode synthesis were found to have a strong peak near the interface. A factorization technique using an approximate synthesis solution is developed for calculating the spectrum, at any location in the reactor, from a zero-dimensional problem. In the transition area around the interface, this factorized spectrum is substantially better than the good two-mode-synthesis result, and much better than any spectrum calculated for this transition area which is not based on an approximate solution. The availability of "realized" spectra, from an approximate two-spectra solution and the factorization technique, leads to devising a successive synthesis approach where the synthesis is applied twice. The approach results in highly accurate energy-integrated quantities for three-mode (one original and two new) applications to two-region problems. The successive space–energy synthesis has great potential for power-flattened (i.e., multi-region) fast-reactor configurations. (Diss. Abstr. Int., B)

18233 EFFECT OF RANDOM FUEL ELEMENT DISPLACEMENT ON NEUTRON REACTION RATES. Barrett, P. R. (Univ. of New South Wales, Sydney). Atomkernenergie; 16: 191-5 (1970).

The effect of random displacement of fuel elements (induced by, for example, fuel element bowing owing to neutron irradiation) upon neutron fluxes and reaction rates in a lattice cell is examined for the case of an array of a large number of lattice cells in each of which the probability distribution for the fuel element displacement is the same. This is illustrated in the example of a single thermal neutron energy group with a slowing down source that is spatially uniform in the moderator and zero in the fuel, using the collision probability approach to transport theory in the flat flux approximation. It is shown that relatively small magnitude random displacements of the fuel elements can lead to significant variance to mean ratios in the neutron flux levels. (auth)

18234 EFFECTIVE CALCULATION OF ONE-DIMENSIONAL NUCLEAR REACTORS WITHOUT USING MESH METHOD. Glushkov, E. S.; Ponomarev-Stepnoi, N. N.; Petushkova, N. A. At. Energ. (USSR); 29: 370-1(Nov 1970). (In Russian).

A method based on the analytical solution of diffusion type equations with a known right side of the equation is suggested for calculations of one-dimensional nuclear reactors. With the right side of the equation obtained the solutions found for the neutron fluxes were reduced into series according to the spatial harmonics which permitted consequent approximations to be carried out using the source fission neutrons in analytical concept independent of the number of approximations. Calculations made for cylindrical reactors in four-group approximation demanded less time than the existing net-point method and the effective coefficient of neutron breeding is within the order of error of the other system. (R.V.J.)

18235 NEW METHOD FOR DETERMINING THE RESERVE REACTIVITY. Kosaly, Gyorgy (Central Research Inst. for Physics, Budapest). Fiz. Szemle; 20: 253-7(Aug 1970). (In Hungarian).

The problem of reactor neutron economy was examined. The study was based on the determination of the reactivity of a specific region of the core, deriving a statistical weight for the whole reactor. Determination of the available reserve reactivity is of great economic interest because it influences the reloading cycle of the reactor. A model reactor was set up for the calculation, assuming that the reserve reactivity is counteracted by absorbers. Numerical calculations based on the curves obtained from the model yielded values which agreed with data derived from experiments with the ZR-2 reactor of the Central Research Institute for Physics. (TTT)

18236 STUDY ON APPROXIMATE METHODS FOR CALCULATING THE NEUTRON FLUX IN A HETEROGENEOUS REACTOR. Ukai, Seiji (Kyoto Univ.). J. Nucl. Energ.; 479-91(Dec 1970).

A mathematical procedure is presented for the formulation of two typical approximation methods for solving the neutron transport (or diffusion) equation of a heterogeneous reactor, the homogenization method based on the unit cell model and a heterogeneous method. The limitation of their validity is discussed. For these purposes the transport equation is transformed into a set of integral equations whose unknowns are boundary values of neutron flux at interfaces between the moderator and fuel or absorber lumps and whose kernels are Green's functions for homogeneous media composed of the moderator or lump's materials. This transformation also provides a new approximation technique. (auth) (UK)

18237 NUMERICAL SOLUTION OF A SET OF INTEGRAL EQUATIONS ARISING IN THE STUDY OF NUCLEAR REACTORS. Chiarella, C. (New South Wales Univ., Kensington, Australia. Wollongong Univ., College, Australia). pp 491-3 of Proceedings of the Fourth Australian Computer Conference, Adelaide, South Australia, 1969. Vol. 1. Adelaide; Australian Computer Society Inc. (1969).

See CONF-690837.

An algorithm based on the use of Simpson's rule is derived and attention is focused on the problems encountered in the choice of an indexing system and the procedure for changing the step length. A program based on this algorithm has been written for the IBM 360/50H computer and is used to study the feasibility of various reactor systems. (auth) (Australia)

18238 EMPIRICAL EQUATION OF NEUTRON DIFFUSION SYSTEM APPLICATION OF THE EXPERIMENTAL DESIGN TECHNIQUE. Hoshino, Tsutomu (Kyoto Univ.). J. Nucl. Sci. Technol. (Tokyo); 7: 610-14(Dec 1970).

An empirical equation between the cross sections and criticality factor was derived by the technique of experimental design and regression analysis. Factorial experiments taking account of interactions between factors were designed with use made of the orthogonal array. Numerical calculation of a two-group, two-core system was performed and an empirical equation derived by regression analysis, resulting in a criticality factor with acceptable accuracy. 9 references. (auth)

XUM

18239 BINOMIAL FORMULATION OF PROMPT NEUTRON EMISSION PROBABILITY. Hara, Fumio (Tokyo Univ.). J. Nucl. Sci. Technol. (Tokyo); 7: 635-41(Dec 1970).

The prompt neutron emission probability of ^{233}U, ^{235}U, and ^{239}Pu is formulated through the convolution of two binomial distributions derived from a simple model representing the nuclear fission processes. Numerical calculations covering several hundred values of parameters characterizing the above distributions have resulted in a probability distribution in good agreement with the experimental results obtained by B. C. Diven et al. Comparison is made between the newly obtained probability distribution and R. B. Leachman's theoretical values as well as with Poisson's distribution, with results in favor of the present calculations. Statistical testing of curve fitting by means of the Kai-square testing technique was also applied. Physical considerations on the nuclear fission process substantiate the validity of the numerically obtained values for the above mentioned parameters. (auth)

Dynamics

18240 DESCRIPTION OF SPACE-TIME DYNAMIC BEHAVIOR OF NUCLEAR REACTOR SYSTEMS. Rohr, Paul Charles. Troy, N. Y.; Rensselaer Polytechnic Inst. (1970). 178p. University Microfilms Order No. 70-19,949.

Thesis.

A study of semidirect modal synthesis methods with specific applications to the dynamics of nuclear-reactor space-time systems is presented. Green's Function modes are used, and the considerations are limited to one-dimensional slab geometry. Some extensions to other geometries and more energy groups are included. Three formulations—Galerkin, Least Squares Variations, and Discontinuous Variational Method—are studied over a range of static test problems to determine figures of merit that predict how well the formulation uses the information available in the modes and how well the formulation and the modes can synthesize in both space and time. The figures of merit are the eigenvalue perturbation (δk) and a tilt parameter; the former is a measure of the time-dependent behavior of the system as a whole, while the latter is sensitive to the shape of the power distribution at a given time. Based upon these figures of merit, the Discontinuous Variational Method (DVM) performed significantly better over a range of problems than did either of the other methods. Further tests of the DVM included larger size perturbations, localized positive perturbations, and an eigenvalue spectrum analysis that measured the ability of the formulation to predict (synthesize) higher eigenvalues. The ability of the DVM to synthesize peaks in the overtones, where there is no peak in the trial functions, through the use of discontinuities is clearly demonstrated. The final test of the DVM was a series of severe time-dependent maneuvers initiated by rod-ejection accidents. Exact calculations for comparison were provided. Some limitations of the basic method are outlined, and possible improvements to the method are discussed. Some of the time-dependent space-time maneuvers had severe enough perturbations to show the limitation of the Green's Function modes. The sensitivity of the results to the accuracy of the derivative of a trial function at the interface between source and sink regions is evaluated. An indirect method using previously calculated integrals improves the estimate of this derivative. It is also established that, if a formulation has an inherent difficulty in using the information of a particular set of modes, the results are not drastically improved by using the same functional with more modes. (TSS) (Diss. Abstr. Int., B)

18241 EXPECTED NUMBER OF SUBASSEMBLY FAILURES DUE TO HOT SPOT OCCURRENCES. Amendola, A. (Kernforschungszentrum, Karlsruhe, Ger.). Nucl. Sci. Eng.; 43: 239-40(Feb 1971).

The effects of core-wide and local uncertainties upon the expected number of subassemblies in which at least one hot spot occurs are analyzed. It is concluded that assuming all channels to be independent results in a conservative estimate of the overall hot spot probability, but the correlations between the channels cannot be neglected if the expected number of failed elements is assumed as the principal reliability criterion. (H.D.R.)

Experimental Applications

18242 EVALUATION OF PUBLISHED DELAYED-NEUTRON PARAMETERS FOR ^{235}U AND ^{233}U HEAVY WATER SYSTEMS. Church, J. P. (E. I. du Pont de Nemours and Co., Aiken, S. C.). Contract AT(07-2)-1. Nucl. Sci. Eng.; 43: 229-33(Feb 1971).

The results of three different methods used for the determination of delayed-neutron and photoneutron parameters are compared and evaluated. The parameters were simulated by computer for the experimental determinations using chopper, pulse, and saturation irradiations. (H.D.R.)

Reactor Components, Fuels, and Accessories

18243 (TRG-Report-1915) BOWING OF A HEATED ELEMENT COOLED BY FORCED CONVECTION. Rapier, A. C. (United Kingdom Atomic Energy Authority, Sellafield (England). Reactor Group). 1970. 24p. Dep. NTIS (U. S. Sales Only). UK 3s. 6d.

When unsymmetrical conditions exist around a heated element cooled by flow in a channel, there will be temperature variations around its circumference. This will result in a tendency for the hottest side of the element to bow away from its normal axis. Usually a movement in this direction results in a reduction of the heat transfer coefficient and an increase in the local coolant temperature on the hot side, inducing greater temperature differences around the element and further movement. Under some conditions this can lead to complete instability. This problem was previously examined for the case of an element simply supported at each end with reference to fuel elements for nuclear reactors. The generality of previous solutions is extended to cover any channel shape and any number of spans. Explicit functions are derived for the final shape of the element, the temperature distribution along it and the forces on the supports. (auth) (UK)

18244 (WHAN-SA-40) LEAKAGE FROM A CONTAINMENT VESSEL. Hanthorn, Howard E. (WADCO Corp., Richland, Wash.). 11 Nov 1970. Contract AT(45-1)-2170. 15p. (CONF-700816-6). Dep. NTIS.

From 11th AEC Air Cleaning Conference, Richland, Wash.

An attempt was made to obtain a unified expression for leakage flow from a nuclear reactor containment vessel. Such an expression would be useful particularly in investigations of the consequences of postulated reactor accidents occurring within containment vessels. It was found that the curves for leakage rate vs containment vessel overpressure for the three flow regimes (viscous, turbulent, and orifice) were of the same general form and could be fitted with ample accuracy by empirical mathematical formulas of the same type, though the range of flow rate covered was six orders of magnitude. A single empirical formula was obtained covering all three flow regimes with sufficient accuracy for source term calculations without regard to the actual flow regime, between 0.3 and 5 atm overpressure. (auth)

18245 (WHAN-SA-70) CERAMIC FUELS. Evans, E. A.; Sheely, W. F. (WADCO Corp., Richland, Wash.). Oct 1970. Contract AT(45-1)-2170. 36p. (CONF-701035-1). Dep. NTIS.

From Meeting on Education and Research in the Nuclear Fuel Cycle, Norman, Okla.

The advances in the technology of production and testing of oxide fuels are reviewed. Some of the problems in the development of plutonium-enriched ceramic fuels are discussed, and the programs and test facilities involved in plutonium fuel technology are described. (H.D.R.)

18246 (WHAN-SA-80) ENERGY TRANSPORT IN OXIDE FUEL MATERIALS. Christensen, J. A. (WADCO Corp., Richland, Wash.). 9 Nov 1970. Contract AT(45-1)-2170. 6p. (CONF-701033-1). Dep. NTIS.

From US-UK Exchange Discussion on Plutonium, Chicago, Ill.

The laser flash diffusivity technique used to measure the thermal conductivity of PuO_2–UO_2 is described. Measured values for different compositions and temperatures are analyzed. (D.C.C.)

18247 (WHAN-SA-96) MOLYBDENUM DISTRIBUTION IN IRRADIATED OXIDE FUELS. Lawrence, L. A.; Christensen, J. A. (Battelle-Northwest, Richland, Wash. Pacific Northwest Lab. WADCO Corp., Richland, Wash.). 3 Nov 1970. Contracts AT(45-1)-1830; AT(45-1)-2170. 14p. (CONF-701102-13). Dep. NTIS.

From Meeting of the American Nuclear Society, Washington, D. C.

Electron microprobe analyses of metallic fission product inclusions in mixed-oxide fuels for molybdenum have been performed. A decrease in the molybdenum concentration of metallic fission product inclusions moving toward the fuel center was measured. Because of the relatively short half-life of the only gamma active molybdenum isotope present (^{99}Mo, $\tau_{\frac{1}{2}}$ = 67 hours) gamma-

ray microbeam scanning and similar experimental techniques had not previously been possible. Because of the close proximity of the special irradiation facilities at the Hanford reactors to the BNW Radiometallurgy Laboratory, it was possible to reduce the elapsed time from sample discharge to postirradiation examination to less than one week. This short elapsed time permitted gamma-ray spectrometric techniques to be used for measuring molybdenum activity profiles in several irradiated UO_2–25 wt % PuO_2 fuel pins. 5 references. (auth)

18248 GAMMA-SPECTROMETRIC BURNUP DETERMINATION IN REACTOR FUEL RODS. Hiller, S. (Siemens AG, Erlangen, Ger.). Kerntechnik; 12: 485-90(Nov 1970). (In German and English).

The description of an experimental arrangement for the nondestructive γ-spectrometric determination of burnup in reactor fuel rods is followed by a discussion of the possibilities of use of scintillation counters and of Ge(Li) diodes. The scintillation counter is suitable for measuring the relative burnup profiles of fuel rods, whereas the Ge(Li) diode is used for absolute burnup determinations. After the arrangement was calibrated with fuel rod shaped standard sources, the burnup at one point of one fuel rod was determined redundantly via the Cs 137, Ce 144 and Zr 95 gamma intensities and was compared with values determined radiochemically. The migration of Cs 137 was demonstrated and its effect on the burnup determination was investigated. (auth)

18249 IMPROVEMENTS IN OR RELATING TO NUCLEAR REACTOR FUEL ELEMENTS. Williams, Albert Etheridge; Linkison, William Simpson (to United Kingdom Atomic Energy Authority). British Patent 1,219,264. 13 Jan 1971. Filed 12 Apr 1967.

Reference is made to cluster type fuel elements, having spaced parallel fuel pins comprising elongated sheaths containing ceramic fuel. Fuel pins of this type are subject to the disadvantage that, if a temperature excursion of the reactor should occur, there is a possibility that the fuel material in the center region of the pins may melt and cause reorientation of the fuel within the sheath; due to this the characteristics of the reactor core may change and give rise to a power excursion. Differential thermal expansion between fuel material and sheath could also cause a change in the temperature coefficient of reactivity. In the fuel element described the sheath has a number of longitudinally spaced regions of reduced diameter, the fuel material at these regions having a decreased heat rating, with less tendency to melt if a temperature excursion should occur, and providing a barrier against fuel reorientation as well as assisting in preventing large changes in temperature coefficient due to differential thermal expansion. The fuel material, at least in the regions of reduced diameter, should be in vibrocompacted powder form. Alternatively, the bulk of the fuel may be of pellet form, with the vibrocompacted fuel powder at the reduced diameter regions separated from the pellet stacks by thin metal disks. Methods of manufacture are described. (UK)

18250 NUCLEAR REACTOR FUEL ELEMENT HOLD-DOWN AND TIGHTENING MECHANISM. Johnson, Melvin L. (to United States Atomic Energy Commission). U. S. Patent 3,549,491. 22 Dec 1970. Filed 21 Nov 1968.

A positive means is described for preventing the hydraulic forces of liquid coolant from lifting fuel elements from their intended location in the core of a nuclear reactor, and to prevent disturbances of the core neutronics by preventing lateral motion or vibration of the fuel elements. This is accomplished by a bayonet lock which holds down a central fuel element of a cluster of elements, by mechanically activated pads which load the central element outward against the adjacent elements to prevent lateral motion, and by retractable arms which extend over the adjacent elements to prevent their upward movement. (auth)

18251 DEVELOPMENT OF EMERGENCY AND CONTROL DRIVES AND ROD-POSITION INDICATORS FOR NUCLEAR REACTORS IN THE CENTRAL RESEARCH INSTITUTE OF PHYSICS. Muzsnay, L.; Probald, V.; Bollok, L.; Zobor, E. (Central Research Inst. for Physics, Budapest). Kernenergie; 13: 360-6(Nov 1970). (In German).

The design of the servomechanisms and rod-position indicators provided for the drive and control of control and emergency rods of reactors is described. The experience gathered during development and testing is reported. 6 references. (auth)

18252 DATA OF HEAT TRANSFER TO WATER IN ONCE-THROUGH BOILERS AND REACTOR CHANNELS UNDER PRESSURES OF 170 TO 215 BAR. Herkenrath H.; Moerk-Moerkenstein, P. (EURATOM, Ispra, Italy). Atomkernenergie; 16: 207-11(1970). (In German).

The layout of once-through-boilers and reactor channels requires data of the heat transfer to water. In two working-tables experimental heat transfer coefficients to water at forced flow and pressures of 170 to 215 bar are grouped. The heat transfer coefficients and the onset of "heat transfer crisis" for various tube diameters, pressures, mass- and heat flux densities are obtained. 4 references. (auth)

18253 TESTS AND RESEARCHES CONCERNED WITH STRUCTURAL DESIGN CRITERIA FOR PRIMARY COOLANT PIPING SYSTEM OF NUCLEAR REACTOR. 2. STRAIN-CONTROLLED LOW-CYCLE FATIGUE STRENGTH OF SMALL SPECIMENS. Yosetsu Gijutsu; 18: No. 8, 145-52(Aug 1970). (In Japanese).

The experimental results of the thermal fatigue strength and low cycle fatigue strength of steel specimens at high temperature are presented. The specimens were A302B steel and AISI 304L steel. The specimens were made from each base metal and weld metal, and the shape of the fatigue test specimens was a thin-walled cylinder. Thermal cycle was applied by the electrical heating of the specimens and compressed air cooling of the inside the specimens. Strain controlled fatigue test at room and high temperature and thermal fatigue test were carried out. Strain, stress, temperature and number of cycles were measured. The test results are shown in diagrams and discussed. The coefficient of fatigue strength reduction due to the presence of welded joints is 1.5 to 3.0 for 304L steel. The strength of A302B steel welds is higher than the base metal. (Japan)

18254 TESTS AND RESEARCHES CONCERNED WITH STRUCTURAL DESIGN CRITERIA FOR PRIMARY COOLANT PIPING SYSTEM OF NUCLEAR REACTOR. 2. STRAIN-CONTROLLED LOW-CYCLE FATIGUE STRENGTH OF SMALL SPECIMENS. Yosetsu Gijutsu; 18: No. 5, 125-34(May 1970). (In Japanese).

Notch effect for strain-controlled low-cycle fatigue strength of matrix and weld joint materials at room temperature is examined. Hour-glass and circumferentially V-notched (60°) specimens were used. The notch radius of latter type specimens was changed by five stages. For weld joint materials, weld method was changed (hand, submerged, slag welding). Tests were performed within the life of 10^5 cycles by diametral-strain controlling method. Strain ratio was −1. Test data were proposed by many figures and tables. The results are reported. (Japan)

18255 TESTS AND RESEARCHES CONCERNED WITH STRUCTURAL DESIGN CRITERIA FOR PRIMARY COOLANT PIPING SYSTEM OF NUCLEAR REACTOR. 2. STRAIN-CONTROLLED LOW-CYCLE FATIGUE STRENGTH OF SMALL SPECIMENS. Yosetsu Gijutsu; 18: No. 7, 135-46(Jul 1970). (In Japanese).

The influence of strain ratio and notch ductility for low-cycle fatigue of reactor cooling system piping is analyzed. The influence of strain-ratio is described and test results are presented. The strain-controlled low-cycle fatigue characteristics at low temperature where notch-ductility decreases is researched. Results are presented. (Japan)

1825б TEST CONCERNING THE STRUCTURAL DESIGN CRITERIA FOR THE PRIMARY COOLANT PIPING OF A NUCLEAR REACTOR. Yosetsu Gijutsu; 18: No. 4, 148-50(Apr 1970). (In Japanese).

Low cycle fatigue and thermal fatigue fracture among the fracture modes for primary coolant system pipings is measured. Fatigue tests were performed for A302B and AISI 304 steel. (Japan)

18257 APPLICATION OF THE FINITE ELEMENT METHOD TO PRESSURE VESSEL DESIGN. Kawai, Tadahiko (Tokyo Univ.). Koatsuryoku; 8: 1877-85(Jan 1970). (In Japanese).

The utilization of the finite element method for the rationalization of pressure vessel design is mentioned. The theory of shell structure based on Kirchhoff–Love's assumption, and the outline of shell structure analysis by the displacement method are explained, and the advantages and disadvantages of the several finite elements and their displacement functions used for shell structure analysis are mentioned. As an example of the shell structure analysis by the finite element method, the computed results of the following problems are analyzed: stress concentration of a cylindrical shell having circular holes; problem about the bending deformation of a cylindrical shell; and stress distribution of a cylindrical shell having slits. (Japan)

18270 (CONF-701204-2) POTENTIOMETRIC STUDY OF THE DISSOCIATION OF THE $AlCl_4^-$ ION IN MOLTEN SODIUM CHLOROALUMINATES AT TEMPERATURES 175 TO 400°C. Torsi, G.; Mamantov, G. (Tennessee Univ., Knoxville. Dept. of Chemistry). [1970]. 11p. Dep. NTIS.
From Regional Meeting of the American Chemical Society, New Orleans, La.

18271 (COO-38-727) INFRARED, MOESSBAUER AND NMR STUDIES OF SOME STANNOUS CHLORIDE AND BROMIDE COMPLEXES OF THIOUREA AND TETRAMETHYLTHIOUREA. Lefelhocz, John F. (Virginia Commonwealth Univ., Richmond. Notre Dame Univ., Ind.). [1969]. 36p. (CONF-700114-2). Dep. NTIS.
From 6th Moessbauer Symposium, Chicago, Ill.

18272 (COO-841-22) THERMOTRANSPORT OF SOLUTES IN LIQUID SILVER. Bhat, B. N.; Swalin, R. A. (Minnesota Univ., Minneapolis. Dept. of Chemical Engineering and Materials Science). [1971]. 29p. Dep. NTIS.

18273 (COO-1018-1207) QUARTERLY TECHNICAL PROGRESS REPORT [ON COMPUTERS], JULY, AUGUST, SEPTEMBER 1970. (Illinois Univ., Urbana. Dept. of Computer Science). Contracts AT(11-1)-1018; AT(11-1)-1469. 290p. (COO-1469-172). Dep. NTIS.

18274 (COO-1198-778) TEMPERATURE CHANGES IN THIN FILMS DURING GROWTH BY PHYSICAL VAPOR DEPOSITION. I. THEORETICAL. Thornburg, D. D.; Wayman, C. M. (Illinois Univ., Urbana). [1970]. Contract AT(11-1)-1198. 24p. Dep. NTIS.

18275 (COO-1383-11) INTERACTIONS ON METALLIC SURFACES. Progress Report, February 1, 1970-February 1, 1971. Gomer, Robert (Chicago Univ., Ill.). Contract AT(11-1)-1383. 5p. Dep. NTIS.

18276 (COO-1422-78) IMPROVED BONE STANDARD CONTAINING DIPOTASSIUM HYDROGEN PHOSPHATE SOLUTION FOR THE INTERCOMPARISON OF DIFFERENT TRANSMISSION BONE SCANNING SYSTEMS. Witt, R. M.; Cameron, J. R. (Wisconsin Univ., Madison. Dept. of Radiology). [1970]. Contract AT(11-1)-1422. 6p. Dep. CFSTI.

18277 (COO-1790-3) "IN-SITU" ELECTRON MICROSCOPE INVESTIGATION OF THE NUCLEATION AND GROWTH OF SPUTTERED THIN FILMS. Annual Technical Progress Report, III. Hutchinson, Thos. E.; Sherman, Dudley (Minnesota Univ., Minneapolis. Dept. of Chemical Engineering and Materials Science). 22 Jan 1971. 26p. Dep. NTIS.

18278 (CTC-45) FFT-W: A PROGRAM FOR FAST FOURIER TRANSFORM BAND-PASS FILTERING OF LARGE AMOUNTS OF DATA. Long, E. C. (Union Carbide Corp., Oak Ridge, Tenn. Computing Technology Center). 22 Feb 1971. Contract W-7405-eng-26. 53p. Dep. NTIS.

18279 (CU-3957-10) THE EFFECT OF CHEMICAL MODIFICATIONS OF DNA ON ITS MACROMOLECULAR STRUCTURE. Krasna, Alvin I. (Columbia Univ., New York. Dept. of Biochemistry). [1970]. Contract AT(30-1)-3957. 20p. Dep. NTIS.

18280 (EGG-1183-530) STUDY OF DIFFRACTION ANL DRAG IN THE MODEL 739 FRAMING CAMERA. Technical Report Number B-4178. Pierson, Arthur (EG and G, Inc., Bedford, Mass.). Apr 1970. Contract AT(29-1)-1183. 23p. Dep. NTIS.

18281 (EGG-1183-1509) FREQUENCY INTERFERENCE PREDICTION: CDC-6400 COMPUTER PROGRAM. Tech Report No. L-1023. (EG and G, Inc., Las Vegas, Nev.). Feb 1971. 66p. Dep. NTIS.

18282 (LA-4550) APPARATUS FOR PLASTICITY EXPERIMENTS UNDER BIAXIAL STRESSES. Hecker, S. S.; Strait, B. G.; Lang, R. M. (Los Alamos Scientific Lab., N. Mex.). Aug 1970. Contract W-7405-eng-36. 8p. Dep. NTIS.

18283 (MIT-2241-58) GLOBAL RADIATIVE HEATING OF THE EARTH'S ATMOSPHERE. Report No. 24. Dopplick, Thomas Gilbert (Massachusetts Inst. of Tech., Cambridge. Dept. of Meteorology). 15 Apr 1970. Contract AT(30-1)-2241. 36p. Dep. NTIS.

18284 (NYO-3699-50) INFLUENCE OF TWO-BODY POTENTIAL ON THE GROUND-STATE PROPERTIES OF SOLID HELIUM. Hansen, Jean-Pierre (Cornell Univ., Ithaca, N. Y. Lab. of Atomic and Solid State Physics). Dec 1970. 7p. Dep. NTIS.

18285 (NYO-3951-3) LOW TEMPERATURE PROPERTIES OF LIQUID AND SOLID HELIUM. Annual Progress Report, III, December 1, 1969-November 30, 1970. Cohen, H. Daniel (Brandeis Univ., Waltham, Mass. Dept. of Physics). Contract AT(30-1)-3951. 12p. Dep. NTIS.

18286 (NYO-3965-3) PROGRESS REPORT [ON DEUTERON MAGNETIC RESONANCE]. Fung, B. M. (Tufts Univ., Medford, Mass. Dept. of Chemistry). 1 Feb 1971. Contract AT(30-1)-3965. 3p. Dep. NTIS.

18287 (ORNL-4641) ECOLOGY AND RESOURCE ECONOMICS: AN INTEGRATION AND APPLICATION OF THEORY TO

ENVIRONMENTAL DILEMMAS. Chapman, Duane; O'Neill, Robert V. (Oak Ridge National Lab., Tenn.). Dec 1970. Contract W-7405-eng-26. 38p. Dep. NTIS.

18288 (ORNL–4644) LINEARLY CONSTRAINED NONLINEAR PROGRAMMING ALGORITHM. Westley, G. W. (Oak Ridge National Lab., Tenn.). Jan 1971. Contract W-7405-eng-26. 61p. Dep. NTIS.

18289 (ORNL-IBP–70-4) INTRODUCTION TO THE NUMERICAL SOLUTION OF DIFFERENTIAL EQUATIONS IN ECOSYSTEM MODELS. O'Neill, Robert V. (Oak Ridge National Lab., Tenn.). Dec 1970. Contract W-7405-eng-26. 29p. Dep. NTIS.

18290 (ORNL-NSF-EP–1) MERCURY IN THE ENVIRONMENT: THE HUMAN ELEMENT. Wallace, Robin A.; Fulkerson, William; Shults, Wilbur D.; Lyon, William S. (Oak Ridge National Lab., Tenn.). Jan 1971. Contract W-7405-eng-26. 61p. Dep. NTIS.

18291 (ORNL-TM–2028) A PROPOSITIONAL INVENTORY OF THE EMPIRICAL WORK INVOLVING FOREIGN AFFAIRS AND NATIONAL SECURITY ATTITUDES, 1960–1966: A NON-EVALUATIVE REVIEW. Atkinson, Tom (Oak Ridge National Lab., Tenn.). 24 Oct 1967. Contract W-7405-eng-26. 61p. Dep. NTIS.

18292 (ORNL-TM–3208) HEATING3: AN IBM 360 HEAT CONDUCTION PROGRAM. Turner, W. D.; Siman-Tov, M. (Oak Ridge National Lab., Tenn.). Feb 1971. 93p. Dep. NTIS.

18293 (ORNL-TM–3218) BASIC AND MISSION RESEARCH IN THE BIOLOGICAL SCIENCES AT ORNL. Mazur, Peter (Oak Ridge National Lab.). Nov 1970. Contract W-7405-eng-26. 120p. Dep. NTIS.

18294 (ORNL-TM–3287) HISS: HYBRID INTERFACE SUBSTITUTE SUBROUTINES FOR USE IN DEBUGGING HYBRID PROGRAMS. Patterson, H.; Burke, O. W.; Booth, R. S. (Oak Ridge National Lab., Tenn.). 5 Feb 1971. 14p. Dep. NTIS.

18295 (ORNL-tr–2187) PROPERTIES IN SOLUTION IN FUSED SODIUM TETRACHLOROALUMINATE. I. "ACID-BASE" SYSTEMS. Tremillon, Bernard; Letisse, Gerard. Translated for Oak Ridge National Lab., Tenn., from J. Electroanal. Chem., 17: 371-86(1968). 24p. CFSTI.

18296 (ORNL-tr–2425) ON THE THERMAL STABILITY OF ETA-CARBIDES. Ettmayer, P.; Suchentrunk, R. Translated by R. Gregg Mansfield (Oak Ridge National Lab., Tenn.), from Monatsh. Chem.; 101: 1098-1103(1970). 5p. Dep. NTIS.

18297 (ORO–2124-24) DIFFERENTIAL SCANNING CALORIMETRY AND THERMOGRAVIMETRIC ANALYSIS OF SOME METAL CHELATES AND SOME ADDUCTS OF THESE METAL CHELATES. Tincher, Gabriel Lynn (Kentucky Univ., Lexington). 1970. 48p. Dep. NTIS.
Thesis.

18298 (ORO–2741-24) PROGRESS REPORT [ON BIOLUMINESCENCE], 1970–71. (Georgia Univ., Athens. Dept. of Biochemistry). Contract AT(40-1)-2741. 4p. Dep. NTIS.

18299 (ORO–2755-25) SURFACE PROPERTIES OF MAGNETIC MATERIALS. Progress Report No. 10, March 1, 1969–May 31, 1970. Final Report. Scheibner, E. J. (Georgia Inst. of Tech., Atlanta. Engineering Experiment Station). Contract AT(40-1)-2755. 36p. Dep. NTIS.

18300 (ORO–3108-107) FCC-BCC TRANSFORMATION IN THIN IRON FILMS. Olsen, Gregory Hammond (Virginia Univ., Charlottesville. School of Engineering and Applied Science). Dec 1970. 136p. Dep. NTIS.
Thesis.

18301 (ORO–3542-8) THE CHEMISTRY OF RUTHENIUM COMPLEXES. Annual Report. Mercer, Edward E. (South Carolina Univ., Columbia. Dept. of Chemistry). [1970]. 7p. Dep. NTIS.

18302 (ORO–3792-3) DEVELOPMENTAL APPROACH TO THE STUDY OF IMMUNOLOGIC TOLERANCE. Progress Report, April 1–December 31, 1970. Hyde, Richard M. (Oklahoma Univ., Oklahoma City. Medical Center). Contract AT(40-1)-3792. 15p. Dep. NTIS.

18303 (RFP–1626) METHOD FOR PREPARING LOW CONCENTRATION STANDARD GAS SAMPLES. Fehringer, Daniel J. (Dow Chemical Co., Golden, Colo. Rocky Flats Div.). 12 Feb 1971. Contract AT(29-1)-1106. 3p. Dep. NTIS.

18304 (RLO–1725-187) PRIMARY PRODUCTIVITY STUDIES USING MERCHANT VESSELS IN THE NORTH PACIFIC OCEAN. Anderson, G. C.; Munson, R. E. (Washingon Univ., Seattle. Dept. of Oceanography). [1970]. 15p. Dep. NTIS.

18305 (SC-CR–70-6125-B) STUDY OF TURBULENT BOUNDARY LAYER MODELS. PART II. MEAN TURBULENT FIELD CLOSURE. Mellor, George L.; Herring, H. James (Princeton Univ., N. J.). Jan 1971. Contract 48-7837. 46p. Dep. NTIS.
For Sandia Corp., Albuquerque, N. Mex.
Supersedes SC-CR–70-6125.

18306 (SC-DC–71-3664) TECHNIQUE FOR OBTAINING SEA ICE THICKNESS MEASUREMENTS FROM AIRCRAFT. McIntosh, J. A. (Coast Guard [Washington, D. C.]); Young, C. Wayne (Sandia Labs., Albuquerque, N. Mex.). [1970]. 8p. (CONF-710303–1). Dep. NTIS.
From Offshore Technology Conference, Houston, Tex.

18307 (SC-R–70-4211) ENVIRONMENTAL ENGINEERING ABSTRACTS. (Sandia Labs., Albuquerque, N. Mex.). Sept-Oct 1970. 10p. Dep. NTIS.

18308 (SC-R–70-4339) EXCITATION OF INTERNAL CIRCUITRY BY THE PROPAGATION OF AN ELECTROMAGNETIC FIELD THROUGH A TRANSVERSE SLOT IN A MISSILE SKIN. Harrison, Charles W. Jr. (Sandia Labs., Albuquerque, N. Mex.); King, Ronold W. P. (Harvard Univ., Cambridge, Mass.). Oct 1970. 18p. Dep. NTIS.

18309 (SC-RR–70-722) BODY FORCE EFFECTS ON THE STABILITY OF A LIQUID FILM. Nayfeh, Ali Hasan (Aerotherm Corp., Mountain View, Calif.); Saric, William S. (Sandia Labs., Albuquerque, N. Mex.). Nov 1970. 38p. Dep. NTIS.

18310 (SC-T–71-3007) THE NECESSARY CONDITION FOR THE DETACHMENT (SEPARATION) OF A 3-DIMENSIONAL BOUNDARY LAYER. Bam-Zelikovich, G. M. Translated by Marcel I. Weinreich (Sandia Labs., Albuquerque, N. Mex.), from Izv. Akad. Nauk SSSR, Mekh. Zhidk. Gaza; No. 2, 109–13(1970). 16p. Dep. NTIS.

18311 (SCL-DR–70-272) DISPLT USERS' MANUAL. Barker, B. E. (Sandia Labs., Livermore, Calif.). Oct 1970. Contract AT(29-1)-789. 16p. Dep. NTIS.

18312 (TID–3761) BIBLIOGRAPHIES OF ATOMIC ENERGY LITERATURE, Issued or in Progress During the Period October–December 1970. (Division of Technical Information Extension (AEC), Oak Ridge, Tenn.). 10p. NTIS.

18313 (TID–25642) MARINE GEOCHEMICAL CYCLE OF CHROMIUM AND MOLYBDENUM. Bertine, Kathe K. (Yale Univ., New Haven, Conn.). 1970. Contract AT(30-1)-2912. 71p. Dep. NTIS.
Thesis.

18314 (TID–25652) KINETIC, MAGNETIC, AND MOESSBAUER STUDIES ON PORPHYRIN SYSTEMS. Progress Report, April 15, 1969–April 14, 1970. Hambright, Peter (Howard Univ., Washington, D. C. Dept. of Chemistry). 12 Jan 1971. Contract AT-(40-1)-4047. 12p. Dep. NTIS.

18315 (UCLA–12-804) FATTY ACID UPTAKE BY THE BRAIN. V. INCORPORATION OF LINOLENIC ACID 1-^{14}C INTO ADULT RAT BRAIN. Dhopeshwarkar, G. A.; Subramanian, Carole; Mead, James F. (California Univ., Los Angeles. Lab. of Nuclear Medicine and Radiation Biology). [1970]. Contract AT-04-1-GEN-12. 12p. Dep. NTIS.

18316 (UCLA–12-806) ABSORPTION AND CIRCULAR DICHROISM SPECTRA OF RIBONUCLEASE-S AT 77°K. Horwitz, Joseph; Strickland, E. Hardin (California Univ., Los Angeles. Lab. of Nuclear Medicine and Radiation Biology). [1970]. Contract AT(04-1)-Gen-12. 24p. Dep. NTIS.

18317 (UCLA–12-807) IN VITRO STUDIES OF BEATING HEART CELLS IN CULTURE. XIV. PROTEIN CHANGES AND MYOSIN SYNTHESIS, STUDIED BY GEL ELECTROPHORESIS. Bieleski, R. L.; Desmond, W. J.; Harary, Isaac (California Univ., Los Angeles). [1970]. Contract AT(04-3)-Gen-12. 33p. Dep. NTIS.

18318 (UCLA–12-808) IDENTIFICATION OF PURE MYOSIN AS JUDGED BY RADIOACTIVE PURITY CRITERIA. Desmond, Walter J. Jr.; Bieleski, R. L.; Harary, Isaac (California Univ., Los Angeles). [1971]. Contract AT(04-1)-Gen-12. 18p. Dep. NTIS.

XUM

18319 (UCLA-12-811) RADIAL TRANSPORT OF CALCIUM IN CORN ROOTS. Yu, Grace Hu; Lunt, O. R. (California Univ., Los Angeles). [1970]. Contract AT(04-1)-Gen-12. 29p. Dep. NTIS.

18320 (UCRL-19654) MOLECULAR BEAM KINETICS. Parrish, David D. (California Univ., Berkeley. Lawrence Radiation Lab.). Oct 1970. Contract W-7405-eng-48. 244p. Dep. NTIS.
Thesis.

18321 (UCRL-19958) BEHAVIOR OF CHLORELLA PYRENOIDOSA IN STEADY STATE CONTINUOUS CULTURE. Dabes, Joseph N.; Wilke, Charles R.; Sauer, Kenneth H. (California Univ., Berkeley. Lawrence Radiation Lab.). Aug 1970. Contract W-7405-eng-48. 184p. Dep. NTIS.
Thesis. Submitted by Joseph N. Dabes.

18322 (UCRL-20219) BIOPHYSICAL STUDIES OF SPERMATOZOA. Pistenma, David Andrew (California Univ., Berkeley. Lawrence Radiation Lab.). Dec 1970. Contract W-7405-eng-48. 402p. Dep. NTIS.
Thesis.

18323 (UCRL-20377) ELECTRONIC STRUCTURE AND DIELECTRIC PROPERTIES OF CUBIC SEMICONDUCTORS. Walker, John P. (California Univ., Berkeley. Lawrence Radiation Lab.). Nov 1970. Contract W-7405-eng-48. 114p. Dep. NTIS.
Thesis.

18324 (UCRL-Trans-10502) PHYSICAL NATURE OF THE DENSITY OF IGNEOUS AND METAMORPHIC ROCKS AND ITS PHYSICAL SIGNIFICANCE. Zhdanov, V. V. Translated by A. M. Mincer for Univ. of California Lawrence Radiation Lab., Livermore, from Fiziko-Mekhanicheskie Syoistva Gornykh Porod Verkhnei Chasti Zemnoi Kory, November 30-December 4, 1964, Moscow. 24p. (CONF-641140-1). Dep. NTIS.

18325 (UCRL-Trans-10506) RATE EQUATION FOR A THERMAL DECOMPOSITION REACTION OF THE $A_{(s)} \rightleftharpoons B_{(s)} + C_{(g)}$ TYPE OCCURRING IN THE DIFFUSION-KINETIC REGION. Pysiak, Ya. Translated by A. M. A. Mincer for Univ. of California, Lawrence Radiation Lab., Livermore, from Dokl. Akad. Nauk BSSR; 14: 131-3(1970). 7p. Dep. CFSTI.

18326 (UCRL-Trans-10507) X-RAY FLASH STUDIES OF SHOCK WAVES PRODUCED FROM A LIQUID FROZEN BY SHOCK-WAVE PROCESSES. Schaafs, W.; Krehl, P. Translated by B. Thayne for Univ. of California, Lawrence Radiation Lab., Livermore, from Acustica; 23: 99-107(1970). 26p. Dep. NTIS.

18327 (UCSD-34-P-143-28) OBSERVATION OF THE STATIC MAGNETISM OF PURE METALLIC COPPER IN LOW MAGNETIC FIELDS. Hirschkoff, E. C.; Symko, O. G.; Vant-Hull, L. L.; Wheatley, J. C. (California Univ., La Jolla, San Diego. Dept. of Physics). [1969]. Contract AT(04-3)-34. 22p. Dep. NTIS.

18328 (UCSD-34-P-143-34) ENAMEL: MAGNETIC THERMOMETER USEFUL INTO THE MILLIDEGREE REGION. Hirschkoff, E. C.; Symko, O. G.; Wheatley, J. C. (California Univ., La Jolla, San Diego. Dept. of Physics). [1970]. Contract AT-(04-3)-34. 10p. Dep. NTIS.

18329 (UCSD-34-P-143-35) THERMAL RESISTANCE BETWEEN POWDERED CERIUM MAGNESIUM NITRATE AND LIQUID HELIUM AT VERY LOW TEMPERATURES. Black, W. C.; Mota, A. C.; Wheatley, J. C.; Bishop, J. H.; Brewster, P. M. (California Univ., La Jolla, San Diego). [1970]. Contract AT-(04-3)-34. 13p. Dep. NTIS.

18330 (USC-113-P-17-X-12) TRITIUM INCORPORATION INTO THE NATURAL NAPHTHOQUINONE OF M. PHLEI. Final Report, September 1, 1968-August 31, 1969. Brodie, Arnold F. (University of Southern California, Los Angeles. Dept. of Biochemistry). 30 Dec 1969. Contract AT(11-1)-113. 9p. Dep. NTIS.

18331 (WANL-TME-1951) THE SIMPLOT PROGRAM: COMPUTERIZED PLOTTING ROUTINE AND SIMULATION MODEL EVALUATES FAULT TREES AND RELIABILITY BLOCK DIAGRAMS. Moran, L. L.; Wagner, G. L.; Weaver, W. O. (Westinghouse Electric Corp., Pittsburgh, Pa. Astronuclear Lab.). Sep 1969. 61p. Dep. NTIS.

18332 NUCLEAR INDUSTRY, 1970. Washington, D. C.; Atomic Energy Commission, Division of Industrial Participation (1970). 396p. GPO $2.75.

18333 NUCLEAR INDUSTRY, 1969. Washington, D. C.; Atomic Energy Commission, Division of Industrial Participation (1969). 353p. GPO $2.50.

CORPORATE AUTHOR INDEX

In the Corporate Author Index, technical report literature is indexed by the organization or institution responsible for issuing the report. Entries are given for all report literature and for published literature for which a corporate author approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate author gives the publication title and the *NSA* volume and abstract numbers. Report numbers, where applicable, are given in parentheses at the end of the entry.

A

ACADEMY OF NATURAL SCIENCES OF PHILADELPHIA, PA. DEPT. OF LIMNOLOGY.
Summary of studies on Savannah River, 1951--1970 for E. I. du Pont de Nemours and Co, 25:18225 (TID-25634)

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, PARIS (FRANCE).
Conference of the AGARD propulsion and energetics, Florence, Italy, 9/70, 25:16397 (AGARD-CP-73-71)

AEROSPACE CORP., EL SEGUNDO, CALIF.
Acceleration mechanism for neutron production in Z-pinch discharges, 25:17205 (AD-712692)
Basic processes and cross sections in proton auroras, 25:16887 (AD-713691)
Observation of Early-type stars from OGO-VI, 25:16626 (AD-712691)
Review of Ti--6Al--6V--2Sn fatigue behavior, 25:16436 (AD-710635)
Variation in O VII x-ray line emission from the solar corona, 25:16688 (AD-713112)

AEROTHERM CORP., MOUNTAIN VIEW, CALIF.
Body force effects on the stability of a liquid film, 25:18309 (SC-RR-70-722)

AGRICULTURAL RESEARCH SERVICE, BELTSVILLE, MD.
Methods and equipment for irradiating insects, 25:16285 (CONF-701202-1)

AIR FORCE CAMBRIDGE RESEARCH LABS., L. G. HANSCOM FIELD, MASS.
First-order prediction model of total-electron-content group path delay for midlatitude ionosphere, 25:16880 (AD-711365)

AKADEMIYA NAUK SSSR, MOSCOW. INSTITUT ATOMNOI ENERGII.
Charge-exchange experiment with a fast plasma bunch in the INES installation, 25:17213 (UCRL-Trans-10497)
Radiation--thermal decomposition of highly fluorinated liquid and perfluorobenzene, 25:15661 (BNL-tr-394)

AKADEMIYA NAUK SSSR, MOSCOW. INSTITUT FIZIKI.
Compensation of resonance perturbations of a stellarator magnetic field, 25:17219 (CTO-741)
Influence of resonance structure of magnetic field on containment of collisionless plasma in Tor-1 stellarator, 25:17123 (CTO-740)
New scheme for a double-turn stellarator. preprint no. 31, 25:17208 (LA-tr-70-22)

AKADEMIYA NAUK SSSR, NOVOSIBIRSK. INSTITUT YADERNOI FIZIKI.
Selection of optimal parameters for stellarator magnetic systems, 25:17207 (IYAF-8-70)

AKADEMIYA NAUK UKRAINSKOI SSR, KHARKOV. FIZIKO-TEKHNICHESKII INSTITUT.
Problems of beam optics in multisection 2-GeV electron Linac, 25:17615 (SLAC-Trans-128)
Structure of electron bunches from an injector with stepped variation of the wave phase velocity, 25:17614 (SLAC-Trans-127)

AMES LAB., IOWA.
Ceramic Engineering Division, 25:16569 (IS-2300, pp 1-5)
Chemical Engineering Division, 25:15561 (IS-2300, pp 7-20)
Chemistry Division, 25:15562 (IS-2300, pp 21-89)
Mathematics and Computer Division, 25:17326 (IS-2300, pp 90-100)
Metallurgy Division, 25:16398 (IS-2300, pp 101-86)
Physics Division, 25:17403 (IS-2300, pp 187-251)
Prog. rpt. on ceramic engineering, chemical engineering, chemistry, mathematics and computer science, metallurgy, physics, and reactors, annual, 7/69--6/70, 25:18174 (IS-2300)
Reactor Division, 25:18175 (IS-2300, pp 253-73)

ARGONNE CANCER RESEARCH HOSPITAL, CHICAGO, ILL.
Prog. rpt., semiannual, 9/70, 25:16234 (ACRH-34)

ARGONNE NATIONAL LAB., IDAHO FALLS, IDAHO.
Postirradiation examination of tantalum cladding from photoneutron startup sources for EBR-II, 25:16544 (ANL-EBR-31)

ARGONNE NATIONAL LAB., ILL.
Absolute slow neutron measurements with solid state track recorders, 25:15879 (ANL-7760(Pt.1), pp 57-66)
Analysis of the response of Ge(Li) and Si(Li) detectors to 46.5-keV gamma ray of ^{210}Pb, 25:15878 (ANL-7760(Pt.1), pp 28-32)
Cesium-137 in various Chicago foods (collected month October 1970), 25:16133 (HASL-239, pp III.36-9)
Code for calculating effluent air temperatures from a sand filter, 25:18166 (ANL-7687)
Curium-244 and ^{148}Sm--^{148}Pm x-ray sources, 25:15835 (ANL-7760(Pt.1), pp 33-5)
Design, analysis, and construction of EBR-II primary tank and associated structures, 25:18121 (ANL-6922)
Dual loop terms and counterterms by means of their projective group, 25:17583 (COO-264-567)
Efficient Kerr cell for use in the uv, 25:15961 (ANL-7760(Pt.1), pp 1-12)
Fission-product spectra from fast and thermal fission of ^{235}U and ^{239}Pu, 25:17855 (ANL-7678)
Liquid scintillator analysis of neutron spectra; 25:15880 (ANL-7760(Pt.1), pp 67-73)
Meltdown analysis of various EBR-II core configurations using the MELT-II code, 25:18168 (ANL-7752)
Out-of-pile study of the effects of thermal gradients on the distribution of plutonium in fast-reactor fuel materials, 25:16597 (ANL-7703)
Postirradiation examination of tantalum cladding from photoneutron startup sources for EBR-II, 25:16544 (ANL-EBR-31)
Prog. rpt. on development of high-energy batteries for electric vehicles, semiannual, 2--6/70, 25:16405 (ANL-7756)
Prog. rpt. on lithium/selenium secondary cells for components in electric vehicular-propulsion generating systems, 5/23--11/22/69, 25:16404 (ANL-7663)
Prog. rpt. on radiological and health physics, annual, 7/69--6/70, 25:16212 (ANL-7760(Pt.1))
Radiophotoluminescent dosimetry employing a uv laser, 25:15946 (ANL-7760(Pt.1), pp 13-20)
Relationship between encapsulation and apparent fast neutron-induced fading in thermoluminescent dosimeters, 25:15947 (ANL-7760(Pt.1), pp 21-7)
Safety problems of liquid-metal-cooled fast breeder reactors, 25:18154 (ANL-7657)
Specification and procurement of CP-5 fuel tubes, 25:18167 (ANL-7708)
Tabulation of the interionic potential in the alkali metals, 25:18261 (ANL-7761)

ARMED FORCES RADIOBIOLOGY RESEARCH INST., BETHESDA, MD.
Alteration of postirradiation hypotension and incapacitation in the monkey by administration of vasopressor drugs, 25:16299 (AD-702723)
Cardiovascular response of beagles to a supralethal dose of mixed gamma--neutron radiation, 25:16300 (AD-705920)
Closed circuit television applications in reactor radiation biology research, 25:16359 (AD-710375)
Liver enzymes involved in glycogen metabolism in x-irradiated rat, 25:16025 (AD-713087)

XUM

PERSONAL AUTHOR INDEX

Authors' names are indexed in the form appearing in the abstracted publication. Each entry under an author's name gives the publication title and the *NSA* volume and abstract numbers. Report numbers, where applicable, are given in parentheses at the end of the entry.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. The following changes in spelling have been introduced to reduce some of the confusion which might result from omitting the accents:

Germanic	ä	appears as ae
Germanic	ö	oe
Germanic	ü	ue
Scandinavian	ø	oe

A

SUBJECT INDEX

Cross references are included in cumulative subject indexes and in *Subject Headings Used by the USAEC Division of Technical Information* (USAEC report TID-5001).

The reader is also referred to *Guide to Abstracting and Indexing for Nuclear Science Abstracts* (USAEC report TID-4576).

Most headings in the subject index are specific materials, things, and processes. The headings are followed by modifiers that describe the properties of, or processes applied to, the headings.

All index entries cite *NSA* volume and abstract numbers; volume number precedes the colon and the abstract number follows it. The designation (R) following the abstract number indicates a progress report; (P) indicates a patent; and (T) indicates a translation. Abstracts for reports other than progress reports carry no letter designation. Report numbers, where applicable, are included in parentheses after the abstract number of the citation. Published literature (journal article or book) can be identified by the absence of a report number.

Ideas presented in the original literature, rather than key words, have been indexed. The indexers have selected what seemed the most probable and logical place to look for typical information. Since it is not always possible to anticipate where a user would look for information, the cumulative indexes include numerous cross references. Consideration of synonymous or closely related terms will prove valuable.

Information is indexed for the greatest use to the greatest number of users. This requires that a topic be indexed to headings that most specifically describe it and not ordinarily to the headings that describe its ultimate use or to the general class headings that include the specific headings. For example, information on boiler design for the Fermi Fast Breeder Reactor would be indexed under the headings BOILERS and FERMI FAST BREEDER REACTOR but not necessarily under the headings REACTORS, FAST or REACTORS, BREEDER.

General or broad headings are reserved for general summaries, reviews, comprehensive reports, and similar literature.

Subject Heading Styles

Generally, the direct form of subject entry is used rather than inverted headings; e.g., AMINO ACIDS rather than ACIDS, AMINO; HELIUM ISOTOPES He-4 rather than HELIUM—ISOTOPES He-4 or HELIUM—He-4 ISOTOPES. Note, however, that in some cases parenthetic modifying terms or inverted headings such as NEUTRONS, FAST, are used where the alphabetical arrangement of a direct entry would cause information to be scattered. In addition, organic compounds are usually entered in the index in the inverted form to facilitate grouping like or related compounds with the parent compounds; e.g., BENZENE, BROMO- rather than BROMOBENZENE. In general, the nomenclature used is that of the subject indexes to *Chemical Abstracts*.

Alphabetization

Subject headings are alphabetized word by word. Parenthetic qualifiers, numbers, and Greek letters within subject headings are disregarded in alphabetizing unless there are two or more headings that are otherwise identical, in which case the qualifier, numerical progression, or spelled names for the Greek letters determine the order.

Examples:

M-Capture
  see ELECTRON CAPTURE
MAGNESIUM
MAGNESIUM ALLOYS AND SYSTEMS
MANGANESE FLUORIDES
MANGANESE FLUORIDES MnF_2
MESONS
MESONS (π)
MESONS (ρ)
1-PENTANOL
2-PENTANOL

Modifying Phrases

The modifiers appearing under a subject heading are written specifically to show the relation between the item being indexed and the heading. The modifier therefore contains a maximum of useful information. Although the modifier begins with the word judged to be of greatest use to the greatest number of users, there is still need for the searcher to consider all modifiers under the heading(s) of interest.

Modifiers usually form meaningful phrases when combined with the subject heading. Some are intended to be read following the subject heading, e.g., the entry HYDROGEN—sorption by charcoal should be read "hydrogen sorption by charcoal." As a result of placing the important word first, however, many modifiers must be rearranged for smooth reading, e.g., FORMALDEHYDE—yields in radiolysis of ethyl ether, effects of deuterium on, should be read "effects of deuterium on formaldehyde yields in radiolysis of ethyl ether" and URANIUM—crystal structure of, effect of cooling rate on allotropic transformations in, should be read "effect of cooling rate on allotropic transformations in crystal structure of uranium."

Special characters are added to modifiers in the fields of physics and reactor technology; if the modifier does not establish the experimental or theoretical character of a reference, a symbol (E), (T), or (E/T) is placed immediately after the modifying phrase and before the abstract number.

Physical States and Configurations of Materials

The specific physical state, if other than normal, or the geometric configuration of the material is included in the modifying phrase; e.g., information on liquid metals is indexed under the specific metal with "liquid" in the modifier and carbon crucibles is indexed under CARBON with "crucibles" appropriately placed in the modifier. The information on carbon crucibles is also indexed under CRUCIBLES.

Nomenclature of Inorganic Compounds

Inorganic compounds are indexed to subject headings in the direct form. Cations are listed in the order of increasing valence for polycationic salts of varying valence and in alphabetic order for polycationic salts in which all cations have the same valence; e.g., SODIUM ALUMINUM SILICATES and POTASSIUM SODIUM SULFATES. If more than one anionic species is presented in a compound, the anions are arranged alphabetically, e.g., BERYLLIUM FLUORIDE HYDROXIDES.

Nomenclature of Organic Compounds

Organic compounds are indexed by subject headings based on the indexes to *Chemical Abstracts* except in the area of enzymes, in which specific enzymes, named according to the 1964 recommendations of the International Union of Biochemistry, are used. In many cases nonproprietary names for drugs are used as subject headings, and cross references are made from the systematic chemical names. Subject headings for hormones appear in the inverted style at HORMONES.

Nomenclature of Life Sciences

Subject headings for plants are names of phyla with one exception: members of the Phylum Tracheophyta are indexed under class or subclass names. Scientific names (genus and species) are used as the initial, or file, word in the modifying phrase. Scientific names are omitted only when the name is not available in the literature or cannot be found in available references.

Subject headings for animals are the names of phyla with the following exceptions: (1) members of Phylum Arthropoda and Phylum Chordata are indexed under appropriate class name, and (2) common names are used for members of Class Mammalia.

Subject headings are entered for various classes of commodities, and specific products are identified in the file-word position of the modifier. In the following examples, approved subject headings are capitalized and typical modifier file words are listed in lower case.

Example 1	Example 2
CEREALS	MEATS
bread	beef
flour	fish
oats	mutton
rice	pork
rye	poultry
wheat	seafood

Diseases, pathological conditions, and in vitro studies of atypical cells and tissues are indexed under subject headings for the organism affected, under the appropriate anatomical structure of physiological phenomenon affected, and under the appropriate disease heading. Subject headings for diseases (defined as any deviation from the norm) are DISEASES; DISEASES, INFECTIOUS; DISEASES, NEOPLASTIC; DISEASES, PHYSIOLOGICAL; DISEASES, PLANT; and DISEASES, TRAUMATIC.

Diseases of mixed etiology are treated in the following manner: neoplastic diseases that are also classified as infectious or physiological are indexed under DISEASES, NEOPLASTIC; diseases in which a microorganism is the etiologic agent are classified under DISEASES, INFECTIOUS; physiological anomalies that are neither neoplastic nor infectious are indexed under DISEASES, PHYSIOLOGICAL; the acute radiation syndrome, nonspecific radiation injuries, trauma, and wounds or incisions inflicted mechanically are indexed under DISEASES, TRAUMATIC.

Specific diseases or pathological conditions are named in the file-word position of the modifier, in the author's terminology, and are set off from the remainder of the modifier by commas. Neoplasms are designated as benign or malignant in the file-word position when more specific information is not available.

Multicomponent Alloys and Other Systems

Multicomponent alloys and systems, except well-known trade names, are indexed under a subject heading for each component in the form "element systems" for nonmetals or "element alloys and systems" for metals. The modifier begins with element symbols for each component arranged alphabetically. In addition, if significance is placed on the base metal of the alloy, this is indicated by adding "-base" to the element symbol.

Example: A 1.5C, 12Cr, 0.25V, 0.8Mo, bal Fe alloy is indexed as

```
CARBON SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
CHROMIUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V,...
IRON ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
MOLYBDENUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
VANADIUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
```

Well-known alloys, such as ZIRCALOY-2, are indexed under the trade name; cross references from each component of the alloy to the trade name appear in cumulative indexes.

Multicomponent systems in which nonmetallic elements are present in large percentage and which are commonly referred to as systems or mixtures are indexed in a manner similar to alloys.

Example: A tungsten–silicon preparation is indexed as

```
TUNGSTEN ALLOYS AND SYSTEMS
  Si--W, ...
SILICON SYSTEMS
  Si--W, ...
```

Multicompound systems and mixtures of inorganic compounds are indexed under the subject heading for each component compound; the modifiers begin with an alphabetical listing of compound formulas.

Example: A lead titanate–lead zirconate mixture is indexed as

```
LEAD TITANATES
  PbTiO3--PbZrO3
LEAD ZIRCONATES
  PbTiO3--PbZrO3
```

A mixed system of compounds and elements is indexed by a combined form of the preceding conventions; e.g., a dispersion of copper and alumina would be indexed as

ALUMINUM OXIDES
Al_2O_3—Cu, ...
COPPER ALLOYS AND SYSTEMS
Al_2O_3—Cu, ...

Mixtures of organic compounds are indexed under subject headings for each component of the mixture; the modifiers begin with an alphabetical listing of compound names.

Example:

ACETIC ACID
acetic acid—BF_3, ...
BORON FLUORIDES
acetic acid—BF_3, ...

Example:

BENZENE, CHLORO-
bromophenol—chlorobenzene, ...
PHENOL, BROMO-
bromophenol—chlorobenzene, ...

If modifiers for alloys and systems are included with other modifiers under the same subject heading, they are filed last.

Example:

CARBON SYSTEMS
deposition on nuclear fuel particles
molecular structure of
neutron total cross section for
sorptive properties for xenon
Young's modulus for
Al—C—Cr, superconductivity in
B—C, phase studies for
C—U—Zr, fabrication and physical properties of

Nomenclature of High Energy Physics

Information on particle-particle events is indexed under subject headings for the specific particles involved. The modifier file word *interactions* is followed by the specific interaction written in symbolic form. Particle nomenclature and symbols follow that of Rosenfeld, et al. *Data on Particles and Resonant States,* UCRL-8030 (latest revision). For consistency the incident particle is always written first. The mass (in MeV) of a resonance state is included in parentheses after the symbol to avoid ambiguity. Hyperfragments are indicated in modifiers as in the following examples: Λ-He^5, Σ-H^3, $\Lambda\Lambda$-Be^{10}. The superscript on the right indicates the total number of baryons in the composite system.

Examples:

MESONS (π^-)
interactions $\pi^- + p \rightarrow \Lambda + K^+ + \pi^-$ at 6 GeV/c in hydrogen bubble chamber, $\Lambda K(1700)$ enhancement in, (E)
BARYONS, RESONANCE (N^*)
production of $\Delta^{++}(1236)$ and $\Delta^0(1236)$ from $K^- + p \rightarrow K^- + p + \pi^+ + \pi^-$ interactions at 2.63 and 2.70 GeV/c, (E)
HYPERFRAGMENTS
binding energy of $\Lambda\Lambda$-He^6, three-body α—Λ—Λ model for

Subject headings are also provided for specific models and theories.

Examples:

ELEMENTARY PARTICLE MODELS (TRIPLET)
hadron total cross sections in quark, numerical analysis of
CURRENT ALGEBRA
PCAC hypothesis for A_1 and rho dominance in $\pi \rightarrow e + \nu + \gamma$ decay
REGGE POLE THEORY
predictions for polarization in $K^- + p \rightarrow$ anti $K^0 + n$, $\pi^- + p \rightarrow \pi^0 + n$, and $\pi^- + p \rightarrow$ eta + n interactions at high energies
SYMMETRY GROUPS
$SU(2) \times SU(4)$ intermediate-coupling model for nucleon and hyperon isobars

Nomenclature of Reactor Technology

Subject headings for reactors are of three types:

(1) Specific reactors, e.g., ARGONNE RESEARCH REACTOR, SAXTON POWER REACTOR

(2) Reactors having a common physics or engineering characteristic, e.g., REACTORS, FAST; REACTORS, ORGANIC-COOLED; REACTORS, PRESSURIZED-WATER

(3) Reactors having a common purpose, e.g., REACTORS, POWER; REACTORS, RESEARCH

Information on specific reactors, type (1), is indexed under the one specific subject heading. Information on classes or types of reactors, types (2) (characteristics) and (3) (purpose), is indexed under all applicable headings. For example, information on a heavy-water-moderated organic-cooled power reactor is indexed under REACTORS, HEAVY WATER-MODERATED; REACTORS, ORGANIC-COOLED; and REACTORS, POWER.

Subject headings exist for selected reactor components, e.g., REACTOR FUEL ELEMENTS. When applicable, headings for components are indexed even though they may have been included in a modifier under a type (1) or (2) heading. The materials in reactor components are indexed when the information is peculiar to the material.

Modifier file words under reactor headings are of two primary types: one type expresses reactor characteristics, e.g., reactivity; the other, components, e.g., control rod. If no subject heading appears for a reactor component, the heading REACTORS is used, and the component is used as the modifier file word.

A

A-286 (IRON ALLOY)
corrosion of, mechanisms of stress, 25:16415
ACCELERATION
effects on genetics of Drosophila, Habrobracon, and Tribolium in Soviet Union and United States, 25:16292
ACCELERATORS
beam instability in cyclic, stabilization of transverse coherent, 25:17636
beam interactions with residual gas in 1-MeV proton, 25:17617
betatron oscillations in cyclic, effect of space charge on stability of, 25:17631
betatron oscillations in, initial priming and measurements for coherent, 25:17606(T) (CERN-Trans-70-10)
design of 40- to 200-kV ion, for ion implantation and ion--atom reactions, 25:17654
design of induction-type high-current 1.2-MeV proton, 25:17632
development of, review on, 25:17630
experimental facility for activation of gaseous or liquid samples, 25:17627
experimental facility for Dynamitron, for ion channeling studies, 25:17625
experimental facility for on-line spectroscopy of short-lived isotopes, helium-jet recoil transport, 25:17648
radioactivity in soil around high-energy, calculation of long-lived induced, 25:17622
research at Lawrence Radiation Lab., Nov. 1969 to June 1970, (E/T), 25:17351(R) (UCRL-20120)
use of deuteron and proton, for neutron production, 25:17607 (JINR-P9-5285)
ACCIDENTS
radiation hazards to man following, at Atomic Energy Research Institute in Korea, 25:16118
radiation injuries to man following, treatment of, using stem cell transplants, 25:16366
ACETIC ACID
acetic acid--chloroacetic acid--HCl--$HClO_4$, performance in electrolytic polishing of zirconium and zirconium alloys, 25:16427(P)
ACETIC ACID, [(CARBOXYMETHYLIMINO)BIS(ETHYLENENITRILO)]TETRA-
complexes with antimony, chromium, cobalt, europium, indium, and scandium, determination in water by neutron activation, 25:15549
complexes with transuranium elements, stability of, 25:15722 (KFK-1291)
effects on relative concentrations of americium-241 and plutonium in urine, liver and bones of dogs, 25:16012
effects on sorption of gallium-68 and germanium-68 on alumina, 25:15755
ACETIC ACID, [(o-CARBOXYPHENYL)IMINO]DI-
complexes with transuranium elements, stability of, 25:15722 (KFK-1291)
ACETIC ACID, CHLORO-
acetic acid--chloroacetic acid--HCl--$HClO_4$, performance in electrolytic polishing of zirconium and zirconium alloys, 25:16427(P)
ACETIC ACID, (1,2-CYCLOHEXYLENEDINITRILO)TETRA-
effects on sorption of gallium-68 and germanium-68 on alumina, 25:15755
ACETIC ACID, [ETHYLENEBIS[[(CARBOXYMETHYL)IMINO]ETHYLENENITRILO]]TETRA-
complexes with transuranium elements, stability of, 25:15722 (KFK-1291)
ACETIC ACID, [ETHYLENEBIS(OXYETHYLENENITRILO)]TETRA-
complexes with transuranium elements, stability of, 25:15722 (KFK-1291)
ACETIC ACID, (ETHYLENEDINITRILO)TETRA-
complexes with antimony, chromium, cobalt, europium, indium, and scandium, determination in water by neutron activation, 25:15549
complexes with uranium(IV), spectra of, effects of frequency, pH, and temperature on NMR, 25:15630
effects on sorption of gallium-68 and germanium-68 on alumina, 25:15755
effects on spectrographic determination of rare earths, 25:15476
sodium salt, effects on rare earth complexes with Arsenazo III, spectrophotometric studies on, 25:15631
uses in chromatographic separation of rare earths, effects of retaining ions on, 25:15731(T) (UCRL-Trans-10513)
ACETIC ACID, [(2-HYDROXYETHYL)IMINO]DI-
complexes with transuranium elements, stability of, 25:15722 (KFK-1291)
ACETIC ACID, IMINODI-
complexes with transuranium elements, stability of, 25:15722 (KFK-1291)
ACETIC ACID, (METHYLIMINO)DI-
complexes with transuranium elements, stability of, 25:15722 (KFK-1291)
ACETIC ACID, [[(6-METHYL-2-PYRIDYL)METHYL]IMINO]DI-
complexes with transuranium elements, stability of, 25:15722 (KFK-1291)
ACETIC ACID, NITRILOTRI-
effects on sorption of gallium-68 and germanium-68 on alumina, 25:15755
ACETONE
transition probabilities of, effects of deuterium on, 25:15601
ACETONITRILE
separation of deuterated and normal, use of high-efficiency packed columns for gas-solid chromatographic, 25:15751
ACETOPHENONE
effects of cationic derivatives of, on uv-irradiated phage T4, 25:16388
ACETYLENE
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
decomposition on tungsten, field emission studies on, 25:15562 (IS-2300, pp 21-89)
ACID PHOSPHATASE
radiation effects on activity of, in dermal and myocardial cells of rat embryos, fast neutron, 25:16358
ACRYLIC ACID, 2,2,3,3,4,4,4-HEPTAFLUOROBUTYL ESTER
radioinduced graft polymerization on surface of cellulose fabric, properties of product produced by γ, 25:15652
ACRYLONITRILE
radiation effects on subsequent polymerization of cellulose and another monomer, effects of composition and solvent on γ, 25:15655
ACTINIDE NITRIDES
thermodynamic properties of, review on, 25:16590
ACTINIDES
arrangement in revised periodic system, 25:15563(T) (UCRL-Trans-10510)
properties of, effects of atomic number on, 25:15565 (INR-1212)
ACTINIUM ISOTOPES
fission of isomers of, search for spontaneous, 25:17924
ACTIVATION ANALYSIS
californium-252 source for, evaluation of, 25:15849
detection conditions in, calculation of optimum, 25:15902
energy distribution in charged particle, 25:15554
equipment and method for, at Ispra, Italy, development of, 25:15539
equipment for drillhole neutron, 25:15959
gamma spectra of radioisotopes produced in, computer programs for data analysis of, 25:15543
irradiation conditions in, calculation of optimum in, 25:15902
method for whole body, use of cyclotron as neutron source for, 25:15550
methods using helium-3, sensitivity and uses of, 25:15546
sensitivity and uses of photon, review on, 25:15553
sodium-26 interference in, removal of, 25:15560
uses in oceanography, conference on, Brussels, Belgium, June 17, 1968, 25:15535
ADDITION COMPOUNDS
thermal capacity of normal and superconducting $Ag_7O_8NO_3$ and $Hg_7O_8HF_2$ at low temperatures, (E), 25:17090
ADENOSINE
radioprotective effects of, on survival time of erythrocytes of rabbits, fast neutron and x, 25:16221
ADRENAL GLANDS
effects on electrolyte balance in cardiac muscle of irradiated rats, removal of, 25:16351
AEROSOLS
monitoring of radioactive, in laboratories, effects of collector location, measuring method, and time on accuracy of, 25:16153
sampling of radioactive, for measurements of activity and particle size, design of filters for, 25:16141 (SZS-17/70)
size distribution of released, from liquid metal cooled fast breeder reactor accidents, (T), 25:18161
use of exploding-wire produced, for studying radioactivity releases from nuclear power plant off-gases, 25:15874
AET
radioprotective effects of, against x-radiolinduced dominant lethal mutations in male germ cells of mice, 25:16227
AFRICA
uranium deposits in Bakouma area of central, mineralogy of, 25:15795 (CEA-R-4003)
AGAR-AGAR
radiation effects on, binding reactions of neoplasms following γ, 25:16047
reactions in human leukemias and carcinomas, effects of heparin and pentosan (SP 54) on binding, 25:16047
AGE
effects on cesium-134 retention in rats, combined effects of sex and temperature on, 25:16007
effects on immune reactions in whole-body x-irradiated mice following infection with smallpox virus, 25:16060
effects on immune reactions, review of, 25:16061
effects on thorium-232 concentration in human bones, equation for, 25:16011
effects on x-radiosensitivity of premetamorphic newt larvae, 25:16350
AGE ESTIMATION
effects on radiosensitivity of eosinophile granulomas in

XUM

man in relation to therapy, 25:16262
AGRICULTURE
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)
research in radiobiological aspects of, 25:16307(R) (CRO-678)
use of radiation and radioisotopes for research on, in Netherlands, progress report for 1970, 25:16089(R) (EUR-4545)
AIR
analysis for helium isotopes, mass spectrometric, 25:15504
analysis for radioisotopes and stable lead, radiochemical, 25:15514 (HASL-239, pp I.58-62)
content of ammonium uranates in, on industrial premises, recommendations regarding maximum permissible, 25:16119
effects on crack propagation behavior of aluminum--tin--titanium--vanadium alloy, 25:16436 (AD-710635)
gamma buildup factors above air/ground interface covered with cobalt-60, (E/T), 25:17252 (AD-710985)
iodine isotope transport to human thyroids from, kinetics of, 25:16082
ionic conditioning of, using americium-241 source, 25:15842(T) (ORNL-tr-2427)
radiation monitoring of laboratory, effects of collector location, measuring method, and time on accuracy of, 25:16153
radioactive contamination of, relation of, to contamination of surfaces, 25:16117
radon and radon decay product content of underground uranium mine, methods for control of, 25:15792
AIR LOCKS
design and operation of safety, for moving samples into and out of high vacuum systems, 25:15876
AIRGLOW
hydroxyl emission spectra in night, variations of, (E/T), 25:17040
intensity variation of atomic oxygen red line in, effects of solar activity on, (E), 25:16934
ALANINE
polymers, radiolysis of aqueous oxygen-saturated solutions of, γ, 25:15672
ALANINE, N-ACETYL-
radiolysis of aqueous oxygen-saturated solutions of, γ, 25:15672
ALANINE, 3-(3,4-DIHYDROXYPHENYL)-
yields from radiolysis and uv photolysis of N-(3-phenyl-L-alanyl)glycine, comparison of, 25:15678
ALANINE, PHENYL-
yields from radiolysis and uv photolysis of N-(3-phenyl-L-alanyl)glycine, comparison of, 25:15678
ALASKA
characteristics of Amchitka Island, effects of Milrow Event underground nuclear explosion on biological and physical, 25:15802 (NVO-79)
ecology of Amchitka Island, effects of Milrow underground explosion on, 25:16079 (NVO-79, pp 49-71)
ecology of Amchitka Island, model for effects of underground testing of nuclear devices on, 25:16074(R) (BMI-171-118)
radiation monitoring of marine organisms in Amchitka, 25:16073(R) (BMI-171-113)
radiation monitoring of surface atmosphere, ground waters, and surface waters of Amchitka Island, following Long Shot and Milrow Events, 25:15806 (NVO-79, pp 41-8)
radioactive contamination of environment of Amchitka Island, analysis of samples following, 25:16072(R) (BMI-171-110)
seismic activity of Amchitka Island, effects of Milrow Event on, 25:15807 (NVO-79, pp 72-96)
site selection of Amchitka Island, for Milrow Event, history of, 25:15803 (NVO-79, pp 1-8)
water waves off Amchitka Island, effects of Milrow Event on tsunami-type, 25:15808 (NVO-79, pp 97-106)
ALBUMINS
radiation effects on metabolism of homologous iodine-131-labeled, in mice, x, 25:16021
ALCOHOLS
radioprotective effects of, against DNA breaks in mammalian cells, x, 25:16217 (UR-49-1389)
ALEUTIAN ISLANDS
seismology of, 25:18268 (CGS-746-112)
ALGAE
development of Savannah River, effects of reactor effluents on, 25:18225 (TID-25634)
radiation effects on cells of, in lichens, effects of dose on γ, 25:16374(R) (COO-2085-1)
radioisotope content of, in Amchitka Island, Alaska, cesium-137, potassium-40, and strontium-90, 25:16072(R) (BMI-171-110)
ALGORITHMS
linearly constrained nonlinear programming, 25:18288 (ORNL-4644)
ALICE DEVICES
injection source for, development of, 25:17209 (UCRL-50002-70, pp 2.1-44)
ALKALI METAL BROMIDES
radiolysis of frozen aqueous solutions of, ESR studies of intermediates from γ, 25:15684
ALKALI METAL IODIDES
radiolysis of frozen aqueous solutions of, ESR studies of intermediates from γ, 25:15684
ALKALI METALS
interionic potentials of, tables of, 25:18261 (ANL-7761)
ALKALINE PHOSPHATASE
radiation effects on activity of, in fractured bones of mice, x, 25:16321
ALKANES
reactions with recoil carbon-11, acetylene formation in, 25:15711
ALKYL PHOSPHITES
complexes with nickel, crystal and molecular structure of, 25:15562 (IS-2300, pp 21-89)
ALLENE
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
ALLOXAN
effects on penetration of injected calcium-45-labeled calcium chloride into aqueous and corneas of rabbit eyes, 25:15996
ALLOYS
book: Corrosion and Metal Protection. Collection of Papers (In Russian), 25:16407
book: Ultrafine-Grain Metals, 25:16486
diffusion in, bibliography and data tabulations on, 25:16514
diffusional flow in fine-grain, with non-Newtonian viscosity, 25:16489
ductility of ultrafine-grain, 25:16487
fabrication of, hot isostatic compacting method for, 25:16432
plasticity of, effects of grain size on super-, 25:16490
uses of superplastic industrial, 25:16490
ALPHA PARTICLES
capture of 1 to 8 MeV solar, into radiation belts during magnetic storms, (T), 25:16884 (AD-711813)
effects on bones, effects of radium-224 therapy of human diseases on neoplastic, 25:16365
effects on gaseous and liquid hydrobromic acid, hydrochloric acid, and hydriodic acid, review on, 25:15666
emission from neptunium-237 in volatile fractions of lead--zinc ores, 25:15761 (JINR-P6-5307)
heating of solar wind, in colliding streams, (E), 25:16698
reactions (α,2α) with beryllium-9, carbon-12, lithium-6, lithium-7, and oxygen-16 at 55 MeV, analysis for quasi-elastic mechanism in, (E), 25:17760
reactions (α,2α) with carbon-12 at 90 MeV, analysis for reaction mechanism in, (E), 25:17761
reactions (α,2α) with nuclei, analysis using Shapiro model and three-body theory, (T), 25:18032
reactions (α,2n) with terbium-159 at 30 MeV, rotational spectra of holmium-161 from, 25:17895
reactions (α,αd), (α,αHe-3), and (α,αt) with helium-4 at 104 MeV, coincidence measurements of, (E), 25:17684 (KFK-1055)
reactions (α,d) and (α,p) with lithium-6 at 28 to 40 MeV, analysis for reaction mechanism in, (E), 25:17743
reactions (α,f) with bismuth-209 and plutonium-239, mass-yield curves and absolute cross sections for various fission products from binary and ternary, (E/T), 25:17898
reactions (α,f) with gold-197, correlation between fissionability parameter and cross section for ternary, (E), 25:17858(R) (COO-1716-11)
reactions (α,f) with thorium-232 at 20 to 41 MeV, cross sections for, (E), 25:17858(R) (COO-1716-11)
reactions (α,γ) with oxygen-16 at 0.85 to 1.8 MeV, excitation functions for, (E), 25:17737
reactions (α,γ) with silicon-28 at 1.4 to 2.7 MeV, excitation functions for, (E), 25:17737
reactions (α,n) and (α,p) with aluminum-27 at 8.5 and 4.6 MeV, lifetimes of excited states of phosphorus-30 and silicon-30 from, (E), 25:17777
reactions (α,p) with iron-56 at 10 and 11 MeV, proton and gamma spectra and angular correlations from, (E), 25:17810
reactions (α,pxn) and (α,xn) with lead-206 and -208 at 60 to 150 MeV, analysis for reaction mechanisms in, (E), 25:17938
reactions (α,tα) with lithium-7 at 50 MeV, alpha and triton energy and angular distributions from, (E), 25:17733
reactions (α,xn) with holmium-165 and thulium-169 up to 150 MeV, statistical analysis of, (E/T), 25:17940
reactions (α,xn) with nuclei, method for estimation of excitation functions for, 25:18018
reactions with copper, gold, and titanium at 6.25 to 20 MeV/amu, ratio of x-ray yields from, to deuteron-induced yields, (E), 25:16762
reactions with oxygen-16 at 32 MeV, excitation function for fluorine-18 production in, (E), 25:17738
reactions with solid helium, delayed photon emission from, (E), 25:16765
reactions with zinc-64, compound-nucleus decay in, (E), 25:17824
scattering by carbon, lead, silicon, and tin at 166 MeV, optical-model analysis of elastic, (E/T), 25:17739
scattering by copper-63 and -65, nickel-64, and zinc-66 at 19.5 MeV, angular distributions from, (E/T),

25:17793
scattering by gadolinium-152 at 10 MeV, inelastic, (E), 25:17900
scattering by helium-3 at 104 MeV, optical-model analysis of elastic, (E), 25:17685 (KFK-1204)
scattering by lead-204, -206, -208 and bismuth-209 at low energies, mass distributions from elastic, (T), 25:18007
scattering by nickel-58, microscopic analysis using nonlocal potential for elastic, (T), 25:17960
scattering by nuclei, microscopic model for elastic, (T), 25:17960
scattering by palladium-108 and -110 and cadmium-110 at 7 to 10 MeV, gamma spectra from inelastic, (E), 25:17893
scattering by platinum isotopes at 10 and 15 MeV, gamma energy and angular distributions from, (E), 25:17904
scattering by silver at 54 MeV, statistical analysis of inelastic, (E/T), 25:17939
scattering by strontium-86, differential cross sections for inelastic, (E/T), 25:17819
scattering elastically by helium-4 below 100 MeV, analysis using non-local separable potential, 25:17702
stopping in gaseous compounds at 300 keV to 2 MeV, (E), 25:17265
ALUMEL COUPLES
Alumel/Chromel, fast neutron radiation effects on, 25:15982 (WHAN-SA-10)
ALUMINUM
abundance in 112 Her AB, (E), 25:16645
analysis for impurities by elastic proton scattering, 25:15528
analysis for tungsten by neutron activation, 25:15548
argon-ion reactions at 40 keV, analysis of visible emission spectra from, 25:16752
charged particle attenuation at high energies, 25:16188
corrosion by chlorine pentafluoride, fluorine, and nitrogen oxide, 25:16413
determination by activation, evaluation of beryllium--plutonium-238 and californium-252 sources for, 25:15849
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by method based on reaction of EDTA and lead iodate, 25:15479
determination by thermometric titration, effects of calcium, beryllium, thorium, and zirconium on, 25:15484
determination in beryllium oxide and uranium, effects of spark duration on relation sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in low and high alloy steel by flame emission spectrometry, 25:15482
determination of trace amounts of, in human dentine and enamel by thermal neutron activation and γ spectrometry, 25:15545
determination of trace amounts of, in uranium by gas phase chromatography after solvent extraction using TTA, 25:15483
effects on martensitic transformation and superconducting transition temperature of Nb_3Sn, 25:17082
electron energy loss and scattering at 5 to 30 keV, 25:17257 (NIRS-9, pp 1-14)
electron stopping power at <500 keV, (T), 25:17962
electron transmission at 1.0 to 2.5 MeV through, angular and energy distributions from, (E), 25:17259
Hall coefficient of, effects of pressure on, 25:17316
interaction parameter and lasing conditions for superconducting, (T), 25:17115 (ORO-3665-24)
ion implantation in films of, effects on electromigration and resistivity ratio, 25:17282
neutron inelastic scattering by, cross sections for gamma yields from, (E), 25:17842
nuclear magnetic resonance, pressure dependence of Knight shift in, (E/T), 25:17320
positron stopping power at <500 keV, (T), 25:17962
properties for use in bomb reduction of molybdenum oxide, 25:16398 (IS-2300, pp 101-86)
proton attenuation at high energies, 25:16188
radiation damage in, annealing kinetics of 90°K electron, 25:17278
separation as pivaloyl trifluoroacetonate from other metal pivaloyl trifluoroacetonates by gas chromatography, 25:15752
strains in deformed fcc crystals of, at 25°C, measurement of micro-, 25:16516(R) (ORO-3908-2)
Al-base--Zn, radiation damage in, annealing kinetics of 90°K electron, 25:17278
effects on mechanical properties of chromium--molybdenum--nickel and manganese--molybdenum--nickel alloy weld metals, 25:16483
ALUMINUM ALLOYS AND SYSTEMS
electrochemical properties of Types 1100, 2219, 6061, and X8001, galvanostatic measurements of, 25:16438 (IN-1295)
mechanical properties of, effects of precipitation hardening on, 25:16510
radioinduced helium production in Types 1100, 6061, and X8001, cyclotron simulation of neutron, 25:16558
Ag--Al, microstructure of unidirectionally solidified, 25:16543
Ag--Al-base, radiation damage in, annealing kinetics of 90°K electron, 25:17278
Al--Al_2O_3, properties of Serme Tel W, for use as protective coating for beryllium, 25:16416
Al--Au, microstructure of unidirectionally solidified, 25:16543
Al--Ce--La, electric conductivity of Ce/sub 1-x/La/sub x/Al_3, Kondo sideband theory of, (E/T), 25:17304
Al--Ce--Th, electric conductivity of Ce/sub 1-x/Th/sub x/Al_3, Kondo sideband theory of, (E/T), 25:17304
Al--Ce--Y, electric conductivity of Ce/sub 1-x/Y/sub x/Al_3, Kondo sideband theory of, (E/T), 25:17304
Al--Co--Cr--Mo--Ni-base--Ta--Ti, corrosion by JP-5 exhaust streams, aluminide coatings for protection against, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Co--Cr--Mo--Ni-base--Ti, corrosion by JP-5 exhaust streams, aluminide coatings for protection against, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Cr, deposition on superalloy turbine parts for corrosion protection, methods for, 25:16402 (AGARD-CP-73-71, Paper 20)
Al--Cr, properties for use as coating for B-1900 and IN-100 turbine blades, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Cr--Fe--Mo--Ti, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Cr--Mo--Ni, microstructure of eutectic, electron microscopy study of, 25:16530
Al--Cr--Mo--Ni-base--Ti, mechanical properties at 1200 and 1400°F, effects of γ--γ' mismatch and volume fraction γ' on, 25:16463
Al--Cr--Mo--Ti--V, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Cr--Mo--Ti-base, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Cr--Ni, microstructure of eutectic, electron microscopy study of, 25:16530
Al--Cu, ion implantation in films of, effects on electromigration and resistivity ratio, 25:17282
Al--Fe, microstructure of unidirectionally solidified, 25:16543
Al--Ge--Hf--Nb, superconductivity of, (E), 25:17076
Al--Ge--Nb, crystal structure of intermetallic $Nb_{12}Al_3Ge$ in, 25:16526
Al--Ge--Nb--Ti, superconductivity of, (E), 25:17076
Al--Ge--Nb--Zr, superconductivity of, (E), 25:17076
Al--Hf, microstructure of unidirectionally solidified, 25:16543
Al--La, superconducting tunneling conductance of intermetallic $LaAl_2$, using Schottky barrier probe, (E), 25:17111
Al--La, thermal capacity of intermetallic $LaAl_2$, 25:16398 (IS-2300, pp 101-86)
Al--Lu, thermal capacity of intermetallic $LuAl_2$, 25:16398 (IS-2300, pp 101-86)
Al--Mg, microstructure of unidirectionally solidified, 25:16543
Al--Mg, radiation effects on chemical diffusion of magnesium in, at 180 to 1400°C, fast neutron, 25:16556
Al--Mo--Ni, microstructure of eutectic, electron microscopy study of, 25:16530
Al--Mo--Si--Sn--Ti-base--Zr, embrittlement of α-stabilized, effects of long exposures at 800 to 1100°F on, 25:16465
Al--Mo--Sn--Ti-base--Zr, embrittlement of α-stabilized, effects of long exposures at 800 to 1100°F on, 25:16465
Al--Mo--U, phase diagrams of U--UAl_2--Al_3Mo_2--Mo, at 500 to 1250°C, partial isothermal, 25:16537
Al--Mo--Zr-base, phase transformation in, strain induced retained β--martensitic α', 25:16540
Al--Nb, phases in, electron-probe microanalysis in diffusion layers, 25:16525
Al--Ni, mechanical properties of, effects of precipitation hardening on, 25:16510
Al--Sm, aluminum-27 Knight shift in $SmAl_2$, effects of crystalline field on, (T), 25:17321
Al--Sn--Ti-base--V, crack propagation behavior in air and salt water, review of, 25:16436 (AD-710635)
Al--Sn--Ti-base--V, fatigue of, review of effects of material forms and heat treatment on, 25:16436 (AD-710635)
Al--Ta, microstructure of unidirectionally solidified, 25:16543
Al--Ti--Zr, phase studies of, 25:16457
Al--Ti--Zr, tensile properties at high temperatures, 25:16457
Al--Ti-base--V, corrosion by chlorine pentafluoride, fluorine, and nitrogen oxide, 25:16413
Al--Ti-base--V, deformation at 800 to 1040°C, effects of surface oxidation on, 25:16446
Al--Y, thermal capacity of intermetallic YAl_2, 25:16398 (IS-2300, pp 101-86)
Al-base--Au, radiation damage in, annealing kinetics of 90°K electron, 25:17278
Al-base--Fe--Si--Zr, properties for use as dip-coating bath for protection of steel--zirconium alloy joints against hydrogen embrittlement, 25:16473(P)
Al-base--Ge, radiation damage in, annealing kinetics of 90°K electron, 25:17278
Al-base--In, radiation damage in, annealing kinetics of 90°K electron, 25:17278
Al-base--Mg, radiation damage in, annealing kinetics of

XUM

90°K electron, 25:17278
Al-base--Si, electrochemical properties of, 25:16438 (IN-1295)
Al-base--Zr, hardening of chill cast, effects of copper, magnesium, manganese, silicon, and zinc on age, 25:16511
ALUMINUM CHLORIDES
decompositon of $AlCl_4^-$, in molten chlorides at 175 to 450°C, 25:15567(R) (ORO-3518-19)
ALUMINUM IONS
reactions with carbon foils at 100 to 500 keV, equilibrium charge distributions from, (E), 25:16758
spectra in solar corona, (E), 25:16701
ALUMINUM ISOTOPES Al-27
alpha reactions (α,n) at 8.5 MeV, lifetimes of excited states of phosphorus-30 from, (E), 25:17777
alpha reactions (α,p) at 4.6 MeV, lifetimes of excited states of silicon-30 from, (E), 25:17777
deuteron reactions (d,nγ) at 4.0 MeV, gamma and neutron spectra from, (E), 25:17851
deuteron reactions (d,pγ) at 3.5 and 3.7 MeV, coincidence measurements on, 25:17776
electron reactions at 25 to 45 MeV with, effect of thickness on bremsstrahlung produced in, (E), 25:17658
energy levels from neutron inelastic scattering, spin assignments for, (E/T), 25:17815
energy levels from silicon-30 (p,α) reactions, collective nature of low-lying, (E), 25:17726
energy levels of, rotation-vibration interaction in, (T), 25:17805
energy of, calculation of effects of deformation on total, 25:17963
gamma reactions at 2.615 MeV, pair production cross sections for, (E), 25:17808
neutron inelastic scattering at 2.97 MeV, Hauser--Feshbach analysis of cross sections for, (E/T), 25:17813
neutron inelastic scattering at 3.5 MeV, neutron and gamma angular distributions from, (E/T), 25:17815
neutron inelastic scattering by, statistical calculation of neutron spectra from, (T), 25:17958 (N-70-38168)
neutron reactions (n,xγ) at 5.3 to 9.0 MeV, gamma production cross sections for, (E), 25:17775 (ORNL-TM-3284)
neutron total cross sections at 100 to 150 MeV, optical-model analysis of, (E/T), 25:17914
nuclear magnetic resonance in $SmAl_2$, effects of crystalline field on Knight shift in, (T), 25:17321
proton elastic scattering by, depolarization parameter for, (E), 25:17826
proton reactions (p,α) a 5.8 to 11.5 MeV, cross sections and α angular distributions from, (E), 25:17726
proton reactions at 20 GeV, spectra of light fast fragments from, (E), 25:17827
proton reactions below 5 GeV, cascade--evaporation model for analysis of low-energy particles produced in, (T), 25:17515 (JINR-P2-5549)
ALUMINUM ISOTOPES Al-28
energy levels from aluminum-27 (d,pγ) reactions, gamma branching ratios of transitions of, 25:17776
ALUMINUM NITRIDES
corrosion by lithium at 375°C, relations with microstructure and purity, 25:16405(R) (ANL-7756)
ALUMINUM OXIDES
sorptive properties for gallium and germanium, 25:15692
sorptive properties for gallium-68 and germanium-68, effects of chelating agents on, 25:15755
Al--Al_2O_3, properties of Serne Tel W, for use as protective coating for beryllium, 25:16416
ALUMINUM SILICIDES
properties for use as coating for B-1900 and IN-100 alloy turbine blades, 25:16403 (AGARD-CP-73-71, Paper 22)
AMERICIUM
complexes with aminopolycarboxylic acids, stability of, 25:15722 (KFK-1291)
separation from curium by ion exchange, 25:15722 (KFK-1291)
separation from perchloric acid solutions by solvent extraction using bis(2-ethylhexyl) phosphate, 25:15741
AMERICIUM CHLORIDES
crystal structure of hexahydrates of, 25:15635
AMERICIUM ISOTOPES
fission of isomers of, search for spontaneous, 25:17924
AMERICIUM ISOTOPES Am-241
content of beagle dogs following inhalation, use of body-weight changes, excretion analysis, and whole-body scanning for estimations of, 25:16009
distribution in tissues of dogs following wound contamination in comparison to plutonium distribution, effects of DTPA on, 25:16012
gamma spectra, (E), 25:17861 (IN-1448(Rev.))
neutron fission of, epicadmium energy integral rates for, (E/T), 25:17915
neutron reactions with, accumulation of transplutonium isotopes from, 25:15691
properties for use as alpha source for ionic conditioning of air, 25:15842(T) (ORNL-tr-2427)
use as gamma source for determining zinc and lead in polymetallic ores, 25:15527
use in lightning rod for promoting ionization of atmosphere, 25:15854
AMERICIUM ISOTOPES Am-242
neutron fission of isomeric, epicadmium energy integral rates for, (E/T), 25:17915
AMERICIUM ISOTOPES Am-243
neutron fission of, epicadmium energy integral rates for, (E/T), 25:17915
AMES RESEARCH REACTOR
design modifications during July 1969 to June 1970, 25:18175 (IS-2300, pp 253-73)
fuel cycle management program for, 25:18175 (IS-2300, pp 253-73)
operations during July 1969 to June 1970, 25:18175 (IS-2300, pp 253-73)
operations during July 1969 to June 1970, 25:18174(R) (IS-2300)
AMMONIA
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
radiation effects on cyclohexane solutions of deuterated, effects of LET on yields from γ and helium ion, 25:15648
radiolysis of, ion lifetimes following x-ray pulse, 25:15685
AMMONIUM COMPOUNDS, SUBSTITUTED
reactions with metal pentabromides or pentachlorides in anhydrous ethanol, acetonitrile, or dichloromethane, 25:15577
AMMONIUM FLUOROTECHNETATES
crystal structure of, as compared to existence of technetium fluoride nitride, x-ray diffraction studies on, 25:15639
AMMONIUM PERCHLORATES
radiation effects on thermal decomposition induction period in, 25:15644
AMMONIUM RHENATES
crystal structure of, as compared to existence of rhenium fluoride nitride, x-ray diffraction studies on, 25:15639
AMMONIUM URANATES
content of air on industrial premises, recommendations regarding maximum permissible, 25:16119
AMPHETAMINE
radioprotective effects of, against hypotension and incapacitation in monkeys, mixed γ-neutron, 25:16299 (AD-702723)
AMPHIBIA
Rana Sp., radiosensitivity of, effects of temperature on, 25:16354
Taricha torosa, radiosensitivity of premetamorphic larvae of, effects of age and dose on x, 25:16350
AMPHOTERICIN B
radioprotective effects of, on mice infected with fungi, evaluation of x, 25:16224
AMPLIFIERS
design and performance of semiconductor linear pulse, 25:15893
ANALYTICAL CHEMISTRY
book: Analytical Chemistry of Technetium, Promethium, Astatine, and Francium, 25:15470
ANEMOMETERS
design and calibration of hot-film, for heat transfer measurements in liquid metals, 25:15826(R) (RLO-2227-T-4-1)
ANESTHESIA
use of local, for implantation of radium device in uterus, 25:16268
ANGIOSPERMIDAE
Allium cepa (onion), radiosensitivity of seeds of, effects of oxygen on ionizing, 25:16376 (ORO-678, pp 135-51)
Avena sp., radioinduced chromosome aberrations in, effects of dose, dose fractionation, and seed exposure on, 25:16110
Cannabis sativa, radiation effects on seeds of, sterility of male plants following γ, 25:16382
Corchorus olitorius, radioinduced mutations in, effects of crossing of, on plant height and yield of F_1 and F_2 populations, x, 25:16108
Cucumis sativus (cucumber), radiosensitivity of seeds of, effects of oxygen on ionizing, 25:16376 (ORO-678, pp 135-51)
Dacryodes excelsa, transpiration rate of, use of tritium-labeled water for measuring, 25:15997
Dianthus sp., radioinduced mutations in, for flower quality, variation, and yield, x, 25:16089(R) (EUR-4545)
grasses, strontium-85 retention by pasture, measurements of, 25:16076 (FOA-4-4445)
Helianthus sp., radiation effects on physicochemical and organoleptic properties of oil from seeds of, γ, 25:16390(T) (JPRS-52121, pp 63-8)
Helianthus sp., radiation effects on plant growth and seed yield of, effects of plant or seed exposure on γ, 25:16380
Hordeum sp. (barley), radioinduced chromosome aberrations in, combined effects of 5-bromouracil and EMS on fission neutron and γ, 25:16091 (ORO-678, pp 126-34)
Hordeum sp. (barley), radioinduced mutations in, for chlorophyll deficiency, comparison of fast neutron, fission neutron, and γ, 25:16091 (ORO-678, pp 126-34)
Hordeum sp. (barley), radiosensitivity of seeds of, effects of oxygen and water on fast neutron, 25:16376

(ORO-678, pp 135-51)
Hordeum sp. (barley), radiosensitivity of seeds of, effects of oxygen, packaging materials, and water on fission neutron, 25:16376 (ORO-678, pp 135-51)
Hordeum sp., radioinduced mutations in, effects of gametophyte exposure on γ, 25:16089(R) (EUR-4545)
Lespedeza cuneata, radioinduced mutations of, linkage relations of crosses of, with nematode-resistant strains, 25:16098
Lycopersicum sp., radiation effects on populations of, fast neutron and γ, 25:16089(R) (EUR-4545)
Oryza sativa (rice), radiosensitivity of seeds of, effects of oxygen and water on fast neutron, 25:16376 (ORO-678, pp 135-51)
Oryza sativa, radiation effects on germination of seeds of, effects of yeast extract on γ, 25:16378
Prunus sp., radioinduced mutations in, x, 25:16089(R) (EUR-4545)
Pyrus sp., radioinduced mutations in, x, 25:16089(R) (EUR-4545)
Raphanus sativus (radish), radiosensitivity of seeds of, effects of oxygen on ionizing, 25:16376 (ORO-678, pp 135-51)
Secale cereale, radioinduced chromosome aberrations in, fast neutron and γ, 25:16099
Sloanea sp., transpiration rate of, use of tritium-labeled water for measuring, 25:15997
Solanum sp., radioinduced mutations in, for resistance to diseases and pests and yield, neutron and x, 25:16089(R) (EUR-4545)
Tradescantia sp., radioinduced aberrations of chromosomes in cells of, effects of LET on charged particle, 25:16043
Triticum sp., radiation effects on protein content of spring, effects of variety on γ, 25:16381
Triticum sp., radiation effects on segregation of dominant characters in second generation following exposure of hybrid seeds, γ, 25:16100
Triticum sp., radiation effects on yield of spring, effects of dose and variety on γ, 25:16381
Triticum sp., radioinduced mutations in, effects of gametophyte exposure on γ, 25:16089(R) (EUR-4545)
Tulipa sp., radioinduced mutations in, for flower color, x, 25:16089(R) (EUR-4545)
Zea mays, fertilizer management practices for, nitrogen-15 and phosphorus-32 tracer studies of, 25:15986 (STI/DOC-10/121)

ANGIOTENSINS
radioprotective effects of, against hypotension and incapacitation in monkeys, mixed γ-neutron, 25:16299 (AD-702723)

ANIMALS
ecology of, at Amchitka Island, Alaska, effects of Milrow underground explosion on, 25:16079 (NVO-79, pp 49-71)
radiation effects on bone marrow of, relation of hemopoietic function to sinusoidal structure following, 25:16342
radiation effects on, bibliography on ionizing, 25:16277 (AED-C-4-32)
radiation protection of, effectiveness of biological and chemical compounds for, 25:16214(T) (JPRS-52121, pp 15-20)
radioisotope content of, in Greenland during 1969, 25:16080(R) (RISO-222)
radiosensitivity of hungry, effects of bone marrow and trace element treatment on, 25:16354

ANIONS
production in air for ionic conditioning, use of americium-241 source for, 25:15842(T) (ORNL-tr-2427)

ANISOLE, p-METHYL-
electronic transition of, effects of deuterium on energy of principal, 25:15612

ANNELIDA
Hermione hystrix, manganese-54 content of Mediterranean during 1966, 25:16124
Spirographis spallanzani, manganese-54 content of Mediterranean during 1966, 25:16124

ANTENNAS
design of grid assemblies for plasma wave experiments, 25:17241
impedance of short cylindrical, in lower ionospheric plasma, (T), 25:17044
response to vlf electrostatic plasma waves, double-sphere, 25:17016

ANTHRACENE
carbonization of, effects of pressure and temperature on, 25:16559(R) (NYO-1710-100)

ANTIBODIES
radiation effects on formation of, against sheep erythrocytes in mouse spleen implants, γ, 25:16306 (NIRS-9, pp 55-61)

ANTIMONY
complexes with DTPA and EDTA, determination in water by neutron activation, 25:15549
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
radiation effects on vaporization of, at high temperatures, mechanism of fast neutron, 25:15645

ANTIMONY ALLOYS AND SYSTEMS
Sb--Y, phase studies of, 25:16398 (IS-2300, pp 101-86)

ANTIMONY ISOTOPES Sb-120
beta and electron-capture decay of ground-state and isomeric, γ singles and coincidence spectra from, (E), 25:17865 (NP-18598)

ANTIMONY ISOTOPES Sb-125
beta decay of, gamma spectra and γ--γ angular correlations in, (E), 25:17950
beta decay of, γ-γ and ce-γ angular correlations from, (E), 25:17944
beta decay scheme of, 4π β--γ coincidence measurement of, 25:15914 (CEA-R-4131)

ANTIMONY ISOTOPES Sb-127
energy-level scheme from tin-127 decay, (E), 25:17864 (NP-18596)

ANTIMONY ISOTOPES Sb-129
beta decay of, β and γ singles and coincidence spectra from, (E), 25:17871
beta decay of, gamma spectra from, (E), 25:17876

ANTIMONY ISOTOPES Sb-131
yields from fast fission of plutonium, (E), 25:17899

APATITES
uranium IV and VI fixation in, lattice locations for, 25:15795 (CEA-R-4003)

ARACHNIDA
Dermacentor variabilis, radiation effects on reproductive capacity of adult, raised from radioisotope-labeled larvae, chronic β, 25:16295
Dermacentor variabilis, radioisotope incorporation into larvae of, for double tracer ecological studies, transovarial carbon-14 and strontium-90, 25:15989

ARGININE
radiation effects on content of, in perfused rat liver in vitro, effects of dose on x, 25:16030

ARGON
cesium-excited-atom reactions with, mechanisms of excitation transfer in, 25:16820
helium-atom scattering by, glory oscillations in velocity dependence of total collision cross sections for, (E), 25:16829
hydrogen-molecule scattering by, molecular-beam magnetic-resonance measurements of orientation dependence of, 25:16806
neutron capture by natural, gamma spectra from thermal, (E), 25:17850
plasma of, ionization and recombination rates in cesium-seeded, (E), 25:17158 (AD-712710)
radiolysis of liquid, at 87°K, anti W-value for x, 25:15669
reactions between atoms of, differential elastic scattering and ionization cross sections and interaction potentials for, (E), 25:16810
reactions of cations of, with deuterium molecules, kinematic model for dynamical properties of, 25:15604
scattering by argon, quantum undulations in differential collision cross sections for, (E), 25:16830
solubility in sodium, effects of gas partial pressure, purity, and temperature on, 25:15573
spectra of, beam--foil spectroscopy measurement of atomic, 25:15975

ARGON IONS
reactions with aluminum, molybdenum, and silver at 40 keV, analysis of visible emission spectra from, 25:16752
reactions with carbon foils at 100 to 500 keV, equilibrium charge distributions from, (E), 25:16758
reactions with carbon foils at 3 to 54 keV, angular distributions from, (E), 25:16755
reactions with helium at 10 to 75 keV, excitation functions for, (E), 25:16808
reactions with surfaces at 10 to 3000 eV, optical radiation from excited sputtered particles from, (E), 25:16766

ARGON ISOTOPES Ar-36
lithium-7 reactions (Li-7,t) with, (E), 25:17837
neutron capture by, Q value for, (E), 25:17850
nuclear binding energy, charge radius, and quadrupole moments of, Hartree--Fock calculation of, (T), 25:17727

ARGON ISOTOPES Ar-37
energy levels from neutron capture by argon-36, (E), 25:17850

ARGON ISOTOPES Ar-38
proton reactions (p,γ) with, Q value for, (E), 25:17852

ARGON ISOTOPES Ar-40
neutron capture by, Q value for, (E), 25:17850
neutron reactions (n,α) at 14 MeV, total cross sections for, (E), 25:17818

ARGON ISOTOPES Ar-41
beta decay of, charge dependence of one-boson exchange potentials in, (T), 25:17988
energy levels from neutron capture by argon-40, (E), 25:17850

ARGON SYSTEMS
Ar--N, thermodynamic properties of high-temperature, (T), 25:17180

ARGONAUT REACTOR
neutron flux in coupled core, space-dependent spectral-density functions for thermal, (T), 25:18230

ARGONNE RESEARCH REACTOR
fuel tubes for, specifications for fabrication and procurement of, 25:18167 (ANL-7708)
ARKANSAS
radioisotope content of rainwater in Fayetteville, following 8th Chinese nuclear explosion, effects of rainfall rate and storm type on, 25:15791
ARMY REACTORS (SM-1)
pressure vessel for, radiation effects testing of steel, 25:16547 (NRL-7211)
ARSENIC
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in iron, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
radiation effects on vaporization of, at high temperatures, mechanism of fast neutron, 25:15645
ARSENIC CHLORIDES
radiolysis of polycrystals of, ESR studies on radicals from γ, 25:15663 (COO-1385-36)
ARSENIC FLUORIDES
radiolysis of polycrystals of, ESR studies on radicals from γ, 25:15663 (COO-1385-36)
ARSENIC IONS
implantation in metal films at 45 and 90 keV, effects on electromigration and resistivity ratio, 25:17282
ARSENIC ISOTOPES As-69
beta decay of, γ spectra and half-life for, (E), 25:17784
ARSENIC ISOTOPES As-73
electron-capture decay of, γ-ray, K x-ray, and conversion electron spectra from, (E), 25:17792
energy levels from selenium-73 electron capture decay, (E), 25:17847
ARSENIC ISOTOPES As-75
energy levels from germanium-75 beta decay, (E), 25:17847
ARSENIC ISOTOPES As-77
energy levels from germanium-77 beta decay, (E), 25:17847
ARSENIC ISOTOPES As-79
energy levels from beta decay of germanium-79, 25:17843
ARSENIC ISOTOPES As-82
beta decay of two isomers of, gamma spectra from, (E), 25:17843
ARYLESTERASE
radiation effects on activity of, in blood serum, duodenum, liver, and pancreas of rabbits, x, 25:16032
ASHES
analysis for beta-emitting radioisotopes following enrichment by selective ion exchange, radiometric, 25:15515
ASTATINE
bibliography on analytical chemistry of, 25:15470
book: Analytical Chemistry of Technetium, Promethium, Astatine, and Francium, 25:15470
ASTRON DEVICE
E-layer trapping and stability in, research on, (E), 25:17210 (UCRL-50002-70, pp 3.1-46)
ASTRONAUTS
radiation dose to, calculations for heavy charged particle and secondary electron, 25:16134(T) (JPRS-52121, pp 51-7)
radiation protection during space flight, methods for, 25:16213(T) (JPRS-52121)
radiation protection to, during space flight using radioprotective compounds, 25:16215(T) (JPRS-52121, pp 21-4)
ASTROPHYSICS
nature of Clairaut theory, asymptotic, (T), 25:16648
ATLANTIC OCEAN
radioisotope content in waters of, April to July 1964 measurements of cesium-137 and strontium-90, 25:15799(T) (AEC-tr-7214, pp 187-219)
radioisotope content in waters of, Aug. to Nov. 1963, 25:15800(T) (AEC-tr-7214, pp 227-48)
strontium-90 deposition and ratio to strontium-89 at weather stations in, during 1963 to 1970, fallout, 25:16132(R) (HASL-239(App.))
ATMOSPHERE
beta activity of fallout in Yugoslavian, following Chinese nuclear tests, 1967, 25:15787
cadmium-109 content in USSR ground-level, 1964 to 1965, 25:15779(T) (AEC-tr-7214, pp 62-9)
carbon-14 content of prehistoric, estimation of variations in, 25:15771
charged-particle intensity in upper, effect of geomagnetic and solar activity on, (E), 25:17035
circulation and pressure characteristics in Earth, solar-cycle effects on, (E/T), 25:16919
circulation in, relation to high-energy proton absorption and abundance, (E), 25:16969
composition of upper, resonance-backscattering investigation of molecular ions and metastable molecules of nitrogen, (T), 25:17034
cosmic radiation spectra from balloon-flight in, diffuse primary, (E), 25:16862
cosmic-ray diurnal variations at sea level and mountain altitudes, low-latitude, (E), 25:16863
cosmic-ray intensity variations in, effect of pressure and temperature on power spectra of primary, (E/T), 25:17043
diffusion in, comments on use of radioisotopic decay rates in studies of turbulent, (T), 25:15793
diffusion potential of nuclear site, meteorological programs for calculation of, 25:16170
emission of N_2^+ first negative bands at mid-latitude, relation to O I 4278-A oxygen intensity, (E), 25:17039
fallout monitoring of ground-level, at Ispra, Italy during July to Oct. 1970, 25:15785 (HASL-239, pp III.40-4)
fallout monitoring of Leningrad, USSR ground-level, 1959 to 1966, 25:15778(T) (AEC-tr-7214, pp 51-61)
fallout transport in, seasonal and latitudinal modification of HASL model for predicting, 25:15783 (HASL-239, pp I.63-79)
fission product content of Moscow, USSR ground-level, 1963 to 1966, 25:15777(T) (AEC-tr-7214, pp 9-20)
geomagnetic fields in near-Earth, computing methods for vertical distribution of, (E/T), 25:16994
heating of upper, effect of magnetic storms and aurorae on, (T), 25:17049
heating of, global radiative, 25:18283 (MIT-2241-58)
ionization by americium-241 sources in lightning rod, (E/T), 25:15854
ionization in, parameters affecting, (T), 25:16738
lead content of surface, at selected sites in western hemisphere during 1966 to 1970, monthly fallout stable, 25:16132(R) (HASL-239(App.))
monitoring for tritium, method for, 25:16143(R) (UCRL-50007-70-2)
proton intensity in upper, measurement of 1- to 20-MeV, 25:17032
radiation monitoring in New Zealand during 1970, 25:16078 (NRL-F-39)
radiation monitoring of ground-level, at Ispra, Italy during July to Oct. 1970, gross beta, 25:15785 (HASL-239, pp III.40-4)
radiation monitoring of Moscow, USSR ground-level, 1963 to 1966, gross beta, 25:15777(T) (AEC-tr-7214, pp 9-20)
radiation monitoring of surface, near Long Shot and Milrow sites on Amchitka Island, Alaska, 25:15806 (NVO-79, pp 41-8)
radioactivity monitoring in surface, at selected sites in western hemisphere during 1963 to 1970, monthly fallout gross γ, 25:16132(R) (HASL-239(App.))
radioactivity monitoring in, at atomic energy facilities, methods for, 25:15790
radioactivity monitoring in, at atomic energy installations, equipment and methods for, 25:15789
radioactivity of ground-level, in off-site environs of Buggy I Event, postshot measurements of gross beta, 25:15786 (PNE-327)
radioisotope content in surface, 25:15514 (HASL-239, pp I.58-62)
radioisotope content of surface, at selected sites in western hemisphere during 1963 to 1970, monthly fallout, 25:16132(R) (HASL-239(App.))
radioisotope content of, at Mound Lab., Miamisburg, Ohio, during January to July 1970, 25:16077 (MLM-1784)
radioisotope content of, over Soviet Union during 1965 and 1966, 25:16065(T) (AEC-tr-7214, pp 70-81)
radioisotope release to computer programs for calculating consequences of, 25:16181
radon emission into, from radioactive minerals, 25:15774
radon-219 emission into, from radioactive minerals, 25:15774
strontium-90 content of surface-level, in northern and southern hemispheres, predicted and measured values for, 25:15783 (HASL-239, pp I.63-79)
strontium-90 monitoring in, comparison of results from various countries, 25:15780(T) (AEC-tr-7214, pp 267-93)
tritium content of, use of silica gel method for sampling, 25:16179
ATMOSPHERIC PRECIPITATION
cadmium-109 content in USSR, 1964 to 1965, 25:15779(T) (AEC-tr-7214, pp 62-9)
fission product content of Leningrad, USSR, 1959 to 1966, 25:15778(T) (AEC-tr-7214, pp 51-61)
radiation monitoring in New Zealand during 1970, 25:16078 (NRL-F-39)
radiation monitoring in, at Ispra, Italy during July to Oct. 1970, 25:15785 (HASL-239, pp III.40-4)
radioisotope content of, in Greenland during 1969, 25:16080(R) (RISO-222)
role in fallout tritium transport through food chain to man following soil deposition, 25:16138(R) (ORNL-TM-3134)
strontium-90 content of Great Bahama Bank, June 1967 to Aug. 1970 measurements of, 25:15782 (HASL-239, pp I.2-22)
strontium-90 deposition by, 25:16079(T) (AEC-tr-7214, pp 249-66)
tritium content of worldwide, method for predicting natural, 25:15765
ATOMIC ABSORPTION SPECTROMETRY
sensitivity of, lens masks to improve, 25:15495

ATOMIC ENERGY
bibliographies on, Oct.--Dec., 1970, 25:18312 (TID-3761)
status of industrial, review of 1969 U.S, 25:18333
status of industrial, review of 1970 U.S, 25:18332
ATOMIC ENERGY, LEGAL ASPECTS
Administration of Radiation Control for Public Health and Safety Act, annual report to Congress on, 25:16194 (BRH/OBD-70-3)
authorization and declaration regarding possession and use of radioactive substances by Member States of Euratom Community, comparative study of programs for compulsory, 25:16210 (EUR-4515)
legislation and practices of International Atomic Energy Agency, 25:16211 (STI/PUB-250)
legislation for protection of man against excessive and improper medical exposure to ionizing radiation, model, 25:16208 (BRH/ORO-70-8)
recommendations of ICRP on protection of man against external radiation hazards, 25:16200
recommendations of ICRP on protection of patients against diagnostic x-ray hazards, 25:16201
recommendations of UK Code of Practice for control of limits for safe viewing of helium-neon gas lasers, 25:16199
recommendations regarding protection against radiation hazards to medical personnel during care of patients containing therapeutic doses of radioisotopes, NCRP, 25:16197 (NCRP-37)
regulations for radiation processing of potatoes, 25:16394
regulations for safe shipping of fissile and radioactive materials, 25:15864 (CONF-700549-1)
regulations of ICRP for demonstrating radiation sources in schools, 25:16205
report of ICRP on radiation dose to tissues of personnel following internal radioisotope contamination, 25:16148
standards for maximum permissible body burden of radium-226 in man, 25:16014
survey of, for control of radiation hazards to personnel and public in general from electronic equipment and radioactive materials, 25:16202 (BRH/DEP-70-28)
ATOMIC MODELS
electron problem in one-dimensional configuration space, approximate solution of n-, 25:16848
ATOMIC PHYSICS
bibliography on surface and vacuum physics, 25:16772
research at Lawrence Radiation Lab., Nov. 1969 to June 1970, (E/T), 25:17351(R) (UCRL-20120)
ATOMS
charged-particle reactions with, analytical representations of excitation cross sections and polarization fractions for, 25:16804
charged-particle reactions with, computer program for calculation of interaction matrix elements for, 25:16838
charged-particle reactions with, impulse approximation for, 25:16805
electron problem in one-dimensional configuration space, approximate solution of n-, 25:16848
electron reactions with, review of theory of resonances in, 25:16807
energy eigenvalues for, restricted lower bounds to, in statistical theory, 25:16845
energy levels in strong radiation fields, effects of radiation damping on, (T), 25:16847
energy levels of, electron--photon coincidence method for measuring lifetimes of, 25:16775
energy levels of, review of theoretical f values for, 25:16834
energy levels of, review of theory of multiply excited states, 25:16835
energy levels of, scanning monochromator for beam--foil spectroscopy measurements of lifetimes of, 25:15976
energy levels of, Thomas--Fermi approximation associated with formula for, 25:16840
energy-level transitions in systems of, collisional effects on induced emission and absorption in, (T), 25:16843
energy-level transitions in, analytical representation of generalized oscillator strengths for, 25:16804
energy-level transitions in, review of present knowledge and methods of measurement of probabilities of, 25:16774
excitation energies and frequencies for, calculation using higher-order RPA as approximation to equations of motion, 25:16846
interactions between, accuracy of variational calculations of energy of, 25:16791
ion reactions at high energies with, energy dependence of charge exchange in, (T), 25:16825
ion reactions at high energies with, oscillations of differential inelastic cross sections for, (T), 25:16828
ion reactions with, two-state approximation for cross sections for atom excitation and electron capture into excited states in, 25:16826
motion of excited, in spatially periodic potentials, resonance effects in, (T), 25:16777
nuclear charge of, evaluation of effective, from ionization potentials, 25:16779
photon emission by two-level, in applied field, quantum electrodynamic treatment of spontaneous, 25:16841
photon emission from systems of two unlike two-level, coherent effects in spontaneous, 25:16844
photon reactions with, magnetic dipole transitions induced by multiple-, 25:16833(T) (UCRL-Trans-1430)
properties of, beam--foil techniques for determination of, 25:16750
properties of, computer-based beam--foil spectroscopy system for studying, 25:15975
properties of, optical systems for beam--foil spectroscopy for studying, 25:15974
properties of, photon detectors for beam--foil spectroscopy for studying, 25:15973
reactions with diatomic molecules, calculation using three interatomic potential energies, 25:16814
reactions with diatomic molecules, quantum mechanical calculation of reactive and nonreactive scattering probabilities for, 25:16813
scattering by atoms, step potential model for calculation of total cross sections for, 25:16798(T) (ANL-Trans-872)
spectra of Z = 2 through 23, compilation of references to, 25:16773
spectra of, scanning monochromator for beam--foil spectroscopy measurement of, 25:15976
wave functions for many-electron, 25:16839
wave functions for, computer program for calculation of radial parts of interaction matrix elements between hydrogenic, 25:16838
wave functions for, computer program for generation of numerical orbital, 25:16837
ATPase
radiation effects on activity of, in rat liver, whole-body γ, 25:16279 (NIRS-9, pp 15-53)
AURORAE
boundary of day and night oval, effect of intensity of ring current and polar disturbances on, (E), 25:16998
effects on upper atmosphere heating, (T), 25:17049
electric fields in polar ionospheric, origin of, (E), 25:16929
electron detection by equipment on Kosmos 261 satellite, 25:17026
electron detection on Kosmos 261 satellite, photo-produced, 25:17024
emission structure during solar flare-associated magnetic storm and commencement of polar substorm, nitrogen and oxygen, (E), 25:16968
ion detection by equipment on Kosmos 261 satellite, 25:17026
ion detection on Kosmos 261 satellite, energy spectra of, 25:17025
mechanisms in proton, ionization cross sections and hydrogen emission excitations, (E/T), 25:16887 (AD-713691)
observations of x radiation over Syowa, Antarctica, Jan. 14 to Feb. 14, 1969, (E), 25:17030
observations of x radiation over Syowa, Antarctica, balloon-borne instrument for, (E), 25:17031
particle intensity in early-morning pulsating, energetic electron and proton, (E), 25:16950
plasma waves in, observation of man-made, 25:17013
positions of pulsating, photometric observations of, (E), 25:16991
radio-wave emission from, vlf, 25:17014
radio-wave observations in, naturally occurring vlf, 25:17013
spectral emission profiles in ultraviolet, nitrogen Vegard--Kaplan bands in, (E), 25:16951
AURORAL ZONE
charged-particle current profile over homogeneous arc to 135 km, electron and proton, (E), 25:16964
electron collision frequency in ionospheric E-region, height-dependent effective, (E/T), 25:16910
electron precipitation into, effect of magnetospheric-acceleration mechanisms on energetic, (T), 25:17047
geomagnetic bays at midlatitude, distribution of disturbance vectors of negative, (E), 25:16931
parameters of sporadic E formations in, relation to fine structure, (E/T), 25:16911
radio-wave absorption in ionosphere, diurnal-variation comparison at Loparskaya and College, (E), 25:16988
radio-wave absorption in, relation of ionospheric--magnetic activity with diurnal and seasonal variation-dependent cosmic, (E), 25:16987
red arc in sub-, relation to ionospheric plasma-heating parameters, (E/T), 25:16944
x-radiation monitoring in high-altitude, balloon data of, (E), 25:16885(R) (AD-712726)
AUTOPSIES
specimen list of A-Bomb Medical Records and Specimens Center in Hiroshima, 25:16370
AUTORADIOGRAPHY
Bremsstrahlung effects on tritium, of tissues of mice, 25:15988
methods for measuring resolving power of, using cell labeling techniques, 25:15992
photographic film for, luminescence from beta sources in acrylic plastics for calibration of, 25:15889
AVES
Gallus sp., metabolism of calcium-45 and strontium-85 in, effects of age on ratio of, 25:16002 (ORO-678, pp 94-

101)
Gallus sp., radiation effects on immune response of neonatal, to injected antigen, effects of injection of cells from bursa on, 25:16057
Gallus sp., radiosensitivity of developing tibiae in embryonic, x, 25:16330
radioisotope content of, in Amchitka Island, Alaska, cesium-137, potassium-40, and strontium-90, 25:16072(R) (BMI-171-110)
AZINPHOS METHYL
toxicity to γ-irradiated pink bollworm moths, . 25:16294
AZODRIN
toxicity to γ-irradiated pink bollworm moths, 25:16294
AZOVSKOYE MORE
strontium content and distribution in, 1966 measurements of, 25:15760(T) (AEC-tr-7214, pp 161-86)

B

BACTERIOPHAGES
phie, radiation effects on incorporation of, into spores of Bacillus subtilis, effects of phosphorus-32 decay on electron, 25:16386
radioinduced breaks of DNA strands in, effects of LET on charged particle, 25:16043
radioinduced inactivation of DNA and RNA in, fast proton, 25:16387
radiosensitivity of lysogenic mycobacterium avium, uv, 25:16109
T4, photoreactivable sector of, sensitizing effects of cationic derivatives of acetophenone on uv, 25:16388
BALANCES
development of torque-motor, for measuring amounts of target materials evaporated onto substrates, 25:17657
BARIUM
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in beryllium oxide, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
properties as impurity getter for high temperature sodium, 25:16398 (IS-2300, pp 101-86)
BARIUM ALLOYS AND SYSTEMS
Ba--Pr, phase studies of, 25:16398 (IS-2300, pp 101-86)
BARIUM FORMATES
radiation effects on, ESR spectral studies on hyperfine parameters of CO_2^- radicals produced by, 25:15646
BARIUM IONS
electron reactions at 10 to 1000 eV with Ba^+, absolute cross sections for single ionization in, (E), 25:16799 (CRO-3027-18)
BARIUM ISOTOPES Ba-131
electron-capture decay of, gamma spectra from, (E), 25:17922
BARIUM ISOTOPES Ba-133
electron-capture decay of, gamma spectra from, (E), 25:17922
BARIUM ISOTOPES Ba-138
photon reactions (γ,π^+) with, meson (π^+) yields from, (E), 25:17789
BARIUM ISOTOPES Ba-139
energy levels of, coupling between spin-flip and non-spin-flip particle-hole, (T), 25:17868
BARIUM ISOTOPES Ba-140
Ba-140--La-140, diffusion in pyrolytic carbon and silicon carbide coatings, 25:16585
BARIUM ISOTOPES Ba-142
beta decay of, γ spectra from, (E), 25:17941
energy-level scheme from cesium-142 decay, (E), 25:17941
BARIUM NITRIDES
radiation effects on thermal decomposition induction period in, 25:15644
BARYONS
decay of, parameter fit for Cabibbo theory for leptonic, (E/T), 25:17458
form factors of, current algebra for weak, (T), 25:17456
interactions with baryons at high energies, total summation of perturbation series for diffraction, (T), 25:17499 (JINR-E2-5509)
interactions with mesons and baryons at high energies and small angles, quantum field theory for amplitude of diffraction, (T), 25:17476
interactions with mesons at high energies, total summation of perturbation series for diffraction, (T), 25:17499 (JINR-E2-5509)
interactions with mesons in quark model, line-reversal symmetry breaking in, 25:17505
interactions with mesons, baryon fixed poles in, 25:17510
interactions with mesons, static bootstrap models for strong coupling theory for, (T), 25:17502
mass formulas for, static bootstrap models for strong coupling theory for, (T), 25:17502
nonet of, crossing as group and elimination of exotic channels for quark model theory of tensor, (T), 25:17479
nonets of, algebraic realization of SU(3) symmetry for predictions for, 25:17523 (JINR-E2-5229)
structure of, deformable sphere model for level, 25:17475
BARYONS, RESONANCE
classification in symmetry schemes, 25:17542
mass and width of D- and S-wave $Z^*(1830)$ in $K + N \to K^* + N$ interactions, (T), 25:17504
masses of, broken SU(3) relativistic equation for, (T), 25:17546
production in $K^+ + p$ interactions at high energies, review of, (E), 25:17392
production of D- and S-wave $Z^*(1830)$ in $K + N \to K^* + N$ interactions, (T), 25:17504
BARYONS, RESONANCE (N^*)
decay of, static bootstrap models for strong coupling theory for widths of, 25:17502
form factors from $e + p \to e + N^*$ interactions, quark-model predictions of, 25:17445
mass limitation from pionization process in N interactions at very high energies, (T), 25:17473
production in nucleon interactions at very high energies, fireball model for, (T), 25:17473
production in $\pi + N$ interactions, finite-energy sum rules for Regge bootstraps for, (T), 25:17503
production of d^* singlet and triplet in $d + p \to 2p + n$ interactions at 52 MeV, angular distributions and cross sections for, (E), 25:17371 (NP-18561)
production of $\Delta(1236)$ in $N + N \to N^* + N(N^*)$ and $\pi + N \to N^*$ interactions below 3 GeV, isobar model for angular distributions for phenomenological, (T), 25:17517 (ORNL-TM-3132)
production of Δ^{++} in $\pi^+ + p \to f^0 + \Delta^{++}$ interactions at 13.1 GeV/c in hydrogen bubble chamber, (E), 25:17400
production of Δ^{++} in $\pi^+ + p \to \pi^+ + p + K^+(\text{anti } p) + K^-(p)$ interactions at 13.1 GeV/c in hydrogen bubble chamber, (E), 25:17380 (COO-1428-249)
production of N(3695) in 8- and 10-prong $\pi^+ + p$ interactions at 8 GeV/c in hydrogen bubble chamber, (E), 25:17401
production of $P_{11}(1785)$ and $S_{11}(1550)$ in $\gamma + p \to p +$ eta interactions at 1.22 to 1.85 at small angles, Cherenkov counter hodoscope study of differential cross sections for interference in, (E), 25:17358
production of pp(2050) in p + p interactions at 300 to 640 MeV, (T), 25:17518
properties of pp(2050), 25:17518
BARYONS, RESONANCE (Y^*)
decay of, static bootstrap models for strong coupling theory for widths of, 25:17502
BASALT
radioactive waste solidification in, effects on basalt properties of high-level, 25:15873
BEAM SEPARATORS
charged-particle trajectories in rf quadrupole, calculation of, 25:17662
BEHAVIOR
radiation effects on, of miniature swine, effects of dose fractionation and time intervals on γ and neutron, 25:16301 (AD-709938)
work performance, effects on heart rate, respiratory rate, and rectal temperature of ponies, 25:16314 (ORO-678, pp 41-6)
BELOYARSK POWER REACTOR, UNIT 1
power density distribution in, γ ionization chambers for measurement of, (E/T), 25:16047
BENZENE
reactions with radiolytic hydrated electrons, effect of micellar surfactants on, 25:15671
reactions with recoil carbon-11, acetylene formation in, 25:15711
BENZENE, BROMO-
deuterium exchange reactions with para hydrogens of, in aqueous sulfuric acid solutions, kinetic studies on, 25:15610
tritium exchange reactions with para hydrogen of, in aqueous sulfuric acid solutions, kinetic studies on, 25:15610
BENZENE, CHLORO-
radiolysis in lower aliphatic alcohols, reactions of solvated electrons in γ, 25:15688
BENZENE, 1-CHLORO-2-NITRO-
radiolysis in lower aliphatic alcohols, reactions of solvated electrons in γ, 25:15688
BENZENE, 1-CHLORO-4-NITRO-
radiolysis in lower aliphatic alcohols, reactions of solvated electrons in γ, 25:15688
BENZENE, m-DICHLORO-
radiolysis in lower aliphatic alcohols, reactions of solvated electrons in γ, 25:15688
BENZENE, p-DICHLORO-
radiolysis in lower aliphatic alcohols, reactions of solvated electrons in γ, 25:15688
BENZENE, HEXAFLUORO-
radiolysis of liquid and vaporous, mechanism and yields from γ and neutron, 25:15661(T) (BNL-tr-394)
BENZENE, IODO-
effects on hydrogen yields from γ radiolysis of methylcyclohexane and 3-methylpentane at -196°C, 25:15686
radiation effects on, Szilard--Chalmers reactions in neutron, 25:15708

BENZENE, IODOSO-
radiation effects on, Szilard--Chalmers reactions in neutron, 25:15708
BENZENE, IODOXY-
radiation effects on, Szilard--Chalmers reactions in neutron, 25:15708
BENZENEARSONIC ACID, 2,2'-[(1,8-DIHYDROXY-3,6-DISULFO-2,7-NAPHTHYLENE)BIS(AZO)]DI-
complexes with rare earths in presence of Complexone III, spectrophotometric studies on, 25:15631
complexes with thorium and zirconium in perchloric acid solutions, spectral studies on, 25:15632
BENZOIC ACID, m-CHLORO-
radiolysis in lower aliphatic alcohols, reactions of solvated electrons in γ, 25:15688
BENZOIC ACID, p-CHLORO-
radiolysis in lower aliphatic alcohols, reactions of solvated electrons in γ, 25:15688
BERKELIUM CHLORIDES
crystal structure of hexahydrates of, 25:15635
BERYLLIUM
analysis for impurities by elastic proton scattering, 25:15528
corrosion by aqueous sodium chloride, effects of anodized coatings and temperature on, 25:16416
determination by alpha or helium-3 irradiation, activation curves for, 25:15555
determination by photon activation, 25:15553
effects on thermometric titration of aluminum, 25:15484
elastic properties of hexagonal, calculation of x-ray, 25:16476
machining of, comparison of lathe and spark methods for, 25:16425
neutron coherent scattering law for polycrystalline, (T), 25:17665 (GA-9364)
photon reactions at 15 GeV, high-mass dipion pair production in, (E), 25:17433
radiation effects on strength and swelling of, effects of helium and tritium accumulation and radiation dose on in-pile, 25:16552
separation as pivaloyl trifluoroacetonate from other metal pivaloyl trifluoroacetonates by gas chromatography, 25:15752
BERYLLIUM ALLOYS AND SYSTEMS
Be--Cu, mechanical properties of, effects of precipitation hardening on, 25:16510
Be--Cu-base, electron diffraction from Guinier--Preston zones in, (E/T), 25:17314
BERYLLIUM FLUORIDES
BeF_2--CeF_3--LiF, phase diagrams for, 25:15625 (ORNL-4622, pp 60-118)
BeF_2--LiF, solvent properties for gaseous boron trifluoride, 25:15625 (ORNL-4622, pp 60-118)
BeF_2--LiF--ThF_4, electric conductivity in molten, 25:15625 (ORNL-4622, pp 60-118)
BeF_2--LiF--ThF_4, liquidus temperatures of, 25:15625 (ORNL-4622, pp 60-118)
BeF_2--LiF--ThF_4--UF_4, reprocessing of reactor fuels of, development of close-coupled system for, 25:18138 (ORNL-TM-3137)
BeF_2--NaF, glass transition temperatures in, 25:15625 (ORNL-4622, pp 60-118)
BERYLLIUM IONS
scattering by helium at 100 to 800 eV of Be^{2+}, energy-loss spectra and interaction potentials from elastic, (E), 25:16802
BERYLLIUM ISOTOPES Be-7
formation during helium burning in red-giant stars, (T), 25:16655
BERYLLIUM ISOTOPES Be-8
energy levels from boron-10 (p,He-3) reactions, (E), 25:17688
energy levels from helium-4 alpha resonance, calculation using Humblet-Rosenfeld complex eigenvalue theory, (T), 25:17764
energy levels from lithium-7 (α,tα) reactions, widths of, (E), 25:17733
BERYLLIUM ISOTOPES Be-9
alpha reactions (α,2α) at 55 MeV, analysis for quasi-elastic mechanism in, (E), 25:17760
deuteron reactions (d,α) at 0.9 to 2.16 MeV, differential and total cross sections for, (E), 25:17708 (INR-1200)
deuteron reactions (d,p) and (d,t) at 0.24 to 3.8 MeV, angular distributions for, (E), 25:17748
energy levels from lithium-9 decay, spin-parity assignments for, (E), 25:17767
helium-3 elastic scattering at 2.1 to 3.9 MeV, optical-model analysis of, (E/T), 25:17812
helium-3 reactions (He-3,n) at 2.1 to 3.9 MeV, DWBA analysis of cross sections and polarization distributions from, (E/T), 25:17812
proton elastic scattering at 1.97 to 2.18 MeV, angular distributions for, (E), 25:17709 (JINR-P15-5519)
proton elastic scattering by, depolarization parameter for, (E), 25:17826
proton elastic scattering by, mechanism in, 25:17765
proton reactions (p,α) with, mechanism in, 25:17765
proton reactions (p,d) and (p,α) at 0.20 to 2.5 MeV, differential cross sections for, (E), 25:17723
proton reactions (p,n) at 2.8 to 4.1 MeV, neutron angular distributions from, (E), 25:17744
triton reactions (t,d) at 1.5 to 3.5 MeV, differential cross section for, (E), 25:17746
BERYLLIUM OXIDES
analysis for trace amounts of impurities, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
corrosion by lithium at 375°C, relations with microstructure and purity, 25:16405(R) (ANL-7756)
diffusion of helium in irradiated and annealed, at 600 to 1400°C, 25:16593
helium precipitation in irradiated and annealed, 25:16593
BeO--U, radiation effects on stability of, 25:16484
BeO--U, tensile properties at 500 to 600°C, 25:16484
BETA DECAY
charge dependence of one-boson exchange potentials in, (T), 25:17988
Fermi matrix element for pure Fermi, charge-dependent radiative corrections to, (T), 25:18002
theory of, 25:18001
BETA PARTICLES
detection of low-level liquid scintillation detector system for, 25:15886 (NP-18661)
dose to bones in monkeys following ingestion or injection of strontium-90, relation of, to induction of chromosome aberrations in cultured bone marrow cells, 25:16092(R) (ORO-3297-4)
dose to human bones and urinary calculi from deposited strontium-90, correlation between, 25:16192
dose to man from tritium following soil deposition and transport through human food chain, 25:16138(R) (ORNL-TM-3134)
dose to man, from cesium-137 in food, 25:16127(T) (AEC-tr-7214, pp 27-36)
dosimetry in bones of swine following chronic ingestion of strontium-90, calculations for cumulative, 25:16008
effects on body weight and hematology of sheep, effects of skin exposure to strontium-90--yttrium-90, 25:16026 (ORO-678, pp 74-7)
effects on copper, iron, protein, and zinc content of blood plasma of sheep, effects of skin exposure to strontium-90--yttrium-90, 25:16026 (ORO-678, pp 74-7)
effects on DNA following disintegration of incorporated phosphorus-32 or tritium, 25:16048
effects on gastrointestinal tract of γ-irradiated sheep, effects of, on survival, 25:16318 (ORO-678, pp 58-64)
effects on pupae of Sarcophaga peregrina, recovery from low dose, 25:16297
effects on reproductive capacity of adult dog ticks raised from radioisotope-labeled larvae, chronic, 25:16295
effects on tolerance to surgical stress in mice, 25:16357
effects on zinc-65 uptake by erythrocytes of sheep, effects of skin exposure to strontium-90--yttrium-90, 25:16026 (ORO-678, pp 74-7)
energy loss spectra of carbon-14, in proportional counter, effects of gas--solid interface on, (E), 25:15913
monitoring at atomic energy facilities, methods for, 25:15790
monitoring in air and rainwater of New Zealand during 1970, 25:16078 (NRL-F-39)
monitoring in air and rainwater of Pacific Islands during 1970, 25:16078 (NRL-F-39)
monitoring in ground-level atmosphere at Ispra, Italy during July to Oct. 1970, 25:15785 (HASL-239, pp III.40-4)
monitoring in off-site environs following Buggy I Event, 25:15786 (PNE-327)
scattering by hydrogen compounds and lead compounds at 0.2 to 3 MeV, effective atomic numbers for back-, (E), 25:16764
yields from fission products of thermal neutron fission of uranium-235, time-dependent, (E), 25:17919
BETA SOURCES
activity in Yugoslavian atmospheric fallout following Chinese nuclear tests, 1967, 25:15787
activity of particulate, use of autoradiography for determining, 25:16122
determination in ashes and water following enrichment by selective ion exchange, radiometric, 25:15515
luminescence from tritium and carbon-14 in acrylic plastics, 25:15889
BETA SPECTROMETERS
design of 4π coincidence β--γ, for measuring decay schemes, 25:15914 (CEA-R-4131)
magnet power supply system for six-gap orange-type, automatic stabilizer circuit for, 25:15919
performance of trochoidal magnetic, for internal pair spectroscopy, 25:15920
BIBLIOGRAPHIES
on analytical chemistry of astatine, francium, promethium, and technetium, 25:15470
on diffusion in alloys, compounds, and metals, 25:16514
on fallout contamination and decontamination of food, 25:16071 (AED-C-2-10)
on foreign affairs and national security attitudes, 25:18291 (ORNL-TM-2028)
on plasma physics, 25:17119
on plasma physics, 25:17120
on radiation effects on biological materials, ionizing,

XUM

25:16277 (AED-C-4-32)
on radiation processing of foods, 25:16389 (AED-C-5-8)
on radioactive waste disposal, 25:15869 (ORNL-TM-3301)
on radiochemistry, 25:15718
on surface and vacuum physics, 25:16772
BIG ROCK POINT POWER REACTOR
fuel elements bundle for, technical specifications for instrumented Reload-F, 25:18083 (DOCKET-50155-66)
neutron sources for, revised technical specifications for, 25:18082 (DOCKET-50155-64)
BILIRUBIN
radiation effects on metabolism of, in liver of rabbits, effects of dose on γ, 25:16039
BIOLOGICAL MATERIALS
analysis by neutron activation, separation of sodium activity to increase sensitivity of, 25:15560
analysis for 28 elements by neutron activation and radiochemical separation, 25:15531
analysis of marine, for cobalt, copper, iron, manganese, and zinc by neutron activation, 25:15537
analysis of marine, for trace elements by atomic absorption spectrophotometry of neutron activation, 25:15542
analysis of rat, for carbon-14, adaptation of oxygen flask method for, 25:15522
electron microscopy of, radiation damage and image resolution in, 25:15971
radiation effects on, bibliography on ionizing, 25:16277 (AED-C-4-32)
radiation effects on, effects of dose rate on RBE calculations for γ and x, 25:16126 (AD-713557)
radiation effects on, effects of LET on charged particle, 25:16043
trace element content in, on United Kingdom coast, 25:15542
BIOLOGICAL MODELS
design for prediction of response to erythropoietin in polycythemic mice, 25:16343
development for determining ecological effects of underground testing of nuclear devices on Amchitka Island, 25:16074(R) (BMI-171-118)
development of compartmental, using computer analysis of tracer data, 25:16020
use for calculating potential internal radiation dose to man following environmental contamination in Alaska, 25:16072(R) (BMI-171-110)
BIOLOGY
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)
research at Nat. Inst. of Radiological Sciences, Japan, 1969--1970, 25:16276(R) (NIRS-9)
research program at ORNL, review of basic and mission-oriented, 25:18293 (ORNL-TM-3218)
BIPHENYL
performance as working fluid in radioisotope-fueled Rankine power system, 25:15839 (ORNL-TM-2960)
BIPYRIDINE
complexes with iron, electrochemical behavior of, kinetic studies on, 25:15630
BISMUTH
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by method based on reaction of EDTA and lead iodate, 25:15479
neutron inelastic scattering by, cross sections for gamma yields from, (E), 25:17842
x-ray emission from decay of K-shell vacancies in, relative rates of, (E), 25:16786
BISMUTH ALLOYS AND SYSTEMS
Bi--In, electric conductivity at 200 to 500°C, specific, 25:16509
Bi--Li, solvent properties for neodymium, 25:15726 (ORNL-4622, pp 199-225)
Bi--Li--Nd, solvent properties for thorium, 25:15726 (ORNL-4622, pp 199-225)
Bi--Pr, phase studies of, 25:16398 (IS-2300, pp 101-86)
Bi--Sn, diffusion in liquid, at 300, 340, and 400°C, 25:15561 (IS-2300, pp 7-20)
BISMUTH ISOTOPES Bi-207
decay of, gamma energies and intensities of, (E), 25:17923
BISMUTH ISOTOPES Bi-209
alpha fission of, mass-yield curves and absolute cross sections for various fission products from binary and ternary, (E/T), 25:17898
nuclear mass distributions from alpha elastic scattering at low energies, (T), 25:18007
proton reactions (p,f) at 30 to 40 MeV, energies and angular distribution of fragments from, (E), 25:17937
BISMUTH ISOTOPES Bi-212
decay of, gamma energies and intensities of, (E), 25:17923
BITUMINOUS MATERIALS
radioactive waste fixation in, Eurochemic method for medium-level, 25:15865 (NP-18574)
BLACK SEA
radioisotope content in waters of, April to July 1964 measurements of cesium-137 and strontium-90, 25:15799(T) (AEC-tr-7214, pp 187-219)
radioisotope content in waters of, Aug. to Nov. 1963, 25:15800(T) (AEC-tr-7214, pp 227-48)
BLOOD
analysis for carbon-14 by scintillation counting, sample preparation for, 25:15524
analysis of rat, for carbon-14, adaptation of oxygen flask method for, 25:15522
circulation in human brain, use of metastable technetium-99-labeled serum albumin microaggregates and γ camera with television display system for scanning of, 25:16235 (UCLA-12-803)
circulation in human psoriatic skin, use of injected technetium-99m for studying, 25:16244
radioisotope content of bovine, following intravenous and oral administration, cerium-144 and scandium-46, 25:16001 (ORO-678, pp 83-8)
scanning of circulation of, in liver, effectiveness of radioisotope-labeled Rose Bengal for, 25:16240
BLOOD CELLS
radioinduced changes in count and morphology of, in personnel, for use as dosimeter for low-dose ionizing radiations, 25:16189
BLOOD PLASMA
analysis for radioactivity by dissolution in liquid scintillator and 4π counting, 25:15530
radiation effects on content of copper, iron, protein, and zinc in sheep, effects of skin exposure to strontium-90--yttrium-90 β, 25:16026 (ORO-678, pp 74-7)
BLOOD PLATELETS
radiation effects on count of, in sheep, effects of skin exposure to strontium-90--yttrium-90 on β, 25:16026 (ORO-678, pp 74-7)
radiation effects on count of, of sheep, γ, 25:16318 (ORO-678, pp 58-64)
radiation effects on count of, x, 25:16348
turnover rates in rabbits, use of selenium-75-labeled methionine in tracer studies of, 25:15991
BLOOD VESSELS
radiation effects on, of beagle dogs, effects of shielding on γ and neutron, 25:16300 (AD-709920)
radioinduced congestion of, in lungs of rabbits, effects of dose on electron, γ, and x, 25:16305(T) (LF-tr-33)
BODY FLUIDS
cesium-137 content of amniotic fluids in rabbits and rats following administration to mother, 25:16024
BOILERS
design of nuclear power plant, calculation methods for, 25:15815
design problems for prototype liquid sodium cooled fast breeder reactors, 25:18115
development in Japan of liquid metal heated, for fast breeder reactors, 25:18133
development of gas cooled reactor, 25:18099(R) (GA-10313)
heat transfer characteristics of once-through water heated, effects of design parameters on, 25:18252
tubes for, evaluation of Hastelloy N, 25:16399 (ORNL-4622, pp 119-98)
BOILING
detectors for liquid sodium, description of, 25:18146(P)
detectors for liquid sodium, design of stainless steel waveguide for, 25:18130
BONE MARROW
cell renewal in rat, tritium tracer study of, 25:16341
effects on development and severity of acute symptoms in irradiated starved animals, combined effects of trace elements on, 25:16354
effects on restorative capacity of spleen cells from immunized, γ-irradiated rats, 25:16055
growth of transplants of, in extramedullary sites, 25:16342
growth potential of colony-forming cells in, in vitro, 25:16347
hematopoiesis in, of mouse radiation chimeras, in comparison to spleen, 25:16334
iron-59 incorporation in hematopoietic cells of, in mice in relation to cell count, 25:16018
plutonium-239 distribution in, of rabbits following intramuscular and intravenous injection of plutonium nitrates, 25:16015
radiation effects on dog, protective effects of partial-body shielding against proton, 25:16196(T) (JPRS-52121, pp 25-9)
radiation effects on human response to transplants of, x, 25:16059
radiation effects on mouse, erythrocytic and granulocytic repopulating ability following x, 25:16339
radiation effects on reconstitution of, in depleted rabbit femur, x, 25:16340
radiation effects on, of mice, effects of chalone on mitotic replenishment of stem cells following x, 25:16325
radiation effects on, of rat, role of endothelial cells and lymphocytes in regeneration following, 25:16341
radioinduced chromosome aberrations in cultured cells of, from monkeys following ingestion or ingestion of strontium-90, 25:16092(R) (ORO-3297-4)
radioinduced injuries to, relation of sinusoidal microcirculation to hemopoietic function following, 25:16342
radioprotective effects of colony-forming units of, on mice, x, 25:16230
radioprotective effects of hydrolysates of, on

hematopoiesis and survival of rabbits, x, 25:16333
radiosensitivity of colony-forming cells from mouse, x, 25:16345
removal from irradiated rabbits, effects of, on survival rate, 25:16354
transplantation between histoincompatible dogs, treatment of graft-versus-host disease following, 25:16058

BONES
analysis for strontium by atomic absorption spectrometry, 25:15497
analysis of animal and human, for calcium and strontium-90, radiochemical, 25:15513 (HASL-239, pp I.23-57)
analysis of ashed, for calcium, chlorine, magnesium, and sodium by neutron activation and γ spectrometry, 25:15558
description of improved standard, for comparison of scanning systems, 25:18276 (COO-1422-78)
plutonium-239 distribution on endosteal surface of femur of rabbits following injection of plutonium nitrates, 25:16015
radiation dose to human, from deposited strontium-90, 25:16192
radiation dose to monkeys, following ingestion or injection of strontium-90, 25:16092(R) (ORO-3297-4)
radiation dosimetry in, of swine, calculations for cumulative strontium-90 β, 25:16008
radiation effects on bone marrow restoration in depleted rabbit femur, cytokinetic and histological study of x, 25:16340
radioinduced inhibition of metabolism of fractured tibia, in mice, x, 25:16321
radioinduced injuries to, of livestock, description of, following necropsy, 25:16319 (ORO-678, pp 65-73)
radioinduced sarcomas in human, following radium-224 therapy of diseases, α and γ, 25:16365
radioinduced sarcomas in, of radiation chimeras of mice, chromosome analysis of, for determining cellular origin of strontium-90, 25:16329
radioisotope concentrations in, of dogs, effects of DTPA on relative americium-241 and plutonium, 25:16012
radioisotope content of human, from residents of arctic regions of Soviet Union sampled during 1965, 25:16067(T) (AEC-tr-7214, pp 108-14)
radioisotope content of human, in Denmark during 1969, 25:16139 (RISO-220)
radiosensitivity of developing, of embryonic chickens, x, 25:16330
strontium-90 accumulation in, of swine following ingestion, 25:16008
strontium-90 content in human, from Africa and South America, 1969 and 1970, 25:16114 (HASL-239, pp II.1-129)
strontium-90 content of human, in Soviet Union, 25:16068(T) (AEC-tr-7214, pp 115-25)
thorium-232 concentration in human, effects of age on measurements for, 25:16011

BORATES
effects on spectrographic determination of rare earths, 25:15476

BOROCARBIDES
phase studies of, 25:16612

BORON
determination by alpha, helium-3, or proton irradiation, activation curves for, 25:15555
determination in beryllium oxide, iron, and steel, effects of spark duration on relation sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
neutron absorption by, in a 1/E neutron flux, (E), 25:17667
radiation effects on diffusion of, in monocrystalline silicon, 10 to 50 keV proton, 25:16616
reactions with fluorine, kinetics of, 25:16411
removal from boronated Type 304 stainless steel, effects of steam on, 25:18099(R) (GA-10313)
solubility of interstitial, in α-iron, comments on, 25:16479
solubility of interstitial, in α-iron, comments on, 25:16480

BORON CARBIDES
radiation effects on microstructure of, in-pile, 25:18180(R) (WHAN-FR-50)
reactivity worths of large samples of, comparison of calculated and measured, 25:18102 (WHAN-SA-12)

BORON FLUORIDES
solubility of gaseous boron trifluoride in fluoride melts, 25:15625 (ORNL-4622, pp 60-116)

BORON ISOTOPES B-10
deuteron reactions (d,α) with, alpha angular distributions from, (T), 25:17720
deuteron reactions (d,n) at 5.8 MeV, energy levels of carbon-11 from, (E), 25:17771
energy level at 2.15 MeV from lithium-7 (α,n) reactions, lifetime of, (E), 25:17750
energy levels from beryllium-9 (p,d) and (p,α) reactions, (E), 25:17723
helium-3 reactions (He-3,d) at 11 MeV, energy levels of carbon-11 from, (E), 25:17771
neutron absorption by, in a 1/E neutron flux, (E), 25:17667
nuclear structure of, dynamical-cluster, (T), 25:17720
proton elastic scattering by, depolarization parameter for, (E), 25:17826
proton reactions (p,He-3) at 49.5 MeV, differential cross sections for, (E/T), 25:17688
triton reactions (t,α) at 1.5 to 3.5 MeV, differential cross section for, (E), 25:17747
triton reactions (t,d) at 1.5 to 3.5 MeV, differential cross section for, (E), 25:17746

BORON ISOTOPES B-11
energy levels from carbon-12 (γ,p) reactions, continuum calculation of low-lying, (T), 25:17729
energy levels from carbon-12 (γ,pγ') reactions at 24.8 to 42 MeV, (E), 25:17716
helium-3 reactions (He-3,n) at 3.0 to 3.8 MeV, DWBA analysis of cross sections and polarization distributions from, (E/T), 25:17812
helium-3 reactions (He-3,p) at 3 MeV, energy spectra from, (E), 25:17768
neutron inelastic scattering at 4.8 to 9.7 MeV, γ-ray angular distributions and excitation functions for, (E), 25:17749
proton elastic scattering at 1.1 to 3 MeV, excitation function for, (E), 25:17763
proton reactions (p,3α) at 0.2 to 2 MeV, sequential mechanism in, 25:17766
proton reactions (p,α) at 12 to 30 MeV, plane wave analysis of, (E), 25:17752
proton reactions (p,α) at 2.65 MeV, three-α final state interactions in, (E), 25:17769
reactions with gold-197 at 5 to 10 MeV/nucleon, production of spontaneously fissioning isomers by, (E), 25:17924

BORON NITRIDES
corrosion by lithium at 375°C, relations with microstructure and purity, 25:16405(R) (ANL-7756)
corrosion of dielectrics of, by lithium--sulfur mixtures at 375°C, 25:16405(R) (ANL-7756)

BOSONS
correlation functions for charged, long-distance, (T), 25:17337
density matrices of condensed system of identical spinless, consistent form of reduced, (T), 25:17066
interactions of spinless, dual resonance models with residues having maximum fixed finite number of logarithmic poles for amplitudes of, (T), 25:17489
interactions with spinless bosons, Regge pole theory and O(3,1) group for relativistic expansions of amplitudes of two-body, (T), 25:17481
isospin of para-, Carruther theorem for, 25:17565
mass matrix of Goldstone, in spontaneously broken SU(3) x SU(3) symmetry, Mathur and Okubo dosains and Kuo invariance for negative eigenvalues of square, (T), 25:17543
quantum mechanics of scalar, bound-state and scattering problems in relativistic, (T), 25:17559
vertex function in Veneziano model, electromagnetic, 25:17444
wave equation with multiple representations for spin-1, relativistic, 25:17557

BOSONS, INTERMEDIATE-VECTOR
production in ν and μ^+ reactions with nuclei and ν + N and μ^+ + N interactions at high energies, total cross sections for, (T), 25:17453 (COO-1573-73)

BRAIN
blood circulation in, use of metastable technetium-99-labeled serum albumin microaggregates and γ camera with television display system for scanning of, 25:16235 (UCLA-12-803)
radiation effects on growth of, of rats, effects of prenatal exposure on, 25:16309 (ORO-678, pp 7-13)
radiation effects on metabolism of norepinephrine and serotonin in, of rats, effects of low dose on microwave, 25:16303(R) (AD-710005)
radiation effects on neurons of, in rats, electron microscopy of x, 25:16331
radiation effects on rabbit, following embryo exposure, x, 25:16352
radioinduced injuries to, in developing dog fetuses, x, 25:16356
radioinduced lesions in, of mice and rabbits, protective effects of cysteamine against, 25:16225
radiotherapy of cerebral metastases in human, effectiveness of high-dose whole-brain γ, 25:16271
scanning for diagnosis of tumors of, of mice, use of mercury-197-labeled chlormerodrin for, 25:16236
use of iodine-131 for scanning of human, for diagnosis and post-operative supervision of hydrocephalus cases, 25:16237

BREEDING (BIOLOGICAL)
radiation effects on, of apples, carnations, cherries, pears, potatoes, tomatoes, and tulips, x, 25:16089(R) (EUR-4545)

BREMSSTRAHLUNG
effects on tritium autoradiography of tissues of mice, 25:15988
emission from mirror-confined plasma, electron distribution from, 25:17135 (ORNL-TM-3302)
production by 25- to 45-MeV electrons, effects of target Z and thickness on, (E), 25:17658
production in N + N → N + N + γ interactions, review of, (E/T), 25:17372 (UCD-CNL-EX-130)
production in p + p → p + p + γ interactions, proton electromagnetic structure effects on cross sections

for, (T), 25:17519
production in thick targets by electrons at 1 to 25 MeV, calculation of spectra for, 25:17618
reactions ($\gamma,n\gamma'$) and ($\gamma,p\gamma'$) with carbon-12 at 24.5 to 42 MeV, gamma spectra from, (E), 25:17716
BROMINE
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in thyroid gland in man by neutron activation and radiochemical separation, 25:16306 (NIRS-9, pp 55-61)
BROMINE FLUORIDES
reactions with radon at -195 to 25°C, oxidation, 25:15572
BROMINE ISOTOPES Br-72
decay of, half-life and γ spectra for, (E), 25:17784
BROMINE ISOTOPES Br-82
exchange between potassium bromide and Zeise's salt, 25:15579
BROOKHAVEN ALTERNATING-GRADIENT SYNCHROTRON (AGS)
experimental facility for, multiparticle magnetic spectrometer, 25:17641
experimental facility for, multiparticle spectrometer, 25:17640
BROOKHAVEN REACTOR
stack effluent of, results of monitoring γ emitting isotopes in, 25:16178
BUBBLES
distribution in irradiated uranium dioxide, model for calculation of intragranular size, 25:16584
distribution of intragranular, in uranium dioxide during irradiation, model for description of, 25:16588
growth in water cooled power reactor during coolant loss accident conditions, effects on blowdown of delayed, (T), 25:16153 (AHSB(S)R-189)
movement in burnout and transient boiling on heat transfer surfaces, controlling parameters of, 25:15831
BURROS
radiation effects on survival of, effects of dose on, 25:16313 (ORO-678, pp 36-40)
radiation effects on, description of pathological changes following necropsy, 25:16319 (ORO-678, pp 65-73)
BUTANE, 1-CHLORO-
effects on hydrogen yields from γ radiolysis of methylcyclohexane and 3-methylpentane at -196°C, 25:15686
1,3-BUTANEDIONE, 4,4,4-TRIFLUORO-1-PHENYL-
complexes with neodymium, structure of, 25:15626(R) (ORO-2124-23)
2-BUTANONE
effects on polymerization of γ-irradiated cellulose with acrylonitrile and another monomer, 25:15685

C

CADAVERS
radioisotope content of human, in Soviet Union, effects of age and geography on, 25:16066(T) (AEC-tr-7214, pp 87-107)
CADMIUM
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by method based on reaction of EDTA and lead iodate, 25:15479
determination in beryllium oxide, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
elastic properties of hexagonal, calculation of x-ray, 25:16476
gamma reactions at 2.615 MeV, pair production cross sections for, (E), 25:17808
neutron total cross sections at 100 to 150 MeV, optical-model analysis of, (E/T), 25:17914
radiation effects on chromium carbonyl and, reactions of recoil molybdenum from proton, 25:15717
separation from solvent extracts of ores or waste by direct precipitation, 25:15749(P)
CADMIUM ALLOYS AND SYSTEMS
Ag-base--Cd, oxidation of solid solution of, at 600 to 800°C, study of microstructure from internal, 25:16406
Cd--Co--Ni, deposition of ternary, sulfate bath electro-method for, 25:16424
Cd--In, diffusion in liquid, at 300°C, diaphragm cell measurement of, 25:15561 (IS-2300, pp 7-20)
Cd--Y--Zn, phase diagram of YCd_3--Zn section of, 25:16542
Cd--Zn, deformation in eutectic, at 150 to 255°C, superplastic, 25:16451
CADMIUM ISOTOPES Cd-109
content in USSR ground-level atmosphere and atmospheric precipitation, 1964 to 1965, 25:15779(T) (AEC-tr-7214, pp 62-9)
CADMIUM ISOTOPES Cd-110
alpha inelastic scattering at 7 to 10 MeV, gamma spectra from, (E), 25:17893
energy levels from alpha and oxygen-16 inelastic scattering, (E), 25:17893
energy-level transitions in, following silver-110m beta decay, multipole mixing ratios in, (E), 25:17887
oxygen-16 inelastic scattering at 28 to 42 MeV, gamma spectra from, (E), 25:17893
CADMIUM ISOTOPES Cd-112
energy levels from silver-112 beta decay, (E), 25:17877
CADMIUM ISOTOPES Cd-115
beta decay of ground-state and isomeric, β polarization and β-γ angular correlations for, (E), 25:17943
CADMIUM SULFATES
$CdSO_4$--$CoSO_4$--$NiSO_4$, cadmium--cobalt--nickel alloy electrodeposition from baths of, 25:16424
CADMIUM SULFIDES
radiation damage in crystals of, annealing of 10-MeV electron, (E), 25:17279
CALCIUM
abundance in 112 Her AB, (E), 25:16645
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in bones, ion exchange resins, and plants, radiochemical, 25:15513 (HASL-239, pp I.23-57)
determination in rat bone by neutron activation and γ spectrometry, 25:15558
determination of total body, in man by neutron activation using cyclotron as neutron source, 25:15550
determination of trace amounts of, in human dentine and enamel by thermal neutron activation and γ spectrometry, 25:15545
diffusion in calcium fluoride, calcium-45 tracer studies on, 25:16569 (IS-2300, pp 1-5)
effects on thermometric titration of aluminum, 25:15484
metabolism in cattle, pigs, and rats, effects of iodine-131 on, 25:16320 (ORO-678, pp 78-82)
metabolism in man in relation to bone diseases, tracer method using calcium-47 and mathematical model for studying, 25:16306 (NIRS-9, pp 55-61)
neutron elastic scattering at 2.06 to 7.91 MeV, optical-model analysis including Hauser--Feshbach formalism of differential cross sections from, (E/T), 25:17816
neutron total cross sections at 1.8 to 8.3 MeV, (E/T), 25:17816
proton reactions (p,2p) at 600 MeV, (E), 25:17757
radiation effects on content of, in cardiac muscle of rats, effects of adrenalectomy on, 25:16351
transport in corn roots, radial, 25:16319 (UCLA-12-811)
CALCIUM FLUORIDES
crystal defects in, formation energies of, 25:16598
diffusion of calcium in, calcium-45 tracer studies on, 25:16569 (IS-2300, pp 1-5)
CaF_2--LiF--MgF_2, voltammetric properties at 690°C, 25:15567(R) (ORO-3518-19)
CALCIUM FORMATES
radiation effects on, ESR spectral studies on hyperfine parameters of CO_2^- radicals produced by, 25:15646
radiation effects on, ESR spectral studies on hyperfine parameters of CO_2^- radicals produced by γ, 25:15646
CALCIUM IONS
x-ray emission from Ca-XVIII and -XIX, during solar flare of Nov. 2, 1969, (E), 25:16700
CALCIUM ISOTOPES
metabolism in cattle, pigs, and rats, effects of iodine-131 on, 25:16320 (ORO-678, pp 78-82)
CALCIUM ISOTOPES Ca-40
energy levels at 6.752 and 7.114 MeV from proton inelastic scattering, gamma decay, lifetimes, and spins of, (E), 25:17794
energy levels from argon-36 (Li-7,t) reactions, (E), 25:17837
energy levels from potassium-39 (He-3,d) reactions, partial strengths and spectroscopic factors for, (E/T), 25:17822
nuclear binding energy, charge radius, and quadrupole moments of, Hartree--Fock calculation of, (T), 25:17727
nuclear charge distribution of, effect of Jastrow correlation factor on, (T), 25:18012
proton elastic scattering at 25 to 40 MeV, optical-model determination of charge radius from, (E), 25:17778
proton inelastic scattering at 10 to 11 MeV, p-γ angular correlations from, (E), 25:17794
proton reaction ($p,2p$) at 156 MeV, analysis using impulse approximation, (E/T), 25:17758
proton reactions (p,d) at 30 to 45 MeV, cross section for, 25:17828
CALCIUM ISOTOPES Ca-42
deuteron reactions (d,n) at 5.0 to 6.05 MeV, differential cross sections for, (E), 25:17785
helium-3 reactions (He-3,d) at 18 MeV, differential cross sections for, (E), 25:17785
CALCIUM ISOTOPES Ca-45
metabolism in chickens in relation to strontium-85 metabolism, effects of age on, 25:16002 (ORO-678, pp 94-101)
migration in soil columns, 25:16089(R) (EUR-4545)
penetration of injected calcium chloride-incorporated, into aqueous and corneas of rabbit eyes, effects of alloxan on, 25:15996
uptake by oat leaves, role of chloroplasts in,

25:16089(R) (EUR-4545)
CALCIUM ISOTOPES Ca-47
distribution in tissues of pregnant rats and fetuses following subcutaneous injection, 25:16000 (ORO-678, pp 14-24)
production in alpha fission of bismuth-209 and plutonium-239, upper limits for, (E/T), 25:17898
CALCIUM ISOTOPES Ca-48
proton elastic scattering at 25 to 40 MeV, optical-model determination of charge radius from, (E), 25:17778
CALCIUM OXIDES
CaO--ZrO-base, density of, deviation from pure anion vacancy model, 25:16605
CALCIUM PHOSPHATES
analysis for strontium-90, radiochemical, 25:15513 (HASL-239, pp I.23-57)
CALDER HALL REACTORS
radiation monitoring program for, off-site emergency, 25:16171
CALIFORNIA
cesium-137 content of diet and adult human population of, during 1960 to 1969, fallout, 25:16187
environmental effects of thermal effluents in, summary of studies of, 25:18096
CALIFORNIUM
complexes with aminopolycarboxylic acids, stability of, 25:15722 (KFK-1291)
CALIFORNIUM ISOTOPES Cf-241
alpha decay of, half-life for, (E), 25:17929
CALIFORNIUM ISOTOPES Cf-242
alpha decay of, α spectra from, (E), 25:17929
CALIFORNIUM ISOTOPES Cf-252
availability beginning Feb. 1971, 25:15849
availability and price beginning Nov. 1970, 25:15850
decay and radiation properties of, handbook on, 25:15870 (SRO-153)
determination by α, fission fragment, and neutron counting, 25:15512 (DP-1243)
effects on mammalian chromosomes, 25:16291
fabrication and handling of neutron sources of, 25:15850
fabrication of sources of, guide for, 25:15870 (SRO-153)
fission in tissues, dosimetry of radiation from, 25:15849
fission of, energy and angular distributions of long-range alpha particles from spontaneous, (E), 25:17872
fission of, gamma and x-ray spectroscopy on products of spontaneous, (E), 25:17897
handling and shipping of sources of, guide for, 25:15870 (SRO-153)
neutron dose rate and spectra from, 25:16143(R) (UCRL-50007-70-2)
preparation, properties, and uses of, 25:15849
production capability for, at Savannah River Plant, 25:15850
separation and purification of 110 mg of, 25:15849
shielding of, materials for, 25:15849
shielding of, materials for, 25:15850
shipping containers for neutron sources of, availability of commercial, 25:15850
uses as neutron source in activation analysis and process control, 25:15850
uses as neutron source in activation analysis and process control, 25:15849
uses as neutron source in nondestructive assay device for nuclear materials management, 25:15849
CALORIMETERS
development for analysis of reactor fuels and wastes, 25:15916(R) (GEAP-12114-3)
CALUTRONS
ion sources for, design and operation of Plasmatron-type, 25:15844 (SGAE-PH-101/1970)
CAMERAS
image diffraction and drag in Model 739 framing, 25:18280 (EGG-1183-530)
CANDU REACTOR
operation of, performance of components and systems during, 25:18073
CARBAMIC ACID, METHYL-, 1-NAPHTHYL ESTER
toxicity to γ-irradiated pink bollworm moths, 25:16294
CARBIDES
abundance in Apollo 12 fines, (E), 25:16742
analysis for absolute carbon, 25:15489
thermal stability of eta, 25:18296(T) (ORNL-tr-2425)
CARBOHYDRATES
metabolism in rats in relation to x-radiosensitivity, 25:16335
CARBON
abundance in 112 Her AB, (E), 25:16645
abundance in Apollo 12 fines, (E), 25:16742
abundance in OB stars, (E), 25:16641
alpha elastic scattering at 166 MeV, optical-model analysis of, (E/T), 25:17739
analysis for impurities by elastic proton scattering, 25:15528
content in bainite and ferrite in carbon--chromium--iron and carbon--iron--molybdenum alloys, electron microprobe study of, 25:16536
defects in composites of, nondestructive method for detection of, 25:15856 (WHAN-SA-42)
density of, measurement by gamma backscatter, 25:15858
deposition on fuel particles by pyrolysis of methane or propene in fluidized beds, parameters for, 25:16561 (JUL-686-RW)
determination by alpha or helium-3 irradiation, activation curves for, 25:15555
determination by alpha, deuteron, helium-3, or proton activation, method for, 25:15556
determination by photon activation, 25:15553
determination of absolute, in carbides, carbonates, and organic compounds, 25:15489
determination of trace amounts of, in refractory metals, 25:15489
diffusion in niobium carbides, 25:16580
diffusion of fission products in coatings of pyrolytic, 25:16585
effects on mechanical properties of rhenium--tantalum alloy and monocrystalline tantalum at 4.2 to 550°K, 25:16478
enthalpy of solution in liquid plutonium at 700to 1000°C, 25:16440 (LA-4559)
graphitization of pyrolytic, mechanisms of high-temperature, 25:16559(R) (NYO-1710-100)
helium-ion reactions at 10 to 75 keV with foils of, excitation functions for, (E), 25:16757
ion reactions at 1 to 20 keV with foils of, energy loss and angular scattering in, (E), 25:16760
ion reactions at 10 to 3000 eV with surfaces of, optical radiation from excited sputtered particles from, (E), 25:16766
ion reactions at 100 to 500 keV with foils of, equilibrium charge distributions from, (E), 25:16758
ion reactions at 3 to 54 keV with thin foils of, angular distributions and energy losses from, (E), 25:16755
oxidation at high temperatures, thermochemical studies on role of volatilization processes in, 25:16410
photon reactions with, spectrometer study of ω + 2ω decay from rho--ω interference in, (E), 25:17360
production and properties of coatings and structures of pyrolytic, 25:16567(P)
production by disproportionation of carbon monoxide over cobalt and nickel crystals, 25:16559(R) (NYO-1710-100)
proton reactions (p,2p) at 600 MeV, (E), 25:17757
radiation effects on dimensions of isotropic, at 1250°C, relations of density with neutron, 25:16615(R) (GA-10433)
radiation effects on electron microstructure of foils of, image-difference method for study of, 25:16617
radiation effects on properties of, in-pile, 25:16559(R) (NYO-1710-100)
reactions with nickel oxide, mechanisms of reduction, 25:16559(R) (NYO-1710-100)
reactions with niobium pentoxide at 1050 to 2300°C to prepare niobium, mechanism and thermodynamic equilibrium of reduction, 25:16578
removal of thorium carbide--uranium carbide fuel coating of pyrolytic, by pickling, composition and kinetics of solution for, 25:16565
thallium-ion reactions at 200 to 1100 keV with foils of, equilibrium charge distributions from, (E), 25:16758
CARBON BLACK
reactions of deuterium with hydrogen on surfaces of, kinetics of equilibrium, 25:16559(R) (NYO-1710-100)
reactions of surfaces of, with hydrogen, kinetics of, 25:16559(R) (NYO-1710-100)
sorptive properties for oxygen, effects of pressure and temperature on, 25:16559(R) (NYO-1710-100)
CARBON DIOXIDES
absorption in D region, effect on metastable molecular oxygen photo-ionization, (E/T), 25:16954
abundance in Apollo 12 fines, (E), 25:16742
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
measurement of carbon-14-labeled, in human breath, biochemical, physical, and technical factors for, 25:16016
CARBON IONS
effects of 5.2 MeV/n, on chromosomes in Chlorella, RBE determination for, 25:16375(T) (JPRS-52121, pp 58-62)
ionization rate in plasma, collisional, (E), 25:17163
CARBON ISOTOPES C-11
energy levels from boron-10 (d,n), boron-10 (He-3,d), and carbon-12 (He-3,α) reactions, (E), 25:17771
energy levels from carbon-12 (γ,n) reactions, continuum calculation of low-lying, (T), 25:17729
energy levels from carbon-12 (γ,nγ') reactions at 24.5 to 42 MeV, (E), 25:17716
incorporation in polystyrene particles by proton irradiation for use in aerosol deposition studies, 25:15993
reactions of recoil, with alkanes and benzene leading to acetylene formation, 25:15711
CARBON ISOTOPES C-12
alpha reactions (α,2α) at 55 MeV, analysis for quasi-elastic mechanism in, (E), 25:17760
alpha reactions (α,2α) at 90 MeV, analysis for reaction mechanism in, (E), 25:17761
decay into three alpha particles, calculations of distributions from, 25:17769
deuteron elastic scattering at 9 to 12 MeV, optical-model analysis of differential cross sections and vector analyzing power for, (E/T), 25:17725
deuteron reactions (d,α) with, second-order lithium-6 mechanism in, (T), 25:17734

deuteron reactions (d,pn) with, search for proximity scattering and singlet deuteron contributions in, (E), 25:17719
electron quasi-elastic scattering at high energy, energy spectra from, (E), 25:17742
energy level at 18.36 MeV from boron-11 proton resonances, spin-parity assignment for, (E), 25:17763
energy levels at 12.71 and 15.11 MeV from carbon-13 (He-3,α) reactions, isospin mixing parameters for, (E), 25:17711
energy levels of, calculation using three-alpha model with resonant two-body forces, (T), 25:17968
energy levels of, cluster-model analysis of, (T), 25:17718
energy levels of, open-shell random-phase approximation for negative parity excitations of, (T), 25:17730
helium-3 reactions (He-3,α) at 9.5 to 11.5 MeV, energy levels of carbon-11 from, (E), 25:17771
interactions with carbon-12, determination of potential using two-center shell model, (T), 25:17717
lithium-6 reactions (Li-6,t) at 28 MeV, angular distributions for, (E), 25:17755
neutron elastic and inelastic scattering at 14 to 20 MeV, cross sections for, (E), 25:17745
neutron elastic scattering at 14 MeV, optical-model analysis of, (E), 25:17740
neutron reactions (n,α) at 14 MeV, cross sections for, (E), 25:17818
nuclear binding energy, charge radius, and quadrupole moments of, Hartree--Fock calculation of, (T), 25:17727
oxygen-16 scattering by, nucleon exchange in, (T), 25:17994
photon reactions (γ,n) and (γ,p) leading to low-lying mass-11 states, continuum calculation of, (T), 25:17729
photon reactions (γ,nγ') and (γ,pγ') at 24.5 to 42 MeV, gamma spectra from, (E), 25:17716
proton elastic scattering at 140 MeV, bremsstrahlung amplitudes from, (E/T), 25:17728
proton elastic scattering by deformed, differential cross sections for, (T), 25:17707 (INP-721)
proton reaction (p,2p) at 156 MeV, analysis using impulse approximation, (E/T), 25:17758
proton reactions (p,π⁺) at 600 MeV, model for π⁺ emission in, (T), 25:17522
proton reactions (p,t) at 49.5 MeV, effects of beam polarization on differential cross sections for, (E), 25:17715
reactions (C-12,f) with gadolinium-158 at 126 MeV, total cross sections and fragment angular distributions from, (E), 25:17860 (CU-1019-76)
reactions with gold-197 at 5 to 10 MeV/nucleon, production of spontaneously fissioning isomers by, (E), 25:17924
reactions with iron-56, compound-nucleus decay in, (E), 25:17824
scattering by carbon-13, nucleon exchange in, (T), 25:17994

CARBON ISOTOPES C-13
carbon-12 scattering by, nucleon exchange in, (T), 25:17994
deuteron elastic scattering at 1.0 to 2.7 MeV, angular distributions for, (E), 25:17731
deuteron reactions (d,α) at 1.0 to 2.7 MeV, angular distributions and excitation functions for, (E), 25:17731
deuteron reactions (d,p) at 1.0 to 2.7 MeV, angular distributions and excitation functions for, (E), 25:17731
deuteron reactions (d,t) at 1.0 to 2.7 MeV, angular distributions and excitation functions for, (E), 25:17731
deuteron reactions (d,t) at 12.1 MeV, vector analyzing power of, (E/T), 25:17724
electron elastic and inelastic scattering at 40 to 125 MeV, differential cross sections and form factors for, (E), 25:17721
electron elastic scattering at 120 to 750 MeV, cross sections for, (E), 25:17770
energy level at 3.85 MeV from boron-10 (α,p) reactions, lifetime of, (E), 25:17750
energy levels from boron-11 (He-3,p) reactions, widths of, (E), 25:17768
energy levels from electron inelastic scattering, (E), 25:17721
helium-3 reactions (He-3,n) at 3.0 to 3.8 MeV, DWBA analysis of cross sections and polarization distributions from, (E/T), 25:17812
lithium-6 reactions (Li-6,t) at 28 MeV, angular distributions for, (E), 25:17755

CARBON ISOTOPES C-14
beta-particle energy deposition spectra in proportional counter, effects of gas--solid interface on, (E), 25:15913
content of prehistoric atmosphere, estimation of variations in, 25:15771
determination in animal tissues by nitric acid digestion and scintillation counting, 25:15529
determination in biological materials, adaptation of oxygen flask method for, 25:15522
determination in gas-phase labeled organic compounds by beta counting, microchemical, 25:15520
determination in whole blood by scintillation counting, sample preparation for, 25:15524
effects on metabolism of steroids in fungi, 25:16022
incorporation into dog tick larvae for tracer studies of tick ecology, transovarial, 25:15989
measurement of carbon dioxide-incorporated, in human breath, biochemical, physical, and technical factors for, 25:16016
proton reactions (p,He-3) and (p,t) at 39.8 MeV, DWBA analysis of, (E/T), 25:17710
reactions of recoil, in irradiated nitrogen compounds, 25:15705(R) (COO-1620-6)

CARBON MONOXIDES
abundance in Apollo 12 fines, (E), 25:16742
abundance in zeta Oph, (E), 25:16644
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
desorption from surfaces of rhenium and ruthenium, field emission study of, 25:16450
disproportionation over cobalt and nickel crystals to produce carbon, 25:16559(R) (NYO-1710-100)
electron reactions with, excitation functions and lifetimes of metastable states produced in, (E), 25:16816
surface properties on rhenium and ruthenium surfaces, field emission study of, 25:16450

CARBON SYSTEMS
C--Co-base--Cr--Ti--W--Zr, mechanical properties of, effects of composition and cast structure on, 25:16477
C--Cr--Fe-base, carbon content of bainite and ferrite in, electron microprobe study of, 25:16536
C--Fe-base--Mo, carbon content of bainite and ferrite in, electron microprobe study of, 25:16536
C--Mo--N, phase studies of, 25:16606
C--Nb-base--V--Zr, properties of, chemical, mechanical, and physical, 25:16447(P)
C--Pu, thermodynamic properties of, review of, 25:16604
C--U, thermodynamic properties of, review of, 25:16604

CARBON TETRACHLORIDE
effects on hydrogen yields from γ radiolysis of methylcyclohexane and 3-methylpentane at -196°C, 25:15686
effects on ignition of plutonium and plutonium alloys, 25:16442 (RFP-1566)
reactions with recoil iodine-128 from neutron capture, yields from, 25:15706
reactions with recoil iodine-130 from isomeric transition or neutron capture, yields from, 25:15706

CARBON TETRAFLUORIDE
reactions with recoil iodine-128 from neutron capture, yields from, 25:15706

CARBONATES
analysis for absolute carbon, 25:15489

CARBOXYLESTERASE
radiation effects on activity of, in blood serum, duodenum, liver, and pancreas of rabbits, x, 25:16032

CASEIN
radiation effects on physicochemical and organoleptic properties of, γ, 25:16390(T) (JPRS-52121, pp 63-8)

CATTLE
radiation effects on fertility and survival of, effects of dose and dose fractionation on γ, 25:16311 (ORO-678, pp 28-34)
radiation effects on milk yield of, effects of thyroprotein and thyroxine replacement therapy on iodine-131, 25:16320 (ORO-678, pp 78-82)
radiation effects on survival of, γ, 25:16318 (ORO-678, pp 58-64)
radiation effects on testes of, effects of dose and dose rate on γ, 25:16310 (ORO-678, pp 25-7)
radiation effects on tissues of, pathological γ, 25:16312 (ORO-678, pp 35)
radiation effects on, description of pathological changes following necropsy, 25:16319 (ORO-678, pp 65-73)
radioisotope metabolism in, following intravenous and oral administration, cerium-144 and scandium-46, 25:16001 (ORO-678, pp 83-8)
strontium-85 transfer from contaminated pasture to milk of, measurements of, 25:16076 (FOA-4-4445)

CAVITY RESONATORS
design and performance of high-temperature, for temperature measurement in reactors, 25:15967 (WHAN-SA-24)
design of interdigital H-type, for heavy-ion linac, 25:17613 (LYCEN-7055)

CELL PHASE
radiation effects on, use of clone culture methods for determining, 25:16281

CELLS
activity of polygonal hepatic, use of radioisotope-labeled Rose Bengal for determining, 25:16240
antigenicity of transplanted bursa, in x-irradiated neonatal chickens, 25:16057
colony formation by hematopoietic, of mice in vitro following stimulation by embryonic and kidney cells, leukemic and normal sera of mice, and human urine, 25:16023
conference on radiation effects on hematopoietic, 25:16282
count of hematopoietic, in bone marrow of mice in

relation to iron-59 incorporation, 25:16018
immunization of spleen, of mice using tritium-labeled thymidine in vitro, 25:16056
radiation effects on DNA synthesis and mitotic cycle of, review of, 25:16281
radiation effects on glutamate-α-oxoglutarate reactions in ascites, glutamate dehydrogenase activity following uv, 25:16033
radiation effects on growth of transplanted bone marrow, and fetal liver, in mice, 25:16346
radiation effects on hamster, effects of 5-bromodeoxyuridine and cysteamine on x, 25:16096
radiation effects on human blastoid, effects of, on growth of leukocytes from mononucleosis patients, x, 25:16283
radiation effects on mammalian, effects of hydrated electrons, hydroxyl radicals, and hydrogen atoms on x, 25:16217 (UR-49-1389)
radiation effects on pyruvate-lactate reactions in ascites, lactate dehydrogenase activity following uv, 25:16033
radiation effects on stem, in comparison to effects of erythropoietin and hydroxyurea, recovery from, 25:16344
radiation effects on stem, relation between leukemia induction and, 25:16280
radiation effects on survival of mouse mammary tumor, combined effects of hypoxia on fast neutron, 25:16306 (NIRS-9, pp 55-61)
radioinduced metaplasia of, in lungs of rabbits, effects of dose on electron, γ, and x, 25:16305(T) (LF-tr-33)
radioprotective effects of bone marrow and spleen, on mice, comparison of x, 25:16230
radiosensitivity of hematopoietic colony-forming mouse, effects of phase of cycle on x, 25:16345
radiosensitivity of mesenchymal, of rabbit femur, x, 25:16340
radiosensitivity of neurons in brain of rats, electron microscopy of x, 25:16331
replenishment of bone marrow stem, in x-irradiated mice, effects of chalone on mitotic, 25:16325
role of pluripotential stem, in hematopoiesis, 25:16990
synthesis of DNA and thymidine in mammalian, autoradiography studies on, 25:15992
transplantation of bone marrow, and thymocytes into x-irradiated mice, effects of, on erythropoiesis, 25:16338
transplantation of bone marrow, spleen, and thymus mouse, effects of cyclophosphamide and radiation on colony formation after, 25:16337
transplantation of immunocompetent, in mice, effects of x irradiation of recipients on, 25:16051
use of transplants of stem, for treatment of injuries following radiation accidents, 25:16366

CELLS, CULTURED
radiation effects on growth of mouse sarcoma, effects of 5-hydroxytryptamine on x, 25:16279 (NIRS-9, pp 15-53)
radiation effects on rate of synthesis of DNA in, x, 25:16279 (NIRS-9, pp 15-53)
radiation effects on survival of rat thymus, protective effects of thymus tissue extracts against γ, 25:16279 (NIRS-9, pp 15-53)
radioinduced aberrations of chromosomes in Chinese hamster, effects of LET on charged particle, 25:16043
radioinduced formation of pyrimidine dimers in cultured human cells, uv, 25:16044
radioinduced mutations in 8-azaguanine-resistant hamster, effects of dose on x, 25:16101
radiosensitivity of human kidney, effects of oxygen on 910-MeV helium ion, 25:16142 (UCRL-20190)
radiosensitivity of mouse melanoma, effects of metabolic factors and ultrastructure on x, 25:16279 (NIRS-9, pp 15-53)
reproduction of, development of mathematical model for use in radioisotope tracer studies of, 25:15995
synthesis of RNA in interferon producing chick embryo, following infection with uv-irradiated Newcastle Disease Virus, 25:16054

CELLS, HeLa
radiation effects on survival of, effects of sulfhydryl content of cells on x, 25:16279 (NIRS-9, pp 15-53)
radiosensitivity of, effects of metabolic factors and ultrastructure on x, 25:16279 (NIRS-9, pp 15-53)

CELLULOSE
radiation effects on subsequent polymerization with 2-hydroxyethyl methacrylate, 3-hydroxypropyl methacrylate, or methacrylic acid, effects of solvents on kinetics of γ, 25:15656
radiation effects on subsequent polymerization with acrylonitrile and other monomers, effects of composition and solvent on γ, 25:15655
radioinduced polymerization of styrene on swollen films of, concentration measurements during γ, 25:15658

CEMENTS
determination in wet concrete, development of gamma radiometric gage for, 25:15958 (ORO-3842-2)

CERAMIC MATERIALS
defects in, nondestructive method for detection of, 25:15856 (WHAN-SA-42)
fabrication of, hot isostatic compacting method for, 25:16432

CEREALS
separation of strontium-90 from, evaluation of methods for, 25:15753
strontium-90 content of, in Soviet Union during 1963 to 1966, 25:16070(T) (AEC-tr-7214, pp 249-66)
wheat, strontium-90 content of Switzerland, during 1967, 25:16087

CEREBROSPINAL FLUID
circulation in human brain, following surgery for hydrocephalus, determination by iodine-131 scintigraphy, 25:16237

CERIUM
complexes with aminopolycarboxylic acids, stability of, 25:15722 (KFK-1291)
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
complexes with peroxy radicals, ESR studies on, 25:15638
determination of trace amounts of, in thorium dioxide by isotope dilution method, 25:15505(T) (N-70-38452)
distribution in cerium dioxide--uranium dioxide pellets, effects of annealing in thermal gradients on, 25:16597 (ANL-7703)
effects on reactions of hexavalent chromium with tetravalent plutonium, catalytic, 25:15571
heavy ion reactions with, fission fragments from, (E)), 25:17924
photoelectric work function of, (E), 25:17299
reactions with steel in melts, kinetics of reduction, 25:16453
separation from nitric acid solution by solvent extraction using bis(2-ethylhexyl) phosphate, 25:15740
separation from rare earth nitrate solutions by hydrolysis in presence of hydrogen peroxide, 25:15730(T) (UCRL-Trans-10512)
thermal capacity of, 25:16398 (IS-2300, pp 101-86)

CERIUM ALLOYS AND SYSTEMS
Al--Ce--La, electric conductivity of Ce/sub 1-x/La/sub x/Al_2, Kondo sideband theory of, (E/T), 25:17304
Al--Ce--Th, electric conductivity of Ce/sub 1-x/Th/sub x/Al_2, Kondo sideband theory of, (E/T), 25:17304
Al--Ce--Y, electric conductivity of Ce/sub 1-x/Y/sub x/Al_2, Kondo sideband theory of, (E/T), 25:17304
Ce--Cu-base--Zr, electric conductivity of heat-resisting dilute, 25:16455
Ce--La-base, magnetic susceptibility of Kondo system, phenomenological model of, (E/T), 25:17307
Ce--Th, superconducting transition temperature of, effect of nonmagnetic 4f resonances on, 25:17113
Ce--Y, thermal capacity of, 25:16398 (IS-2300, pp 101-86)

CERIUM CHLORIDES
crystal structure of heptahydrates of, 25:15635

CERIUM FLUORIDES
BeF_2--CeF_3--LiF, phase diagrams for, 25:15625 (ORNL-4622, pp 60-118)
CeF_3--ThF_4, phase diagrams for, 25:15625 (ORNL-4622, pp 60-118)

CERIUM ISOTOPES Ce-137
electron-capture decay of, gamma spectra from, (E), 25:17922

CERIUM ISOTOPES Ce-140
energy levels from lanthanum-140 decay, (E), 25:17943

CERIUM ISOTOPES Ce-141
energy levels of, coupling between spin-flip and non-spin-flip particle-hole, (T), 25:17868
metabolism in calves following intravenous and oral administration, 25:16001 (ORO-678, pp 83-8)
use as tracer for determining rate of passage through bovine gastrointestinal tract, 25:16001 (ORO-678, pp 83-8)
yields from neutron fission of plutonium-239 and plutonium-241, 25:15689

CERIUM ISOTOPES Ce-142
energy-level scheme from lanthanum-142 decay, (E), 25:17941

CERIUM ISOTOPES Ce-143
production by neutron fission of plutonium-239 and plutonium-241, 25:15690

CERIUM ISOTOPES Ce-144
compatibility of compounds incorporating, with heat-resisting capsule materials, 25:15838 (ORNL-4359)
content in rainwater at Fayetteville, Arkansas, following 8th Chinese nuclear explosion, effects of rainfall rate and storm type on, 25:15791
content in surface soils near Leningrad, USSR, 1954 to 1965, 25:15757(T) (AEC-tr-7214, pp 21-6)
content in surface soils near Moscow, USSR, 1963 to 1966, 25:15777(T) (AEC-tr-7214, pp 9-20)
content of atmosphere over Soviet Union during 1965 and 1966, 25:16065(T) (AEC-tr-7214, pp 70-81)
content of marine invertebrates in Amchitka, Alaska, 25:16073(R) (BMI-171-113)
determination in irradiated fuel elements, γ spectrometers, scintillation counters and semiconductor radiation detectors for, 25:15248
determination in surface air, radiochemical, 25:15514 (HASL-239, pp I.58-62)
diffusion in pyrolytic carbon and silicon carbide coatings, 25:16585
use as tracer for determining rate of passage through bovine gastrointestinal tract, 25:16001 (ORO-678, pp 83-8)

yields from neutron fission of plutonium-239 and plutonium-241, 25:15689
CERIUM NITRATES
complexes with triphenylphosphine oxide, crystal and molecular structure of, 25:15636
CERIUM OXIDES
thermal expansion at 100 to 300°K, back-reflection x-ray method for measurement of, 25:16575
CeO_2--UO_2, cerium distribution in pellets of, effects of annealing in thermal gradients on, 25:16597 (ANL-7703)
CERMETS
book: Methods of Studying Refractory Materials (In Russian), 25:16595
fabrication of, hot isostatic compacting method for, 25:16432
CESIUM
determination by substoichiometric solvent extraction using nitrobenzene in sodium tetraphenylborate and isotope dilution, 25:15508
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination of trace amounts of, in fish, molluscs, water, and aquatic plants by neutron activation, 25:15540
reactions with argon, helium, and xenon of excited atoms of, mechanisms of excitation transfer in, 25:16820
removal from water cooled reactor containment systems, performance of engineered safeguards, (E/T), 25:18183 (WHAN-SA-39)
separation by solvent extraction using nitrobenzene in presence of substoichiometric amounts of tetraphenylborate, 25:15508
separation from pollucite, development of methods for, 25:16398 (IS-2300, pp 101-86)
sorption by hydrobiotite and vermiculite, mechanism of, 25:15728 (ORO-678, pp 102-13)
sorption by multi-loaded zirconium phosphate anion exchange resins, 25:17257 (NIRS-9, pp 1-14)
sorption on tungsten (100) surfaces, effects on work function, 25:17295
CESIUM ALLOYS AND SYSTEMS
Cs--Pr, phase studies of, 25:16398 (IS-2300, pp 101-86)
CESIUM ALUMINUM SILICATES
separation of cesium from, development of methods for, 25:16398 (IS-2300, pp 101-86)
CESIUM ISOTOPES Cs-131
energy levels from barium-131 electron-capture decay, spin assignments for, (E), 25:17922
CESIUM ISOTOPES Cs-132
content of man, effects of body contour on automatic whole-body counting of, 25:16123
CESIUM ISOTOPES Cs-133
energy levels from barium-133 electron-capture decay, spin assignments for, (E), 25:17922
CESIUM ISOTOPES Cs-134
distribution in tissues of pregnant rats and fetuses following subcutaneous injection, 25:16000 (ORO-678, pp 14-24)
retention by man, calculations of biological half-life for, 25:16013
retention in rats, combined effects of age, sex and temperature on, 25:16007
uptake by leaves of bean plants, 25:16089(R) (EUR-4545)
CESIUM ISOTOPES Cs-137
compatibility of compounds incorporating, with heat-resisting capsule materials, 25:15838 (ORNL-4359)
content in ground-level atmosphere at Ispra, Italy, July to Oct. 1970, 25:15785 (HASL-239, pp III.40-4)
content in rainwater at Fayetteville, Arkansas, following 8th Chinese nuclear explosion, effects of rainfall rate and storm type on, 25:15791
content in surface soils near Leningrad, USSR, 1954 to 1965, 25:15757(T) (AEC-tr-7214, pp 21-6)
content in surface soils near Moscow, USSR, 1963 to 1966, 25:15777(T) (AEC-tr-7214, pp 9-20)
content in waters of Atlantic Ocean, April to July 1964, (E), 25:15799(T) (AEC-tr-7214, pp 187-219)
content in waters of Atlantic Ocean, Aug. to Nov. 1963, (E), 25:15800(T) (AEC-tr-7214, pp 227-48)
content of algae, birds, crustaceans, fish, and otters in Alaska, 25:16072(R) (BMI-171-110)
content of animals, drinking water, plants, precipitation, and seawater in Greenland during 1969, 25:16080(R) (RISO-222)
content of atmosphere, milk, and vegetables in Soviet Union during 1965 and 1966, 25:16065(T) (AEC-tr-7214, pp 70-81)
content of diet and adult human population in California during 1960 to 1969, fallout, 25:16187
content of environment and food samples at Ispra, Italy during 1969, 25:16131 (EUR-4563)
content of environment, food, and human bone samples in Denmark during 1969, 25:16139 (RISO-220)
content of human adult and infant diet in Chicago during October, 1970, fallout, 25:16133 (HASL-239, pp III.36-9)
content of human diet in Netherlands during 1969, 25:16003 (RA-41)
content of human hair, correlation of, with content of body tissues, 25:16121
content of man in Soviet Union from 1962 to 1966, whole-body counting of, 25:16069(T) (AEC-tr-7214, pp 126-42)
content of man residing in arctic region of Soviet Union, effects of diet on, 25:16063(T) (AEC-tr-7214, pp 1-8)
content of marine algae and fish in Amchitka, Alaska, 25:16073(R) (BMI-171-113)
content of milk in New Zealand during 1970, 25:16078 (NRL-F-39)
content of reindeer meat, effects of, on radiation dose absorbed by man residing in arctic regions, 25:16127(T) (AEC-tr-7214, pp 27-36)
determination in irradiated fuel elements, γ spectrometers, scintillation counters and semiconductor radiation detectors for, 25:18248
determination in surface air, radiochemical, 25:15514 (HASL-239, pp I.58-62)
diffusion in pyrolytic carbon and silicon carbide coatings, 25:16585
distribution in amniotic fluid, embryos, organs, and placenta in pregnant rabbits and rats, 25:16024
distribution in USSR soils, 1964 measurements of vertical, 25:15758(T) (AEC-tr-7214, pp 82-6)
migration in soil columns, 25:16089(R) (EUR-4545)
ratio to strontium-90 in New York City tap water during 1965 to 1970, monthly fallout, 25:16132(R) (HASL-239(App.))
separation from seawater containing cerium-144 and strontium-85 by ion exchange on ferrocyanide molybdate resin, 25:17257 (NIRS-9, pp 1-14)
transport in irradiated fuel elements, effects on fuel burnup measurements of, 25:18248
uptake and retention by marine fish, tracer study of, 25:15998 (NIRS-9, pp 63-82)
uptake by leaves of bean plants, 25:16089(R) (EUR-4545)
uptake by man in Soviet Union from food during 1965 and 1966, 25:16064(T) (AEC-tr-7214, pp 37-50)
use as source for gamma backscatter density measurements, 25:15858
CESIUM ISOTOPES Cs-138
yields from fast fission of plutonium, (E), 25:17899
CESIUM ISOTOPES Cs-142
beta decay of, γ spectra from, (E), 25:17941
energy-level scheme from xenon-142 decay, (E), 25:17941
CESIUM PERMANGANATES
radiation effects on thermal decomposition induction period in, 25:15644
CESIUM URANYL CHLORIDES
structure of $Cs(UO_2)_2Cl_5$, 25:15637
CHALONES
effects on mitotic replenishment of stem cells in bone marrow of x-irradiated mice, 25:16325
CHARCOAL
sorptive properties for yttrium-91, effects of humic acids on, 25:15744
CHARGED-PARTICLE BEAMS
detection of pulsed, deadtime corrections for nonparalyzable electronics for, 25:15903
interactions with bounded plasmas, wave excitation in, (T), 25:17184
interactions with magnetoplasma, excitation of surface waves in, (T), 25:17189
interactions with magnetoplasmas, parametric, (T), 25:17170
interactions with plasma, growth rates and stability limits for, (T), 25:17185
motion in quadrupole electromagnetic lens system, aberration effects on, 25:17605 (CEA-N-1286)
transport of, aberrations and nonlinearities of elements in, 25:17659
CHARGED PARTICLES
acceleration in variable magnetic fields, (T), 25:16677
attenuation in aluminum and silicon absorbers, 25:16188
correlation functions for, long-distance, (T), 25:17337
density in magnetospheric plasma envelope, Elektron 2 and 4 measurements of, (E), 25:17051
diffusion across magnetic fields, pitch-angle scattering and grad B drifting through electric field factors in rapid, (T), 25:16943
dosimetry for therapy, performance of semiconductor detectors for, 25:16188
drift currents of quasi-trapped, to radiation belts, (T), 25:17053
dynamics of interstellar or intergalactic bubble of, (T), 25:16678
effects of corpuscular ionizing radiation on O_2^+ and NO_2^+ abundance in lower ionosphere, (E/T), 25:16905
effects of energy distribution of, on activation analysis, 25:15554
effects on biological materials, reaction mechanisms for, 25:16043
effects on lithium-doped silicon solar cells, 25:15980 (N-70-36928)
effects on medical equipment and supplies, factors affecting sensitivity of bacteria to sterilizing, 25:16396
effects on production of radioisotopes, definition of terms concerned with, 25:15704
intensity of corpuscular radiation in upper atmosphere, effect of geomagnetic and solar activity on, (E), 25:17035
interactions, statistical mechanics of, 25:17338
motion in axisymmetric systems with toroidal electric

fields, single, (T), 25:17122 (CLM-R-105)
motion in constant magnetic field, coherent states for electric field excitation of, (T), 25:17438
motion in electromagnetic fields, Chapman--Enskog theory for, 25:17345
motion in electromagnetic fields, space--time invariance principles for, 25:17344
motion in electromagnetic waves propagating in uniform magnetic fields, (T), 25:17186
motion in oscillating electric fields, (T), 25:17018
motion in quiet and disturbed magnetosphere, simulation of, (E), 25:16978
motion in uniform electric field, integral equation for, 25:17428
occurrence in mesosphere and stratosphere, balance equations and research on, (T), 25:16928
propagation of solar-flare, solar atmosphere-accelerated and interplanetary-escaped, (E/T), 25:16970
radiation dose calculations for heavy, 25:16134(T) (JPRS-52121, pp 51-7)
reaction rate coefficients of ionospheric, quasei-stationary approximation, (T), 25:16989
reactions with atoms and molecules, analytical representations of excitation cross sections and polarization fractions for, 25:16804
reactions with atoms, computer program for calculation of interaction matrix elements for, 25:16838
reactions with atoms, impulse approximation for, 25:16805
scattering in electric field, solution of one-dimensional electrical transport equation for elastic and inelastic, 25:17329
trajectories in rf quadrupole devices, calculation of, 25:17662

CHEMICAL REACTIONS
conference on kinetics of, at high temperatures, Philadelphia, Sept. 8 to 10, 1969, 25:16458
rate equation for A(s) = B(s) + C(g) thermal decomposition, 25:18325(T) (UCRL-Trans-10506)

CHEMISTRY
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)

CHICAGO
cesium-137 content of human adult and infant diet in, during October, 1970, fallout, 25:16133 (HASL-239, pp III.36-9)

CHIMERAS
radioinduced osteosarcomas in radiation, of mice, chromosome analysis of, for determining cellular origin of strontium-90, 25:16329

CHITIN
use for removal of ruthenium-106 nitrosyl from contaminated seawater and irradiated-fuel processing plant waste solutions, 25:16116

CHITOSAN
use for removal of ruthenium-106 nitrosyl from contaminated seawater and irradiated-fuel processing plant waste solutions, 25:16116

CHLORAMPHENICOL
radioprotective effects of, against x-radioinduced dominant lethal mutations in male germ cells of mice, 25:16227

CHLORIDES
effects on spectrographic determination of rare earths, 25:15476
separation from rare earth chloride solutions by solvent extraction using D2EHPA, 25:15561 (IS-2300, pp 7-20)

CHLORINE
determination in rat bone by neutron activation and γ spectrometry, 25:15558
determination of trace amounts of, in human dentine and enamel by thermal neutron activation and γ spectrometry, 25:15545

CHLORINE FLUORIDES
corrosive effects on aluminum, aluminum--titanium-base--vanadium alloys, and stainless steel, 25:16413
corrosive effects on copper and Invar 36, 25:16413
reactions with radon at -195 to 25°C, oxidation, 25:15572

CHLORINE IONS
implantation in p-type zinc telluride for n-type layer formation, 25:17271 (CEA-CONF-1719)

CHLORINE ISOTOPES Cl-33
energy levels from (p,t) and (p,He-3) reactions, isobaric analog, (E), 25:17788
energy levels from chlorine-35 (p,t) reactions, isobaric analog, (E), 25:17753
energy levels of, lifetimes from Doppler-shift attenuation for, (E/T), 25:17821

CHLORINE ISOTOPES Cl-34
energy levels of, shell-model calculation using modified surface delta interaction with tensor force, (T), 25:17779

CHLORINE ISOTOPES Cl-35
energy level at 3.947 MeV from sulfur-34 (p,γ) reactions, (E), 25:17817
energy level transitions from sulfur-34 (p,γ) reactions, relative intensities of, (E), 25:17817
energy levels from (p,t) and (p,He-3) reactions, isobaric analog, (E), 25:17788
energy levels from chlorine-37 (p,t) reactions, isobaric analog, (E), 25:17753
energy levels from neutron inelastic scattering, spin assignments for, (E), 25:17814
neutron inelastic scattering at 3.05 and 4.23 MeV, cross sections and gamma angular distributions from, (E), 25:17814
neutron inelastic scattering cross sections at 2.54, 3.09, and 4.03 MeV, (E), 25:17814
proton reactions (p,He-3) and (p,t) at 40 MeV, (E), 25:17753
proton reactions (p,t) and (p,He-3) at 40 MeV, angular distributions for, (E), 25:17788
scattering by titanium-46, titanium-48, and titanium-50 at 70 to 74 MeV, Coulomb excitation by inelastic, (E), 25:17811

CHLORINE ISOTOPES Cl-36
determination in colored plant extracts by Cherenkov counting, 25:15517
exchange between chloromethylformate and lithium chloride in 2-butanone, kinetics of, 25:15606
exchange between organic chlorides and sodium chloride, 25:15614

CHLORINE ISOTOPES Cl-37
energy levels from neutron inelastic scattering, spin assignments for, (E), 25:17814
neutron inelastic scattering at 3.05 and 4.23 MeV, cross sections and gamma angular distributions from, (E), 25:17814
neutron inelastic scattering cross sections at 2.54, 3.09, and 4.03 MeV, (E), 25:17814
proton reactions (p,He-3) and (p,t) at 40 MeV, (E), 25:17753
proton reactions (p,t) and (p,He-3) at 40 MeV, angular distributions for, (E), 25:17788

CHLORINE ISOTOPES Cl-38
reactions of recoil, secondary unimolecular processes following substitution, 25:15713

CHLORINE ISOTOPES Cl-39
reactions of recoil, secondary unimolecular processes following substitution, 25:15713

CHLORMERODRIN
distribution and renal clearance of mercury-203-labeled, in man, effects of cysteine and penicillamine on, 25:16253

CHLOROALUMINATES
ion ($AlCl_4^-$) dissociation in molten, potentiometric study of, 25:18270 (CONF-701204-2)
mercury ions in molten, new subvalent, 25:18269 (CONF-701204-1)

CHLOROFORM
effects on hydrogen yields from γ radiolysis of methylcyclohexane and 3-methylpentane at -196°C, 25:15686
reactions with recoil iodine-128 from neutron capture, yields from, 25:15706
reactions with recoil iodine-130 from isomeric transition or neutron capture, yields from, 25:15706

CHLOROPHYLL
book: Chlorophyll Metabolism in Green Plants, 25:18259(T) (AEC-tr-7094)

CHLOROPHYTA
Chlorella pyrenoidosa, behavior in steady state continuous culture, 25:18321 (UCRL-19958)
Chlorella sp., radioinduced mutations in, RBE for multicharged, 5.2 MeV/n carbon-12 ion, 25:16375(T) (JPRS-52121, pp 58-62)
radioisotope content of, in Amchitka, Alaska, 25:16073(R) (BMI-171-113)

CHROMATOGRAPHY
equipment for bidimensional radio-, G-M detector readout, 25:15911

CHROMEL COUPLES
Alumel/Chromel, fast neutron radiation effects on, 25:15982 (WHAN-SA-10)

CHROMIUM
abundance in 112 Her AB, (E), 25:16645
complexes with DTPA and EDTA, determination in water by neutron activation, 25:15549
corrosion by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
determination as doubly labeled silver chromate by isotope dilution method, 25:15509
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in low and high alloy steel by flame emission spectrometry, 25:15482
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
determination of trace amounts of, in uranium by gas phase chromatography after solvent extraction using TTA, 25:15483
determinaton in iron and uranium, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
effects on tritium-hydrogen exchange in fluoroborate coolant salt, 25:15625 (ORNL-4622, pp 60-118)
enthalpy of solution in liquid plutonium at 700to 1000°C, 25:16440 (LA-4559)
geochemical cycle of, marine, 25:18313 (TID-25642)

hardness anisotropy of, 25:16398 (IS-2300, pp 101-86)
oxidation at high temperatures, thermochemical studies on role of volatilization processes in, 25:16410
photoelectric work function of, (E), 25:17299
reactions of hexavalent, with tetravalent plutonium, catalytic effects of cerium, manganese, and silver on, 25:15571

CHROMIUM ALLOYS AND SYSTEMS
Al--Co--Cr--Mo--Ni-base--Ta--Ti, corrosion by JP-5 exhaust streams, aluminide coatings for protection against, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Co--Cr--Mo--Ni-base--Ti, corrosion by JP-5 exhaust streams, aluminide coatings for protection against, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Cr, deposition on superalloy turbine parts for corrosion protection, methods for, 25:16402 (AGARD-CP-73-71, Paper 20)
Al--Cr, properties for use as coating for B-1900 and IN-100 turbine blades, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Cr--Fe--Mo--Ti, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Cr--Mo--Ni, microstructure of eutectic, electron microscopy study of, 25:16530
Al--Cr--Mo--Ni-base--Ti, mechanical properties at 1200 and 1400°F, effects of γ--γ' mismatch and volume fraction γ' on, 25:16463
Al--Cr--Mo--Ti--V, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Cr--Mo--Ti-base, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Cr--Ni, microstructure of eutectic, electron microscopy study of, 25:16530
C--Co-base--Cr--Ti--W--Zr, mechanical properties of, effects of composition and cast structure on, 25:16477
C--Cr--Fe-base, carbon content of bainite and ferrite in, electron microprobe study of, 25:16536
Co-base--Cr--Fe--Mn--Ni--W, corrosion of Unitemp 605, by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
Cr--Fe-base, Moessbauer effect backscatter spectra of, relations with chemical shift, 25:15853
Cr--Mo--Ni, mechanical properties of weld metals of, effects of aluminum, nitrogen, and vanadium on, 25:16483
Cr--Mo--Ni, strength of, effects of titanium on, 25:16399 (ORNL-4622, pp 119-98)
Cr--Mo--Ni-base, corrosion-resistant properties of, 25:16418
Cr--Mo--Si, thermal conductivity and thermoelectric properties of $Mo_{0.1}Cr_{0.22}Si_{0.68}$ phase in, 25:16571
Cr--Ni, creep of single phase, at 850°C, effects of strain and time on, 25:16452
Cr--Ni--Ti, corrosion of Uniloy, by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
Cr--Ti-base, phase transformations in, electron microscopic studies of, 25:16518(R) (RLO-2225-T-13-6)
Cr--Ti-base, precipitation of omega phase in, effects of phase separation on, 25:16518(R) (RLO-2225-T-13-6)
Cr--Ti-base, superconducting transition temperature of, effects of mixed phases on, 25:16518(R) (RLO-2225-T-13-6)
Cr--Ti-base, superconducting transitions in, relations with microstructural changes, 25:16518(R) (RLO-2225-T-13-6)

CHROMIUM BROMIDES
magnetization of $CrBr_3$ single crystal, measurements and spin-wave theory of, 25:17311

CHROMIUM CARBIDES
phase studies of, 25:16612

CHROMIUM ISOTOPES Cr-51
effectiveness for labeling erythrocytes for spleen scanning, 25:16246
energy levels from vanadium-51 (p,n) reactions, spin assignments from Robson analysis of, (E/T), 25:17820
use for labeling of erythrocytes for studies on erythrocyte survival in whole-body x-irradiated dogs, guinea pigs, and rats, 25:16284

CHROMIUM ISOTOPES Cr-52
oxygen-16 reactions with, compound-nucleus decay in, (E), 25:17824

CHROMIUM ISOTOPES Cr-53
energy levels from vanadium-53 decay, (E), 25:17806
energy levels of, intermediate-coupling model for calculation of, 25:18010
nuclear magnetic resonance in chromium tribromide single crystal, 25:17311

CHROMIUM OXIDES
Cr_2O_3-base--ZrO_2, properties for use as dry bearing lubricant, 25:16563(P)

CHROMOSOMES
analysis of linkage groups of, for locating genes following x-irradiation of sperm, 25:16090(R) (NYO-3671-10)
radioinduced aberrations of cultured bone marrow cell, from monkeys following ingestion or injection of strontium-90, 25:16092(R) (ORO-3297-4)
radioinduced aberrations of, in barley, combined effects of 5-bromouracil and EMS on fission neutron and γ, 25:16091 (ORO-678, pp 126-34)
radioinduced aberrations of, in children following in utero exposure during maternal therapy, 25:16105
radioinduced aberrations of, in cultured hamster cells and Tradescantia, effects of LET on charged particle, 25:16043
radioinduced aberrations of, in hamster cells, effects of, on mitosis, x, 25:16096
radioinduced aberrations of, in human bone marrow, 25:16306 (NIRS-9, pp 55-61)
radioinduced aberrations of, in male germ cells of guinea pigs, hamsters, mice, and rabbits, effects of species on x, 25:16103
radioinduced aberrations of, in mice, effects of saline extracts from irradiated and unirradiated mice on, 25:16097
radioinduced aberrations of, in relation to radiosensitivity of cells, review of, 25:16281
radioinduced aberrations of, in Saccharomyces, effects of meiotic stage on rate of x, 25:16106
radioinduced aberrations of, oat, effects of dose, dose fractionation, and seed exposure on, 25:16110
radioinduced dicentric aberrations of, in rye seeds, effects of heterochromatin on fast neutron and γ, 25:16099
radioinduced inversions of, in mice in relation to frequency of first anaphase bridges in meiotic cells of offspring, x, 25:16090(R) (NYO-3671-10)

CHROMOSPHERE
eruptions in, (E), 25:16707
structure of, (E), 25:16707

CIRCUITS
design of superconducting current loop with preferential current flow, 25:17089(P)

CITRIC ACID
effects on sorption of gallium-68 and germanium-68 on alumina, 25:15755

CIVILIAN DEFENSE
decontamination methods in postattack situations, guidelines for training personnel in, 25:16112(R) (AD-711972)

CLINCH RIVER
radiation monitoring program in relation to fate of radioactive waste discharges, results of, 25:16180

CNIDARIA
Anemonia sulcata, manganese-54 content of Mediterranean during 1966, 25:16124
Tubularia sp., radiation effects on regeneration of, effects of dose on γ, 25:16298

COAL
analysis for sulfur by prompt γ activation using californium-252 source, evaluation of, 25:15849

COAMID
effects on regeneration of liver in whole-body x-irradiated rats with partial hepatectomy, 25:16355

COATINGS
book: Corrosion and Metal Protection. Collection of Papers (In Russian), 25:16407
evaluation of aluminide, for protection of B-1900 and IN-100 alloys in jet engine exhausts, 25:16403 (AGARD-CP-73-71, Paper 22)
permeability of film-type protective, tritium tracer method for measuring moisture, 25:15851

COAXIAL CABLES
noise characteristics of, under in-pile conditions, 25:15983 (WHAN-SA-18)

COBALT
complexes of, reduction by trivalent uranium ions in perchloric acid solution, 25:15574
complexes with DTPA and EDTA, determination in water by neutron activation, 25:15549
corrosion by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by method based on reaction of EDTA and lead iodate, 25:15479
determination in beryllium oxide, iron, and steel, effects of spark duration on relation sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in low and high alloy steel by flame emission spectrometry, 25:15482
determination in marine organisms by neutron activation, 25:15537
determination in seawater by solvent extraction and x-ray fluorescence, 25:15492
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
determination of trace amounts of, in fish, molluscs, water, and aquatic plants by neutron activation, 25:15540
diffusion in nickel single crystals at 970 to 1200°C, isotope effects on, 25:15611
elastic properties of hexagonal, calculation of x-ray, 25:16476
photoelectric work function of, (E), 25:17299
separation as privaloyl trifluoroacetonate from rare earth and thorium pivaloyl trifluoroacetonates by gas chromatography, 25:15752
separation from solvent extracts of ores or waste by direct precipitation, 25:15749(P)

COBALT ALLOYS AND SYSTEMS
properties for use in gas turbine blades, 25:16420 (AGARD-CP-73-71, Paper 21)
properties for use in high-temperature gas turbines, 25:16419 (AGARD-CP-73-71, Paper 18)
Al--Co--Cr--Mo--Ni-base--Ta--Ti, corrosion by JP-5 exhaust streams, aluminide coatings for protection against, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Co--Cr--Mo--Ni-base--Ti, corrosion by JP-5 exhaust streams, aluminide coatings for protection against, 25:16403 (AGARD-CP-73-71, Paper 22)
C--Co-base--Cr--Ti--W--Zr, mechanical properties of, effects of composition and cast structure on, 25:16477
Cd--Co--Ni, deposition of ternary, sulfate bath electro- method for, 25:16424
Co--Cu-base, deformation of, effects of precipitates on, 25:16398 (IS-2300, pp 101-86)
Co--Fe, mechanical properties of, effects of composition and cast structure on, 25:16477
Co--Fe--W, phase studies of, 25:16470
Co--Fe--W, welds of, effects of composition on production of crack-free, 25:16470
Co--NbC--TaC--TiC--WC, mechanical properties of, effects of heat treatment and stresses on, 25:16573
Co--U, phase studies of, computerized method for, 25:16613
Co--WC, properties for use in hard cermet tips, effects of tantalum carbide additions on, 25:16572
Co--WC-base, mechanical properties of, effects of heat treatment and stresses on, 25:16573
Co--WC-base, microstructure of foils of, transmission electron microscopy study of, 25:16599
Co--WC-base, strength of cracked, effects of annealing at 400 to 1200°C on recovery of, 25:16570
Co-base--Cr--Fe--Mn--Ni--W, corrosion of Unitemp 605, by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
COBALT ISOTOPES
helium-3 reactions (He-3,t) at 24.6 MeV, Q values and Coulomb displacement energies from, (E/T), 25:17823
COBALT ISOTOPES Co-56
production by 15-MeV proton irradiation of iron-56 in variable energy cyclotron, 25:15703
COBALT ISOTOPES Co-58
helium-3 reactions (He-3,t) at 24.6 MeV, angular distributions from, (E/T), 25:17823
COBALT ISOTOPES Co-59
energy levels from iron-56 (α,p) reactions, spins, parities, and γ branching and mixing for, (E), 25:17810
triton reactions (t,p) at 11.82 MeV, proton angular distributions from, (E), 25:17802
COBALT ISOTOPES Co-60
beta decay of, gamma spectra from, (E), 25:17803
content of marine algae, fish, and invertebrates in Amchitka, Alaska, 25:16073(R) (BMI-171-113)
effects on contamination of ground surface, gamma buildup factors from, (E/T), 25:17252 (AD-710985)
gamma dose distribution from arrays of, in water-filled cylinders, 25:16143(R) (UCRL-50007-70-2)
helium-3 reactions (He-3,t) at 24.6 MeV, angular distributions from, (E/T), 25:17823
properties for use as gamma source in radiography, 25:15862
properties of moving point source of, for simulation of three-dimensional gamma radiation in fallout, 25:15788
retention by man, calculations of biological half-life for, 25:16013
use as gamma source for polymerization of plastic-impregnated concrete pipes, economics of, 25:16620 (RISO-M-1295)
use as γ-source for therapy, studies of comparison of 1cm and 2cm diameter for, photometric, 25:16144
COBALT ISOTOPES Co-61
energy levels from cobalt-59 (t,p) and nickel-62 (t,α) reactions, (E), 25:17802
energy levels from nickel-64 (p,α) reactions, spins, parities, and γ branching and mixing for, (E), 25:17810
COBALT SULFATES
$CdSO_4$--$CoSO_4$--$NiSO_4$, cadmium--cobalt--nickel alloy electrodeposition from baths of, 25:16424
COCKCROFT-WALTON ACCELERATORS
design and performance of 600-keV electron, at Osaka Prefecture, 25:17663
research programs at Virginia Polytechnic Institute, during January 1960 to August 1968 on, review of, 25:18178 (TID-25646)
CODEINE
radioinduced degradation of, effects of concentration of solution on γ, 25:16392
COINCIDENCE CIRCUITS
design and performance of 4π β--γ, for measuring decay schemes, 25:15914 (CEA-R-4131)
COKE
density and grain structure of isotropic petroleum, 25:16615(R) (GA-10433)
COLLAGEN
radiation effects on fibers of, in lungs of rabbits, effects of dose on electron, γ, and x, 25:16305(T) (LF-tr-33)
COLLISION PROCESSES
resonances in atomic and molecular, review of methods of calculation of, 25:16807
theory of atomic, impulse approximation in, 25:16805
theory of atomic, numerical integration of general two-state coupled first-order differential equations in, 25:16803
COMMUNICATION SYSTEMS
radio-wave propagation effect on, ionospheric multipath short, (E/T), 25:16930
COMPOSITE MATERIALS
fabrication, properties, and uses of filament-wound, review on, 25:16582
COMPOSITE PARTICLES
theory for, generalization of Lagrangian, (T), 25:17416
COMPUTER PROGRAMS
BASFUN, for generation of numerical orbital functions, 25:16837
DISPLT, for plot viewing, user's manual, 25:18311 (SCL-DR-70-272)
ELECTRON--MOLECULE SCATTERING, for study of electron scattering by diatomic closed-shell molecules at low energies, 25:16823
ENGEL, for selection of optimum method for prospecting for uranium deposits, 25:15796 (GJO-918-5)
FFT-W, for fast Fourier transform band-pass filtering of data, 25:18278 (CTC-45)
for data reduction in positron annihilation lifetime spectra, 25:16794 (NYO-3661-34)
for predicting frequency interference between transmitters and receivers, CDC-6400, 25:18281 (EGG-1183-1509)
for radiation transport, review of Monte Carlo method, 25:17258 (ORNL-RSIC-29)
GENIS, for hadron interactions at high energies in Monte Carlo generation method with importance sampling, in FORTRAN IV for CDC 6600, 25:17415
GROGI2, for calculating nuclear evaporation spectra, 25:17952 (BNL-50246)
$H^+ + H(2)$ CHARGE TRANSFER, for charge-transfer probability in proton reactions with hydrogen excited atoms, 25:16822
HEATING3, for steady-state and transient heat conduction problems, IBM-360, 25:18292 (ORNL-TM-3208)
HISS, for debugging hybrid programs, 25:18294 (ORNL-TM-3287)
HYDROGENIC INTERACTION INTEGRAL, for calculation of interaction matrix elements between two hydrogenic wave functions, 25:16838
INTEG, for determination of diffusion coefficients by Boltzman--Matano analysis, 25:15627 (RFP-1544)
MATANO, for determination of diffusion coefficients by Boltzman--Matano analysis, 25:15627 (RFP-1544)
NEUTBAK, for processing liquid scintillation detector data for fast neutron spectroscopy, in FORTRAN for IBM 360, 25:15880 (ANL-7760(Pt.1), pp 67-73)
ORVE, for design and economics calculations of vertical evaporator desalination plants, FORTRAN IV for IBM 360, 25:18205 (ORNL-TM-3149)
research at Lawrence Radiation Lab., Nov. 1969 to June 1970, (E/T), 25:17351(R) (UCRL-20120)
RSAC, for calculation of potential radiation hazards from release of fission products to atmosphere, in MAP for IBM7040, 25:16181
SFEAT, effects of sand filters on temperature of gaseous effluents from critical assemblies, 25:18166 (ANL-7687)
SIMPLOT, for evaluation of fault trees and reliability block diagrams, FORTRAN IV for CDC 6600, 25:18331 (WANL-TME-1951)
SORS, for calculation of spectra of moderated fast neutrons from californium-252 source, 25:16143(R) (UCRL-50007-70-2)
SYNCHROTRON RADIATION, for spectral intensity, angular distribution, and polarization of radiation from monoenergetic electrons moving in circular orbits in synchrotron, in FORTRAN for ICL KDF9, 25:17443
TORMAG, for symmetry optimization of toroidal magnets, 25:17212 (UCRL-50944)
TRANZIT, for multigroup time-dependent transport in (p,z) cylindrical geometry, 25:17256 (LA-4575)
XITRAN-2, for xenon instability in reactors, FORTRAN 4 for IBM 360, 25:16229 (ORNL-TM-2580)
COMPUTERS
conference on uses in industry and science, 25:16019
research at Ames Laboratory, 25:17326 (IS-2300, pp 90-100)
research on, at Illinois Univ, 25:18273(R) (COO-1018-1207)
CONCRETES
analysis of wet, for cement, development of gamma radiometric gage for, 25:15958 (ORO-3842-2)
gamma production and transport in, secondary, (E), 25:17254 (AD-711840)
gamma production and transport in, secondary, (E), 25:17253 (AD-711839)
gamma transport through mutually perpendicular slabs of, (T), 25:17263
neutron attenuation at 0.5 to 18 MeV, 25:17257 (NIRS-9, pp 1-14)
neutron attenuation in, measurement of thermal, (E), 25:18171 (CEA-N-1386)

neutron transport in, fast, (E), 25:17254 (AD-711840)
neutron transport in, fast, (E), 25:17253 (AD-711839)
response of pressure vessel walls of prestressed, to increasing internal pressure, analytical method for determining, 25:15861
shielding properties of, effects of cracks on, 25:17266
testing of, review of methods for nondestructive, 25:15859
thermal expansion of, effects of water on delayed mass transport-induced, 25:16622
concretes--polymers, preparation and properties for, in highway construction, 25:16621
concretes--polymers, production of radiation-cured pipes of, economic evaluation of, 25:16620 (RISO-M-1295)

CONNECTORS (ELECTRIC)
joining to thin foils, evaluation of methods for, 25:16262 (BDX-613-204)

CONTAINMENT RESEARCH INSTALLATION
design configuration for fission product deposition and removal tests, 25:18176 (ORNL-4502)
fission product deposition on stainless steel containment liner in, testing of accident release conditions for, (E), 25:18176 (ORNL-4502)
fission product removal from, effectiveness of spray systems on, (E), 25:18176 (ORNL-4502)

CONTAINMENT SYSTEMS EXPERIMENT
engineered safeguards for water cooled reactors in, performance of air cleaning, (E/T), 25:18183 (WHAN-SA-39)

CONVEYERS
weight measurement on belt-type, by gamma scattering, 25:15957(T) (AEC-tr-7197)

COPPER
alpha-particle reactions at 6.25 to 20 MeV/amu with, ratio of x-ray yields from, to deuteron-induced yields, (E), 25:16762
analysis for tritium by combustion in oxygen and scintillation counting, 25:15511 (CEA-R-4020)
corrosion by chlorine pentafluoride, fluorine, and nitrogen oxide, 25:16413
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by method based on reaction of EDTA and lead iodate, 25:15479
determination in beryllium oxide, iron, steel, and uranium, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in low and high alloy steel by flame emission spectrometry, 25:15482
determination in marine organisms by neutron activation, 25:15537
determination in molybdenites, rocks, or stony meteorites by nondestructive neutron activation, 25:15551
determination in rocks by neutron activation and radiochemical separation, 25:15533
determination in seawater by solvent extraction and x-ray fluorescence, 25:15492
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
determination in thyroid gland in man by neutron activation and radiochemical separation, 25:16306 (NIRS-9, pp 55-61)
effects on age hardening of chill cast aluminum--zirconium alloy, 25:16511
electron reactions at 25 to 45 MeV with, effect of thickness on bremsstrahlung produced in, (E), 25:17658
electron stopping power at <500 keV, (T), 25:17962
gamma reactions at 2.615 MeV, pair production cross sections for, (E), 25:17808
ion bombardment of, estimation of negative heavy-ion yield from heavy, 25:17664
ion reactions at 10 to 3000 eV with surfaces of, optical radiation from excited sputtered particles from, (E), 25:16766
magnetic properties of pure, in low fields, 25:18327 (UCSD-34-P-143-28)
microstructure of interfaces between explosion welds of nickel and steel to, effects of heat treatments at 500 to 1100°C on, 25:16529
neutron inelastic scattering by, cross sections for gamma yields from, (E), 25:17842
neutron reflectivity of distorted crystals of, 25:17678
neutron total cross sections at 100 to 150 MeV, optical-model analysis of, (E/T), 25:17914
photoelectric work function of, (E), 25:17299
photon elastic scattering at 90 and 124.5° and 1.12 and 1.33 MeV, Delbrueck and Rayleigh amplitudes for, (E), 25:17795
positron stopping power at <500 keV, (T), 25:17962
radiation effects on content of, in blood plasma of sheep, effects of skin exposure to strontium-90--yttrium-90 β, 25:16026 (ORO-678, pp 74-7)
radioinduced defects in crystals of, diffuse x-ray scattering study of fast-neutron, 25:17277
separation as pivaloyl tifluoroacetonate from other metal pivaloyl trifluoroacetonates by gas chromatography, 25:15752
separation from solvent extracts of ores or waste by direct precipitation, 25:15749(P)
strains in deformed fcc crystals of, at 25°C, measurement of micro-, 25:16516(R) (ORO-3908-2)
tensile properties at high temperatures, effects of rare earths on, 25:16455

COPPER ALLOYS AND SYSTEMS
Al--Cu, ion implantation in films of, effects on electromigration and resistivity ratio, 25:17282
Be--Cu, mechanical properties of, effects of precipitation hardening on, 25:16510
Be--Cu-base, electron diffraction from Guinier--Preston zones in, (E/T), 25:17314
Cs--Cu-base--Zr, electric conductivity of heat-resisting dilute, 25:16455
Co--Cu-base, deformation of, effects of precipitates on, 25:16398 (IS-2300, pp 101-86)
Cu--Nb, phase studies of, 25:16398 (IS-2300, pp 101-86)
Cu--Nb, tensile properties of vacuum roll-formed, effects of rolling conditions on, 25:16485
Cu--Pt, hardness of intermetallic CuPt, relations with ordering, 25:16516(R) (ORO-3908-2)
Cu--V, phase studies of, 25:16398 (IS-2300, pp 101-86)
Cu-base--Y--Zr, electric conductivity of heat-resisting dilute, 25:16455
Cu-base--Zr, tensile properties at 400°C, 25:16455

COPPER IONS
effects as retaining ion on chromatographic separation of rare earths using EDTA, 25:15731(T) (UCRL-Trans-10513)
spectra from highly ionized dense plasma, x-ray, (E), 25:17162

COPPER ISOTOPES
helium-3 reactions (He-3,t) at 24.6 MeV, Q values and Coulomb displacement energies from, (E/T), 25:17823

COPPER ISOTOPES Cu-58
beta decay, gamma spectra and log ft value for, (E), 25:17782

COPPER ISOTOPES Cu-61
energy levels from nickel-60 proton resonances, spectroscopic factors for isobaric analog, (E), 25:17841
energy levels from zinc-61 electron capture decay, (E), 25:17848
energy levels of, intermediate-coupling model for calculation of, 25:18010

COPPER ISOTOPES Cu-63
alpha elastic and inelastic scattering at 19.5 MeV, angular distributions from, (E/T), 25:17793
energy levels from nickel-62 proton resonances, spectroscopic factors for isobaric analog, (E), 25:17841
energy levels of, intermediate-coupling model for calculation of, 25:18010

COPPER ISOTOPES Cu-64
use as tracer for measuring wear in brush-rotor systems, 25:15847

COPPER ISOTOPES Cu-65
alpha elastic and inelastic scattering at 19.5 MeV, angular distributions from, (E/T), 25:17793
energy levels from nickel-64 proton resonances, spectroscopic factors for isobaric analog, (E), 25:17841
energy levels of, intermediate-coupling model for calculation of, 25:18010
photon reactions (γ,π⁺) with, meson (π⁺) yields from, (E), 25:17789
proton reactions (p,n) at 2.6 to 3.1 MeV, electromagnetic branching in zinc-65 from, (E), 25:17804

CORROSION
book: Corrosion and Metal Protection. Collection of Papers (In Russian), 25:16407
conference on technology of aerospace and marine, Los Angeles, Calif., July 10 to 12, 1968, 25:16412
measurement of rates of, in aqueous reactor cooling systems, design of electrochemical equipment for, 25:16417

CORROSION INHIBITORS
book: Corrosion and Metal Protection. Collection of Papers (In Russian), 25:16407

COSMIC PARTICLES
anisotropy of primary, (E), 25:16849 (AD-710653)
charge spectrum of high-energy, balloon-borne Cherenkov--scintillator telescope for measuring, 25:15944
coupling coefficients for neutrons during 1954 minimum solar activity, (T), 25:16853
detection and measurement of neutron component of, coincidence-effect-compensated recording multiplicity in, (E/T), 25:16855
effects on track production in lunar rocks, (E), 25:16744
flux of high-energy primary, effects of size of antimatter bodies on, (T), 25:16858
geomagnetic cutoff rigidity for, effects of chromospheric eruptions on, (T), 25:16859(T) (AD-712344)
intensity measurements for muons at 4500 m.w.e., (E), 25:16854
intensity of low-energy protons in upper atmosphere, (E), 25:17032
interactions of, experimental apparatus for studying strong, (E), 25:17368 (AD-712735)
meson (μ) decay deep underground, scintillation counter study of rate of, (E), 25:17365

monitoring data for neutrons at Syowa, Antarctica, 1967-68, (E), 25:16864
radiation dose to astronauts from heavy charged, 25:16134(T) (JPRS-52121, pp 51-7)
COSMIC RADIATION
background radio, at 30, 200, and 965 kHz in circumlunar space, (E), 25:16861
detection and measurement of gamma, on Kosmos 208 satellite, 25:16859
detection and measurement, survey report of Soviet expedition to South Atlantic for, (E), 25:16852
diurnal variations at sea level and mountain altitudes, low-latitude, (E), 25:16863
effects on genetics of Drosophila, Habrobracon, and Tribolium in Soviet Union and United States, 25:16292
effects on ionization of atmospheres and ionospheres of planets, (T), 25:16738
intensity of, 11-yr solar-cycle variations of, (T), 25:16860
intensity variations of power spectra of, at ground and atmospheric pressure oscillations, (E/T), 25:17043
modulation during Forbush decreases, comparison with 11-year variations, (E), 25:16851 (AD-713226)
primary, intensity of amplitude of diurnal anisotropy of, (E/T), 25:16856
spectra of diffuse, primary balloon-flight, (E), 25:16862
spectra to 10^{21} eV, slope of, (E), 25:16849 (AD-710653)
COSMIC RADIO SOURCES
dimensions of 352 small, diameter, (E), 25:16672
distance of W31, (E), 25:16679
flux densities of 352 small-diameter, (E), 25:16672
model for double, hydromagnetic-bubble, 25:16678
positions of 352 small-diameter, (E), 25:16672
scintillations due to drifting ionospheric irregularities, (T), 25:17046
scintillations due to ionospheric irregularities, (E), 25:16886 (AD-713000)
spectral absorption line observations in direction of W31, (E), 25:16679
COSMIC X-RAY SOURCES
contribution of discrete, to diffuse x-ray background, (T), 25:16670
Sco X-1, H I and Hβ emission in vicinity of, (E), 25:16682
Sco XR-1, relation of optical and radio variability of, (E), 25:16676
COSMOLOGY
elementary particle production in, (T), 25:16730
entropy and adiabatic density perturbations, small-scale, (T), 25:16731
model of, theory of evolution of homogeneous, 25:16733
origin of matter and galaxies in, (T), 25:16735
relation to relativity theory and thermodynamics, (T), 25:16736
COUMARIN
radioprotective effects of, on membranes of mitochondria and nuclei, 25:16226
CRAB NEBULA
charged particle acceleration in variable magnetic fields, (T), 25:16677
x-ray pulses from, at 20 to 80 keV, (E), 25:16685
x-ray spectra of, (E), 25:16675
CRITICAL ASSEMBLIES
core structure for DCA, design parameters and fabrication techniques for, 25:18195
critical parameters for uranyl nitrate slab and cylinder system, (E/T), 25:18177 (RFP-1314)
design parameters of DCA, 25:18196
design parameters of heavy water moderated pressure tube type, in Japan, 25:18197
effluents from ZPR-6 and ZPR-9, effects of heat transfer characteristics of sand filters on temperature of gaseous, 25:18166 (ANL-7687)
kinetics of fast uranium nitride fueled lithium cooled, hot startup, (T), 25:18200 (N-70-39389)
neutron spectra in center lattice cells of fast, heterogeneity effects on, (E/T), 25:18190
reactivity measurements in multizone, method for determination of neutron lifetime for, 25:18098(R) (BNWL-1522-1)
reactivity of plutonium oxide (PuO_2)--uranium oxide (UO_2) fueled Assembly S of SNEAK, (E/T), 25:18173 (EURFNR-861)
reactivity worths of large fuel and control material samples in ZPPR, comparison of calculated and measured, 25:18182 (WHAN-SA-12)
CRITICALITY
fuel mass configuration effects on, following core meltdown in aircraft reactors, 25:18199 (N-70-36660)
measurements of uranyl nitrate slab and cylinder system, (E/T), 25:18177 (RFP-1314)
CROPS
radiation monitoring in environs of Casaccia Nuclear Center in Italy in relation to radioisotope discharge, 25:16163
strontium-90 uptake by, effects of agricultural practices, hydrology, and soil type on, 25:16085
CROSS SECTIONS
relativistic effects on scattering, (T), 25:17589
scattering, step potential model for calculation of total atomic, 25:16798(T) (ANL-Trans-872)
CRUSTACEA
Artemia sp., radiation effects on survival of larvae of, fast neutron or γ, 25:16279 (NIRS-9, pp 15-53)
radioisotope content of, in Amchitka Island, Alaska, cesium-137, potassium-40, and strontium-90, 25:16072(R) (BMI-171-110)
CRYSTAL RIVER POWER REACTOR, UNIT 3
auxiliary and emergency systems for, final safety analysis of, 25:18091 (DOCKET-50302-21)
containment structure for, integrity testing of, 25:18090 (DOCKET-50302-20)
containment system for, final safety analysis of, 25:18089 (DOCKET-50302-19)
control systems for, final safety analysis of, 25:18090 (DOCKET-50302-20)
cooling system for, final safety analysis of, 25:18089 (DOCKET-50302-19)
design parameters of, final safety analysis of, 25:18089 (DOCKET-50302-19)
design parameters of, final safety analysis of, 25:18088 (DOCKET-50302-18)
electrical systems for, final safety analysis of, 25:18090 (DOCKET-50302-20)
emergency systems for, design capabilities of iodine removal sprays and hydrogen purging, 25:18092 (DOCKET-50302-22)
instrumentation for, final safety analysis of, 25:18090 (DOCKET-50302-20)
operations aspects of, final safety analysis of, 25:18091 (DOCKET-50302-21)
radiation protection system for, final safety analysis of, 25:18091 (DOCKET-50302-21)
radioactive waste disposal system for, final safety analysis of, 25:18091 (DOCKET-50302-21)
safety analysis of, 25:18092 (DOCKET-50302-22)
safety analysis report for, statement concerning amendment number of final, 25:18087 (DOCKET-50302-17)
site for, final safety analysis of, 25:18088 (DOCKET-50302-18)
steam and power conversion systems for, final safety analysis of, 25:18091 (DOCKET-50302-21)
testing programs for, final safety analysis of, 25:18091 (DOCKET-50302-21)
CRYSTALS
ion channeling in lattices of, Monte Carlo calculations, 25:17280
ion channeling in, Dynamitron experimental facility for studying, 25:17625
neutron and x-ray propagation in interference layers, 25:17682
preparation of high-purity single, development of controlled growth rate equipment and method for, 25:15561 (IS-2300, pp 7-20)
CURIUM
complexes with aminopolycarboxylic acids, stability of, 25:15722 (KFK-1291)
separation from americium by ion exchange, 25:15722 (KFK-1291)
spectra of trivalent, in molten fluorides, 25:15625 (ORNL-4622, pp 60-118)
CURIUM ISOTOPES Cm-242
compatibility of compounds incorporating, with heat-resisting capsule materials, 25:15838 (ORNL-4359)
CURIUM ISOTOPES Cm-244
compatibility of compounds incorporating, with heat-resisting capsule materials, 25:15838 (ORNL-4359)
preparation and properties of x-ray sources of, for bone scanning, 25:15835 (ANL-7760(Pt.1), pp 33-5)
CURIUM ISOTOPES Cm-247
alpha decay of, α and γ energies and half-life for, (E), 25:17881
CURRENT ALGEBRA
commutation relations in, quasi-free states of C* algebra of, 25:17414
commutator for predictions of field and quark algebra for rate of $K + \nu + e + \nu$, $n + p + e + \text{anti}\nu$, 25:17455
commutators in, Lorentz invariance and dispersion theory for, 25:17402 (COO-264-561)
hadron weak form factors in, 25:17456
hard-pion models test from predicted total cross sections and angular distributions for $e^+ + e^- + A_1 + \nu$ interactions in colliding beams, 25:17423
PCAC and CVC hypotheses in model for π^+ production in $\nu + p + \mu^- + \pi^+ + p$ interactions near Δ(1236), 25:17457
SU(2) x SU(2) chiral Lagrangian for A_1 rho π system in, 25:17477 (JINR-E2-5249)
CYANAMIDES
spectra in argon matrix, effects of deuterium on, 25:15600
CYANOGEN
spectra of, emission bands in, (E), 25:16780
spectra of, trapped in γ-irradiated potassium cyanate single crystals, ESR, 25:15679
CYCLOBUTANE
reactions with recoil chlorine-38 or chlorine-39, secondary unimolecular processes following substitution, 25:15713
1,3-CYCLOHEXADIENE
radioinduced polymerization of, γ, 25:15657
CYCLOHEXANE
radiation effects on solutions of, containing deuterated

ammonia or nitrous oxide, effects of LET on yields from γ and helium ion, 25:15648
radiolysis of, adsorbed on silica at 77°K, ESR study of trapped hydrogen atoms from γ, 25:15665
radiolysis of, effects of iodine on yields from γ, 25:15683
cyclohexane--dodecafluorocyclohexane, radolysis of, effects of iodine on yields from γ, 25:15683
CYCLOHEXANE, DODECAFLUORO-
radiolysis of, effects of iodine on yields from γ, 25:15683
cyclohexane--dodecafluorocyclohexane, radolysis of, effects of iodine on yields from γ, 25:15683
CYCLOHEXANE, METHYL-
radiolysis at -196°C, effects of chloromethanes and electron scavengers on hydrogen yields from γ, 25:15686
CYCLOPHOSPHAMIDE
effects on bone marrow of mice, assay of erythrocytic and granulocytic repopulating ability following, 25:16339
effects on growth of bone marrow cells in irradiated F_1 hybrid mice, 25:16337
effects on immune response of x-irradiated leukemia patients to bone marrow transplants from histocompatible donors, 25:16059
use for treatment of graft-versus-host disease in γ-irradiated dogs following allogeneic bone marrow transplants from histoincompatible donors, 25:16058
use in combination with radiotherapy and surgery for treatment of lymphosarcomas in children, review of, 25:16272
CYCLOPROPANE
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
radiolysis of, effects of krypton and xenon on yields from γ, 25:15664 (NP-18627)
CYCLOTRON RADIATION
use for simulation of fast neutron effects on reactor materials, 25:16557
CYCLOTRONS
beam orbits in sector-type, geometry of, 25:17633
design for, use with Van de Graaff injector for heavy-ion acceleration, 25:17655
design parameters for neutron radiotherapy, using beryllium (d,n) reactions, 25:17646
experimental facilities for uniform irradiation of large targets, 25:17649
experimental facility for Harwell variable-energy, for radiation damage studies in metals, 25:17651
experimental facility for Harwell variable-energy, for fission studies, 25:17647
experimental facility for Harwell variable-energy, for studying radiolysis of supercritical water, 25:17643
experimental facility for nuclear reaction studies, ultra-high resolution spectrometer, 25:17623
ion source for Karlsruhe isochronous, polarized, 25:17609 (KFK-1262)
ion trajectories in radial-sector step-field, calculation of, 25:17634
irradiation facilities for chemical and biological samples at IPCR 160-cm, 25:16042
optical parameters of, spectroscopy method for measuring, 25:17653
target design for radioisotope production, 25:17650
target designs for isochronous, for radioisotope production, 25:17644
targets for Harwell variable-energy, for radioisotope production, 25:15703
targets for IPhPE, for radioisotope production, 25:17645
uses in biology, chemistry, and metallurgy, 25:17642
CYLINDERS
thermal stresses in multibore circular or square heat-generating, 25:15834
CYMARIN
radiolysis of solutions of, effects of Nipagin on, 25:15687
CYSTEAMINE
effects on x radiosensitivity of intestinal cells in goldfish, 25:16279 (NIRS-9, pp 15-53)
radioprotective effects of, on brain in mice and rabbits, 25:16225
radioprotective effects of, on cultured hamster cells, x, 25:16096
radioprotective effects of, on solutions of deoxynucleotides in relation to release of inorganic phosphate, γ, 25:16216 (UCLA-12-799)
CYSTEINE
effects on renal clearance of mercury-203-labeled chlormerodrin in man, 25:16253
radioprotective effects of, on solutions of deoxynucleotides in relation to release of inorganic phosphate, γ, 25:16216 (UCLA-12-799)
CYTIDINE, 2'-DEOXY-
use as biochemical indicator of radiation injury in man, 25:16140 (RT/PROT-(70)9)
CYTOSINE, 5-FLUORO-
radioprotective effects of, on mice infected with fungi, evaluation of x, 25:16224

D

DACTINOMYCIN
effects on RNA synthesis in liver of irradiated rats, 25:16027
radioprotective effects on hematopoiesis and survival of mice, γ, 25:16228
DATA ACQUISITION SYSTEMS
conference on development of computer-based, for industry and science, 25:16019
description of computer-based, for nuclear physics experiments, 25:15979
design for beam--foil spectroscopy, 25:15975
development of computer, for analysis of data from tracer studies using compartmental biological models, 25:16020
DATA PROCESSING SYSTEMS
description of on-line, for analysis of radiation detector data, 25:16183
description of on-line, for environmental monitors, 25:16182
DATA TABULATIONS
cross sections for proton interactions with deuterons, helium, and nucleons, 25:17369 (CERN-HERA-70-2)
on calculated fission-product yields from fast and thermal fission of uranium-235 and plutonium-239, 25:17655 (ANL-7678)
on gamma spectra from fissionable nuclides and associated isotopes, 25:17861 (IN-1448(Rev.))
DAVIS-BESSE POWER REACTOR
design features of, 25:18040
DECONTAMINATION
book: Radioactive Contamination: Permissible Limits, Preventive Measures, and Decontamination, 25:16115 (NP-18513)
methods for man and materials, 25:16115 (NP-18513)
methods in postattack situations, guidelines for training personnel in, 25:16112(R) (AD-711972)
DEMECOLCINE
effectiveness for treatment of esophagus cancer in man in combination with gamma radiation, 25:16270
DENMARK
radioisotope content of environment, food and human bone samples in, during 1969, 25:16139 (RISO-220)
DENSIMETERS
design of gamma radiometric, for belt-conveyer weighing instrument, 25:15957(T) (AEC-tr-7197)
DESALTING
methods for, comparison of, 25:18212
reactor for, economics for small dual purpose power and process heat, 25:18215
reactors for, development in France of dual purpose power and process heat, 25:18216
reactors for, development in Israel of dual purpose power and process heat, 25:18211
reactors for, development in Japan of dual purpose power and process heat, 25:18217
reactors for, development in Spain of dual purpose power and process heat, 25:18212
reactors for, development in U.K. of dual purpose power and process heat, 25:18210
reactors for, development in U.S. of dual purpose power and process heat, 25:18214
reactors for, development of dual purpose power and process heat, 25:18207
reactors for, development of dual purpose power and process heat, 25:18208
reactors for, economics of dual purpose power and process heat, 25:18218
reactors for, optimum economic development of dual purpose power and process heat, 25:18209
DEUTERIUM
determination by photon activation, 25:15553
deuteron reactions (d,n) and (d,p) and elastic scattering at 1.5 MeV, cross sections for, (E/T), 25:17971
effects on absorption spectra of naphthalene, 25:15599
effects on addition of hydrogen halide to 1-alkynylphosphines, 25:15590
effects on dipole moment, microwave spectra, and structure of cyclopropylphosphine, 25:15594
effects on electron transfer reactions in naphthalene and potassium napthalenide in tetrahydrofuran, 25:15616
effects on energy of principal electronic transition of p-methylanisole and p-nitrotoluene, 25:15612
effects on enthalpy of some solutes in methanol or water, solvent isotope, 25:15618
effects on free radical yields from γ and x radiolysis of polycrystalline glycines, EPR spectral studies on, 25:15675
effects on hydrolysis of acetals and ortho esters, 25:15585
effects on hydrolysis of diazoacetate ion, kinetics of, 25:15586
effects on ion--molecule reaction kinetics, 25:15592
effects on ir and Raman spectra of chlorodifluoroethylene, 25:15584
effects on ir spectra of cyanamide in argon matrix, 25:15600
effects on ir spectra of methanol, 25:15591
effects on ir spectra of methyl octadecanoates in potassium bromide pellets, 25:15609
effects on isothermal compressibility of water at 5 to

65°C, 25:15593
effects on keto--enol equilibria for pure 2,4-pentanedione and solutions in cyclohexane, 25:15615
effects on kinetics of ammonia synthesis over a singly promoted iron catalyst, 25:15621
effects on neutralization of α-nitrotoluene in water by hydroxide ion and morpholine, 25:15607
effects on PMR spectra of 2-methylnaphthalene molecules in naphthalene single crystals, 25:15603
effects on proton abstraction from p-trifluoromethyltoluene by lithium cyclohexylamide--cyclohexylamine system, 25:15589
effects on proton transfer characteristics of cyanocarbon acids in heavy water, 25:15578(R) (NYO-1725-39)
effects on radiative and nonradiative transition probabilities for acetone, 25:15601
effects on reactions of Ar^+ with hydrogen deuteride, effects of molecular orientation on, 25:15605
effects on reactions of α-methylstyrene with diphenylketene, 25:15588
effects on reactions of fluorine atoms with hydrogen, 25:15602
effects on semi-empirical potential energy surfaces for hydrogen atom transfer reactions, 25:15617
effects on solid-state ir absorption spectra of long-chain fatty acids and esters, 25:15608
energy-level transitions between hyperfine-structure levels of μ-mesic atoms of, (E), 25:16797
exchange between diethylarsine and dimethylarsine, NMR spectral studies on kinetics of, 25:15598
exchange between hydrogen in thiamine and related compounds and heavy water, acid-catalyzed, 25:15619
exchange between saturated solutions of sodium metasilicate and its nonahydrate, 25:15581
exchange reactions with hydrogen chloride in shock tubes, 25:15582
exchange reactions with hydrogen in ethylene on cobalt oxide, 25:15583
exchange reactions with hydrogen, molecular stability and reaction surface of, 25:15623
exchange reactions with para hydrogen of bromobenzene in aqueous sulfuric acid solutions, kinetic studies on, 25:15610
exchange with hydrogen in atomic-ion--molecule systems, cross sections for, 25:15596
exchange with hydrogen on nickel filament, catalytic, 25:15622
photodisintegration of, survey of research on, 25:18022
proton elastic scattering at 600 MeV, differential cross section for, (E), 25:17687 (N-70-36659)
proton reactions (p,2p) at 156 MeV, differential cross sections for, (E), 25:17701
proton reactions (p,2p) at 25 to 40 MeV, differential cross sections for, (E), 25:17703
proton reactions (p,n) at 25 to 100 MeV, impulse approximation calculations of polarization transfer in, 25:17714
proton reactions (p,pn) at 8 to 13 MeV, proton--proton scattering length in, (E), 25:17691
reactions of molecules of, with Ar^+, kinematic model for dynamic properties of, 25:15604
reactions of μ-mesic atoms of, in hydrogen isotope mixture, (T), 25:16797
reactions with fluorine atoms, Monte Carlo calculations of energy partitioning in, 25:15602
reactions with hydrogen on graphon surfaces, equilibrium, 25:16559(R) (NYO-1710-100)
reactions with lithium fluoride (001) surfaces at thermal energies of molecular, intensity data for diffraction and reflection in, (E), 25:16763
scattering from graphite overlayers on platinum single crystals, (E), 25:16753
spectra in organic compounds, research on NMR, 25:18286(R) (NYO-3965-3)

DEUTERIUM HYDRIDES
reactions with fluorine atoms, Monte Carlo calculations of energy partitioning in, 25:15602

DEUTERIUM SYSTEMS
D--H, shock-wave propagation in, normal ionizing, 25:17157
D--He, shock-wave propagation in, normal ionizing, 25:17157
D--Ne, thermal capacity of liquid mixtures of, at 24 to 27.5°K, 25:15829

DEUTERONS
anapole moment in e + d → e + d interactions, determination of angular distribution asymmetry of electrons from, (T), 25:17432
dechanneling in silicon at 0.3 and 0.6 MeV, (E/T), 25:17288
energy level of, numerical investigation of ground-state, (T), 25:17683 (AD-711285)
interactions anti ν + d → n + p + anti ν, neutral leptonic-current model for nucleon energy correlations in, 25:17459
interactions d + p → 2p + n at 52 MeV, angular distributions, and cross sections for singlet and triplet d^* production in, (E), 25:17371 (NP-18561)
interactions e + d → e + d, determination of angular distribution asymmetry of electrons from deuteron anapole moment in, (T), 25:17432
interactions γ + d → p + n, parity-violating internucleon potential for, (T), 25:17545
interactions K + d at 1 to 5.5 GeV/c, review of Q region of Kπ mass distributions in, (E), 25:17387
interactions K + d at high energies, production of L(1775) enhancement in Kπ system in, (E), 25:17388
interactions K^+ + d → anti Q^+ + 2A + p + π^+ + π^- at 12 GeV/c in bubble chamber, production cross sections for, (E), 25:17393
interactions n + d, coherence and Migdal--Watson theory in, 25:17997
interactions p + d → p + d at 4 GeV, real part of p + n → p + n amplitude from, (E), 25:17374
interactions p + d at high energies, compilation of cross sections for, (E), 25:17369 (CERN-HERA-70-2)
interactions π^+ + d → d + π^+ + π^+ + π^- at 5.4 GeV/c, 3π enhancement in, (E), 25:17396
magnetic moment of, effect of baryon resonances on, (T), 25:18000
optical potential for, exact expression for, (T), 25:17984
photodisintegration of, effect of baryon resonances on, (T), 25:18000
reactions (d,α) with beryllium-9 at 0.9 to 2.16 MeV, differential and total cross sections for, (E), 25:17708 (INR-1200)
reactions (d,α) with boron-10, alpha angular distributions from, (T), 25:17720
reactions (d,α) with carbon-12, second-order lithium-6 mechanism in, (T), 25:17734
reactions (d,α) with iron-54 at 28 MeV, angular distributions for, (E), 25:17773 (LYCEN-7074)
reactions (d,α) with neon-20 and -22 at 2 to 3.2 MeV, cross-section calculations using Hauser-Feshbach theory, (E/T), 25:17838
reactions (d,αd), (d,α^{3}He), and (d,αt) with lithium-6 at 52 MeV, coincidence measurements of, (E), 25:17684 (KFK-1055)
reactions (d,dt) and (d,2d) with helium-4 at 52 MeV, coincidence measurements of, (E), 25:17684 (KFK-1055)
reactions (d,f) with radium-226, mass-yield distributions of fragments from, (E/T), 25:17884
reactions (d,^{3}He) and (d,t) with helium-3 and tritium at 11 MeV, neutron--neutron effective range parameters for, (E), 25:17690
reactions (d,^{3}He) and (d,tpn) with tritium at 10.9 MeV, helium-3 and triton energy spectra from, (E), 25:17693
reactions (d,^{3}He) with tin-116, -118, -120, -122, and -124 at 28.9 MeV, angular distributions for, (E), 25:17942
reactions (d,n) and (d,p) and elastic scattering by deuterium at 1.5 MeV, cross sections for, (E/T), 25:17971
reactions (d,n) and (d,p) into resonance states, spectroscopic analysis of, (T), 25:18017
reactions (d,n) with boron-10 at 5.8 MeV, energy levels of carbon-11 from, (E), 25:17771
reactions (d,n) with calcium-42 at 5.0 to 6.05 MeV, differential cross sections for, (E), 25:17785
reactions (d,n) with lithium-6 and -7 at 2.5 to 3.8 MeV, DWBA analysis of cross sections and polarization distributions from, (E/T), 25:17812
reactions (d,n) with molybdenum-92, -94, and -96 and zirconium-96, DWBA calculations of cross sections from, (T), 25:17912
reactions (d,nγ) with aluminum-27 and phosphorus-31 at 4.0 MeV, gamma and neutron spectra from, (E), 25:17851
reactions (d,p) and (d,t) with beryllium-9 at 0.24 to 3.8 MeV, angular distributions for, (E), 25:17748
reactions (d,p) and (d,t) with erbium-167, cross sections for, (T), 25:17797
reactions (d,p) with helium-3 at 2 to 27 MeV, analysis for reaction mechanism in, 25:17706
reactions (d,p) with iron-56 at 12 MeV, proton angular distributions from, (E/T), 25:17801
reactions (d,p) with lithium-6 at 1.88 MeV, differential cross sections for, (E), 25:17713
reactions (d,p) with nickel-62 and nickel-64 at 7.5-MeV, energy levels of nickel-63 and nickel-65 from, (E), 25:17846
reactions (d,p) with nitrogen-14 at 3 MeV, angular distributions for, (E), 25:17832
reactions (d,p) with tellurium-125 at 7.5 MeV, proton angular distributions from, (E/T), 25:17890
reactions (d,p), (d,t), and (d,α) with carbon-13 at 1.0 to 2.7 MeV, angular distributions and excitation functions for, (E), 25:17731
reactions (d,pγ) with potassium-39 and aluminum-27 at 3.6 and 3.7 MeV, coincidence measurements on, 25:17776
reactions (d,pn) with carbon-12, search for proximity scattering and singlet deuteron contributions in, (E), 25:17719
reactions (d,t) and (d,^{3}He-3pn) with helium-3 at 10.9 MeV, helium-3 and triton energy spectra from, (E), 25:17693
reactions (d,t) with carbon-13 at 12.1 MeV, vector analyzing power of, (E/T), 25:17724
reactions (d,t) with lead-208 at 12.3 MeV, DWBA analysis of differential cross sections and vector analyzing powers from polarized, (E), 25:17911
reactions (d,t) with strontium-87, angular distributions from, (E), 25:17819
reactions (d,xn) with nuclei, method for estimation of

excitation functions for, 25:18018
reactions with carbon foils at 1 to 20 keV, energy loss and angular scattering in, (E), 25:16760
reactions with carbon foils at 3 to 54 keV, angular distributions from, (E), 25:16755
reactions with copper, gold, and titanium at 6.25 to 20 MeV/amu, ratio of x-ray yields from, to alpha-particle-induced yields, (E), 25:16762
reactions with nuclei, theory of breakup, 25:17964
scattering by carbon-12 at 9 to 12 MeV, optical-model analysis of differential cross sections and vector analyzing power for, (E/T), 25:17725
scattering by carbon-13 at 1.0 to 2.7 MeV, angular distributions for, (E), 25:17731
scattering by helium-4 at 2 to 10 MeV, Faddeev calculation of p- and d-wave phase shifts for elastic, (T), 25:17695
scattering by helium-4 at 3 to 11 MeV, vector polarization and phase shifts for elastic, (E), 25:17692
scattering by nickel-58, microscopic analysis using nonlocal potential for elastic, (T), 25:17960
scattering by nuclei, calculation of optical potentials for elastic, 25:17987
scattering by nuclei, microscopic model for elastic, (T), 25:17960

DEXTRIN-1,6-GLUCOSIDASE
radiation effects on activity of, in liver of rats, x, 25:16025 (AD-713087)

DIAMONDS
radioinduced S = 1 center in, ESR spectra of 1.5-MeV electron, 25:17284

DIET
cesium-137 content of human adult and infant, in Chicago during October, 1970, fallout, 25:16133 (HASL-239, pp III.36-9)
effects on radiosensitivity of rabbits, 25:16354
strontium-90 content of human, in relation to content of urinary calculi, 25:16125
strontium-90 content of New York City and San Francisco, 1970, 25:16114 (HASL-239, pp II.1-129)

DIFFERENTIAL EQUATIONS
solution of elliptic partial, for reactor configurations with flux having angular singularities, (T), 25:18228 (HUX-3971-5)

DIFFUSION
calculation of coefficients for, computer programs for, 25:15627 (RFP-1544)
data tabulations on, in alloys, compounds, and metals, 25:16514

DILATOMETERS
design for measurement of fuel element deformation during thermal neutron irradiation, 25:15965 (UJV-2490-P-A)

DIODES
radiation effects on p--i--n microwave, permanent neutron, 25:15981 (SC-RR-70-853)

DIOXANE
solvent properties for styrene in swollen cellulose films, 25:15658

DIRECT ENERGY CONVERSION DEVICES
book: Electromagnetic Energy Conversion Devices and Systems, 25:16866

DISEASES
hemopoiesis oscillation in, of man and animals, 25:16336

DISEASES, INFECTIOUS
mononucleosis, growth of leukocytes from patients with, effects of x-irradiated blastoid cells on, 25:16283
tinea capitis, radiotherapy for human children, dose to brain, eyes, and thyroid glands during x, 25:16130 (BRH/DBE-70-4)

DISEASES, NEOPLASTIC
benign, radiodiagnosis in thyroid of human children, effectiveness of technetium-99m scanning for, 25:16247
carcinomas, Agar-binding reactions in, effects of heparin and pentosan (SP 54) on, 25:16047
carcinomas, agar-binding reactions in, effects of heparin and pentosan (SP 54) on, 25:16047
carcinomas, radiation effects on temperature of Walker, in relation to uptake of iodine-131-labeled fibrinogen, microwave, 25:16035
carcinomas, radioinduced squamous cell, in eyes of cattle, effects of dose and dose fractionation on, 25:16311 (ORO-678, pp 28-34)
carcinomas, radioinduced, in human thyroid in Japan, effects of atomic bombing on incidence of, 25:16371
carcinomas, radiotherapy of head and neck, in man, effects of, on gustation, 25:16362
carcinomas, radiotherapy of human bronchial, effects of dose fractionation and rate on, 25:16263
carcinomas, radiotherapy of human mammary, effects of dose fractionation and rate on, 25:16263
carcinomas, radiotherapy of mammary gland, in man, development of constrictive pericarditis following, 25:16364
carcinomas, radiotherapy of testicular germ cell, in man, combined effects of lymphadenectomy, orchiectomy and, 25:16274
granulomas, radiotherapy of eosinophile, in man, effectiveness of betatron electrons for, effects of age, dose fractionation, localization, and sex on, 25:16262
leukemia, radioinduced, in human population, reevaluation of data on relation between low dose exposure and mortality from, 25:16373
leukemia, radioinduced, relation of hypothetical stem cell patterns to acute myeloid, 25:16280
leukemia, radiotherapy of human chronic lymphocytic, induction of hemolysis of erythrocytes following extracorporeal γ-, 25:16266
leukemia, radiotherapy of human granulocytic, effectiveness of single whole body exposure, γ, 25:16259 (ORAU-112)
leukemia, relation of hemopoiesis to, 25:15990
lymphomas, radiotherapy of human, effectiveness of single whole body exposure, γ, 25:16259 (ORAU-112)
lymphosarcomas, radiodiagnosis in children, review of x, 25:16272
lymphosarcomas, radiotherapy in children combined with chemotherapy and surgery, 25:16272
malignant, effects of dose on development of skin erythema and exudative epidermitis following cobalt-60 γ, radiotherapy of human, 25:16369
malignant, radiodiagnosis in thyroid of human children, effectiveness of technetium-99m scanning for, 25:16247
malignant, radiodiagnosis of nodal metastases from testicular, effectiveness of pedal and testicular lymphangiography for, 25:16258
malignant, radiotherapy of esophagus, in man, effectiveness of gamma radiation for, in combination with colchicine or 5-fluorouracil, 25:16270
metastases, radiodiagnosis of human liver, use of radioisotope scanning following injection of gold-198 or rectal administration of iodine-125 for, 25:16256
metastases, radiodiagnosis of nodal, from testicular malignancy, effectiveness of pedal and testicular lymphangiography for, 25:16258
metastases, radiosensitivity in patients with Ewings sarcomas in relation to therapy, 25:16261
metastases, radiotherapy of human cerebral, effectiveness of high-dose whole-brain γ, 25:16271
metastases, radiotherapy of human lymph node, from tongue neoplasms, evaluation of effectiveness of, 25:16269
osteosarcomas, radioinduced, in man following radium-224 therapy, α and γ, 25:16365
osteosarcomas, radioinduced, in radiation chimeras of mice, chromosome analysis of, for determining cellular origin of strontium-90, 25:16329
polycythemia vera, radiotherapy of human, effectiveness of single whole body exposure, γ, 25:16259 (ORAU-112)
radiodiagnosis in human kidneys, effectiveness of radiography methods for, 25:16248
radiodiagnosis of stomach, in man, effectiveness of phosphorus-32 for, 25:16251
radioinduced benign and malignant, in human thyroid gland following childhood therapy of enlarged thymus, 25:16372
sarcomas, radiosensitivity of human Ewings, in relation to therapy, 25:16261
seminomas, radiotherapy of testicular germ cell, in man, combined effects of orchiectomy and, 25:16274
tumors, radiodiagnosis of brain, in mice, use of mercury-197-labeled chlormerodrin for, 25:16236
tumors, radiodiagnosis of liver, effectiveness of scintigraphy for, 25:16245
tumors, radiotherapy of human plasma cell, monitoring of abnormal serum globulins to determine effectiveness of x, 25:16273
tumors, radoinduced malignant, in man, maximum permissible body burden for prevention of radium-226, 25:16014

DISEASES, PHYSIOLOGICAL
anemia, role of bone marrow sinusoidal microcirculation and hemopoietic cells in aplastic, 25:16342
cirrhosis, radiodiagnosis of liver, effectiveness of gold-198 scanning for, 25:16245
cirrhosis, transfer of heliotrine-induced, into x-irradiated rats by injection of spleen cells, 25:16062
Down's syndrome, occurrence of, relation of in utero exposure to diagnostic x radiation to, 25:16368
Down's syndrome, occurrence of, relation of natural background radiation to, 25:16367
ectopia, radiodiagnosis of thyroid, using iodine-131, 25:16250
edema, radioinduced, in lungs of rabbits, effects of dose on electron, γ, and x, 25:16305(T) (LF-tr-33)
enteritis, radioinduced, in burros, effects of dose on γ, 25:16313 (ORO-678, pp 36-40)
epidermitis, radioinduced exudative, in human skin following teletherapy of malignant tumors, effects of dose on γ, 25:16369
erythema, radioinduced, in human skin following teletherapy of malignant tumors, effects of dose on γ, 25:16369
erythema, radioinduced, in skin of man, minimal dose determination for, 25:16363
graft-versus-host, development in γ-irradiated dogs following allogeneic bone marrow transplants from histoincompatible donors, use of cyclophosphamide or methotrexate for suppression of, 25:16058
hemorrhages, radiodiagnosis of human upper gastrointestinal tract, combined use of endoscopy with x, 25:16243
hydrocephalus, radiodiagnosis of human, using iodine-131

scintigraphy, 25:16237
hypotension, radioinduced, in monkeys, protective effects of vasopressor drugs against mixed γ-neutron, 25:16299 (AD-702723)
nephritis, radioinduced, in burros, effects of dose on γ, 25:16313 (ORO-678, pp 36-40)
nephritis, radioinduced, in rats, effects on survival following nephrectomy, effects of prednisolone on x, 25:16218
pericarditis, radioinduced constrictive, in man following therapy for mammary carcinoma, effects of, on development of intestinal lymphagiectasis, 25:16364
psoriasis, effects on blood circulation in human skin, use of technetium-99m for studying, 25:16244
radiodiagnosis of stomach, in man, effectiveness of phosphorus-32 for, 25:16251
splenomegaly, radiodiagnosis of human, using mercury-197-labeled erythrocytes, 25:16246
synovitis, radiotherapy of human rheumatoid, use of colloidal gold-198 for, 25:16267
thrombocytopenia, radioinduced, in mice, effects of platelet depletion on severity of x, 25:16348
thrombophlebitis, radiodiagnosis in man, using radioisotopes and radiography, 25:16238
thrombophlebitis, radiotherapy of, in man, evaluation of, 25:16238
thyroiditis, radiodiagnosis in human children, effectiveness of technetium-99m scanning for, 25:16247
DISEASES, TRAUMATIC
fractures, radioinduced inhibition of healing of bone, in mice, x, 25:16321
radiation injuries, survey of human acute and chronic, following nuclear explosions, 25:16276 (FOA-1-1449)
radiation sickness, effects on mice, modifying effects of mixtures of allogeneic and xenogeneic hemopoietic grafts on secondary effects of, 25:16050
DISPERSION RELATIONS
calculation of real parts of forward amplitudes of $K^- + p$, $K^+ + p$, $\pi^- + p$, and $\pi^+ + p$ interactions, 25:17479
current commutators in, 25:17402 (COO-264-561)
sum rules for particle interactions, 25:17411
DODECANE
dodecane--TBP, solvent properties for ruthenium as nitrosyl complex, 25:15725 (NP-18656)
DOGS
americium-241 content of beagle, use of body-weight changes, excretion analysis, and whole-body scanning for estimations of, 25:16009
radiation effects on cardiovascular response of beagle, effects of shielding on γ and neutron, 25:16300 (AD-709920)
radiation effects on function of nervous system in neonatal, following whole-body exposure of pregnant mother, x, 25:16356
radiation effects on immune response to allogeneic bone marrow transplants from histoincompatible donors, γ, 25:16058
radiation effects on survival of erythrocytes in, effects of dose on whole-body x, 25:16284
radiation effects on, protective effects of partial-body shielding against proton, 25:16196(T) (JPRS-52121, pp 25-9)
radioisotope distribution in tissues of, following wound contamination, effects of DTPA on differential americium-241 and plutonium, 25:16012
uptake of tritium-labeled neutral red and toluidine blue by parathyroid and thyroid gland of, 25:16017
DRUGS
effects on growth and reproduction of fish, 25:16326
effects on hematopoiesis in polycythemic mice, effects of erythropoietin on, 25:16343
DUANE ARNOLD POWER REACTOR
design parameters of, revised and additional data on, 25:18093 (DOCKET-50331-13)
operation aspects of, revised and additional data on, 25:18093 (DOCKET-50331-13)
DURIMET 20
corrosion by lithium--sulfur mixtures at 375°C, 25:16405(R) (ANL-7756)
DUST HAZARDS
evaluation for uranium ore processing plant tailings, 25:16177
DUSTS
properties of cosmic microtektites, chemical and physical, (E), 25:16624
DYES
radiolysis of solid and aqueous solutions of, review on, 25:15667
DYSPROSIUM
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
complexes with nitrilotriacetic acid, crystal and molecular structure of, 25:15562 (IS-2300, pp 21-89)
determination of trace amounts of, in thorium dioxide by isotope dilution method, 25:15505(T) (N-70-38452)
DYSPROSIUM ISOTOPES
nucleon separation and pairing energies in, (T), 25:17888
DYSPROSIUM ISOTOPES Dy-158
energy levels from variable-moment-of-inertia model, simultaneous analysis of ground-state rotational and β-vibrational bands, (T), 25:17895
DYSPROSIUM ISOTOPES Dy-160
energy levels of, g-factors for 2^+, (E), 25:17900
energy-level transitions in, relativistic Hartree--Fock calculations of K-shell internal conversion coefficients, L-subshell ratios, and second-order K- and L-shell particle parameters for, (T), 25:17916
DYSPROSIUM ISOTOPES Dy-162
energy levels of, g-factors for 2^+, (E), 25:17900
DYSPROSIUM ISOTOPES Dy-164
energy level at 2.206 MeV from terbium-164 decay, four-quasiparticle, (E), 25:17880
energy levels of, g-factors for 2^+, (E), 25:17900

E

EARTH
day length of, effect of torsional magnetchydrodynamic vibrations in core on, (T), 25:16976
EARTHQUAKES
effects on nuclear reactor structures, effects of interactions of soils and structures on, 25:18317 (UCLA-12-807)
response with foundations of large structures, factors effecting dynamic, 25:18160
ECHINODERMATA
Holothuria tubulosa, manganese-54 content of Mediterranean during 1966, 25:16124
ECOSYSTEMS
development of Savannah River, effects of reactor effluents on, 25:18225 (TID-25634)
iodine isotope transport through, research program for analysis of kinetics of, 25:16082
model of hypothetical, numerical solution methods for differential equations in simplified energy flow, 25:18289 (ORNL-IBP-70-4)
radiation monitoring near Casaccia Nuclear Center in Italy in relation to critical crops, critical population groups, and maximum rates of radioisotope discharge, 25:16163
strontium-90 transport in field crop, effects of agricultural practices, hydrology, and soil type on, 25:16085
EGGS
radioinduced mutations in, of Misgurnus fossilis following incubation in solutions with strontium-90 and yttrium-90, effects of stage of development on β, 25:16093
ELECTRIC ARCS
plasma diffusion in magnetic fields, quasi-ambipolar, (T), 25:17187
ELECTRIC CAPACITORS
radiation effects on wet aluminum electrolytic, increase in leakage current due to x, 25:15984
ELECTRIC CONDUCTIVITY
radioinduced, in DNA films, x, 25:16036
ELECTRIC CURRENTS
relation of ionospheric auroral-zone, with solar-disturbance daily variation during IGY, (E/T), 25:17041
ELECTRIC DISCHARGE
plasma heating in high-current, collisional effects on, 25:17132
plasma oscillations in hollow-cathode, relation to anomalous diffusion, 25:17229
plasma radiations from, electron cyclotron frequency, (E), 25:17161
plasma sheath in positive column, (T), 25:17178
theory of positive column, 25:17171
ELECTRIC FIELDS
charged-particle motion in uniform, integral equation for, 25:17428
charged-particle scattering in, solution of one-dimensional electrical transport equation for elastic and inelastic, 25:17329
development in region of ionospheric hydrogen arc, relation to proton-flux precipitation, (T), 25:16992
distribution in ionosphere and magnetosphere, fast-particle inhomogeneity-associated, (T), 25:16922
effect on B-region ionization from midnight to sunrise, Feb. 22, 1968, (E/T), 25:16889(R) (N-70-36900)
excitation of charged-particle motion in constant magnetic fields, coherent states for, (T), 25:17438
origin of magnetopause, relation with charged-particle flux at 6.6 R/sub E/ during satellite crossing of magnetopause, (E), 25:16941
splitting of drift shells by dawn-to-dusk magnetospheric, (T), 25:16955
ELECTRIC GENERATORS
design of large-capacity turbo- for nuclear power plants, 25:15816
ELECTRIC INSULATORS
development for lithium--selenium batteries, 25:16404(R) (ANL-7663)
resistivity measurements of, space-charge effects at high temperatures on, 25:15968 (WHAN-SA-69)
ELECTRIC POWER
generation in U. S., conference on, 25:18036
production of, review on methods for increased, 25:15813
ELECTRIC PROBES
theory of spherical electrostatic, continuum, 25:17139

ELECTRODES
design and performance of liquid state iodide-selective, 25:15491
development of reference, for molten fluoride salts, 25:15625 (ORNL-4622, pp 60-118)
ELECTROHYDRODYNAMIC GENERATORS
temperature measurement in 50-MW facility, 25:16865 (AD-713672)
ELECTROLYTIC CELLS
development for use in reprocessing of MSBR fuels, 25:15726 (ORNL-4622, pp 199-225)
ELECTROMAGNETIC FIELDS
charged particle motion in, Chapman--Enskog theory for, 25:17345
charged-particle motion in, space--time invariance principles for, 25:17344
Einstein--Maxwell fields with matter and pressure in, 25:17577
electron motion in intense crossed external, mass operator, eigenfunctions, and exact Green's function for, (T), 25:17431
fermion interactions with external, two-component spinor theory for spin-$1/_2$, 25:17562
Noether theorems for, derivation of, (T), 25:17548
propagation through slots in missile skin, excitation of internal circuitry by, 25:18308 (SC-R-70-4339)
ELECTROMAGNETIC LENSES
aberrations and nonlinearities of, 25:17659
charged-particle beam properties in quadrupole, aberration effects on, 25:17605 (CEA-N-1286)
ELECTROMAGNETIC SEPARATION
ion sources for, design and operation of Plasmatron-type, 25:15844 (SGAE-PH-101/1970)
method for on-line, of short-lived radioisotopes in far-off stability regions, 25:15848
ELECTROMAGNETIC WAVES
generation in solar-wind plasma in interplanetary space, upstream discrete wave-packet, (E), 25:16937
interaction with hot dense plasma, confinement properties of rf, (T), 25:17130
interactions with plasma, acoustic instabilities from transverse, 25:17245
interactions with plasma, theory for cyclotron resonance, 25:17221 (D-1-82-1010)
neutrino--antineutrino emission from plasmon decay, (T), 25:16732
propagation at 400 km, diffusion of particles in presence of simultaneous ulf and vlf, (E/T), 25:16960
propagation in randomly inhomogeneous media, (T), 25:17349
propagation in three-dimension inhomogeneous isotropic ionosphere, solution method of, (T), 25:16979
propagation in vacuum channel in plasma with magnetic fields, (T), 25:17251
propagation in warm homogeneous magnetoplasma, cyclotron harmonic, (T), 25:17234
propagation in warm plasma, oblique cyclotron harmonic, 25:17235
propagation through weak inhomogeneities in ionosphere, low-frequency, (T), 25:16973
ELECTROMAGNETISM
book: Electromagnetic Energy Conversion Devices and Systems, 25:16866
ELECTROMETERS
operation and performance for standard ionization chambers, 25:15904
ELECTRON BEAMS
effects of high-voltage electron microscope, on void growth in nickel at 280 to 480°C, 25:16551
interactions with inhomogeneous plasma, oscillations from, (T), 25:17183
interactions with plasma, beam distribution functions for, 25:17156
interactions with plasma, instabilities from, (E/T), 25:17151
interactions with plasma, properties of intense relativistic, 25:17165 (AD-713576)
isodose charts for, 25:16151
properties for use in therapy, in comparison to x rays, 25:16264
ELECTRON CAPTURE
exchange and overlap corrections in, (T), 25:17975
ELECTRON GAS
correlation functions for classical, long-distance, (T), 25:17337
dielectric function of, self-consistent Hartree--Fock calculation of, 25:17343
electron--ion interaction in, canonical transformation method for, 25:17332
energy--momentum relations for magnetized, quantum-mechanical, 25:17347
theory of, technique for summing iteration series in, 25:17338
ELECTRON MICROSCOPY
beam energy loss in carbonaceous specimens in high-resolution, effects on image and specimen, 25:15971
resolution limit due to radiation damage, calculation for organic molecules, 25:15972
structure analysis for atomic resolution, principles of, 25:15970
ELECTRON MULTIPLIER TUBES
operation and performance for photon detection in beam-foil spectroscopy, 25:15973
ELECTRON PAIRS
production by laser beam scattering on dense plasma, 25:17153
production in field of nucleus with magnetic dipole moment, angular distributions and polarization of, (T), 25:17427
production in photon reactions with nuclei in emulsions, asymmetry ratio and differential cross sections in opening angle for, (E), 25:17364
ELECTRON-RING ACCELERATORS
accelerating system for, cryogenic high-frequency, 25:17608 (JINR-P9-5488)
ELECTRONIC EQUIPMENT
radiation hazards to personnel and public in general from, survey of role of federal agencies in establishing or enforcing safety standards for control of, 25:16202 (BRH/DEP-70-28)
radiation hazards to public from, annual report of Bureau of Radiological Health on status of compliance of industry with federal programs and standards for control of, 25:16194 (BRH/OBD-70-3)
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)
ELECTRONS
angular distribution asymmetry in e + d + e + d interactions, deuteron anapole moment for determination of, (T), 25:17432
angular distribution of trapped, naturally and artificially injected, (E), 25:17042
behavior in radiation belts, instability-associated anisotropy of distribution function of ultrarelativistic, (E/T), 25:16972
current-intensity profile over auroral homogeneous arc to 135 km, (E), 25:16964
density in plasma sheet at 40 R/sub E/, spatial and geophysical parameters of energetic, (E), 25:16939
density in plasma sheet at 60 R/sub E/, dawn-to-dusk asymmetry of energetic, (E, 25:16938
density profile at 100 to 450 km in nighttime ionosphere, (E/T), 25:17036
detection at 300 to 1600 MeV, separated function shower detector for, 25:15938
detection in auroral zones and radiation belts by equipment on Kosmos 261 satellite, 25:17026
detection of low-energy cosmic, on Kosmos 261 satellite, 25:17023
detection of photo-produced, on Kosmos 261 satellite in auroral zone, 25:17024
detection of, model for nonlinear response of plastic scintillation detectors for, 25:15906
diffraction from Guinier--Preston zones in copper--beryllium alloy, (E/T), 25:17314
diffusion in presence of simultaneous ulf and vlf electromagnetic waves at 400 km, (E/T), 25:16960
dose distribution with depth, method for homogenization of, calculations for 10, 30, and 43 MeV, 25:16147
dosimetry of, tissue-equivalent pocket proportional detector for, 25:15948 (CEA-N-1393)
effectiveness for eosinophile granulomas in man, effects of age, dose fractionation, localization, and sex on betatron, 25:16262
effects of pulsed, on alkaline ethanol solutions, spectral studies on kinetics of, 25:15681
effects of pulsed, on aqueous solutions of methyl chloride, 25:15673
effects of pulsed, on aqueous solutions of thiocyanogen, 25:15668
effects on aluminum and its dilute alloys at 90°K and 2-3 MeV, annealing kinetics of, 25:17278
effects on cadmium sulfide crystals at 10 MeV, annealing of, (E), 25:17279
effects on diamonds at 1.5 MeV, ESR spectra of S = 1 center induced in, 25:17284
effects on incorporation of phage phie into spores of Bacillus subtilis, effects of phosphorus-32 decay on, 25:16386
effects on potassium chloride and sodium chloride crystals at 15°K of pulsed, color center formation in, (E), 25:17287
effects on silicon at 2.5 MeV, EPR spectra of defects induced in, 25:17285
effects on tissues of lungs of rabbits, effects of dose on pathological, 25:16305(T) (LF-tr-33)
effects on x-radioinduced breaks in DNA of mammalian cells, 25:16217 (UR-49-1389)
energy flux at 6.6 R/sub E/ during magnetopause crossings, effect on electric fields, (E), 25:16941
energy loss in aluminum and polystyrene at 5 to 30 keV, 25:17257 (NIRS-9, pp 1-14)
energy shifts between conducting plates, quantum electrodynamics for, (T), 25:17451
heating of solar wind, in colliding streams, (E), 25:16698
intensity fluxes near ionospheric equator, late-evening soft-, (E), 25:16959
intensity in early-morning pulsating aurorae, energetic, Dec. 18, 1968, (E), 25:16950
interactions anti ν + e, model determination for, (E), 25:17366
interactions e + d + e + d, determination of angular

distribution asymmetry of electrons from deuteron anapole moment in, (T), 25:17432
interactions e + N + e + hadrons in dispersion-theoretic models, Bjorken limit and scaling behavior of structure functions for, 25:17430
interactions e + N, models with isobar resonances for deep inelastic, (T), 25:17442
interactions e + p + e + N*, quark-model predictions of form factors for N* resonances from, 25:17445
interactions e + p + e + p + γ, Bethe--Heitler calculation of wide-angle bremsstrahlung contribution to proton spectra in, (T), 25:17447
interactions e + p + π⁰ + e + p, polarized incident electron for asymmetry in, (T), 25:17440
interactions e + p at high energies, broken scale invariance and kinematic moments of cross sections for, 25:17449
interactions e + p, parton--duality model for structure functions for deep-inelastic, (T), 25:17441
interactions e + p, scale invariance breaking from models for Q² dependence of structure functions for inelastic, (T), 25:17422 (SU-1206-236)
interactions e + p, Schwinger-term sum rule for structure function in inelastic, 25:17434
interactions e⁺ + e⁻ + A_1 + π in colliding beams, test of hard-pion current algebra models from predicted total cross sections and angular distributions for, (T), 25:17423
interactions e⁺ + e⁻ + mesons cross section for, (T), 25:17450
interactions e⁺ + e⁻ + N + hadrons in dispersion-theoretic models, Bjorken limit and scaling behavior of structure functions for, 25:17430
interactions γ + e at 2.62 MeV, streamer chamber study of pair production in, (E), 25:17363
interactions with ion, canonical transformation method for, 25:17332
motion in axially symmetric focusing-type magnetic field, quantum theory of relativistic, (T), 25:17437
motion in intense crossed external electromagnetic field, mass operator, eigenfunctions, and exact Green's function for, (T), 25:17431
motion in one-dimensional square well, integral equation for, 25:17428
precipitation into auroral zone, effect of magnetospheric-acceleration mechanisms on energetic, (T), 25:17047
production in photon reactions with liquid xenon at 35 to 2000 MeV, (E), 25:17255 (JINR-P1-5482)
properties of stabilized, review on, 25:15643
radiation dose calculations for secondary, 25:16134(T) (JPRS-52121, pp 51-7)
radiation from monoenergetic, moving in circular orbits, computer program for spectral intensity, angular distribution, and polarization of synchrotron, (T), 25:17443
reactions (e,ed) with helium-4 at 35 to 50 MeV, differential cross sections for, (E), 25:17698
reactions of adducts of, with oxygen during radiolysis of aqueous thymine solutions, 25:15674
reactions of radiolytic hydrated, with benzene, effects of micellar surfactants on, 25:15671
reactions of solvated, in radiolysis of chlorobenzene and its derivatives in lower aliphatic alcohols, 25:15688
reactions with aluminum, copper, and platinum at 25 to 45 MeV, effect of target thickness and Z on bremsstrahlung produced in, (E), 25:17658
reactions with atoms, ions, and molecules, review of theory of resonances in, 25:16807
reactions with barium ions (Ba^+) at 10 to 1000 eV, absolute cross sections for single ionization in, (E), 25:16799 (ORO-3027-18)
reactions with carbon monoxide and nitrogen molecules, excitation functions and lifetimes of metastable states produced in, (E), 25:16816
reactions with helium, excitation cross sections for, (T), 25:16804
reactions with hydrogen molecules, zero-range potential approximation for excitation of triplet state in, 25:16827
reactions with molecules, excess energy in dissociative electron attachment in, 25:16812
reactions with nitrogen ions (N_2^+) in eV range, dissociative recombination in, 25:16800(R) (ORO-3771-3)
reactions with solid surfaces, review of ion emission in, 25:16767
reactions with thin targets, total cross sections for radiational losses and energy losses, (T), 25:17264
reflection from niobium(100) surfaces at 11 to 500 eV, 25:17276
scattering by aluminum and polystyrene at 5 to 30 keV, angular distribution of, 25:17257 (NIRS-9, pp 1-14)
scattering by carbon-12 at high energy, energy spectra from quasi-elastic, (E), 25:17742
scattering by carbon-13 at 120 to 750 MeV, cross sections for elastic, (E), 25:17770
scattering by carbon-13 at 40 to 125 MeV, differential cross sections and form factors for elastic and inelastic, (E), 25:17721
scattering by diatomic closed-shell molecules at low energies, general computer code for study of, 25:16823
scattering by helium at 800 MeV, relativistic effects on differential cross sections for elastic, (T), 25:17798
scattering by helium-4 at high energies, short-range dynamical correlations from elastic and quasi-elastic, (T), 25:17426
scattering by helium-4 at high energies, short-range nucleon-nucleon correlations from elastic and quasi-elastic, (T), 25:17421 (LNF-70/47)
scattering by lead at 248 and 502 MeV, relativistic effects on differential cross sections for elastic, (T), 25:17798
scattering by neodymium-142, -144,-146, -148, and -150 at high energy, differential cross sections for, (E), 25:17854 (AD-712082)
scattering by nickel single atoms at 2 to 100 eV, phase shifts for, (T), 25:16751 (NP-18640)
stopping power for aluminum, copper, gold, and silver at <500 keV, (T), 25:17962
transmission through aluminum, gold, and tin at 1.0 and 2.5 MeV, angular and energy distributions from, (E), 25:17259

ELEMENTARY PARTICLE MODELS
cascade--evaporation, for analysis of low-energy particles produced in proton reactions with nuclei below 5 GeV, 25:17515 (JINR-P2-5549)
coherent-state, for factorization of dual N-point amplitudes, 25:17585 (JINR-E2-5568)
deformable sphere, for level structure of hadrons, 25:17475
double-pole, A_2 mass distributions in π + p and π⁻ + p + eta + n interactions in, 25:17482
dual-resonance, internal-symmetry factor in, 25:17468
fireball, for inelastic scattering at high energies, 25:17419
fireball, for N* production in N interactions at very high energies, 25:17473
isobar, for angular distributions for phenomenological Δ(1236) production in N + N + N* + N(N*) and π + N + N* interactions below 3 GeV, 25:17517 (ORNL-TM-3132)
Lee, properties of amplitudes and approximate solutions for integral equations for scattering in generalized, 25:17588
one-pion-exchange, for p + p + p + n + π⁺ interactions at 660 and 970 MeV, 25:17516 (JINR-P2-5572)
parton, scale invariance breaking in Q² dependence of structure functions for inelastic e + p interactions in, 25:17422 (SU-1206-236)
parton--duality, structure functions for deep inelastic e + p interactions in, 25:17441
single-particle exchange, for inelastic π + N interactions at 1 to 8 GeV, 25:17513
Sugawara, for strong interactions, 25:17467
Veneziano, boson electromagnetic vertex function in, 25:17444
Veneziano, operator formalism for factorization of nonplanar dual amplitudes in generalized, 25:17590

ELEMENTARY PARTICLE MODELS (BOOTSTRAP)
baryon interactions with mesons in static, strong coupling theory for, 25:17502
baryon mass formulas in static, strong coupling theory for, 25:17502
baryon resonance decay widths in static, strong coupling theory for, 25:17502
hadrons in, symmetry for, 25:17528
sum rules for resonance production in π + N interactions in Regge, finite-energy, 25:17503

ELEMENTARY PARTICLE MODELS (TRIPLET)
additivity sum rules for inelastic interactions of hadrons in quark, 25:17474
hyperon nonleptonic decays in quark, 25:17461
meson interactions with baryons in quark, line-reversal symmetry breaking in, 25:17505
tensor nonet in quark, crossing as group and elimination of exotic channels for, 25:17479

ELEMENTARY PARTICLES
book: The Theory of Elementary Particles, 25:17406
bound states of, kinetic equations for, (T), 25:17591
charge conjugation for, conformal, 25:17531
coupling constants for nonzero-rest mass, analytical structure of superpropagator in, (T), 25:17413
field equations for extended, extremus principles for, (T), 25:17567
interactions at high energies, fireball theory for inelastic, (T), 25:17419
interactions at high energies, review of theorems on, (T), 25:17418
interactions near rho mass, rho--ω mixing in multichannel elastic, (T), 25:17484
interactions of spinless, dual resonance models with residues having maximum fixed finite number of logarithmic poles for amplitudes of, (T), 25:17489
interactions of, dispersion sum rules for, (T), 25:17411
interactions of, enhancement of acausal effects in multiple scattering in, (T), 25:17596
interactions of, optimal coordinate representations for, (T), 25:17409
interactions of, parity rule and helicity conservation in diffraction dissociation, 25:17429
interactions of, systematics of elastic, 25:17593
interactions of, use of collinear and double O(2,1) variables for single-particle spectra in, 25:17420

isospin of para-, group theory basis of Carruther theorem for, 25:17565
lectures on, (T), 25:17410
production in cosmological models, (T), 25:16730
production of, unitarity condition for differential cross section decrease with energy increase of multiple, (T), 25:17412
research at Chicago Univ., 1970, (T), 25:17465(R) (COO-264-568)
research at Lawrence Radiation Lab., Nov. 1969 to June 1970, (E/T), 25:17351(R) (UCRL-20120)
scattering by nuclei at 1 GeV, analysis of elastic and inelastic, 25:18020
spin of, Poincare group representations for, (T), 25:17404
strong interactions at 3 to 21 GeV/c, review of A_1 ncndiffractive production in, (E), 25:17386
strong interactions at high energies, review of multi-Regge model for multiple production in, (T), 25:17470
strong interactions at very high energies with large cross sections, (T), 25:17471
strong interactions of cosmic, experimental apparatus for studying, (E), 25:17368 (AD-712735)
strong interactions of, conference on meson spectra from, 25:17382
strong interactions of, formulation of local gauge Yang--Mills theory for, (T), 25:17558
strong interactions of, multiple scattering corrections to Regge pole exchange in, (T), 25:17472
strong interactions of, review of ω--rho interference in, (E), 25:17383
strong interactions of, Sugawara model with currents as dynamical variables for, (T), 25:17467
symmetry for, algebraic realization of SU(3), 25:17523 (JINR-E2-5229)
symmetry for, Wigner coefficients for E(2), 25:17529
weak interactions of, long-range corrections to Coulomb potential from corrections to photon propagator due to production of virtual neutrino pairs for effects on cutoff of, for, (T), 25:17452 (AD-713108)

ELEMENTARY PARTICLES (TRIPLET)
abundance of quarks in graphite, resonance diamagnetic electrometer study of upper limit for, (E), 25:17352

ELEMENTS
abundance in Sun, review of problems in determination of, 25:16693
analysis of environmental samples for, from Amchitka Island, Alaska, 25:16072(R) (BMI-171-110)
atomic number of, evaluation of effective, from ionization potentials, 25:16779
determination by mass spectrometry using negative surface ionization, 25:15478
proton range in, atomic number--energy nomogram for determining, 25:17260

EMBRYOS
cesium-137 content of, in rabbits and rats, following administration to mother, 25:16024
radiation effects on brain of rabbit, x, 25:16352

ENERGY
consumption of, trends in, 25:15813
storage of reactor-produced thermal, method for, 25:15830(P)

ENGLAND
radioactive waste discharge monitoring of Windscale area, 25:16173

ENTHALPY
measurement in steam turbines, tracer techniques for, 25:18097

ENVIRONMENT
book: Environmental Surveillance in the Vicinity of Nuclear Facilities, 25:16154
contamination by radioactive materials leached from coal mines, 25:16185
ecological--economic relations for, classification scheme for linking, 25:18287 (ORNL-4641)
information on engineering and, abstracts of, 25:18307 (SC-R-70-4211)
radiation dose to, from stack effluent of nuclear power plants, comparison of calculated and measured long term γ, 25:16176
radiation monitoring at United Kingdom atomic energy establishments during 1969, 25:16128 (AHSB(RP)R-105)
radiation monitoring following accidents, recommendations for development of emergency procedures for, 25:16207
radiation monitoring near nuclear center in Mexico, design of survey for preoperational, 25:16164
radiation monitoring near nuclear facilities, comparison of absolute contribution, graded, and threshold approaches to development of programs for, 25:16162
radiation monitoring near nuclear facilities, development of on-line data handling equipment for, 25:16182
radiation monitoring near nuclear facilities, objectives of programs in U.K. for, 25:16155
radiation monitoring near nuclear facilities, use of radionuclide effluent release data for planning, 25:16175
radiation monitoring near nuclear facility, program in Canada for, 25:16156
radiation monitoring near nuclear installations, criteria for programs for, 25:16171
radiation monitoring near nuclear power plants, survey of methods and objectives of, 25:16157
radiation monitoring near nuclear powers, criticism and recommendations for preoperational, 25:16167
radiation monitoring near Windscale, England, results of, 25:16173
radiation monitoring of LOFT, design of program for, 25:16168
radiation monitoring of nuclear power plant, comparison of recommendations of FAO, IAEA, ICRP, and WHO regarding programs for, 25:16159
radiation monitoring of nuclear power plant, design of graded program for, 25:16166
radiation monitoring of nuclear power plant, design and performance of program for, 25:16161
radiation monitoring of nuclear power plant, panel discussion on objectives of, 25:16158
radiation monitoring of nuclear power site, economics of preoperational, 25:16165
radiation monitoring of on-line equipment for data handling in, 25:16183
radiation monitoring of operating nuclear power plant, summary of information regarding programs for, 25:16160
radiation monitoring of, methods and objectives of New Jersey programs for, 25:16169
radiation surveillance of New Jersey, evaluation of comprehensive program for, 25:16209 (CONF-691129-1)
radioactive contamination of, radiation dose to human populations from low-level, 25:16174
radioisotope content of, at Ispra, Italy during 1969, 25:16131 (EUR-4563)
radioisotope content of, in Denmark during 1969, 25:16139 (RISO-220)
research at Nat. Inst. of Radiological Sciences, Japan, 1969--1970, 25:16278(R) (NIRS-9)

EPHEDRINE
radioinduced degradation of, effects of concentration of solution on γ, 25:16392
radioprotective effects of, against hypotension and incapacitation in monkeys, mixed γ-neutron, 25:16299 (AD-702723)

EPOXY RESINS
epoxy--graphite, mechanical properties of composites of, 25:16559(R) (NYO-1710-100)

EQUATION OF STATE
calculation of Debye--Hueckel, formalism for, 25:17338

ERBIUM
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
complexes with methanol and 2,4-pentanedione, structure of, 25:15626(R) (ORO-2124-23)
determination of trace amounts of, in thorium dioxide by isotope dilution method, 25:15505(T) (N-70-38452)
separation from aqueous hydrochloric acid and nitric acid solutions by solvent extraction using D2EHPA, 25:15561 (IS-2300, pp 7-20)

ERBIUM ALLOYS AND SYSTEMS
Er--Lu, electric conductivity at 2 to 340°K, 25:16398 (IS-2300, pp 101-86)

ERBIUM ISOTOPES
nucleon separation and pairing energies in, (T), 25:17888

ERBIUM ISOTOPES Er-164
energy levels from variable-moment-of-inertia model, simultaneous analysis of ground-state rotational and β-vibrational bands, (T), 25:17885

ERBIUM ISOTOPES Er-166
energy levels from variable-moment-of-inertia model, simultaneous analysis of ground-state rotational and γ-vibrational bands, (T), 25:17885
energy-level transitions in, relativistic Hartree--Fock calculations of K-shell internal conversion coefficients, L-subshell ratios, and second-order K- and L-shell particle parameters for, (T), 25:17916

ERBIUM ISOTOPES Er-167
deuteron reactions (d,p) and (d,t), cross sections for, (T), 25:17797
energy levels of, positive-parity, (T), 25:17797

ERBIUM ISOTOPES Er-168
energy levels of, g-factors for 2+, (E), 25:17900

ERBIUM ISOTOPES Er-170
energy levels of, g-factors for 2+, (E), 25:17900

ERBIUM ISOTOPES Er-173
beta decay of, half-life and beta and gamma spectra from, (E), 25:17921

ERBIUM TRITIDES
radiation damage from tritium decay to helium-3, calculations of lattice constant change, 25:17274 (SC-RR-70-753)

ERYSIMIN
radiolysis of solutions of, effects of Nipagin on, 25:15687

ERYTHROCYTES
labeling with mercury-197 for use in spleen scanning, 25:16246
radiation effects on population of, in rats, analysis of cell volume for determination of whole-body, 25:16304 (CEA-CONF-1591)
radiation effects on survival of chromium-51-labeled, in dogs, guinea pigs, and rats, effects of dose on whole-body x, 25:16284
radiation effects on survival time of, of rabbits,

protective effects of adenosine against fast neutron and x, 25:16221
radiation effects on zinc-65 uptake by, of sheep, effects of skin exposure to strontium-90--yttrium-90 on β, 25:16026 (ORO-678, pp 74-7)
radioinduced hemolysis of, in human blood, extracorporeal γ, 25:16266
ERYTHROPOIESIS
radiation effects on, in mice transplanted with bone marrow and thymocytes, effects of splenectomy and thymectomy on x, 25:16338
ERYTHROPOIETIN
effects on stem cell cycle kinetics in mice, 25:16344
ESOPHAGUS
radiation effects on tissues of, of rats, laser, 25:16322
ESPANOLA AREA (N. MEX.)
radioisotope content of soils of, from fallout from weapons testing, plutonium-238, plutonium-239, and strontium-90, 25:15763 (LA-4562)
ETHANE
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
radiolysis of, adsorbed on silica at 77°K, ESR study of trapped hydrogen atoms from γ, 25:15665
separation of deuterated and normal, use of high-efficiency packed columns for gas-solid chromatographic, 25:15751
ETHANE, CHLORO-
reactions with recoil chlorine-38 or chlorine-39, secondary unimolecular processes following substitution, 25:15713
ETHANE, 1,2-DICHLORO-
reactions with recoil chlorine-38 or chlorine-39, secondary unimolecular processes following substitution, 25:15713
ETHANOL
effects on radiolysis chlorobenzene and its derivatives, 25:15688
radolysis of alkaline solutions of, spectral studies on kinetics of electron pulse, 25:15681
separation of deuterated and normal, use of high-efficiency packed columns for gas-solid chromatographic, 25:15751
ETHYL TELLURIDE
tellurium-131 β decay in, chemical effects of, 25:15562 (IS-2300, pp 21-89)
ETHYLENE
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
decomposition on tungsten, field emission studies on, 25:15562 (IS-2300, pp 21-89)
radiation effects on sorption by magnesium oxide, proton, 25:16619
separation of deuterated and normal, use of high-efficiency packed columns for gas-solid chromatographic, 25:15751
ETHYLENE, TETRAFLUORO-, POLYMERS
sorptive properties of Teflon, for yttrium, 25:15694
ETHYLENE, TRICHLORO-
effects on ignition of plutonium and plutonium alloys, 25:16442 (RFP-1566)
ETHYLENIMINE
effects on uv-irradiated Fusarium moniliforme, mutagenic, 25:16095
EUMYCOTA
Aspergillus sp., radiation effects on survival of species of, effects of dose on γ, 25:16377
Aspergillus sp., radiosensitivity of species of, effects of dose on γ, 25:16377
Blastomyces dermatidis, infection of x-irradiated mice with, effects of, on survival, protective effects of antifungal agents against, 25:16224
Botryodiplodia malorum, metabolism of steroids in, effects of carbon-14 and tritium labeling on, 25:16022
Candida albicans, infection of x-irradiated mice with, effects of, on survival, protective effects of antifungal agents against, 25:16224
Cryptococcus neoformans, infection of x-irradiated mice with, effects of, on survival, protective effects of antifungal agents against, 25:16224
Fusarium moniliforme, mutations induced in, by guanidine or nitrosoethyl urea, 25:16095
Fusarium moniliforme, radioinduced mutations in, combined effects of ethylenimine on uv, 25:16095
Fusarium moniliforme, radioinduced mutations in, for cultural-morphological characteristics, gibberallin production and nutritional requirements, γ, 25:16095
Histoplasma capsulatum, infection of x-irradiated mice with, effects of, on survival, protective effects of antifungal agents against, 25:16224
Penicillium sp., radiation effects on survival of species of, effects of dose on γ, 25:16377
Penicillium sp., radiosensitivity of species of, effects of dose on γ, 25:16377
radiation effects on growth of saprophytic on surface of southern pine beetles, uv, 25:16379
radiation effects on survival of, effects of LET on charged particle, 25:16043
Saccharomyces cerevisiae, radiation effects on intragenic recombination during meiosis in, x, 25:16106
Saccharomyces cerevisiae, radioinduced mutations in, uv and x, 25:16279 (NIRS-9, pp 15-53)
Saccharomyces cerevisiae, radiosensitivity of polyploids of, effects of ploidy on uv and x, 25:16094
Saccharomyces sp., radiation effects on metabolism in, γ, 25:16279 (NIRS-9, pp 15-53)
yeast, radiation effects on physicochemical and organoleptic properties of, γ, 25:16390(T) (JPRS-52121, pp 63-8)
yeasts, effects of extracts of, on germination of γ-irradiated seeds of rice, 25:16378
EUROPIUM
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
complexes with DTPA and EDTA, determination in water by neutron activation, 25:15549
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
determination using hexafluoro-2,4-pentanedione, fluorometric, 25:15502
europium-152 decay in, slowing down of recoil atoms from, 25:15716
hyperfine structure of, measurement using Fabry--Perot interferometer and internal atomic beam, 25:16793
photoelectric work function of, (E), 25:17299
separation from aqueous solutions by solvent extraction using octyl phosphate, 25:15742
EUROPIUM ALLOYS AND SYSTEMS
Eu--Mo--O, crystal structure of $EuMoO_3$ and $Eu_2Mo_2O_7$, 25:16603
Eu--O--W, crystal structure of $EuWo_4$ and Eu_6WO_{12}, 25:16603
EUROPIUM ISOTOPES Eu-151
alpha inelastic scattering at 5 to 11 MeV, gamma spectra from, (E), 25:17892
energy levels and transitions from alpha and proton inelastic scattering, (E), 25:17892
proton inelastic scattering at 4.5 MeV, gamma spectra from, (E), 25:17892
EUROPIUM ISOTOPES Eu-152
electron capture decay in europium or europium oxide, slowing down of recoil atoms from, 25:15716
EUROPIUM ISOTOPES Eu-153
alpha inelastic scattering at 5 to 11 MeV, gamma spectra from, (E), 25:17892
energy levels and transitions from alpha and proton inelastic scattering, (E), 25:17892
proton inelastic scattering at 4.5 MeV, gamma spectra from, (E), 25:17892
EUROPIUM ISOTOPES Eu-155
yields from neutron fission of plutonium-239 and plutonium-241, 25:15689
EUROPIUM ISOTOPES Eu-156
yields from neutron fission of plutonium-239 and plutonium-241, 25:15689
EUROPIUM ISOTOPES Eu-157
production by neutron fission of plutonium-239 and plutonium-241, 25:15690
EUROPIUM OXIDES
europium-152 decay in, slowing down of recoil atoms from, 25:15716
magnetic properties near critical temperature, exponents and exchange interactions, (E/T), 25:17298
EXOSPHERE
hydrogen spectral emission to 70,000 km, solar cyclic-Balmer α distribution, (E/T), 25:16952
hydrogen-ion flux measurement in, by Elektron satellites, 25:17022
ion composition in mid-latitude trough region and plasmasphere, altitude-dependent, (E), 25:16892 (N-70-39303)
ionization functions at 120 to 500 km in, temperature-, zenith angle-, and height-dependent, (E/T), 25:16983
EXPERIMENTAL BREEDER REACTOR-II
core meltdown in, effects of fuel materials and configuration on, 25:18168 (ANL-7752)
core vessel for, design, fabrication, and construction of, 25:18121 (ANL-6922)
EYES
penetration of injected calcium-45-labeled calcium chloride into aqueous and corneas of rabbit, effects of alloxan on, 25:15996
radiation effects on, of rats, effects of dose rate and prenatal exposure on γ, 25:16308 (ORO-678, pp 4-6)
radioinduced injuries of rabbit, laser, 25:16361(T) (JPRS-52274)
radioinduced injuries to human, methods of protecting against laser, 25:16206

F

FALLOUT
analysis of pot collections of, for strontium-89 and strontium-90, radiochemical, 25:15513 (HASL-239, pp I.23-57)
beta activity in Yugoslavian atmospheric, following Chinese nuclear tests, 1967, 25:15787
contamination of food by, bibliography on mechanisms of, 25:16071 (AED-C-2-10)
content of animals, drinking water, plants, precipitation, and seawater in Greenland during 1969,

XUM

25:16080(R) (RISO-222)
content of environment and food samples at Ispra, Italy during 1969, 25:16131 (EUR-4563)
content of environment, food, and human bone samples in Denmark during 1969, 25:16139 (RISO-220)
deposition of radioactive, at Ispra, Italy during July to Oct. 1970, (E), 25:15785 (HASL-239, pp III.40-4)
gamma radiation simulation in, using moving cobalt-60 point source, method for three-dimensional, 25:15788
monitoring in ground-level atmosphere and atmospheric precipitation at Leningrad, USSR, 1959 to 1966, 25:15778(T) (AEC-tr-7214, pp 51-61)
monitoring in ground-level atmosphere and surface soils near Moscow, USSR, 1963 to 1966, 25:15777(T) (AEC-tr-7214, pp 9-20)
monitoring in Soviet Union during 1959 to 1966, 25:15776(T) (AEC-tr-7214)
monitoring in surface soils near Leningrad, USSR, 1954 to 1965, 25:15757(T) (AEC-tr-7214, pp 21-6)
monitoring in USSR during 1965 and 1966, 25:16065(T) (AEC-tr-7214, pp 70-81)
research program on, at Health and Safety Laboratory, 25:15781(R) (HASL-239)
transport in atmosphere, seasonal and latitudinal modification of HASL model for predicting, 25:15783 (HASL-239, pp I.63-79)
transport in marine environment of Amchitka, Alaska, development of model for determining, 25:16074(R) (BNI-171-118)
FAST CERAMIC REACTOR
core for, design and kinetics analysis of, 25:18137(R) (GEAP-10028-36)
fuel element for, development during August to October 1970, 25:18137(R) (GEAP-10028-36)
safety of, transient overpower and coolant loss effects on, 25:18137(R) (GEAP-10028-36)
FAST FLUX TEST FACILITY
components for, development during July to September 1970, 25:18180(R) (WHAN-FR-50)
control systems for, development during July to September 1970, 25:18180(R) (WHAN-FR-50)
coolant for, instrumentation and sampling systems for sodium, 25:18180(R) (WHAN-FR-50)
coolant sampling in, removable section bypass tubes for, 25:18179 (WHAN-FR-36)
core design for, progress during July to September 1970, 25:18180(R) (WHAN-FR-50)
design of, progress during July to September 1970, 25:18180(R) (WHAN-FR-50)
fuels for, development and testing of mixed oxide, 25:18180(R) (WHAN-FR-50)
heat transfer loops in, performance of control systems for, (T), 25:18169 (BNWL-1395)
instrumentation for, development during July to September 1970, 25:18180(R) (WHAN-FR-50)
physics analysis of, 25:18180(R) (WHAN-FR-50)
safety analysis for, 25:18180(R) (WHAN-FR-50)
FAST TEST REACTOR
kinetics for, comparison of two and three dimensional models for, (T), 25:18181 (WHAN-SA-11)
materials for, radiation damage evaluation of, 25:16554
FASTENERS
design of releasing latch-type, actuated by temperature excursion, 25:15812(P)
FATTY ACIDS
radioinduced formation of, in animals and man, carbon-14 tracer study of, 25:16316 (ORO-678, pp 49-50)
FECES
radiation processing of poultry, design of equipment for, 25:16393
FEDERAL REPUBLIC OF GERMANY
power plant startup in, table of 1969 to 1974, 25:18053
FELDSPARS
fission tracks in Pacific Ocean-bottom, search for transuranium elements by analysis of, 25:15770
FERMIONS
field theory for massless higher-spin, with definite parity, (T), 25:17547
field theory for zero-mass, (T), 25:17550
interactions with external electromagnetic field, two-component spinor theory for, (T), 25:17562
wave equations with multiple Lorentz group representations for, matrix structure of, 25:17556
FERRICYANIDES
effects on oxidation of hexavalent neptunium ions, 25:15568
FERROCYANIDES
sorptive properties of molybdate-containing, for cesium-137 in presence of cerium-144 and strontium-85 in seawater, 25:17257 (NIRS-9, pp 1-14)
FERROMAGNETIC MATERIALS
ion implantations into, review of Coulomb-excitation perturbed-angular-correlation, 25:17273 (COO-7-585)
neutron transmission through films of, polarized, (E), 25:17675
FERTILITY
radiation effects on, of cattle, effects of dose and dose fractionation on γ, 25:16311 (ORO-678, pp 28-34)
FERTILIZERS
management practices for maize, nitrogen-15 and phosphorus-32 tracer studies of, 25:15986 (STI/DOC-10/121)
FETUSES
radioinduced injuries to, of sheep and rats, effects of dose rate on γ, 25:16308 (ORO-678, pp 4-6)
radioisotope content of, of rats following subcutaneous injection into mother, calcium-47, cesium-134, and strontium-85, 25:16000 (ORO-678, pp 14-24)
FIBRINOGEN
radiation effects on uptake of iodine-131-labeled, by Walker carcinomas, microwave, 25:16035
FIELD THEORY
fermion fields in, zero-mass, 25:17550
fermions with definite parity in, massless higher-spin, 25:17547
fields on homogeneous space of Poincare group in, 25:17532
Kepler problem in classical scalar, relativistic, 25:17549
Noether theorems for, derivation of, (T), 25:17548
FILMS
deposition of thin, temperature changes during vapor, (T), 25:18274 (COO-1198-778)
effects of thermal-barrier, on heat transfer in mercury, 25:15826(R) (RLO-2227-T-4-1)
radiation monitoring service for, in Thailand, 25:16198(R) (RPS-AR-3)
stability of liquid, body force effects on, 25:18309 (SC-RR-70-722)
FILTERS
efficiency of paper, in high altitude air samplers, (E), 25:16114 (HASL-239, pp II.1-129)
heat transfer characteristics of sand, effects on critical assembly gaseous effluents of, 25:18166 (ANL-7687)
performance of activated charcoal, for methyl iodide removal from reactor containment atmospheres, (E), 25:18147
performance of water cooled reactor air cleaning, for coolant loss accident conditions, (E/T), 25:18183 (WHAN-SA-39)
preparation of combined polyvinyl chloride and millipore, for sampling radioactive aerosols, 25:16141 (SZS-17/70)
FINS
testing of steel shipping container reinforcing, under impact loading, 25:15867 (ORNL-TM-1312(Vol.9))
FISSION FRAGMENTS
angular distributions from (t,pf) reactions with plutonium-240 and -242, thorium-230 and -232, and uranium-236 and -238 at 18 MeV, (E/T), 25:17918
beta decay of, time-dependent beta yields from, (E), 25:17919
effects on defect structure of vanadium, 25:16555
effects on tungsten, vacancy clusters induced in, 25:17292
production in neutron fission of thorium-232 at 4.8 and 14.0 MeV, mass--energy distributions, yields, and anisotropies for, (E), 25:17901
production in proton and deuteron fission of radium-226, mass-yield distributions from, (E/T), 25:17884
production in thermal neutron fission of uranium-235, mass and energy distributions from, (E/T), 25:17917
tracks in mica, hydrofluoric acid etching of spontaneous, 25:15775
tracks in ocean-bottom feldspar from, search for transuranium elements by analysis of, 25:15770
FISSION PRODUCTS
angular distribution from neutron fission of uranium-238 at 12.2 to 18.2 MeV, (E), 25:17949
angular distributions from carbon-12 fission of gadolinium-158 and oxygen-16 fission of samarium-154, (E), 25:17860 (CU-1019-76)
behavior in MSRE molten salt samples, 25:15625 (ORNL-4622, pp 60-118)
content in atmospheric dust and precipitation in Leningrad, USSR, 1959 to 1966, 25:15778(T) (AEC-tr-7214, pp 51-61)
deposition on graphite and Hastelloy N samples from MSRE core, 25:15625 (ORNL-4622, pp 60-118)
deposition on stainless steel reactor containment liner, testing of accident release conditions for, 25:18176 (ORNL-4502)
determination by isotope dilution method, 25:15509
determination in high-temperature coated reactor fuels by recoil and chemical etching methods, 25:15521
diffusion in graphite, effects of pyrolytic carbon sealing on, 25:16399 (ORNL-4622, pp 119-98)
diffusion in mixed oxide fuels during irradiation, 25:18098(R) (BNWL-1522-1)
distribution in plutonium oxide (PuO_2)--uranium oxide (UO_2) pin type fuel elements, radiation effects on molybdenum, 25:18247 (WHAN-SA-96)
monitoring for LOFT, 25:16168
movement through soils, role of diffusion in, 25:15764 (ORO-678, pp 124-5)
production in alpha fission of bismuth-209 and plutonium-239, cross sections for, (E/T), 25:17898
production in spontaneous fission of californium-252, gamma and x-ray spectroscopy on, (E), 25:17897
release from coated particle fuels, (E), 25:18099(R) (GA-10313)

release from sintered uranium dioxide, effects of burnup rates, fuel characteristics, and temperature on, 25:16574
release in water cooled reactor accidents, (E/T), 25:18163
release rates in helium cooled reactor, 25:18063(R) (GA-10400)
release to atmosphere, computer program for calculating consequences of, 25:16181
removal from molten salt reactor fuels, development of system for gaseous, 25:18101 (ORNL-4622, pp 7-59)
removal from reactor containment structures, effectiveness of spray systems for, (E), 25:18176 (ORNL-4502)
removal of methyl iodide from reactor containment atmospheres, performance of activated charcoal filters for, (E), 25:18147
separation of radioactive tellurium from, in acid solutions by deposition on metals, 25:15697(P)
separation of, reactor on-line facility for, 25:18187
uptake by plants, effects of soil conditions and seed characteristics on, (E), 25:15764 (ORO-678, pp 124-5)
yields from thermal and fast fission of uranium-235 and plutonium-239, tabulation of, (T), 25:17855 (ANL-7678)
FISSIONABLE MATERIAL
packaging and shipping of, regulations for safe, 25:15864 (CONF-700549-1)
FLOWMETERS
design of electromagnetic, for liquid metal cooled reactor fuel subassemblies, 25:18112
design of in-pile, for liquid sodium, 25:18123(P)
FLUID FLOW
boundary layer models in, mean turbulent field closure in, 25:18305 (SC-CR-70-6125-B)
boundary layer separation in, necessary conditions for three-dimensional, 25:18310(T) (SC-T-71-3007)
collisional effects on Rayleigh--Taylor and Kelvin--Helmholtz instabilities in, 25:17195
magnetohydrodynamic boundary layer, heat and mass transfer under insufflation and exhaustion in, (T), 25:16872
magnetohydrodynamic, effect of magnetic field on heat exchange of abnormally viscous, (T), 25:16871
magnetohydrodynamic, reconnection of magnetic field lines in, (T), 25:16873
magnetohydrodynamic, structure of current sheet in interacting streams of, (T), 25:16874
magnetoplasmadynamic, around a disk, Langmuir-probe study of, 25:16875
FLUIDIZED BEDS
design for denitration of uranyl nitrates, engineering drawings for, 25:15819
FLUORESCEIN
mercury derivatives, radiation effects on, reactions of recoil mercury-197 from neutron, 25:15715
protective effects on man following postirradiation surgery of head and neck, 25:16220
FLUORIDES
electrochemical properties of molten, 25:15567(R) (ORO-3518-19)
separation from molten lithium chloride by reaction with boron chloride at 650°C, 25:15625 (ORNL-4622, pp 60-118)
FLUORINE
corrosive effects on aluminum--titanium-base--vanadium alloys, and stainless steel, 25:16413
corrosive effects on copper, Invar 36, and Nickel 200, 25:16413
determination by activation, evaluation of beryllium--plutonium-238 and californium-252 sources for, 25:15849
determination by proton irradiation, activation curves for, 25:15555
determination in uranium, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
reactions of atomic and molecular, with molybdenum and tungsten surfaces, effects of temperature and pressure on, 25:16411
reactions of atoms of, with deuterium, deuterium hydride, and hydrogen, Monte Carlo calculations of energy partitioning in, 25:15602
reactions of atoms of, with hydrogen, effects of deuterium on, 25:15602
reactions with boron, graphite, and titanium, kinetics of, 25:16411
FLUORINE IONS
reactions with carbon foils at 100 to 500 keV, equilibrium charge distributions from, (E), 25:16758
FLUORINE ISOTOPES F-18
production by photonuclear reactions in fluorocarbons, 25:15695
FLUORINE ISOTOPES F-19
Hartree--Fock calculations for, parity-mixed, 25:17992
FLUORINE ISOTOPES F-20
energy levels of, proton-hole, (T), 25:17791
FLUORINE SYSTEMS
F--Th--Ti, phase studies of, 25:16608
FLUOROBORATES
polarizability of, 25:15625 (ORNL-4622, pp 60-118)
FLUOROCARBONS
radiation effects on, fluorine-18 production by photon, 25:15695
FLUORONICKELATES
reactions with radon in presence of hydrogen fluoride at -195 to 25°C, oxidation, 25:15572
FOILS
ion reactions with, mechanisms related to excitation in, 25:16756
ion reactions with, multicollisional molecular orbital model for, 25:16757
ion reactions with, spectroscopic methods for study of mechanisms of, 25:16754
FOOD
fallout contamination and decontamination of, bibliography on, 25:16071 (AED-C-2-10)
radiation processing of, bibliography on, 25:16389 (AED-C-5-8)
radioisotope content of Netherlands, during 1969, 25:16003 (RA-41)
radioisotope content of, at Ispra, Italy during 1969, 25:16131 (EUR-4563)
radioisotope content of, in Denmark during 1969, 25:16139 (RISO-220)
radioisotope uptake by man from, in Soviet Union during 1965 and 1966, 25:16064(T) (AEC-tr-7214, pp 37-50)
FOOD CHAINS
cesium-137 distribution in plant--reindeer--man, in arctic regions of Soviet Union, 25:16127(T) (AEC-tr-7214, pp 27-36)
iodine isotope transport through to man, kinetics of, 25:16082
radioisotope distribution in human, in Soviet Union during 1965 and 1966, 25:16064(T) (AEC-tr-7214, pp 37-50)
radioisotope transport through, to man, bibliography on, 25:16071 (AED-C-2-10)
strontium-90 distribution in, in Soviet Union during 1963 to 1966, 25:16070(T) (AEC-tr-7214, pp 249-66)
tritium transport through human, following soil deposition, role of rainfall in, 25:16138(R) (ORNL-TM-3134)
FORBUSH DECREASES
counting-rate variations at different vertical cutoff rigidities by neutron monitors, (E), 25:16851 (AD-713226)
FORMALDEHYDE
radiation effects on formation of, in starch, effects of dose rate on γ, 25:16040
radio emission from, in Trapezium region of Orion Nebula, (E), 25:16674
FORMAMIDE, N,N-DIMETHYL-
effects on kinetics of polymerization of γ-irradiated cellulose with monomers, 25:15656
FORMIC ACID
separation from 2-ethyl-1-hexanol in sol--gel process using anion exchange resins, 25:15727 (ORNL-TM-3226)
separation of plutonium from, by electrodeposition, 25:15748
FORT CALHOUN POWER REACTOR, UNIT 1
site for, environmental survey during July to September 1970, 25:18085 (DOCKET-50285-40)
site for, environmental survey during October 1968 to October 1970, 25:18086 (DOCKET-50285-41)
FORT ST. VRAIN POWER REACTOR, UNIT 1
boiler for, development and testing of, 25:18099(R) (GA-10313)
control materials for, shattering characteristics of boronated graphite spheres, 25:18099(R) (GA-10313)
core for, properties and irradiation stability of graphite in, 25:18099(R) (GA-10313)
fuel cycle management program for, development of, 25:18099(R) (GA-10313)
fuel element design and testing for, 25:18099(R) (GA-10313)
fuel element for, properties and irradiation stability of graphite in, 25:18099(R) (GA-10313)
fuels for, preparation and testing of coated particle, 25:18099(R) (GA-10313)
loading machine for, development of, 25:18099(R) (GA-10313)
physics parameters analysis for, 25:18099(R) (GA-10313)
remote viewing equipment for, temperature testing of television, 25:18099(R) (GA-10313)
shielding materials for, effects of steam on boron loss from boronated Type 304 stainless steel, 25:18099(R) (GA-10313)
thermal insulation for, performance of, 25:18099(R) (GA-10313)
FRANCIUM
bibliography on analytical chemistry of, 25:15470
book: Analytical Chemistry of Technetium, Promethium, Astatine, and Francium, 25:15470
FRANCIUM ISOTOPES
fission of isomers of, search for spontaneous, 25:17924
FREE RADICALS
radioinduced production in imidazole monocrystals, ENDOR and ESR spectral studies on γ, 25:15662 (CEA-R-3758)
radioinduced, in biological materials, effects on RBE, 25:16126 (AD-713557)
yields from γ and x radiolysis of polycrystalline glycines, EPR spectral studies on effects of crystal structure and deuterium on, 25:15675

XUM

FRUITS
peers, radiation processing of, combined effects of heat on, 25:16089(R) (EUR-4545)
strawberries, radiation processing of, combined effects of heat on, 25:16089(R) (EUR-4545)
FUEL CAPSULES
design and testing of SNAP-23A, 25:15846(R) (WANL-4182-3)
development and testing of SNAP-19, 25:15836(R) (INSD-2873-44)
materials for SNAP-23A, properties and selection of, 25:15846(R) (WANL-4182-3)
materials for walls of DART I heat source, metallographic interface reactions in, 25:15837 (MLM-1578)
testing of simulated reentry Transit, under ground impact conditions, 25:15843 (SC-DR-70-127)
FUSED SALTS
conductance of, design of cell for measurement of, 25:15625 (ORNL-4622, pp 60-118)
corrosive effects on Hastelloy N, 25:16399 (ORNL-4622, pp 119-98)
electrolysis of refractory metal, separation coefficients for near-equilibrium, 25:16426
entropies of, at 1000°K, 25:15625 (ORNL-4622, pp 60-118)
purification of, design of test stand and molybdenum reductive extraction equipment for, 25:15726 (ORNL-4622, pp 199-225)
reprocessing of reactor fuel, development of close-coupled system for, 25:18138 (ORNL-TM-3137)

G

GADOLINIUM
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
determination of trace amounts of, in thorium dioxide by isotope dilution method, 25:15505(T) (N-70-38452)
determination of, effects of solution composition on spectrographic, 25:15476
photoelectric work function of, (E), 25:17299
GADOLINIUM ALLOYS AND SYSTEMS
Fe-base--Gd, magnetic coercive force of, effects of thermomechanical treatment in magnetic field on, 25:16469
GADOLINIUM ISOTOPES Gd-151
production by deuteron or proton irradiation of europium-151 in variable energy cyclotron, 25:15703
GADOLINIUM ISOTOPES Gd-152
alpha inelastic scattering at 10 MeV, (E), 25:17900
energy levels of, g-factors for 2+, (E), 25:17900
energy-level transitions in, relativistic Hartree--Fock calculations of K-shell internal conversion coefficients, L-subshell ratios, and second-order K- and L-shell particle parameters for, (T), 25:17916
GADOLINIUM ISOTOPES Gd-154
energy levels of, g-factors for 2+, (E), 25:17900
energy-level transitions in, relativistic Hartree--Fock calculations of K-shell internal conversion coefficients, L-subshell ratios, and second-order K- and L-shell particle parameters for, (T), 25:17916
oxygen inelastic scattering at 36 MeV, (E), 25:17900
GADOLINIUM ISOTOPES Gd-156
energy levels of, g-factors for 2+, (E), 25:17900
energy-level transitions in, relativistic Hartree--Fock calculations of K-shell internal conversion coefficients, L-subshell ratios, and second-order K- and L-shell particle parameters for, (T), 25:17916
GADOLINIUM ISOTOPES Gd-158
carbon-12 fission at 126 MeV, total cross sections and fragment angular distributions from, (E), 25:17860 (CU-1019-76)
energy levels of, g-factors for 2+, (E), 25:17900
GADOLINIUM ISOTOPES Gd-159
production by neutron fission of plutonium-239 and plutonium-241, 25:15690
GADOLINIUM ISOTOPES Gd-160
energy levels of, g-factors for 2+, (E), 25:17900
GALAXIES
color changes in nuclear regions of M31, M32, NGC 4472, (E), 25:16724
distribution of clusters of, (E), 25:16720 (AD-712807)
evolution of, role of variable stars in, 25:16659
origin of, (T), 25:16735
photometry of elliptical, in Virgo Cluster, (E), 25:16720 (AD-712807)
spectral absorption line variations over central regions of M31, M32, and NGC 4472, (E), 25:16724
stabilization of clusters of, hot-gas model for, (T), 25:16722
velocities of, comparison of optical and 21-cm data for radial, (E), 25:16725
x-ray emission from Cen A, (E), 25:16683
GALL BLADDER
scanning of human, for concentration capacity, effectiveness of iodine-131-labeled Rose Bengal for, 25:16241
GALLIUM
abundance in 112 Her AB, (E), 25:16645
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
diffusion in lithium-6 and -7, tracer studies of, 25:16500
separation from germanium by sorption on alumina in presence of chelating agents, 25:15755
separation from germanium by sorption on aluminum oxide, silica gel, or zirconium dioxide, 25:15692
GALLIUM ALLOYS AND SYSTEMS
Ga--Mn--Mo, critical field for superconducting, anomalous behavior of, (T), 25:17074
Ga--Pu, diffusion in, computer programs for determination of, 25:15627 (RFP-1544)
Ga--Pu-base, ignition of, effects of oxygen, solvent vapor, and water vapor on, 25:16442 (RFP-1566)
Ga--V, phases in superconducting, electron-probe microanalysis in diffusion layers, 25:16525
GALLIUM ISOTOPES Ga-66
production by proton irradiation of zinc-66 in variable energy cyclotron, 25:15703
GALLIUM ISOTOPES Ga-68
energy levels from zinc-68 (p,n) reactions, resonance parameters and spin--parity assignments from Robson analysis of, (E/T), 25:17820
production of, generator for, 25:15692
sorption on alumina in presence of chelating agents, 25:15755
GAMMA CAMERAS
performance for blood circulation scanning in human brain following injection of metastable technetium-99 labeled serum albumin microaggregates, 25:16235 (UCLA-12-803)
GAMMA RADIATION
book: Medical Radiation Physics, 25:16275
buildup factors above air/ground interface covered with cobalt-60, (E/T), 25:17252 (AD-710985)
detection and measurement of cosmic, on Kosmos 208 satellite, 25:16859
detection at 300 to 1600 MeV, separated function shower detector for, 25:15938
detection of 0.15- to 6.1-MeV, finite-solid-angle attenuation factors for thallium-activated sodium-iodide counters for, 25:15897
dose distribution from array of cobalt-60 pencil sources in water-filled cylinder, 25:16143(R) (UCRL-50007-70-2)
dose to environment from radioactive waste discharge from Windscale Nuclear Facilities, United Kingdom, 25:16173
dose to environment from stack effluent of nuclear power plants, comparison of calculated and measured long term, 25:16176
dose to human bone marrow, gonads, and whole-body during 1960 to 1969, calculation of absorbed fallout, cesium-137, 25:16187
dose to man, from cesium-137 in food, 25:16127(T) (AEC-tr-7214, pp 27-36)
dosimetry in human reproductive system, use of analytical transport theory for fallout and natural background, 25:16152
dosimetry of high-level, characteristics of thulium-activated calcium sulfate thermoluminescent dosimeters for, 25:15956
effectiveness for therapy of esophagus cancer in combination with colchicine or 5-fluorouracil, 25:16270
effectiveness for therapy of human leukemia, lymphomas, and polycythemia vera, single whole body exposure, 25:16259 (ORAU-112)
effectiveness of high-dose whole-brain cobalt-60, for therapy of human cerebral metastases, 25:16271
effects mixed with neutrons on fluorinated liquid and liquid and vaporous hexafluorobenzene, mechanism and yields from, 25:15661(T) (BNL-tr-394)
effects on 3,3,4,4,5,5,5-heptafluoro-1-pentene, effects of pressure and temperature on, 25:15649
effects on activity of hydrolases in rat liver, whole-body, 25:16279 (NIRS-9, pp 15-53)
effects on Agar, binding reactions in neoplasms following, 25:16047
effects on antibody formation in mouse spleen implants challenged with sheep erythrocytes, effects of dose on, 25:16306 (NIRS-9, pp 55-61)
effects on aqueous solutions of methyl chloride, 25:15673
effects on aqueous solutions of N-acetyl-DL-alanine and poly-DL-alanine, 25:15672
effects on arsenic chlorides and fluorides, ESR studies on radicals from, 25:15663 (COO-1365-36)
effects on auditory and visual discrimination in monkeys, effects of dose on, 25:16302(R) (AD-709971)
effects on barley and wheat, mutagenic, 25:16089(R) (EUR-4545)
effects on barley in comparison to effects on fast neutrons and fission neutrons, mutagenic for chlorophyll deficiency, 25:16091 (ORO-678, pp 126-34)
effects on behavior of miniature swine, effects of dose fractionation and time intervals on, 25:16301 (AD-709938)
effects on biological materials, effects of dose rate on calculation of RBE for, 25:16126 (AD-713557)

effects on bones, effects of radium-224 therapy of human diseases on neoplastic, 25:16365
effects on burros, effects of dose on late cobalt-60 and tantalum-182, 25:16313 (ORO-678, pp 36-40)
effects on cardiovascular response of beagle dogs, effects of shielding on, 25:16300 (AD-709920)
effects on carrier diffusion length in silicon solar cells, 25:15985
effects on cesium formate, lithium formate, potassium formate, and sodium formate, ESR spectral studies on hyperfine parameters of CO_2^- radicals produced by, 25:15646
effects on chlorobenzene and its derivatives in lower aliphatic alcohols, 25:15688
effects on chlorotrimethylsilane, methylsilane, or trimethylsilane, ESR studies on methylsilyl radicals produced from, 25:15682
effects on chromosome aberrations in rye seeds aberrant, 25:16099
effects on chromosomes and seedling height of barley, combined effects of 5-bromouracil, EMS, and fission neutrons on, 25:16091 (ORO-678, pp 126-34)
effects on chromosomes of oats, effects of dose, dose fractionation, and seed exposure on aberrant, 25:16110
effects on count of blood platelets and leukocytes of sheep, 25:16318 (ORO-678, pp 58-64)
effects on count of swine leukocytes, effects of dose on, 25:16315 (ORO-678, pp 47-8)
effects on creep and elasticity of Englemann spruce wood beams, 25:16623
effects on cubic lead fluoride single crystals, (E), 25:17286
effects on cyclohexane solutions of deuterated ammonia or nitrous oxide, yields from, 25:15648
effects on cyclopropane, effects of krypton and xenon on yields from, 25:15664 (NP-18627)
effects on damping of sodium chloride single crystals, interruption effects on, 25:17283
effects on development of Drosophila, effects of shielding on small dose, 25:16290
effects on development of hemp pollen, effects of dose on, 25:16382
effects on erythrocytes during extracorporeal exposure of human blood, lytic, 25:16266
effects on eyes and testes of rats, effects of dose rate and prenatal exposure on, 25:16308 (ORO-678, pp 4-6)
effects on fertility and survival of cattle, effects of dose and dose fractionation on, 25:16311 (ORO-678, pp 28-34)
effects on fertility of male mosquitos for population control, effects of, on sexual activity, inhibitory cobalt-60, 25:16293
effects on formation of formaldehyde in starch, effects of dose rate on, 25:16040
effects on frozen aqueous solutions of alkali metal halides, ESR studies of intermediates from, 25:15684
effects on frozen sodium hydroxide, optical absorption and photobleaching of trapped electrons from, 25:15677
effects on Fusarium moniliforme, mutagenic, 25:16095
effects on gaseous and liquid hydrobromic acid, hydrochloric acid, and hydriodic acid, review on, 25:15666
effects on germination of seeds of rice, effects of yeast extract on, 25:16378
effects on glasses at 78°K, absorption-center formation from, cobalt-60, (E), 25:17270(T) (BNWL-tr-62)
effects on graft polymerization of 2,2,3,3,4,4,4-heptafluorobutyl acrylate on surface of cellulose fiber, properties of product produced by, 25:15652
effects on grafting styrene on swollen cellulose films, 25:15658
effects on growth and reproduction of fish, effects of dose on, 25:16326
effects on growth and seed yield of sunflower plants, effects of plant or seed exposure on, 25:16380
effects on growth of kidneys, liver, spleen, and thymus of rats, effects of prenatal exposure on, 25:16309 (ORO-678, pp 7-13)
effects on heart rate, respiratory rate, and rectal temperature of ponies during work, 25:16314 (ORO-678, pp 41-6)
effects on hematopoiesis and survival of mice, protective effects of d actinomycin and dose fractionation against, 25:16228
effects on hydrocarbons and water adsorbed on silica at 77°K, ESR study of trapped hydrogen atoms from, 25:15665
effects on hypotension in monkeys, protective effects of vasopressor drugs against, 25:16299 (AD-702723)
effects on imidazole monocrystals, ENDOR and ESR spectral studies on free radicals produced by, 25:15662 (CEA-R-3758)
effects on immune reactions in rats, effects of bone marrow cells on, 25:16055
effects on immune response of dogs to allogeneic bone marrow transplants from histoincompatible donors, 25:16058
effects on isomerization of α-methylstilbene in cyclohexane, 25:15650
effects on lichens, use of appearance on infrared film and count of damaged algal cells as index to, 25:16374(R) (COO-2085-1)
effects on lithium fluoride crystals containing defect centers, studies on chemically bound neutron in, 25:17858(R) (COO-1716-11)
effects on lithium fluoride, thermal-conductivity study of defects induced in, 25:17272 (CEA-R-4010)
effects on lysozyme chloride monocrystals, EPR spectral studies on effects of temperature on, 25:15670
effects on man following accident at cobalt-60 facility in Korea, 25:16118
effects on materials, EPR spectrometer for studying, 25:15962 (CEA-R-4022)
effects on mating behavior of male corn earworms, 25:16296
effects on medical equipment and supplies, factors affecting sensitivity of bacteria to sterilizing cesium-137 and cobalt-60, 25:16396
effects on metabolism in yeast, 25:16279 (NIRS-9, pp 15-53)
effects on metabolism of bilirubin in liver of rabbits, effects of dose on, 25:16039
effects on methylcyclohexane and 3-methylpentane at -196°C, effects of chloromethanes and electron scavengers on hydrogen yields from, 25:15686
effects on mice, protective effects of dithiocarbamates of aminothiophenes against, 25:16219
effects on mice, protective effects of organic selenium compounds against cobalt-60, 25:16233
effects on Moessbauer line widths for iron complexes with 2,4-pentanedione, 25:15647
effects on mortality in mice, protective effects of bee venom, against whole-body cobalt-60, 25:16232
effects on physicochemical and organoleptic properties of casein, sunflower seed oil, yeast, and oil concentrates of vitamins A and D, 25:16390(T) (JPRS-52121, pp 63-8)
effects on polycrystalline glycines, EPR spectral studies on effects of crystal structure and deuterium on free radical yields from, 25:15675
effects on polymerization of 1,3-cyclohexadiene, 25:15657
effects on populations of tomatoes, 25:16089(R) (EUR-4545)
effects on potassium cyanate single crystal, ESR studies of CN molecule from, 25:15679
effects on poultry wastes, design of equipment for, 25:16393
effects on production of botulinum toxin in fish fillets, 25:16391 (MIT-4049-2)
effects on properties of graphite, 25:16559(R) (NYO-1710-100)
effects on properties of paper and wood, 25:15651
effects on protein content of spring wheat, effects of variety on, 25:16381
effects on regeneration of Tubularia, 10,000 to 300,000 R cesium-137, 25:16298
effects on release of inorganic phosphate from deoxynucleotides in solution, comparison of protective effects of sulphydryl compounds against, 25:16216 (UCLA-12-799)
effects on reproduction and survival of crickets, effects of dose on, 25:16288
effects on reproductive system of female rats, effects of dose and dose rate on, 25:16310 (ORO-678, pp 25-7)
effects on respiration of lichens and associated bacteria, 25:16374(R) (COO-2085-1)
effects on seeds of hybrid wheat, effects of, on segregation of dominant characters in second generation, 25:16100
effects on sheep, effects of dose rate and prenatal exposure on, 25:16308 (ORO-678, pp 4-6)
effects on silicon/silicon oxide interface in MOS transistors, 25:17290
effects on solutions of drugs, effects of concentration on, 25:16392
effects on sprouting of potatoes, 25:16089(R) (EUR-4545)
effects on sterilization of heat-stabilized propene polymers, effects of thiodipropionate on, 25:15653(P)
effects on subsequent polymerization of cellulose with acrylonitrile and another monomer, effects of composition and solvent on, 25:15655
effects on subsequent polymerization of cellulose with monomers, effects of solvents on kinetics of, 25:15656
effects on survival of brine shrimp larvae, 25:16279 (NIRS-9, pp 15-53)
effects on survival of cultured thymus cells, protective effects of thymus tissue extracts against, 25:16279 (NIRS-9, pp 15-53)
effects on survival of honey bees, effects of post-exposure temperature on, 25:16287
effects on survival of sheep, effects of ingestion of yttrium-90-labeled sand on, 25:16318 (ORO-678, pp 58-64)
effects on survival of swine, calculation of RBE for effects of depth dose distribution on, 25:16317 (ORO-678, pp 51-7)
effects on survival of third and fourth stage larvae and pupae of alfalfa weevils, 25:16289
effects on survival of wheat spoilage fungi, effects of dose on species of Aspergillus and Penicillium, 25:16377
effects on susceptibility of pink bollworm moths to insecticides, cobalt-60, 25:16294

XUM

effects on testes of cattle, effects of dose and dose rate on, 25:16310 (ORO-678, pp 25-7)
effects on thermal decomposition induction period in pseudostable inorganic solids, 25:15644
effects on tissues of cattle, pathological, 25:16312 (ORO-678, pp 35)
effects on tissues of lungs of rabbits, effects of dose on pathological, 25:16305(T) (LF-tr-33)
effects on tolerance to surgical stress in mice, 25:16357
effects on tyrosine hydrochloride monocrystals, photochemical conversion of paramagnetic centers produced by, 25:15654
effects on xanthine dehydrogenase activity in Drosophila and Habrobracon, effects of space flight on, 25:16028
effects on yield of spring wheat, effects of dose and variety on, 25:16381
emission from mined uranium ores, method for measuring, 25:15797
isodose charts for cesium-137 and cobalt-60, 25:16151
measurements in rocks and soils for use in gas and oil prospecting, 25:15768
monitoring at atomic energy facilities, equipment and methods for, 25:15789
monitoring in air and rainwater of Pacific Islands during 1970, 25:16078 (NRL-F-39)
monitoring in lower stratosphere of Western Hemisphere during Oct. 1969 and Jan. 1970, 25:16114 (HASL-239, pp II.1-129)
production and transport in concrete, secondary, (E), 25:17253 (AD-711839)
production and transport in concrete, secondary, (E), 25:17254 (AD-711840)
reactions (γ,π^+) with potassium-41, copper-65, strontium-88, and barium-138, meson (π^+) yields from, (E), 25:17789
reactions in central regions of quasars, (T), 25:16669
reactions with aluminum, copper, cadmium, and lead at 2.615 MeV, pair production cross sections for, (E), 25:17808
reactions with liquid xenon at 35 to 2000 Mev, (E), 25:17255 (JINR-P1-5482)
scattering by elements at 90 and 124.5° and 1.12 and 1.33 MeV, Delbrueck and Rayleigh amplitudes for elastic, (E), 25:17795
scattering in single crystals of resonant, kinematic theory of Bragg, 25:17322
simulation of three-dimensional, in fallout, moving cobalt-60 point source for, 25:15788
spectra of, from fissionable nuclides and associated isotopes, (E), 25:17861 (IN-1448(Rev.))
transport through concrete slabs, (T), 25:17263
use for therapy of human malignant tumors, effects of dose on development of skin erythema and exudative epidermitis following, 25:16369
uses in well logging in lower Volga region, USSR, 25:15766

GAMMA SOURCES
comparison of cesium-137, cobalt-60, iridium-192, and radium-226 for contact radiotherapy, 25:16260 (SZS-18/70)
description of 3.85-MeV, using boron-10 or carbon-13 (α,γ) reactions, 25:15931(P)
design of cesium-137 and cobalt-60, for exposure of insects, 25:16285 (CONF-701202-1)
monitoring Brookhaven--Reactor stack effluent, 25:16178

GAMMA SPECTROMETERS
data from, use of on-line computers for analysis of, 25:16182
design for reactor fuel element burnup measurement, 25:16248
design of Compton-suppressed lithium-drifted germanium, 25:15936
development for analysis of reactor fuels and wastes, 25:15916(R) (GEAP-12114-3)
operation of Baird Atomic enrichment tester, for analyzing uranium billets, 25:15915 (DUN-M-30)

GAMMA SPECTROSCOPY
data analysis for radioisotopes in mixtures, computer programs for, 25:15543
evaluation for field studies under emergency conditions, 25:16184
measurements in nuclear reactions, survey on, 25:17930

GAS FLOW
calculations for reactor containment structure leakage with viscous, turbulent, and orifice, (T), 25:18244 (WHAN-SA-40)
electrohydrodynamic, temperature measurements in 50-MW facility, 25:16865 (AD-713672)

GAS TURBINE ENGINES
conference on materials for high-temperature, Florence, Italy, Sept. 21 to 25, 1970, 25:16397 (AGARD-CP-73-71)
materials for high-temperature, methods for preparing improved, 25:16419 (AGARD-CP-73-71, Paper 18)

GASES
evolution of radiolytic, from aqueous plutonium solutions during storage, 25:15660(T) (AEC-tr-7217)
ion lifetime in unstable, negative-, (T), 25:17341
kinetic theory of Lorentz, generalization of Boltzmann, 25:17346
plasma interactions with neutral, astrophysical, (T), 25:16703
preparation of low-concentration standard samples of mixed, 25:16303 (RFP-1626)
reactions of dissociated, with refractory materials, kinetics of, 25:16459
separation of krypton and xenon isotopes from cover, in nuclear facilities, evaluation of collection processes for, 25:15723 (NACAR-10007)

GASTROINTESTINAL TRACT
hemorrhages of human upper, combined use of endoscopy with x radiography for diagnosis of, 25:16243
iron-59 sorption by, for detection of blood loss in patients with stomach operations, 25:16006
radioisotope metabolism in, effects of physico-chemical characteristics on, 25:16005
rate of passage through bovine, cerium-144 and cerium-141 tracer study of, 25:16001 (ORO-678, pp 83-8)

GENERATORS
use of single-phase, with transformer as substitute for synchronous MHD generator, parametric design study of, 25:16869

GENETIC RECOMBINATION
radiation effects on, in Escherichia coli, comparison of metabolic inhibitors with uv and x, 25:16104

GEOCHEMISTRY
analytical methods for, review on radiometric, spectrophotometric, and spectroscopic, 25:15518

GEOMAGNETIC FIELDS
activity index K/sub p/, effects on solar wind deformation velocity, (E/T), 25:16923
characteristics of anomalous, statistical correlation with anomalous gravitational fields, (E/T), 25:16921
configuration before and during magnetospheric substorm at 6.6 R/sub E/, effect of neutral sheet on, (E/T), 25:16903
cosmic-ray cutoff rigidity in presence of penumbra, (T), 25:16850(T) (AD-712344)
deformation in radiation belts during magnetic-storm recovery, (T), 25:17053
distribution of vertical near-Earth, computing methods for 10 to 200 km for, (E/T), 25:16994
disturbances in, effect on occurrence of spread F, (T), 25:17027
effect of nondipole, on boundary of magnetosphere, (T), 25:16914
effect on corpuscular-radiation intensity in upper atmosphere, altitude-dependent, (E), 25:17035
effects of activity of, on appearance of sporadic E and radio-wave absorption, (E), 25:16997
effects of activity on charged-particle density in plasmapause, (E), 25:17051
effects of activity on magnetospheric soft electron-flux time variations, 25:17052
intensity of negative bays at midlatitude, distribution of disturbance vectors of, (E), 25:16931
intensity variations of Sq, at magnetically conjugate and subfocal observatories, (E), 25:16999
intensity variations of, magnetopause Kelvin--Helmholtz instability and semiannual, (E/T), 25:16963
magnetohydrodynamic vibrations in, correlation of Earth westward-drift velocity variations to torsional, (T), 25:16976
origin of, and contraction mechanism, relativistic theory of, 25:16888(T) (JPRS-52234)
Poynting flux measurements in, theory of Injun 5 vlf, (E/T), 25:16949
pulsation intensities and short-period disturbances in, relation with interplanetary-space solar-wind flux of micro-, (T), 25:16957
pulsation periods in, relation to simultaneous solar-wind ion flux of micro-, (E), 25:17048
pulsations in mid-latitude, diurnal, annual, and 11-year variations in Pc1, 1957-1967, (E), 25:16920
pulsations in, diurnal variations of polarization-axis direction of Pc1, (E/T), 25:16932
pulsations in, fine structure of Pc1-type micro-, (T), 25:16933
pulsations in, magnetospheric plasma density determination from periods of, (E/T), 25:16913
pulsations in, polarization patterns of Pc1 along F2-centered waveguide, (E/T), 25:16993
pulsations in, relation to Alfven fine-structure irregularities near plasmapause, micro-, (E), 25:17028
pulsations in, seasonal dependence of preferred-directional polarization of micro-, (E), 25:17000
pulsations in, simultaneous Canadian data on Pc3 and Pc4 micro-, (E), 25:16946
relation of latitude of, with deviations of F2-layer critical frequencies, approximating, (E/T), 25:16981

GERMANIUM
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determinative in beryllium oxide and iron, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
ion reactions at 10 to 3000 eV with surfaces of, optical radiation from excited sputtered particles from, (E), 25:16766
properties of, research on, 25:17294(R) (NBS-TN-560)
radiation damage in n- and p-type, annealing of 77°K 14-MeV neutron, 25:17275
separation from gallium by sorption on alumina in

presence of chelating agents, 25:15755
separation from gallium by sorption on aluminum oxide, silica gel, or zirconium dioxide, 25:15692
GERMANIUM ALLOYS AND SYSTEMS
Al--Ge--Nb, crystal structure of intermetallic $Nb_{12}Al_3Ge$ in, 25:16526
Al--Ge--Nb--Ti, superconductivity of, (E), 25:17076
Al--Ge--Nb--Zr, superconductivity of, (E), 25:17076
Al-base--Ge, radiation damage in, annealing kinetics of 90°K electron, 25:17278
Ge--Y, phase studies of, 25:16398 (IS-2300, pp 101-86)
GERMANIUM ISOTOPES Ge-68
sorption on alumina in presence of chelating agents, 25:15755
GERMANIUM ISOTOPES Ge-69
energy levels from arsenic-69 decay, spin-parity assignments for, (E), 25:17784
GERMANIUM ISOTOPES Ge-70
energy levels from neutron inelastic scattering, spin--parity assignments for, (E/T), 25:17815
energy-level transitions from neutron inelastic scattering, branching and mixing ratios for, (E/T), 25:17815
neutron inelastic scattering at 0.5 to 2.55 MeV, gamma excitation functions and Wolfenstein--Hauser--Feshbach analysis of neutron differential cross sections from, (E/T), 25:17815
GERMANIUM ISOTOPES Ge-71
energy level from the gallium-71 (p,n) reaction, g-factor for 20.2-msec isomeric, (E), 25:17809
GERMANIUM ISOTOPES Ge-72
energy levels from neutron inelastic scattering, spin--parity assignments for, (E/T), 25:17815
energy-level transitions from neutron inelastic scattering, branching and mixing ratios for, (E/T), 25:17815
neutron inelastic scattering at 0.5 to 2.55 MeV, gamma excitation functions and Wolfenstein--Hauser--Feshbach analysis of neutron differential cross sections from, (E/T), 25:17815
GERMANIUM ISOTOPES Ge-73
energy levels at 13.5 and 66.8 keV from arsenic-75 decay, half-lives of, (E), 25:17792
GERMANIUM ISOTOPES Ge-74
energy levels from neutron inelastic scattering, spin--parity assignments for, (E/T), 25:17815
energy-level transitions from neutron inelastic scattering, branching and mixing ratios for, (E/T), 25:17815
neutron inelastic scattering at 0.5 to 2.55 MeV, gamma excitation functions and Wolfenstein--Hauser--Feshbach analysis of neutron differential cross sections from, (E/T), 25:17815
GERMANIUM ISOTOPES Ge-75
beta decay of metastable, gamma spectra from, (E), 25:17847
GERMANIUM ISOTOPES Ge-76
energy levels from neutron inelastic scattering, spin--parity assignments for, (E/T), 25:17815
energy-level transitions from neutron inelastic scattering, branching and mixing ratios for, (E/T), 25:17815
neutron inelastic scattering at 0.5 to 2.55 MeV, gamma excitation functions and Wolfenstein--Hauser--Feshbach analysis of neutron differential cross sections from, (E/T), 25:17815
GERMANIUM ISOTOPES Ge-77
beta decay of metastable, gamma spectra from, (E), 25:17847
GERMANIUM ISOTOPES Ge-79
beta decay of, gamma spectra from, (E), 25:17843
GLASS
radiation effects at 78°K, absorption-center formation from ^{60}Co γ-, (E), 25:17270(T) (BNWL-tr-62)
GLOBULINS
monitoring abnormal serum, in man as indication of effectiveness of x-radiotherapy of plasma cell tumors, 25:16273
GLUCOSE 6-PHOSPHATASE
radiation effects on activity of, in rat liver, whole-body γ, 25:16279 (NIRS-9, pp 15-53)
GLUTAMATE DEHYDROGENASE
activity in ascites tumor cells, effects of uv-irradiated glutamate and glutarate on, 25:16033
GLYCEROL
glycerol--H_2O, mass transfer coefficients for helium bubbles in, (E/T), 25:18101 (ORNL-4622, pp 7-59)
GLYCINE
radiolysis of polycrystalline, EPR spectral studies on effects of crystal structure and deuterium on free radical yields from γ and x, 25:15675
yields from radiolysis and uv photolysis of N-(3-phenyl-L-alanyl)glycine, comparison of, 25:15678
GLYCINE, N-(CARBOXYMETHYL)-N'-(2-HYDROXYETHYL)-N,N'-ETHYLENEDI-
complexes with transuranium elements, stability of, 25:15722 (KFK-1291)
GLYCINE, N-(3-PHENYLALANYL)-
photolysis of aerated aqueous solutions of, comparison of mechanism of radiolysis with, 25:15678
radiolysis of aerated aqueous solutions of, comparison of mechanism of photolysis with, 25:15678
GLYCINE, TYROSYL-
yields from radiolysis and uv photolysis of N-(3-phenyl-L-alanyl)glycine, comparison of, 25:15678
GLYCOGEN
radiation effects on metabolism of, in liver of rats, x, 25:16025 (AD-713087)
GLYOXYLIC ACID
yields from radiolysis and uv photolysis of N-(3-phenyl-L-alanyl)glycine, comparison of, 25:15678
GOLD
alpha-particle reactions at 6.25 to 20 MeV/amu with, ratio of x-ray yields from, to deuteron-induced yields, (E), 25:16762
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by ring colorimetry after separation by thin-layer chromatography, 25:15487
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
diffusion in lithium-6 and -7, tracer studies of, 25:16500
electron stopping power at <500 keV, (T), 25:17962
electron transmission at 1.0 to 2.5 MeV through, angular and energy distributions from, (E), 25:17259
heavy-ion reactions with, fission fragments from, (E), 25:17924
impedance of films of, on bulk superconducting tin, (E/T), 25:17080
photoelectric work function of, (E), 25:17299
positron stopping power at <500 keV, (T), 25:17962
separation from pulverized gold ore fractured by underground conventional or nuclear explosions, 25:15754(P)
separation from solvent extracts of ores or waste by direct precipitation, 25:15749(P)
sputtering in argon--oxygen mixtures, 25:16497
strains in deformed fcc crystals of, at 25°C, measurement of micro-, 25:16516(R) (CRO-3908-2)
x-ray emission from decay of K-shell vacancies in, relative rates of, (E), 25:16786
GOLD ALLOYS AND SYSTEMS
Al--Au, microstructure of unidirectionally solidified, 25:16543
Al-base--Au, radiation damage in, annealing kinetics of 90°K electron, 25:17278
Au--Fe--Te-base, band structure and transport properties of superconducting, (E/T), 25:17084
Au--Mn--Te-base, band structure and transport properties of superconducting, (E/T), 25:17084
Au--Pd, electric conductivity of, 25:16398 (IS-2300, pp 101-86)
Au--rare earths, crystal structure of intermetallic compounds of, 25:16398 (IS-2300, pp 101-86)
Au--Te-base, band structure and transport properties of superconducting, (E/T), 25:17084
GOLD ISOTOPES Au-193
energy levels from mercury-193 electron-capture decay, negative parity, (E), 25:17925
GOLD ISOTOPES Au-197
alpha fission of, correlation between fissionability parameter and cross sections for ternary, (E), 25:17858(R) (COO-1716-11)
heavy-ion reactions at 5 to 10 MeV/nucleon, production of spontaneously fissioning isomers by, (E), 25:17924
oxygen-16 reactions at 137 MeV, differential cross sections for formation of light-element isotopes by nucleon exchange in, (E), 25:17891
photon reactions (γ,n) and (γ,2n) at 0.3 to 1 GeV, yields from, (E), 25:17357
proton reactions below 5 GeV, cascade--evaporation model for analysis of low-energy particles produced in, (T), 25:17515 (JINR-P2-5549)
GOLD ISOTOPES Au-198
effectiveness of colloids of, for treatment of human rheumatoid synovitis, 25:16267
use for liver scanning for diagnosis of cirrhosis, 25:16245
use for liver scanning for diagnosis of neoplastic metastases, 25:16256
GOLD ORES
leaching of pulverized, fractured by underground conventional or nuclear explosions, 25:15754(P)
GONADS
radiation dose to, of man, x, 25:16136 (NP-18590)
GRAIN STRUCTURE
book: Ultrafine-Grain Metals, 25:16486
effects on ductility of alloys, 25:16487
effects on flow stress of metals, model of, 25:16488
GRAPHITE
Compton profile anisotropy in, measurement using 59.54-keV gamma rays, 25:17318
crystal structure of, x-ray diffraction studies of, 25:16399 (ORNL-4622, pp 119-98)
density of various grades of, 25:16399 (ORNL-4622, pp 119-98)
deuterium-beam scattering from overlayers of, on platinum single crystals, (E), 25:16753
diffusion in, model for self-, 25:16559(R) (NYO-1710-

100)
diffusion of fission products in, effects of pyrolytic carbon sealing on, 25:16399 (ORNL-4622, pp 119-98)
electron band structure of pressure-annealed pyrolytic, carrier locations and quantum transport in magnetic fields up to 103 kG, 25:17297
fabrication for use in MSRE program, 25:16399 (ORNL-4622, pp 119-98)
fission product deposition on, from MSRE core, 25:15625 (ORNL-4622, pp 60-118)
gasification of, magnetic studies of kinetics of, 25:16559(R) (NYO-1710-100)
neutron attenuation in, measurement of thermal, (E), 25:18171 (CEA-N-1386)
performance of oriented, as thermal neutron monochromator, 25:17677
phonon-drag component of thermoelectric power of, (T), 25:17325
properties of, electric and thermal, 25:16399 (ORNL-4622, pp 119-98)
quark abundance in, resonance diamagnetic electrometer study of upper limit for, (E), 25:17352
radiation effects on, 25:16399 (ORNL-4622, pp 119-98)
radiation effects on chemical and physical properties of, in-pile, 25:18098(R) (BNWL-1522-1)
radiation effects on dimensions and properties of, relations of crystallite orientation and size with neutron, 25:16615(R) (GA-10433)
radiation effects on dimensions and properties of, relations of original density with neutron, 25:16615(R) (GA-10433)
radiation effects on electron microstructure of lamellae of, image-difference method for study of, 25:16617
radiation effects on microstructure of, at high temperatures, fast neutron, 25:16559(R) (NYO-1710-100)
radiation effects on properties of, gamma, 25:16559(R) (NYO-1710-100)
radiation effects on properties of, in-pile, 25:16559(R) (NYO-1710-100)
radiation effects on viscoelastic properties of, method for estimating neutron, 25:16618
radiation effects on, fast neutron, (E), 25:18099(R) (GA-10313)
reactions of pyrolytic, with oxygen, effects of temperature on, 25:16559(R) (NYO-1710-100)
reactions with fluorine, kinetics of, 25:16411
structural stability of boronated spheres of, 25:18099(R) (GA-10313)
tensile properties of H-327 and HLM 8S, 25:18099(R) (GA-10313)
epoxy--graphite, mechanical properties of composites of, 25:16559(R) (NYO-1710-100)

GRAVITATION
accelerations near arbitrary timelike geodesic in Schwartschild space in, tidal, 25:17580
effects on xanthine dehydrogenase activity in Drosophila and Habrobracon, effects of γ radiation on, 25:16028
stability of plasma, analysis, (T), 25:16734
stresses in, magnitude of, (T), 25:17579
theory of, linearized, 25:16729

GRAVITATIONAL COLLAPSE
magnetic-field behavior during, of neutron stars, (T), 25:16631

GRAVITATIONAL FIELDS
axial-vector current in, anomalous commutators and divergence of, 25:17551
characteristics of anomalous, statistical correlation with anomalous magnetic fields, (E/T), 25:16921
particle interactions with, asymptotic states of massive, (T), 25:17578

GRAVITATIONAL RADIATION
graviton mass and linearized gravitation theory, 25:16729
propagation on cylindrically symmetric null fields in general relativity, 25:17576

GREENLAND
radioisotope content of animals, drinking water, plants, precipitation, and seawater during 1969, 25:16080(R) (RISO-222)

GRENOBLE REACTORS (MELUSINE)
radiation dose measurements in, accuracy of calorimeters for absorbed, (E), 25:18191

GROUND
gamma buildup factors above air/ground interface covered with cobalt-60, (E/T), 25:17252 (AD-710985)
motion from proposed underground nuclear explosions in Piceance Creek basin, Colo., methods for predicting, 25:15801 (NVO-1163-TM-18)
motion of surface and sea-bottom, from Milrow Event, methods for measurement of, 25:15804 (NVO-79, pp 9-19)

GROUND WATERS
distribution and flow of, use of natural tritium in atmospheric precipitation for studying, 25:15765
radioactivity of, calculation of natural, (T), 25:15773
tritium content of Amchitka Island, Alaska, following Milrow Event, 25:15806 (NVO-79, pp 41-8)
tritium transport in Amchitka Island, Alaska, following Milrow Event, predictions of, 25:15806 (NVO-79, pp 41-8)

GROUP THEORY
book: Cohomological Topics in Group Theory, 25:17527
conformal charge conjugation, 25:17531
conformal group for two-variable-expansion review of scattering amplitudes in, 25:17586 (TID-25654)
crossing transformations for quark model theory of tensor nonet, 25:17479
de Sitter group in angular momentum basis in, decomposition with respect to Lorentz group representations for induced representations of (1 + 4), 25:17537
duality between representations and classes in, 25:17525
Galilei group in, irreducible ray representations of full inhomogeneous, 25:17535
Lie algebra of $SO_0(n,1)$, unitary irreducible representations of, 25:17530
Lie group for relativistic free particle in, spectrum-generating nilpotent, 25:17536
Lie groups in, relation to canonical formalism for class of solvable, 25:17534
Lorentz group for particle phase shifts in, complex vector parameter of, 25:17524
Lorentz group for two-variable-expansion review of scattering amplitudes in, 25:17586 (TID-25654)
Lorentz group representations for fermions, matrix structure of wave equations with multiple, 25:17556
Poincare group elements for wave functions and field operators in quantum mechanics and quantum field theory, 25:17553 (JINR-P2-5513)
Poincare group in, decomposition of tensorial product of two representations of, 25:17533
Poincare group in, fields on homogeneous space of, 25:17532
Poincare group representations for elementary particle spin, 25:17404
reducible groups in, number of roots of certain equations in finite simply, 25:17526

GROWTH
radiation effects on, of cattle, effects of dose and dose fractionation on γ, 25:16311 (ORO-678, pp 28-34)

GUANIDINE
effects on Fusarium moniliforme, mutagenic, 25:16095

GUINEA PIGS
radiation effects on survival of erythrocytes in, effects of dose on whole-body x, 25:16284
radioinduced chromosome aberrations and mutations in male germ cells of, x, 25:16103

GUNDREMMINGEN POWER REACTOR
coolant chemistry measurements during November 1970, 25:18065 (TID-25663)
maintenance during November 1970, 25:18065 (TID-25663)
operations during November 1970, 25:18065 (TID-25663)

GYROSCOPES
development of free-precession nuclear, for research on general relativity theory, 25:15877 (AD-713633)

H

HI REGIONS
radio-wave absorption in, in direction of W31, (E), 25:16679

HADRONS
coupling of exotic, three components of D-spin for selection rules for, (T), 25:17466 (COO-264-570)
interactions at high energies, computer program for Monte Carlo generation method with importance sampling for, (T), 25:17415
interactions of, quark counting additivity sum rules for inelastic, 25:17474
interactions of, Sugawara model with currents as dynamical variables for, (T), 25:17467
interactions with cosmic hadrons, experimental apparatus for studying, (E), 25:17368 (AD-712735)
interactions with hadrons at 3 to 21 GeV/c, review of A_1 nondiffractive production in, (E), 25:17386
interactions with hadrons at high energies, review of multi-Regge model for multiple production in, (T), 25:17470
interactions with hadrons at very high energies with large cross sections, (T), 25:17471
interactions with hadrons, conference on meson spectra from, 25:17382
interactions with hadrons, formulation of local gauge Yang--Mills theory for, (T), 25:17558
interactions with hadrons, multiple scattering corrections to Regge pole exchange in, (T), 25:17472
interactions with hadrons, review of ω--rho interference in, (E), 25:17383
interactions with neutrinos, tests of V--A theory for, 25:17464
interactions with photons, review of ω--rho interference in hadron production in, (E), 25:17383
mass spectra for, SU(2) and SU(3) asymptotic symmetries for intermultiplet regularities among, (T), 25:17544
production in photon interactions with hadrons, review of ω--rho interference in, (E), 25:17383
production in strong interactions, review of multi-Regge theory for multiple, (T), 25:17470
production of exotic, in diffractive π + N interactions, D-spin formalism for, (T), 25:17466 (COO-264-570)
structure of, deformable sphere model for level, 25:17475
symmetry for, bootstrap model for, (T), 25:17528

symmetry for, formulation of asymptotic SU(2) and SU(3), (T), 25:17544
HAFNIUM
determination in rocks by neutron activation, 25:15536
determination of trace amounts of, in scandium by ion exchange and neutron activation, 25:15544
effects of additions of, on mechanical properties of fast neutron-irradiated Hastelloy N, 25:16548 (ORNL-TM-3064)
effects on creep rupture properties of irradiated Hastelloy N, 25:16399 (ORNL-4622, pp 119-98)
elastic properties of hexagonal, calculation of x-ray, 25:16476
microstructure of, optimum imaging parameters for field ion micrographs of, 25:16521
photoelectric work function of, (E), 25:17299
separation from mineral acid solutions by sorption on silica gel, 25:15743
HAFNIUM ALLOYS AND SYSTEMS
Al--Ge--Hf--Nb, superconductivity of, (E), 25:17076
Al--Hf, microstructure of unidirectionally solidified, 25:16543
Hf--Nb, phase studies of precipitation reactions at 600 to 1400°C, 25:16531
Hf--Ta, phase studies of precipitation reactions at 600 to 1400°C, 25:16531
Hf--Ta, phase studies of precipitation reactions at 600 to 1400°C, 25:16531
HAFNIUM CARBIDES
properties of, elastic and thermodynamic, 25:16576
HAFNIUM CHLORIDES
reduction of $HfCl_4$, formation of monochloride by, 25:15562 (IS-2300, pp 21-89)
HAFNIUM ISOTOPES
nucleon separation and pairing energies in, (T), 25:17888
HAFNIUM ISOTOPES Hf-174
energy levels from variable-moment-of-inertia model, simultaneous analysis of ground-state rotational and β-vibrational bands, (T), 25:17885
HAFNIUM ISOTOPES Hf-178
energy levels of, g-factors for 2^+, (E), 25:17900
HAFNIUM OXIDES
preparation of high-purity, method for, 25:16398 (IS-2300, pp 101-86)
HAIR
cesium-137 content of human, correlation of, with content of body tissues, 25:16121
radioinduced graying of, in burros, γ and neutron, 25:16313 (ORO-678, pp 36-40)
HALIDES
diffusion in, bibliography and data tabulations on, 25:16514
polarizability of, 25:15625 (ORNL-4622, pp 60-118)
HAMSTERS
histology of thymus allografts in cheek pouch of, following thymectomy and x irradiation, 25:16328
radioinduced chromosome aberrations and mutations in male germ cells of, x, 25:16103
HANDBOOKS AND MANUALS
radiation dose to tissues of personnel following internal radioisotope contamination, ICRP report on, 25:16148
radiation hazards to man, ICRP recommendations on protection against external, 25:16200
radiation hazards to patients during diagnosis, ICRP recommendations for protection against x, 25:16201
radiation hazards to students during demonstrations using radiation sources in schools, ICRP recommendations on protection against, 25:16205
HANFORD PRODUCTION REACTORS
effluents from, environmental effects of radioactive and thermal, 25:18224 (BNWL-SA-3679)
HASTELLOY B
corrosion by lithium--sulfur mixtures at 375°C, 25:16405(R) (ANL-7756)
HASTELLOY C
coating with molybdenum or tungsten, 25:16399 (ORNL-4622, pp 119-98)
corrosion by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
friction and wear of ball bearings of, in liquid sodium at 400°C, 25:16409
performance as cladding for strontium titanate heat source for organic Rankine power system, 25:15839 (CRNL-TM-2960)
properties for use in SNAP-23A fuel capsule, 25:15846(R) (WANL-4182-3)
HASTELLOY N
corrosion by molten salts or steam, 25:16399 (ORNL-4622, pp 119-98)
effects on tritium-hydrogen exchange in fluoroborate coolant salt, 25:15625 (ORNL-4622, pp 60-118)
fission product deposition on, from MSRE core, 25:15625 (CRNL-4622, pp 60-118)
mechanical properties of modified, 25:16399 (ORNL-4622, pp 119-98)
microstructure of modified, electron microscope studies of, 25:16399 (ORNL-4622, pp 119-98)
properties for use in SNAP-23A fuel capsule, 25:15846(R) (WANL-4182-3)
radiation effects on creep rupture properties of, effects of titanium on post-, 25:16399 (ORNL-4622, pp 119-98)
radiation effects on mechanical properties of, effects of composition on post-, 25:16399 (ORNL-4622, pp 119-98)
radiation effects on mechanical properties of, relations of hafnium, titanium, and zirconium additions with fast neutron, 25:16548 (ORNL-TM-3064)
weldability of modified, 25:16399 (ORNL-4622, pp 119-98)
HASTELLOY X
corrosion by high-temperature turbine gases, aluminum--chromium coating for protection against, 25:16402 (AGARD-CP-73-71, Paper 20)
corrosion by lithium--sulfur mixtures at 375°C, 25:16405(R) (ANL-7756)
radiation effects on creep of tubes of, in-pile, 25:16545(T) (EURFNR-783)
HAYNES STELLITE NO. 6
friction and wear of ball bearings of, in liquid sodium at 400°C, 25:16409
HAYNES STELLITE NO. 25
corrosion by high-temperature turbine gases, aluminum--chromium coating for protection against, 25:16402 (AGARD-CP-73-71, Paper 20)
HAYNES 25 ALLOY
corrosion by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
properties for use in SNAP-23A fuel capsule, 25:15846(R) (WANL-4182-3)
HAYNES 188 ALLOY
properties for use in SNAP-23A fuel capsule, 25:15846(R) (WANL-4182-3)
HEALTH PHYSICS
book: Medical Radiation Physics, 25:16275
personnel training programs for, institutions offering federal grant-supported, 25:16193 (BRH/OED-70-2)
program for environmental, in New Jersey, 25:16209 (CONF-691129-1)
quarterly report of Oarai Research Establishment for April to June, 1970, 25:16203(R) (JAERI-Memo-4112)
HEARING
radiation effects on, of monkeys, effects of dose on γ and neutron, 25:16302(R) (AD-709971)
HEART
myosin synthesis in cultured cells of, 25:18156 (ORO-3822-7)
radiation effects on lysosomes in myocardial cells of rat embryonic, electron microscopy of fast neutron, 25:16358
radiation effects on rate of, in cattle, effects of thyroprotein on iodine-131, 25:16320 (ORO-678, pp 78-82)
radiation effects on rate of, of ponies, effects of work on γ, 25:16314 (ORO-678, pp 41-6)
radiation effects on, of beagle dogs, effects of shielding on γ and neutron, 25:16300 (AD-709920)
scintic scanning of human, effects of hyperthermia on, 25:16249
HEAT EXCHANGERS (LIQUID-LIQUID)
development in Japan of intermediate liquid metal cooled, for fast breeder reactor, 25:18133
HEAT-RESISTING ALLOYS AND METALS
book: Methods of Studying Refractory Materials (In Russian), 25:16595
compatibility of capsule materials of, with compounds containing cerium-144, cesium-137, curium-244, and strontium-90, 25:15838 (CRNL-4359)
corrosion by gas turbine combustion products, review on, 25:16402 (AGARD-CP-73-71, Paper 20)
production, properties, and uses of, review of, 25:16493
purification by electron beam melting, parameters for, 25:16429
separation by fused-salt electrolysis, parameters for, 25:16426
welding by electron beam and gas-tungsten arc methods, evaluation of, 25:16421 (N-70-36774)
HEAT SOURCES
design and thermal performance of SNAP-19, 25:15836(R) (INSD-2873-44)
HEAT TRANSFER
rates in burnout and transient boiling, controlling parameters for, 25:15831
thermal stresses in multibore circular or square surfaces for, 25:15834
HEAT TRANSFER SYSTEMS
coolant hold-up measurements in steam--water, design of quick-closing valve for, 25:15824
corrosion of metals in aqueous, at high pressure and temperature, method for measuring, 25:16417
HEATED EFFLUENTS
effects on power reactor site requirements, 25:18159
effects on Savannah River ecosystems, 25:18225 (TID-25634)
environmental effects of, 25:18048
environmental effects of, from California nuclear power plants, 25:18096
environmental effects of, nuclear power plant, 25:18044
temperature of critical assembly gaseous, effects of heat transfer from sand filters on, 25:18166 (ANL-7687)
HELIUM
abundance in 112 Her AB, (E), 25:16645
alpha-particle reactions with solid, delayed photon emission from, (E), 25:16765
beryllium-ion (Be^{2+}) elastic scattering at 100 to 800 eV

XUM

by, energy-loss spectra and interaction potentials from, (E), 25:16802
burning in red-giant stars, (T), 25:16655
cesium-excited-atom reactions with, mechanisms of excitation transfer in, 25:16820
diffusion in irradiated and annealed beryllium oxide at 600 to 1400°C, 25:16593
effects on strength and swelling of irradiated beryllium, 25:16552
effects on stress rupture of Type 316 stainless steel at 700°C in vacuum, 25:16464
electron elastic scattering at 800 MeV, relativistic effects on differential cross sections for, (T), 25:17798
electron reactions with, excitation cross sections for, (T), 25:16804
energy levels of atomic, quantum beats and level-crossing signals in photon emission from beam--foil-excited, (E/T), 25:16778
energy levels of solid, effects of two-body potential on ground-state, 25:16284 (NYO-3699-50)
energy levels of, lifetime of metastable 2^3S state, (T), 25:16842
energy levels of, lifetimes of 3^3D, 4^3S, and 4^1S, (E), 25:16775
energy levels of, variational perturbation treatment of singly excited, 25:16836
energy of $(1s)^2\ ^1S$ and $(2p)^2\ ^3P$ states of, relativistic and radiative corrections to, 25:16776
hydrogen-atom reactions at thermal energies with, rates of excitation and ionization for, (T), 25:16824
ion reactions at 10 to 75 keV with, excitation functions for, (E), 25:16808
mass transfer coefficients for bubbles of, in glycerol-water mixtures, (E/T), 25:16101 (ORNL-4622, pp 7-59)
plasma of, confinement in levitated spherator, 25:17127
plasma of, microwave emission from negative glow, (E), 25:17160
potential energy curve for diatomic, calculation from continuum--continuum emission spectrum, 25:16788
precipitation in irradiated and annealed beryllium oxide, 25:16593
properties of liquid and solid, 25:18285(R) (NYO-3951-3)
proton reactions at 300 keV with, angular and energy distributions of electrons from excitation and ionization in, (T), 25:16817
proton reactions at high energies, compilation of cross sections for, (E), 25:17369 (CERN-HERA-70-2)
proton reactions with, Born-approximation calculation of differential and total cross sections for simultaneous charge exchange and ionization in, 25:16818
proton reactions with, excitation cross sections for, (T), 25:16804
radioinduced production in reactor cladding and structural materials, cyclotron simulation of neutron, 25:16558
reactions between atoms of, differential elastic scattering and ionization cross sections and interaction potentials for, (E), 25:16810
reactions with hydrogen atoms at thermal energies of 2^3S atoms of, cross section for Penning ionization in, (E), 25:16831
scattering by argon, glory oscillations in velocity dependence of total collision cross sections for, (E), 25:16829
solubility in sodium, effects of gas partial pressure, purity, and temperature on, 25:15573
thermal resistance between powdered cerium magnesium nitrate and liquid, 25:18329 (UCSD-34-P-143-35)

HELIUM IONS
abundance in mid-latitude trough region and plasmasphere, altitude-dependent positive, (E), 25:16892 (N-70-39303)
dose distribution for 910-MeV, effects of ridge filters on, 25:16142 (UCRL-20190)
effects of 910-MeV on cultured human kidney cells, use of phantoms for measurement of effects of oxygen on, 25:16142 (UCRL-20190)
effects of cyclotron-produced, on bacteria and solutions, experimental facilities for studies of, 25:16042
effects on cyclohexane solutions of deuterated ammonia or nitrous oxide, yields from, 25:15648
fine-structure measurements in n = 4 term of He^+, 25:16785
reactions with carbon foils at 1 to 20 keV, energy loss and angular scattering in, (E), 25:16760
reactions with carbon foils at 10 to 75 keV, excitation functions for, (E), 25:16757
reactions with carbon foils at 3 to 54 keV, angular distributions from, (E), 25:16755
reactions with helium at 10 to 75 keV, excitation functions for, (E), 25:16808
reactions with neon at high energies, oscillations of inelastic differential cross sections for, (T), 25:16828
reactions with surfaces at 10 to 3000 eV, optical radiation from excited sputtered particles from, (E), 25:16766
spectral polarization of 304-A line from He^+, calculation of, 25:17173

HELIUM ISOTOPES He-3
alpha elastic scattering at 104 MeV, optical-model analysis of, (E), 25:17685 (KFK-1204)
determination of abundance of, relative to helium-4 in air, mass spectrometric, 25:15504
deuteron reactions (d,He-3) and (d,t) at 11 MeV, neutron--neutron effective range parameters for, (E), 25:17690
deuteron reactions (d,p) at 2 to 27 MeV, analysis for reaction mechanism in, 25:17706
deuteron reactions (d,t) and (d,He-3pn) at 10.9 MeV, helium-3 and triton energy spectra from, (E), 25:17693
neutron elastic scattering at 5 and 6 MeV, cross sections for, (E/T), 25:17971
optical potential for, exact expression for, (T), 25:17984
photodisintegration of, survey of research on, 25:18022
proton elastic scattering at 156 MeV, differential cross sections for, (E), 25:17699
proton elastic scattering at 5.5 MeV, cross sections for, (E/T), 25:17971
proton elastic scattering at 600 MeV, differential cross section for, (E), 25:17687 (N-70-36659)
reactions (He-3,α) with carbon-12 at 9.5 to 11.5 MeV, energy levels of carbon-11 from, (E), 25:17771
reactions (He-3,α) with lithium-7, coincidence study of, (E), 25:17712
reactions (He-3,α) with magnesium-24, magnesium-26, silicon-28, silicon-30, and sulfur-32 at 8 MeV, angular distributions of alpha particles from, (E), 25:17796
reactions (He-3,α) with magnesium-24, magnesium-26, silicon-28, silicon-30, and sulfur-32 at 8 MeV, angular distributions for, (E), 25:17780
reactions (He-3,α) with silicon-28 near Coulomb barrier, angular distribution for, (E), 25:17829
reactions (He-3,d) with boron-10 at 11 MeV, energy levels of carbon-11 from, (E), 25:17771
reactions (He-3,d) with calcium-42 at 18 MeV, differential cross sections for, (E), 25:17785
reactions (He-3,d) with indium-113 at 37.7 MeV, DWBA analysis of angular distributions and angular-momentum transfer from, (E/T), 25:17822
reactions (He-3,d) with light nuclei, transfer amplitudes in DWBA and vertex functions for, 25:17974
reactions (He-3,d) with molybdenum-92, -94, and -96 and zirconium-90 and -92, DWBA calculation of cross sections from, (T), 25:17912
reactions (He-3,d) with potassium-39 at 29.3 MeV, DWBA analysis of angular distributions from, (E/T), 25:17822
reactions (He-3,n) with beryllium-9 at 2.1 to 3.9 MeV, DWBA analysis of cross sections and polarization distributions from, (E/T), 25:17812
reactions (He-3,n) with boron-11 and carbon-13 at 3.0 to 3.8 MeV, DWBA analysis of cross sections and polarization distributions from, (E/T), 25:17812
reactions (He-3,p) with boron-11 at 3 MeV, energy spectra from, (E), 25:17768
reactions (He-3,p) with neon-20 at 2.8 and 3 MeV, angular distributions for, (E), 25:17835
reactions (He-3,p) with nitrogen-14 at 3 MeV, analysis for reaction mechanism in, (E), 25:17751
reactions (He-3,p) with nitrogen-15 at 18 MeV, angular distributions for, (E), 25:17754
reactions (He-3,t) with cobalt, copper, manganese, and scandium isotopes at 24.6 MeV, Q values and Coulomb displacement energies from, (E/T), 25:17823
reactions (He-3,t) with cobalt-58 and -60 and scandium-46 at 24.6 MeV, angular distributions from, (E/T), 25:17823
reactions with lithium fluoride (001) surfaces at thermal energies, intensity data for diffraction and reflection in, (E), 25:16763
reactions with oxygen-16 at 35 MeV, excitation function for fluorine-18 production in, (E), 25:17738
scattering by A = 40 to 210 nuclei at 10 to 40 MeV, optical-model analysis of elastic, (E/T), 25:17823
scattering by beryllium-9 at 2.1 to 3.9 MeV, optical-model analysis of elastic, (E/T), 25:17812
scattering by helium-4, polarization in elastic, (E), 25:17686 (LA-4538)
scattering by indium-113 and potassium-39, optical-model analysis of, (E), 25:17822
scattering by magnesium-24, magnesium-26, silicon-28, silicon-30, and sulfur-32 at 8 MeV, angular distributions for elastic, (E), 25:17780
scattering by nuclei, calculation of optical potentials for elastic, 25:17987
spectra of diatomic, prediction of 600-A bands of, from helium-4 spectra, 25:16788
He-3--He-4, diffusion coefficient of helium-3 in solutions of, 25:17064
He-3--He-4, helium-3 concentration waves as temperature waves in solutions with liquid II, 25:17063
He-3--He-4, helium-3 quasi-particle energy in superfluid helium-4, 25:17071
He-3--He-4, helium-3 spin diffusion in dilute mixtures with helium II at elevated pressures in semiclassical regime, (E/T), 25:17067
He-3--He-4, osmotic pressure of dilute mixtures of helium-3 in liquid helium-4 at low temperatures, (T), 25:17073

HELIUM ISOTOPES He-4
alpha elastic scattering below 100 MeV, analysis using

non-local separable potential, 25:17702
alpha reactions (α,αd), (α,αHe-3), and (α,αt) at 104 MeV, coincidence measurements of, (E), 25:17684 (KFK-1055)
Bose condensation in liquid II, 25:17068
Bose--Einstein condensations in two dimensions in superfluid, (T), 25:17069
burning in solar-mass carbon stars, shell, (T), 25:16656
currents of superfluid, decay of persistent, 25:17058
density matrices of superfluid, consistent form of reduced, (T), 25:17066
density of helium II in superfluid flow, (E/T), 25:17056
determination of abundance of, relative to helium-3 in air, mass spectrometric, 25:15504
deuteron elastic scattering at 2 to 10 MeV, Faddeev calculation of p- and d-wave phase shifts for, (T), 25:17695
deuteron elastic scattering at 3 to 11 MeV, vector polarization and phase shifts for, (E), 25:17692
deuteron reactions (d,dt) and (d,2d) at 52 MeV, coincidence measurements of, (E), 25:17684 (KFK-1055)
electron elastic and quasi-elastic scattering at high energies, short-range dynamical correlations from, (T), 25:17426
electron elastic and quasi-elastic scattering at high energies, short-range nucleon--nucleon correlations from, (T), 25:17421 (LNF-70/47)
electron reactions (e,ed) at 35 to 50 MeV, differential cross sections for, (E), 25:17698
energy levels of monolayers adsorbed on inert substrate, ground-state, 25:17055
energy levels of, three-particle reaction study of T = 0, (E), 25:17684 (KFK-1055)
equilibrium condensate fraction in liquid II, proposal for measurement of, 25:17065
excitations radiated from thermal source in liquid II, below 0.3°K, 25:17061
Hartree-Fock calculations for, 25:17998
helium-3 elastic scattering by, polarization in, (E), 25:17686 (LA-4538)
interatomic potential in liquid, 25:17072
ion motion in liquid II, (T), 25:17060
meson (π) elastic scattering at 1.1 GeV, differential cross section for, (E), 25:17700
meson (π) reactions with, rigorous bounds on averaged cross sections for, (T), 25:17506
neutron elastic scattering by, theory for, 25:17697
neutron scattering cross sections for liquid, 25:17068
nucleation of ultrasonic cavitation by alpha-particle irradiation of superfluid, 25:17059
nucleon short-range correlations from electron elastic and quasi-elastic scattering by helium-4 at high energies, (T), 25:17421 (LNF-70/47)
photodisintegration of, survey of research on, 25:18022
proton elastic scattering at 0.5 to 2 MeV, cross section for, (E), 25:17705
proton elastic scattering at 600 MeV, differential cross section for, (E), 25:17687 (N-70-36659)
proton elastic scattering at 600 MeV, differential cross sections for, (E), 25:17700
proton reactions (p,He-3) and (p,t) at 156 MeV, two-nucleon final state interactions in, (E), 25:17696
pulses propagation in liquid II, cool, (E), 25:17062
quantized vortices in liquid II, comment on theory of, 25:17070
reactions with lithium fluoride (001) surfaces at thermal energies, intensity data for diffraction and reflection in, (E), 25:16763
scattering by helium-4 at 0.3 to 80 MeV, total cross sections and interaction potentials for, (E), 25:16821
scattering by helium-4 at low energies, total cross sections and interaction potentials for, (E/T), 25:16798(T) (ANL-Trans-872)
size effects in liquid II, measured by fourth sound, 25:17054
theory of liquid, long-wavelength excitations and structure functions at T = 0 in, 25:17057
triton elastic scattering at 0.8 to 3.9 MeV, cross sections for, (E), 25:17704
triton elastic scattering by, polarization in, (E), 25:17686 (LA-4538)
He-3--He-4, diffusion coefficient of helium-3 in solutions of, 25:17064
He-3--He-4, helium-3 concentration waves as temperature waves in solutions with liquid II, 25:17063
He-3--He-4, helium-3 quasi-particle energy in superfluid helium-4, 25:17071
He-3--He-4, helium-3 spin diffusion in dilute mixtures with helium II at elevated pressures in semiclassical regime, (E/T), 25:17067
He-3--He-4, osmotic pressure of dilute mixtures of helium-3 in liquid helium-4 at low temperatures, (T), 25:17073

HELIUM SYSTEMS
D--He, shock-wave propagation in, normal ionizing, 25:17157
H--He, shock-wave propagation in, normal ionizing, 25:17157
He--N, thermodynamic properties of high-temperature, (T), 25:17180

HEMATOLOGY
conference on experimental, 25:16053

HEMATOPOIESIS
control of, in mice, cellular interactions in, 25:16337
control of, relation of feedback loops to oscillation and, 25:16336
mechanisms for control of, conference on, 25:15990
radiation effects on mouse, comparison of patterns of recovery from, following transplants of fetal liver and adult bone marrow cells, 25:16346
radiation effects on, in mice, effects of hydroxyurea and partial shielding on, 25:16347
radiation effects on, in mice, protective effects of D actinomycin, and dose fractionation against γ, 25:16228
radiation effects on, of rabbits, protective effects of bone marrow hydrolysate against x, 25:16333
relation of normal and leukemic, in acute myeloid leukemia, 25:16280

HEMATOPOIETIC SYSTEM
model of compartments of x-irradiated mouse, relation of stem cell assay procedures to, 25:16339

HEMOGLOBIN
denaturation by methyl sulfoxide, 25:15524
deuterium oxide effects on oxygen binding, denaturation, and autoxidation of human, 25:16045

HEPARIN
effects on Agar-binding reactions in human leukemias and neoplasms, 25:16047

HEXANE, 3-METHYL-
radiolysis of, adsorbed on silica at 77°K, ESR study of trapped hydrogen atoms from γ, 25:15665

1-HEXANOL, 2-ETHYL-
analysis for water by gas chromatography or absorption spectrophotometry in Sol--Gel process, 25:15473 (MLM-1777)
purification in sol--gel process using anion exchange resins, 25:15727 (ORNL-TM-3226)

HEXYL SULFOXIDE
solvent properties for tellurium, thorium, and zirconium, 25:15734
solvent properties for uranium as uranyl nitrate, 25:15733

HIGH-ENERGY PHYSICS
book: Topics in Theoretical Physics, 25:17410
High Energy Physics Index. Vol. 8, No. 26, 25:17407
High Energy Physics Index. Vol. 9, Nos. 1-2, 25:17408
research at Ames Laboratory, (E/T), 25:17403 (IS-2300, pp 187-251)
research at Chicago Univ., 1970, (T), 25:17465(R) (COO-264-568)
research at Lawrence Radiation Lab., Nov. 1969 to June 1970, (E/T), 25:17351(R) (UCRL-20120)

HIGH-TEMPERATURE LATTICE TEST REACTOR
physics measurements in HTGR-type lattices in, 25:18098(R) (BNWL-1522-1)
safety rods in, technique for measurement of deformation in, 25:18098(R) (BNWL-1522-1)

HIGH-TEMPERATURE REACTIONS
book: Heterogeneous Kinetics at Elevated Temperatures, 25:16458

HIROSHIMA
atomic bombing of, incidence of thyroid carcinoma in men following, 25:16371

HISTONES
effects on RNA synthesis in liver of irradiated rats, 25:16027

HODOSCOPES
light guide for scintillation, preparation of Plexiglas, 25:15885 (LUSY-6903)

HOLMIUM
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
phonon dispersion relations of, neutron inelastic scattering study of, 25:17301
separation from aqueous hydrochloric acid and nitric acid solutions by solvent extraction using D2EHPA, 25:15561 (IS-2300, pp 7-20)

HOLMIUM CHLORIDES
crystal structure of, 25:15562 (IS-2300, pp 21-89)

HOLMIUM ISOTOPES
nucleon separation and pairing energies in, (T), 25:17888

HOLMIUM ISOTOPES Ho-161
energy levels from terbium-159 (α,2n) reaction at 30 MeV, rotational spectra of, 25:17895

HOLMIUM ISOTOPES Ho-164
decay scheme for ground and metastable isomers of, 25:17799

HOLMIUM ISOTOPES Ho-165
alpha reactions (α,xn) up to 150 MeV, statistical analysis of, (E/T), 25:17940
energy level of, lifetime and M1 transition probability of first-excited, (E), 25:17934

HOLMIUM OXIDES
thermal expansion at 100 to 300°K, back-reflection x-ray method for measurement of, 25:16575

HORMONES, ADRENAL
norepinephrine, radiation effects on metabolism of, in brain of rats, effects of low dose on microwave, 25:16303(R) (AD-710005)
norepinephrine, radioprotective effects of, against hypotension and incapacitation in monkeys, mixed γ-

XUM

neutron, 25:16299 (AD-702723)
prednisolone, effects on survival of rats following x-radioinduced nephritis with subsequent nephrectomy, 25:16218
HORMONES, PITUITARY
follicle-stimulating hormone, radioimmunoassay for content of, in sheep, 25:16049
growth hormone, effects on growth of prenatally γ-irradiated rats, 25:16309 (ORO-678, pp 7-13)
luteinizing hormone, effectiveness for prolonging life span of corpus luteum in sheep, effects of x-radioinduced destruction of ovarian follicles on, 25:16324
thyroid stimulating, effects on iodine-131 secretion into milk of cattle following iodine-131 damage to thyroid, 25:16320 (ORO-678, pp 78-82)
HORMONES, SEX
effects on growth and reproduction of fish, 25:16326
testosterone propionate, effects on colony forming cells of x-irradiated spleen, 25:16223
HORMONES, THYROID
thyroxine, effects on milk yield of cattle treated with iodine-131, 25:16320 (ORO-678, pp 78-82)
thyroxine, secretion rate of, from human thyroid gland, in vivo tracer method for measurement of, 25:15987
HORSES
radiation effects on heart rate, respiratory rate, and rectal temperature of ponies during work, γ, 25:16314 (ORO-678, pp 41-6)
HUMIC ACIDS
effects on sorption of yttrium-91 by charcoal, 25:15744
HYBRIDS
radiation effects on seeds of wheat, effects of, on segregation of dominant characters in second generation, γ, 25:16100
HYDRAZINE
reactions with uranium hexafluoride vapors in presence of inert gas, properties and spectra of compound produced by reduction, 25:15564 (IJS-584)
HYDRIODIC ACID
radiation chemistry of gaseous and liquid, review on α, γ, and x, 25:15666
HYDROBIOTITES
sorptive properties for cesium and sodium, effects of chemical environment on, 25:15728 (ORO-678, pp 102-13)
HYDROBROMIC ACID
radiation chemistry of gaseous and liquid, review on α, γ, and x, 25:15666
HYDROCARBONS
radiolysis of, adsorbed on silica at 77°K, ESR study of trapped hydrogen atoms from γ, 25:15665
HYDROCHLORIC ACID
determination of free, in uranyl chloride solutions, 25:15496
effects on electrochemical behavior of molybdenum, 25:16513
radiation chemistry of gaseous and liquid, review on α, γ, and x, 25:15666
radiolysis of stored aqueous solutions of, by plutonium, gas evolution from, 25:15660(T) (AEC-tr-7217)
radiolysis of, adsorbed on silica at 77°K, ESR study of trapped hydrogen atoms from γ, 25:15665
separation of erbium, holmium, and yttrium from aqueous solutions of, by solvent extraction using D2EHPA, 25:15561 (IS-2300, pp 7-20)
separation of selenium and tellurium from solutions of, by solvent extraction using thionaphthenic acids, 25:15737
acetic acid--chloroacetic acid--HCl--$HClO_4$, performance in electrolytic polishing of zirconium and zirconium alloys, 25:16427(P)
HCl--KCl, effects on electrochemical behavior of molybdenum, 25:16513
HYDROCINNAMAMIDE, α-AMINO-
yields from radiolysis and uv photolysis of N-(3-phenyl-L-alanyl)glycine, comparison of, 25:15678
HYDROFLUORIC ACID
properties for use as etchant for spontaneous fission fragment tracks in mica, 25:15775
HYDROGEN
abundance of neutral, in Seyfert galaxies, (E), 25:16728
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
compounds, beta-particle backscattering at 0.2 to 3 MeV by, effective atomic numbers for, (E), 25:16764
detection in lunar atmosphere by scattered Lyman-α radiation, (T), 25:16749
Doppler-shifted spectra of, in proton aurorae, (E/T), 25:16887 (AD-713691)
effects on fracture of wedge-opening-load specimens of Zircaloy-4, 25:15444 (WAPD-TM-936)
effects on x-radioinduced breaks in DNA of mammalian cells, 25:16217 (UR-49-1389)
electron reactions with molecular, zero-range-potential approximation for excitation of triplet state in, 25:16827
energy levels of atomic, atomic-beam rf measurements of separations between, 25:16768 (TID-25596)
energy levels of atomic, quantum beats and level-crossing signals in photon emission from beam--foil-excited, (E/T), 25:16778
energy levels of atoms of, in superstrong magnetic fields, (T), 25:17328
energy levels of molecular, lifetime of a $^3I/sub\ g/^+$ state, (E), 25:16775
energy levels of molecular, predissociation of $D^1PI/sub\ u/$ state, (T), 25:16792
energy levels of, rf-spectroscopy measurements of fine structure in n = 3, 4, 5 states, 25:16783
energy of molecular, calculation using Pade approximants and inner projections in configuration-interaction framework, 25:16782
energy shifts between conducting plates for atomic, quantum electrodynamics for, (T), 25:17451
energy-level transitions between hyperfine-structure levels of μ-mesic atoms of, (E), 25:16797
exchange with deuterium on nickel filament, catalytic, 25:15622
hydrogen-ion (H_3^+) reactions above 100 keV, neutral beam yields from, (E), 25:17136 (UCRL-50002-70, pp 5.1-15)
interactions between atoms in molecules of, variational calculation of energy of, 25:16791
ionization growth rates in electric fields for E/p of 100 to 10000 V/cm torr, (E), 25:16787
ionization of atomic, in electric fields, Monte Carlo calculation of dependence on field intensity of Townsend, 25:16789
motion of excited atoms of, in spatially periodic electric fields, resonance effects in, (E/T), 25:16777
neutron total cross sections at 25 to 60 MeV, (E), 25:17694
plasma of, injection and confinement in superconducting Levitron, 25:17125 (UCRL-50976)
positron elastic scattering by atomic, optical potential calculation of, 25:16819
production by proton beam interactions with magnesium vapor, charge exchange, 25:17213(T) (UCRL-Trans-10497)
proton elastic scattering at 600 MeV, differential cross section for, (E), 25:17687 (N-70-36659)
proton reactions at high energies with atomic, energy dependence of charge exchange in, (T), 25:16825
proton reactions with excited atoms of, computer program for calculation of charge-transfer and excitation probabilities for, 25:16822
radiation effects on sorption by magnesium oxide, proton, 25:16619
reactions of μ-mesic atoms of, in hydrogen isotope mixture, (T), 25:16797
reactions with deuterium on graphon surfaces, equilibrium, 25:16559(R) (NYO-1710-100)
reactions with fluorine atoms, Monte Carlo calculations of energy partitioning in, 25:15602
reactions with graphon surfaces, kinetics of, 25:16559(R) (NYO-1710-100)
reactions with helium 2^3S atoms at thermal energies of atomic, cross section for Penning ionization in, (E), 25:16831
reactions with hydrogen and helium atoms at thermal energies of atomic, rates of excitation and ionization for, (T), 25:16824
reactions with lithium fluoride (001) surfaces at thermal energies of molecular, intensity data for diffraction and reflection in, (E), 25:16763
scattering by argon, molecular-beam magnetic-resonance measurements of orientation dependence of, 25:16806
spectra of, comparison of experimental and theoretical determinations of Stark broadening of Balmer lines in, 25:16784
spectral emission in exosphere, solar cyclic-Balmer α distribution, (E/T), 25:16952
symmetry groups for nonrelativistic atom of, 25:16832 (CEA-R-4112)
yields from γ radiolysis of methylcyclohexane and 3-methylpentane at -196°C, effects of chloromethanes and electron scavengers on, 25:15686
yields from radiolysis of hydrocarbons and water on silica at 77°K, 25:15665
HYDROGEN IONS
flux measurements in exosphere by Elektron satellites, 25:17022
HYDROGEN IONS (H^-)
spectral absorption coefficient in range 8000 to 12000 A, (T), 25:16790
HYDROGEN IONS (H_2^+)
force constant for, analytic calculation of, 25:16781
reactions with helium at 10 to 75 keV, excitation functions for, (E), 25:16808
reactions with surfaces at 10 to 3000 eV, optical radiation from excited sputtered particles from, (E), 25:16766
HYDROGEN IONS (H_3^+)
reactions with helium at 10 to 75 keV, excitation functions for, (E), 25:16808
reactions with hydrogen, lithium, and nitrogen above 100 keV, neutral beam yields from, (E), 25:17136 (UCRL-50002-70, pp 5.1-15)
HYDROGEN PEROXIDES
effects on oxidation and precipitation of cerium from rare earth nitrate solutions, 25:15730(T) (UCRL-Trans-10512)
HYDROGEN SYSTEMS
D--H, shock-wave propagation in, normal ionizing, 25:17157

H--He, shock-wave propagation in, normal ionizing, 25:17157
H--methane, reactions with recoil tritium, 25:15710
H--methane, reactions with recoil tritium, 25:15709
H--Ne, thermal capacity of liquid mixtures of, at 24 to 30°K, 25:15828
H--O, properties of premixed flames of, for use in flame spectroscopy, 25:15562 (IS-2300, pp 21-89)
HYDROMAGNETIC WAVES
fine-structure irregularities near plasmapause of Alfven, relation of Pcl-geomagnetic micropulsations to, (E), 25:17028
spectrum of magnetospheric Alfven oscillations, polarization splitting of, (E/T), 25:16912
HYDROPEROXO (HO_2)
complexes with transition metal ions, ESR studies on, 25:15638
HYDROXYL (HO)
spectra in γ-irradiated frozen aqueous solutions of alkali metal halides, ESR, 25:15684
spectral emission in night airglow, variations of, (E/T), 25:17040
HYDROXYL GROUP
effects on x-radioinduced breaks in DNA of mammalian cells, 25:16217 (UR-49-1389)
reactions of adducts of, with oxygen during radiolysis of aqueous thymine solutions, 25:15674
HYDROXYLAMINE
nitrate, efficiency for plutonium reduction in Purex Process, 25:15721 (DP-1248)
HYPERFRAGMENTS
energy levels of, optical potential model for Λ-excited, (T), 25:17514 (INR-P-1222)
hyperon (Λ) binding energy in excited levels of, optical potential model for, (T), 25:17514 (INR-P-1222)
HYPERONS
decays in quark model with vector--meson exchange, nonleptonic, 25:17461
decays of, selection rules for S- and P-wave nonleptonic, 25:17460
HYPERONS (Λ)
binding energy for excited levels of hypernuclei, optical potential model for, (T), 25:17514 (INR-P-1222)
decay $\Lambda \rightarrow p + e^- +$ anti ν, asymptotic symmetry for broken SU(3) sum rules for, (T), 25:17544
decay $\Lambda \rightarrow p + e^- + \nu$, second-class currents for parameters for, (T), 25:17454 (UR-875-331)
decay of, parameter fit for Cabibbo theory for leptonic, (E/T), 25:17458
production in $\gamma + p \rightarrow K^+ + \Lambda$ interactions at 1.19 to 1.68 GeV, differential cross sections for, (E), 25:17361
HYPERONS (Ω^-)
decay $\Omega^- \rightarrow \Lambda + K^-$, selection rule for D-wave, 25:17460
decay $\Omega^- \rightarrow \Xi^0 + \pi^-$, selection rule for P-wave, 25:17460
decay $\Omega^- \rightarrow \Xi^- + \pi^0$, selection rule for P-wave, 25:17460
HYPERONS (Σ)
decay of, selection rule for S- and P-wave nonleptonic, 25:17460
HYPERONS (Σ^-)
decay of, parameter fit for Cabibbo theory for leptonic, (E/T), 25:17458
decay $\Sigma^- \rightarrow \Lambda + e^- + \nu$, second-class currents for branching ratio for, (T), 25:17454 (UR-875-331)
lifetime of, parameter fit for Cabibbo theory for, (E/T), 25:17458
HYPERONS (Σ^0)
production in $\gamma + p \rightarrow K^+ + \Sigma^0$ interactions at 1.19 to 1.68 GeV, differential cross sections for, (E), 25:17361
HYPERONS (Σ^+)
decay $\Sigma^+ \rightarrow \Lambda + e^+ + \nu$, second-class currents for branching ratio for, (T), 25:17454 (UR-875-331)
decay $\Sigma^+ \rightarrow p + \gamma$, in current algebra, asymmetry parameter and parity-violating amplitude in, 25:17463
lifetime of, parameter fit for Cabibbo theory for, (E/T), 25:17458
HYPOXIA
effects on fast-neutron radiosensitivity of cells in mouse mammary tumors, 25:16306 (NIRS-9, pp 55-61)
effects on intestinal epithelial cells in mice, effects of dose on effects of radiation on, 25:16222

I

ICE
lattice dynamics of, neutron inelastic scattering study of, 25:17680
thickness of sea, use of aircraft-dropped potentiometers for measurement of, 25:18306 (SC-DC-71-3664)
IGNEOUS ROCKS
density of, physical nature and significance of, 25:18324(T) (UCRL-Trans-10502)
IMIDAZOLE
radiolysis of monocrystals of, ENDOR and ESR spectral studies on free radicals produced by γ, 25:15662 (CEA-R-3758)
IMMUNE REACTIONS
radiation effects on, in mice following infection with smallpox virus, effects of age on whole-body x, 25:16060
radiation effects on, in mice following injection of sheep erythrocytes, 25:16052
radiation effects on, in mice, modifying effects of allogeneic and xenogeneic mixtures of hemopoietic grafts on whole-body lethal x, 25:16050
radiation effects on, in rats, effects of bone marrow cells on γ, 25:16055
radiation effects on, of dogs to allogeneic bone marrow transplants from histoincompatible donors, γ, 25:16058
radiation effects on, of hematopoietic cells, 25:16282
radiation effects on, of leukemia patients to bone marrow transplants from histocompatible donors, effects of cyclophosphamide on x, 25:16059
radiation effects on, of mice, x, 25:16051
radiation effects on, of neonatal chickens to injections of bursa cells, x, 25:16057
radiation effects on, of rats injected with spleen cells from donors with heliotrine-induced cirrhosis of liver, 25:16062
radiation effects on, review of, 25:16061
tolerance induction mechanisms, 25:18302(R) (ORO-3792-3)
IMMUNIZATION
method for spleen cells of mice using tritium-labeled thymidine in vitro, 25:16056
INCOLOY 800
radiation effects on creep of tubes of, in-pile, 25:16545(T) (EURFNR-783)
INCONEL
corrosion by sodium at high temperatures, effects of oxygen on, 25:16398 (IS-2300, pp 101-86)
INCONEL X750
radiation effects on creep of tubes of, in-pile, 25:16545(T) (EURFNR-783)
INCONEL 600
coating with molybdenum or tungsten, 25:16399 (ORNL-4622, pp 119-98)
corrosion by lithium--sulfur mixtures at 375°C, 25:16405(R) (ANL-7756)
INCONEL 625
properties for use in SNAP-23A fuel capsule, 25:15846(R) (WANL-4182-3)
radiation effects on creep of tubes of, in-pile, 25:16545(T) (EURFNR-783)
INCONEL 713C
corrosion by high-temperature turbine gases, aluminum--chromium coating for protection against, 25:16402 (AGARD-CP-73-71, Paper 20)
INCONEL 718
corrosion by lithium--sulfur mixtures at 375°C, 25:16405(R) (ANL-7756)
properties for use in SNAP-23A fuel capsule, 25:15846(R) (WANL-4182-3)
radiation effects on creep of tubes of, in-pile, 25:16545(T) (EURFNR-783)
INDIA
radiation monitoring of environment of nuclear power site in Tarapur, economics of preoperational, 25:16165
INDIAN OCEAN
strontium-90 content in, 1962, 25.15471(T) (AEC-tr-7214, pp 220-6)
INDIUM
complexes with DTPA and EDTA, determination in water by neutron activation, 25:15549
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by catalytic method, 25:15490
determination by method based on reaction of EDTA and lead iodate, 25:15479
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
Hall coefficient of, effects of pressure on, 25:17316
magnetic response of superconducting, and superheating and supercooling critical fields, (E/T), 25:17094
radiation effects on chromium carbonyl and, reactions of recoil molybdenum from proton, 25:15717
separation as pivaloyl trifluoroacetonate from other metal pivaloyl trifluoroacetonates by gas chromatography, 25:15752
structure factors for liquid, at 165 to 665°C, x-ray diffraction measurements of, 25:16538
superconducting transition temperature of thin films of, effects of strain on thickness-dependent, (E), 25:17081
INDIUM ALLOYS AND SYSTEMS
Al-base--In, radiation damage in, annealing kinetics of 90°K electron, 25:17278
Bi--In, electric conductivity at 200 to 500°C, specific, 25:16509
Cd--In, diffusion in liquid, at 300°C, diaphragm cell measurement of, 25:15561 (IS-2300, pp 7-20)
In--Pb, properties of superconducting, electron tunneling study of, 25:17099
In--Pb, superconducting surface sheath of, dynamic response of current-carrying, 25:17086
In--Sn, diffusion in liquid, at 300°C, coefficient for, 25:15561 (IS-2300, pp 7-20)
In--Sn, electric conductivity at 200 to 800°C, specific, 25:16508
In--Sn, magnetic response of superconducting, 25:17094
In--Yb, phase studies of, 25:16398 (IS-2300, pp 101-86)
In-base--Pb, Hall coefficient of, effects of pressure on, 25:17316

XUM

In-base--Tl, Hall coefficient of, effects of pressure on, 25:17316
INDIUM ISOTOPES In-113
helium-3 elastic scattering by, optical-model analysis of, (E), 25:17822
helium-3 reactions (He-3,d) at 37.7 MeV, DWBA analysis of angular distributions and angular-momentum transfer from, (E/T), 25:17822
preparation of high-purity isomeric, by neutron irradiation of tin and radiochemical separation, 25:15696(P)
INDIUM ISOTOPES In-115
energy levels from (He-3,d), (d,He-3), and (d,d') reactions, spectroscopic factors for, (E), 25:17933
energy levels from cadmium-115 decay, (E), 25:17943
energy levels from tin-116 (d,He-3) reactions, (E), 25:17942
INDIUM ISOTOPES In-117
energy levels from tin-118 (d,He-3) reactions, (E), 25:17942
INDIUM ISOTOPES In-119
energy levels from tin-120 (d,He-3) reactions, (E), 25:17942
INDIUM ISOTOPES In-120
beta decay of ground-state and isomeric, γ singles and coincidence spectra from, (E), 25:17865 (NP-18598)
INDIUM ISOTOPES In-121
energy levels from tin-122 (d,He-3) reactions, (E), 25:17942
INDIUM ISOTOPES In-123
energy levels from tin-124 (d,He-3) reactions, (E), 25:17942
INFRARED RADIATION
cosmic background, effects on x-ray flux from Cen A, (E), 25:16683
emission from stars, circumstellar dust model for, (T), 25:16629
INORGANIC PYROPHOSPHATASE
radiation effects on activity of, in liver of mice, effects of pH and dose on x, 25:16046
INSECTA
Acheta domesticus, radiation effects on reproduction and survival of, effects of dose on γ, 25:16288
Apis sp., radiation effects on survival of, effects of post-exposure temperature on γ, 25:16287
Culex pipiens fatigans, radioinduced sterility in male, for population control, effects of, on sexual activity, cobalt-60 γ, 25:16293
Dendroctonus frontalis, radiosterilization of surface of, in relation to growth of saprophytic fungi, uv, 25:16379
development of Savannah River, effects of reactor effluents on, 25:18225 (TID-25634)
Drosophila melanogaster, radiation effects on development of, effects of shielding on small dose γ, 25:16290
Drosophila melanogaster, radioinduced mutations in, x, 25:16279 (NIRS-9, pp 15-53)
Drosophila sp., radiation effects on genetics of, cosmic, 25:16292
Drosophila sp., radiation effects on xanthine dehydrogenase activity in, effects of space flight on γ, 25:16028
Drosophila melanogaster, radioinduced mutations in, x, 25:16279 (NIRS-9, pp 15-53)
Habrobracon sp., radiation effects on genetics of, cosmic, 25:16292
Habrobracon sp., radiation effects on xanthine dehydrogenase activity in, effects of space flight on γ, 25:16028
Heliothis zea, radiation effects on mating behavior of male, γ, 25:16296
Hypera postica, radiation effects on survival of third and fourth stage larvae and pupae of, γ, 25:16289
Hypera postica, radioinduced abnormalities in antennae, elytra, and legs of, effects of larval exposure on γ, 25:16289
irradiation facilities for, in USA, 25:16285 (CONF-701202-1)
irradiation of, equipment and methods for γ, 25:16285 (CONF-701202-1)
Musca domestica, radiation effects on sensitivity of adult, to malaoxon or malathion following pupal irradiation, additive effects of piperonyl butoxide treatment of adults on x, 25:16286
Pectinophora gossypiella, radiation effects on susceptibility of, to insecticides, cobalt-60 γ, 25:16294
radiosterilization of onion flies, use of sterile male technique for, 25:16089(R) (EUR-4545)
Sarcophaga peregrine, radiation effects on pupae of, recovery from low dose β, 25:16297
Tribolium sp., radiation effects on genetics of, cosmic, 25:16292
INSTRUMENTS
development of standard NIM, 25:15963 (NBS-TN-556)
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)
INTENSE NEUTRON GENERATOR (ING)
linear accelerator for simultaneous acceleration of two proton beams to 1 GeV, 25:17660
INTERFEROMETERS
design for measuring thermal expansion in solids at low temperatures, 25:16559(R) (NYO-1710-100)
performance of Mach--Zehnder, for plasma diagnostics, 25:17142
INTERFERON
production by chick embryo cells following infection with uv-irradiated Newcastle Disease Virus, 25:16054
INTERNATIONAL ATOMIC ENERGY AGENCY
legislation and practices of, development of, 25:16211 (STI/PUB-250)
INTESTINES
analysis of rat, for carbon-14, adaptation of oxygen flask method for, 25:15522
radiation effects on epithelial cells in jejunum of, in mice, effects of hypoxia on, 25:16222
radiation effects on retention of tritium-labeled thymidine in, of mice, effects of dose on x, 25:16349
radioisotope uptake by mucosa of, of chickens, calcium-45 and strontium-85, 25:16002 (ORO-678, pp 94-101)
INVARIANCE PRINCIPLES
charge conjugation invariance, conformal, 25:17531
CP violation in $K^0 \rightarrow 2\pi$ decay, interference effects of K_2^0--K_1^0 on, 25:17540
emission from B stars associated with nebulae, (E), 25:16651
emission from carbon, M, and S stars, (E), 25:16652
time reversal violation in $K \rightarrow \pi + e + \nu + \gamma$ decay, search for, (T), 25:17539
INVERTEBRATES
development of Savannah River, effects of reactor effluents on, 25:18225 (TID-25634)
radioisotope content of marine, in Amchitka, Alaska,, 25:16073(R) (BMI-171-113)
IODATES
separation from xenon oxides by thin-layer chromatography, 25:15693
IODIDES
determination using liquid state electrode, selective, 25:15491
sorption by soils from solutions, effects of concentration on, 25:15772
IODINE
compounds, analysis for oxygen by photoactivation, 25:15534
deposition on stainless steel reactor containment liner, testing of accident release conditions for, (E), 25:18176 (ORNL-4502)
determination in rocks in ppM range, spectrophotometric, 25:15494
determination in thyroid gland in man by neutron activation and radiochemical separation, 25:16306 (NIRS-9, pp 55-61)
effects on yields from γ radiolysis of cyclohexane, dodecafluorocyclohexane, and their mixtures, 25:15683
removal from reactor containment structures, effectiveness of spray systems for, (E), 25:18176 (ORNL-4502)
removal from water cooled reactor containment systems, performance of engineered safeguards, (E/T), 25:18183 (WHAN-SA-39)
IODINE FLUORIDES
reactions with radon at -195 to 25°C, oxidation, 25:15572
IODINE IONS
reactions with molybdenum, tellurium, and ytterbium at 30 MeV, inner-shell-vacancy production and x-ray emission in, (E), 25:16759
IODINE ISOTOPES
exchange between iodine and potassium iodide in aqueous solutions of carbon tetrachloride, kinetics of extraction and, 25:15595
transport through food chain to man, Controlled Environmental Radioiodine Test program for analysis of kinetics of, 25:16082
uptake by human thyroid gland following nuclear accident, methods for measurement of potential, 25:16172
IODINE ISOTOPES I-123
production by α reactions with antimony-121, cyclotron, 25:15700
production by beta decay of xenon-123 produced from α reactions with tellurium-122 in cyclotron, 25:15701
production by beta decay of xenon-123 produced from helium-3 reactions with tellurium-122 in cyclotron, 25:15701
production by beta decay of xenon-123 produced from helium-3 reactions with tellurium-123 in cyclotron, 25:15701
production by deuteron reactions with tellurium-122, cyclotron, 25:15700
IODINE ISOTOPES I-125
sorption by abomasum of cattle in comparison to thyroid sorption, 25:16320 (ORO-678, pp 78-82)
use for liver scanning following rectal administration for diagnosis of neoplastic metastases, 25:16256
uses in x-ray analyses, 25:15499
IODINE ISOTOPES I-128
reactions of recoil, from neutron capture with polyhalomethanes, yields from, 25:15706
reactions of recoil, in neutron-irradiated aromatic iodine compounds, 25:15709
IODINE ISOTOPES I-130
reactions of recoil, from isomeric transition or neutron

capture with polyhalomethanes, yields from, 25:15706
IODINE ISOTOPES I-131
accumulation in human thyroid following accident at Atomic Energy Research Institute in Korea, 25:16118
beta decay in tellurium, slowing down of recoil atoms from, 25:15716
content in off-site environs milk following Buggy I Event, 25:15786 (PNE-327)
content of milk in New Zealand during 1970, 25:16078 (NRL-F-39)
deposition on graphite and Hastelloy N samples from MSRE core, 25:15625 (ORNL-4622, pp 6C-11B)
effectiveness of Rose Bengal-incorporated, for studies on gallbladder concentration capacity, 25:16241
effects on thyroid of cattle, effects of dose on, 25:16320 (ORO-678, pp 78-82)
effects on thyroid of cattle, pigs, and rats, effects of, on calcium metabolism, 25:16320 (ORO-678, pp 78-82)
incorporation in sulfobromophthalein sodium, 25:15994
iodine-131 metabolism in x-irradiated, 25:16021
monitoring in water, calibration of scintillation detector system for, 25:15881 (BNWL-B-41)
radiation effects on homologous albumin-incorporated, in mice, x, 25:16021
radiation effects on uptake of fibrinogen-incorporated, by Walker carcinomas, microwave, 25:16035
radiation effects on uptake of, by catfish thyroid, effects of dose on x, 25:16332
secretion into milk of thyroid-damaged cattle, effects of TSH on, 25:16320 (ORO-678, pp 78-82)
sorption by abomasum of cattle in comparison to thyroid sorption, 25:16320 (ORO-678, pp 78-82)
sorption by soils from iodide solutions, effects of concentration on, 25:15772
uptake by thyroid glands of children in relation to content of milk in 1962, 25:16010
use for scanning human thyroid glands for measurement of dimensions, 25:16252
use for scanning of human brain for diagnosis and post-operative supervision of hydrocephalus cases, 25:16237
use for scanning of human thyroid in base of tongue, 25:16250
use of sulfobromophthalein-labeled, for liver scanning, 25:15994
IODINE ISOTOPES I-136
yields from fast fission of plutonium, (E), 25:17899
IODONIUM COMPOUNDS
diphenyliodonium iodide, radiation effects on, Szilard--Chalmers reactions in neutron, 25:15708
ION-ACOUSTIC WAVES
excitation and spatial response in plasma, (E), 25:17225
excitation in collisionless plasma, (T), 25:17220 (CU-3954-7)
excitation in current layer of turbulent z discharges, (E), 25:17201
ION BEAMS
production of negative heavy, from heavy-ion bombardment of solid targets, yield estimates for, 25:17664
ION EXCHANGE MATERIALS
analysis for calcium, strontium-89, and strontium-90, radiochemical, 25:15513 (HASL-239, pp I.23-57)
shielded container for radioactive material-absorbing, design of, 25:15872(P)
ION EXCHANGERS
performance of mixed-bed, in power plant condensate treatment systems, 25:18046
ION SOURCES
charge exchange reactions for Lamb-shift polarized, energy dependence of, 25:17610 (KFK-1265)
description of Lamb-shift polarized, for Karlsruhe isochronous cyclotron, 25:17609 (KFK-1262)
design and operation of Plasmatron-type, for use with electromagnetic isotope separators, 25:15844 (SGAE-PH-101/1970)
design and performance of mass-separated, for μA beams of light ions, 25:17656
design and performance of microwave-discharge, for chemical accelerators, 25:16761
development for Alice device, 25:17209 (UCRL-50002-70, pp 2.1-44)
development of negative heavy, based on heavy-ion bombardment of solid targets, 25:17664
performance of gas discharge, (E), 25:17637
IONOSPHERE
charged-particle reaction rate coefficients for <200 km in, quasi-stationary approximation, (T), 25:16989
circulation in lower, relation to high-energy proton absorption and abundance, (E), 25:16969
conference on plasma waves in, Roeros, Norway, 4/68, 25:17002
current direction in polar, diurnal, seasonal, and 11-year cyclic variations of, (E/T), 25:16995
current system in, associated with polar magnetic substorm precursor, (E/T), 25:16904
D region, ionization theory of upper, review of, (E/T), 25:16901
D region, nitric oxide content in lower, mechanisms of, (E/T), 25:16967
D region, parameters of, solar-flare associated aeronomic and energetic, (E/T), 25:16900
D region, photo-ionization of metastable molecular oxygen in D region, effect of carbon dioxide absorption on, (E/T), 25:16954
E layer, plasma-cloud motion in, relation to appearance and evolution of sporadic E, alkali-released, (E/T), 25:16876 (AD-710742)
E region, electron collision frequency in auroral, height-dependent effective, (E/T), 25:16910
E region, electron densities during May 20, 1966 solar eclipse, variations in, (E/T), 25:16927
E region, ionization from 140 to 110 km between midnight and sunrise, Feb. 22, 1968, (E/T), 25:16889(R) (N-70-36900)
E region, ionization increases during maximum solar activity, (E/T), 25:16915
E region, ionization theory of, review of, (E/T), 25:16901
E region, recombination coefficient in, as function of electron temperature, dissociative, (E/T), 25:16984
electric current system in auoral vicinity, associated with solar disturbance daily variation during IGY, (E/T), 25:17041
electric field distribution in, fast-particle inhomogeneity-associated, (T), 25:16922
electric fields in polar, origin during auroras of, (E), 25:16929
electric fields in, rocket measurements of, 25:17015
electromagnetic wave propagation in three-dimension inhomogeneous isotropic, solution method of, (T), 25:16979
electromagnetic-wave propagation at 400 km in, electron diffusion in presence of simultaneous ulf and vlf, (E/T), 25:16960
electromagnetic-wave propagation through weak inhomogeneities in, low-frequency, (T), 25:16973
electron density at 100 to 450 km in nighttime, 25:17036
electron density distribution in, determination of vertical, (T), 25:16909
electron density from 80 to 170 km in, high-frequency impedance-probe measurement of, (E), 25:17050
electron density measurement with high-altitude rockets, 25:17006
electron density plots from Vol. 6 of Atlas of Lunar and Satellite Data, time-dependent, 25:16883 (AD-711573)
electron density variations in, motion of, (T), 25:17046
electron distribution in topside, Sept. 14, 1963 magnetic storm effect on vertical, (E), 25:16924
electron-content group path delay in midlatitude, first-order prediction model of total, (E/T), 25:16880 (AD-711365)
electron-density variations in, microwave scattering from, (E), 25:16886 (AD-713000)
electrostatic wave propagation in upper, at MHz frequencies, 25:17012
F region, absence at high latitudes of, from 1962-63 topside sounding, (E), 25:16925
F region, ion-density gradients in, satellite observations of horizontal, (E), 25:16879(R) (AD-710800)
F region, irregularities in, relation to ionospheric scintillation power spectrum, (E/T), 25:16965
F region, N(h)-profile changes at 80°N to 12°S during positive disturbance at maximum and minimum solar activity, (E), 25:16908
F region, radio-wave propagation in, second-order theory of phase-path difference of, (E/T), 25:16881 (AD-711394)
F region, variations in, effect of proton flare-associated low-energy solar plasma on, (E), 25:16986
F1 layer, electron density in summer, nonstationary model of, (E/T), 25:16916
F2 layer, critical frequency of, expansion in natural orthogonal component forecasting of, (T), 25:16907
F2 layer, critical-frequency deviations of, approximating relationship with geomagnetic latitude and sunspot number, (E/T), 25:16981
F2 layer, electron concentration variations in daytime equatorial, (E), 25:16980
F2 layer, electron content in, determination by Faraday rotation of lunar radio echoes of solar-cycle dependent, (E/T), 25:16882 (AD-711524)
F2 layer, electron density of, effect of solar corpuscular radiation on seasonal anomalous, (E), 25:16906
F2 layer, ionization in noon, geographic-dependent equatorial anomaly during winter and summer solstices of, (E), 25:16985
F2 layer, ionization of noon, effect of seasonal--latitudinal variations in solar energy on, (T), 25:16975
F2 layer, Pc1 polarization patterns along waveguide centered in, (E/T), 25:16993
F2 layer, variations during descending solar activity, seasonal, (E), 25:16953
Faraday rotation plots from Vol. 6 of Atlas of Lunar and Satellite Data, time-dependent, 25:16883 (AD-711573)
fine structure of, from signal broadening on ionograms, (E/T), 25:16996
geomagnetic fields in near-Earth, computing methods for vertical distribution of, (E/T), 25:16994
ion abundance in lower, contribution of corpuscular ionizing radiation to O_2 and NO_2, (E/T), 25:16905
ion density at 100 to 450 km in nighttime, atomic and

molecular oxygen and nitrogen oxide, (E/T), 25:17036
ion temperature determination from proton whistlers, (T), 25:17017
ionization functions at 120 to 500 km in, temperature-, zenith angle-, and height-dependent, (E/T), 25:16983
ionization in, parameters affecting, (T), 25:16738
irregularities in, radio-astronomical studies of, (E/T), 25:16965
magnetic fields in, rocket measurements of, 25:17015
nitric oxide-density profiles at 70 to 110 km in, by fluorescence-scattered solar-radiation measurements, (E), 25:16962
parameters of, effect of sphericity on horizontal gradients of, from sounding data, (E/T), 25:16990
particle reaction rate constants in, solution for narrowing indeterminacy limits of, (T), 25:16926
plasma drift velocity in, similar-amplitude-fading method for determination of, (E/T), 25:16918
plasma frequency resonance, Alouette 2 observations supporting oblique model of, (E/T), 25:16961
plasma of lower, short cylindrical antenna impedance in, (T), 25:17044
plasma resonance in, WKB technique for determination of frequencies of oblique echoes at, (E/T), 25:16956
plasma wave detection in, response of double-sphere dipole for electrostatic vlf, 25:17016
plasma wave resonances in, higher-order cyclotron harmonic, 25:17008
plasma waves in, conference on, Roeros, Norway, 4/68, 25:17002
proton-flux precipitation from 100 to 1000 km in, interaction of, (T), 25:16992
pulsations in mid-latitude, diurnal, annual, and 11-year variations in Pc1, 1957-1967, (E), 25:16920
radio-wave absorption in high-latitude, during magnetically disturbed and quiet periods, (E), 25:16997
radio-wave absorption in, diurnal-variation comparison at Loparskaya and College of auroral, (E), 25:16988
radio-wave coupling at ion-whistler frequencies in stratified collisionless, intermode, (E/T), 25:16947
radio-wave propagation and reflection in, parameters affecting initial behavior of, (T), 25:16982
radio-wave propagation in, effect on communication equipment of multipath short, (E/T), 25:16930
radio-wave propagation in, interaction of vertical disturbed-pulsed, (T), 25:16974
radio-wave propagation in, mode theory of whispering-gallery guidance at hf and vhf, (T), 25:17037
relation of plasma-heating parameters to subauroral red arcs, (E/T), 25:16944
soft-particle fluxes near equator, late-evening electron and proton, (E), 25:16959
sporadic E, appearance and evolution of, relation to alkali-released plasma-cloud motion in E layer, (E/T), 25:16876 (AD-710742)
sporadic E, appearance of, correlation with geomagnetic activity, (E), 25:16997
sporadic E, radio-wave propagation in, second-order theory of phase-path difference of, (E/T), 25:16881 (AD-711394)
sporadic E, structure and parameters of, during quiet auroras, (E/T), 25:16911
spread F, relation of midlatitude occurrence of, to geomagnetic and solar activities, (T), 25:17027
structure of polar, satellite-signal investigation of inhomogeneous, (E), 25:16971
temperature relaxation time estimation in, after nitrogen molecule collisions with thermal electrons, (T), 25:16917
wave resonance echoes in, stimulation by Alouette II satellite, 25:17004
wave resonances in topside, interpretation as oblique echoes, 25:17009
wave resonances in, Alouette I observations of, 25:17003
wave resonances in, asymptotic time behavior of, 25:17011
wave resonances in, detection of upper hybrid resonance by satellites, 25:17010
wave resonances in, spike observations on alouette II ionograms, 25:17005
wave resonances in, theory for, 25:17007
whistler propagation in, effect of collisions on ion cyclotron, 25:17019
whistler propagation in, instabilities from, (T), 25:17243
whistler propagation in, vlf-mode coupling and polarization reversal of electron and proton, (E/T), 25:16948

IONS
channeling in lattices, Monte Carlo calculations, 25:17280
channeling in single crystals, Dynamitron experimental facility for studying, 25:17625
detection in auroral zone using equipment on Kosmos 261 satellite, 25:17025
detection of heavy, development of scintillation detectors for rapid, (E), 25:15884 (EUR-4567)
detection of low-energy cosmic, on Kosmos 261 satellite, 25:17023
effects on solids, review of damage induced in, 25:17289
electron reactions with, review of theory of resonances in, 25:16807
energy levels of two-electron, lifetimes of metastable 2^3S states, 25:16842
energy levels of two-electron, variational perturbation treatment of singly excited, 25:16836
energy of $(1s)^2\ ^1S$ and $(2p)^2\ ^3P$ states of two-electron, relativistic and radiative corrections to, 25:16776
energy-level transitions in lithium-like, formula for oscillator strengths for, 25:16839
energy-level transitions in two-electron, theory of relativistic magnetic dipole, 25:16842
implantation in ferromagnetic materials by Coulomb-excitation recoil, review of perturbed-angular-correlation studies of hyperfine fields from, 25:17273 (COO-7-585)
interactions with electrons, canonical transformation method for, 25:17332
reactions following pulse radiolysis of ammonia, 25:15685
reactions with atoms at high energies, energy dependence of charge exchange in, (T), 25:16825
reactions with atoms at high energies, oscillations of differential inelastic cross sections for, (T), 25:16828
reactions with atoms, two-state approximation for cross sections for atom excitation and electron capture into excited states in, 25:16826
reactions with foils, mechanisms related to excitation in, 25:16756
reactions with foils, multicollisional molecular orbital model for, 25:16757
reactions with foils, spectroscopic methods for study of mechanisms of, 25:16754

IRIDIUM
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in iron meteorites by neutron activation, 25:15551

IRIDIUM ALLOYS AND SYSTEMS
Ir--Re--W, phase studies of, 25:16527

IRIDIUM ISOTOPES Ir-189
energy levels from platinum-189 electron-capture decay, negative parity, (E), 25:17925

IRIDIUM ISOTOPES Ir-191
energy levels from platinum-191 electron-capture decay, negative parity, (E), 25:17925
neutron reactions (n,2n) at 12 to 18 MeV, total cross sections and isomeric cross-section ratios for, (E), 25:17946

IRIDIUM ISOTOPES Ir-192
properties for use as gamma source in industrial radiography, 25:15857
properties for use as gamma source in radiography, 25:15362

IRIDIUM ISOTOPES Ir-193
energy levels from osmium-193 beta decay, negative parity, (E), 25:17925

IRIDIUM ISOTOPES Ir-194
beta decay of polarized, in iron at low temperatures, β^- and γ angular distributions from, (E), 25:17889

IRON
abundance in 112 Her AB, (E), 25:16645
abundance in corona, photosphere, and carbonaceous chondrites, (E), 25:16713
analysis for trace amounts of impurities, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
analysis for tritium by combustion in oxygen and scintillation counting, 25:15511 (CEA-R-4020)
complexes with 2,4-pentanedione, radiation effects on Moessbauer line widths for, γ, 25:15647
complexes with bipyridine, electrochemical behavior of, kinetic studies on, 25:15630
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by method based on reaction of EDTA and lead iodate, 25:15479
determination by spectrophotometry using 1-(2-carboxy-4-sulfonatophenyl)-3-hydroxy-3-phenyltriazene, 25:15503
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in marine organisms by neutron activation, 25:15537
determination in seawater by solvent extraction and x-ray fluorescence, 25:15492
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
determination of trace amounts of, by isotope dilution using dibenzoylmethane, 25:15506
elastic properties of fcc, effects of carbon on, 25:16398 (IS-2300, pp 101-86)
Moessbauer effect transmission spectra of Armco, using iron-57 source, 25:15853
neutron attenuation at 0.5 to 18 MeV, 25:17257 (NIRS-9, pp 1-14)
neutron attenuation in, measurement of thermal, (E), 25:18171 (CEA-N-1386)
neutron distribution behind cylinders of, angular and energy, (E), 25:17261

neutron inelastic scattering by, cross sections for gamma yields from, (E), 25:17842
phase transformations in thin films of, fcc-bcc, 25:16300 (ORO-3108-107)
photoelectric work function of, (E), 25:17299
production using process heat reactors, economics of, 25:18206
properties for use as heat block and shielding for thermoelectric generators, 25:15840 (ORNL-TM-3213)
radiation effects on content of, in blood plasma of sheep, effects of skin exposure to strontium-90--yttrium-90 8, 25:16026 (ORO-678, pp 74-7)
separation as pivaloyl tifluoroacetonate from other metal pivaloyl trifluoroacetonates by gas chromatography, 25:15752
separation from solvent extracts of ores or waste by direct precipitation, 25:15749(P)
solvent properties of α-, for interstitial boron, comments on, 25:16480
solvent properties of α-, for interstitial boron, comments on, 25:16479
spectra of, identification of spark lines in, (E), 25:16694

IRON ALLOYS AND SYSTEMS
Al--Cr--Fe--Mo--Ti, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Fe, microstructure of unidirectionally solidified, 25:16543
Al-base--Fe--Si--Zr, properties for use as dip-coating bath for protection of steel--zirconium alloy joints against hydrogen embrittlement, 25:16473(P)
Au--Fe--Te-base, band structure and transport properties of superconducting, (E/T), 25:17084
C--Cr--Fe-base, carbon content of bainite and ferrite in, electron microprobe study of, 25:16536
C--Fe-base--Mo, carbon content of bainite and ferrite in, electron microprobe study of, 25:16536
Co--Fe, mechanical properties of, effects of composition and cast structure on, 25:16477
Co--Fe--W, phase studies of, 25:16470
Co--Fe--W, welds of, effects of composition on production of crack-free, 25:16470
Co-base--Cr--Fe--Mn--Ni--W, corrosion of Unitemp 605, by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
Cr--Fe-base, Moessbauer effect backscatter spectra of, relations with chemical shift, 25:15853
Fe--Mn--Mo--Ni-base, magnetic properties of, relations with cooling rate, 25:17309
Fe--Ni, creep of single phase, at 850°C, effects of strain and time on, 25:16452
Fe--Pd--Si, magnetic states in amorphous, 25:18266 (CALT-822-24)
Fe--Rh, phase diagram of, 25:18265 (CALT-822-23)
Fe--Si, creep of single phase, at 850°C, effects of strain and time on, 25:16452
Fe--Ti-base, superconducting transitions in, relations with phase separation, 25:16518(R) (RLO-2225-T-13-6)
Fe--W, creep of single phase, at 850°C, effects of strain and time on, 25:16452
Fe-base--Gd, magnetic coercive force of, effects of thermomechanical treatment in magnetic field on, 25:16469
Fe-base--Nb, hardening in, Laves phases in precipitation, 25:16512
Fe-base--Ni, corrosion by chlorine pentafluoride, fluorine, and nitrogen oxide, 25:16413
Fe-base--Ta, hardening in, Laves phases in precipitation, 25:16512
Fe-base--W, hardening in, Laves phases in precipitation, 25:16512
Fe-base--W, microstructure of incoherent twin segment of, field ion microscope study of, 25:16534

IRON CARBIDES
growth of Widmanstaetten plates in, mechanisms of, 25:16398 (IS-2300, pp 101-86)

IRON CARBONYLS
effects on retention of nickel-65 recoil in neutron-activated nickel carbonyl, 25:15712

IRON HYDROXIDES
Moessbauer effect backscatter spectra of, at 300°K, 25:15853

IRON IONS
energy level transitions in highly stripped, observation in plasma focus, 25:17150
spectra from highly ionized dense plasma, x-ray, (E), 25:17162

IRON ISOTOPES
energy levels from manganese (He-3,t) reactions, isobaric-analog, (E/T), 25:17823

IRON ISOTOPES Fe-54
deuteron reactions (d,α) at 28 MeV, angular distributions for, (E), 25:17773 (LYCEN-7074)
energy levels from proton inelastic scattering, spins and parities of, (E), 25:17844
proton inelastic scattering at 49.35 MeV, angular distribution for 11 excited states in, (E/T), 25:17844

IRON ISOTOPES Fe-55
energy levels of, intermediate-coupling model for calculation of, 25:18010

IRON ISOTOPES Fe-56
alpha reactions (α,p) at 10 and 11 MeV, proton and gamma spectra and angular correlations from, (E), 25:17810
carbon-12 reactions with, compound-nucleus decay in, (E), 25:17824
deuteron reactions (d,p) at 12 MeV, proton angular distributions from, (E/T), 25:17801
neutron inelastic scattering at 2.97 MeV, Hauser--Feshbach analysis of cross sections for, (E/T), 25:17813
proton reactions below 5 GeV, cascade--evaporation model for analysis of low-energy particles produced in, (T), 25:17515 (JINR-P2-5549)

IRON ISOTOPES Fe-57
energy levels from iron-56 (d,p) reactions, parity, spin, and spectroscopic factors for, (E), 25:17801
proton reactions (p,d) using polarized beam, differential cross section and asymmetry for, (E), 25:17831

IRON ISOTOPES Fe-59
accumulation in tissues of mice following intravenous injection, 25:16018
beta decay scheme of, 4ν β--γ coincidence measurement of, 25:15914 (CEA-R-4131)
diffusion in single crystals of nickel at 815 to 1200°C, 25:15611
sorption by gastrointestinal tract in patients following stomach operations, effects of blood loss on, 25:16006

IRON OXIDES
Moessbauer effect backscatter spectra of, at 300°K, 25:15853

IRRADIATION FACILITIES
design for processing poultry wastes, 25:16393
design of cesium-137 and cobalt-60 γ, for insects, 25:16285 (CONF-701202-1)
design of flow system for activation of gaseous or liquid samples, 25:17627
design of pneumatic transport system for targets for neutron, for activation analysis, 25:17629

IRRADIATION TECHNIQUES
development for uniform irradiation of large targets using cyclotron beam, 25:17649

ISOTOPE EFFECTS
method for studying, use of high-efficiency packed columns for gas-solid chromatographic, 25:15751
use as guide to transition-state structure in deprotonation reactions, 25:15607

ISOTOPES
determination using negative surface ionization, 25:15478
implantation in ferromagnetic materials by Coulomb-excitation recoil, review of perturbed-angular-correlation studies of hyperfine fields from, 25:17273 (COO-7-585)
production in lunar rocks by cosmic and solar particles, (E), 25:16744

ITALY
radiation monitoring in ecosystems near Casaccia Nuclear Center in, in relation to critical crops, critical population groups, and maximum rates of radioisotope discharge, 25:16163
radioisotope content of environment and food samples at Ispra, during 1969, 25:16131 (EUR-4563)

J

JAPAN
nuclear research center in, description of, 25:15823

JET ENGINE FUELS
combustion products from JP-3, effects on aluminide-coated B-1900 and IN-100 alloys, 25:16403 (AGARD-CP-73-71, Paper 22)

JUPITER (PLANET)
decametric radiation from, variations of source-A position in, (T), 25:16745
magnetosphere of, parameters of, (T), 25:16747
plasma density distribution in inner magnetosphere, (T), 25:16739
radio emission at 13.1 cm from, circular polarization and total flux of, (E), 25:16743

K

KIDNEYS
analysis of rat, for carbon-14, adaptation of oxygen flask method for, 25:15522
mercury-203 clearance from human, effects of cysteine and penicillamine on, 25:16253
radiation effects on growth of, of rats, effects of prenatal exposure on γ, 25:16309 (ORO-678, pp 7-13)
radiation effects on retention of tritium-labeled thymidine in, of mice, effects of dose on x, 25:16349
radiography of human, effectiveness of, for mass lesion diagnosis, 25:16248
scanning for blood circulation and function, use of metastable technetium-99-labeled sodium pertechnetate and γ camera for, 25:16257

KRYPTON
effects on radiolysis of cyclopropane, 25:15664 (NP-18627)
neon-atom scattering by, glory oscillations in velocity dependence of total collision cross sections for, (E),

XUM

25:16829
reactions between atoms of, differential elastic scattering and ionization cross sections and interaction potentials for, (E), 25:16810
solubility in sodium, effects of gas partial pressure, purity, and temperature on, 25:15573
KRYPTON IONS
reactions with helium at 10 to 75 keV, excitation functions for, (E), 25:16808
KRYPTON ISOTOPES
separation from cover gases in nuclear facilities, evaluation of collection processes for, 25:15723 (NACAR-10007)
KRYPTON ISOTOPES Kr-77
decay of isomeric, γ energies and half-life for, (E), 25:17784
KRYPTON ISOTOPES Kr-79
energy levels from rubidium-79 decay, (E), 25:17787
KRYPTON ISOTOPES Kr-84
reactions with helium at 10 to 75 keV, excitation functions for, (E), 25:16808
KRYPTON ISOTOPES Kr-85
release from nuclear power plants, dose rates from projected, 25:18080 (BNWL-SA-3665)
use in self-luminous overhead traffic signs, 25:15852
KRYPTON ISOTOPES Kr-86
reactions with helium at 10 to 75 keV, excitation functions for, (E), 25:16808

L

LA CROSSE BOILING-WATER REACTOR
fuel elements for, November 1970 inspection of, 25:18060 (DOCKET-1155-99)
LABORATORIES
research and development programs of Ames Laboratory during July 1969 to June 1970, review of, 25:18174(R) (IS-2300)
LACTATE DEHYDROGENASE
activity in ascites tumor cells, effects of uv-irradiated lactate and pyruvate on, 25:16033
LACTIC ACID
effects on sorption of gallium-68 and germanium-68 on alumina, 25:15755
LAKES
water displacement in, near Milrow Event, (E), 25:15805 (NVO-79, pp 20-40)
LANTHANUM
complexes with 1,1,1,5,5,5-hexafluoro-2,4-pentanediones, structure of, 25:15626(R) (ORO-2124-23)
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
energy levels of, hyperfine structure, lifetimes, and Stark effect of excited 5d6s6p y ^{3}D(sub 3/2,5/2/ states, (E), 25:16771
photoelectric work function of, (E), 25:17299
separation from rare earth chlorides by solvent extraction using D2EHPA, 25:15561 (IS-2300, pp 7-20)
LANTHANUM ALLOYS AND SYSTEMS
Al--Ce--La, electric conductivity of Ce/sub 1-x/La/sub x/Al$_3$, Kondo sideband theory of, (E/T), 25:17304
Al--La, superconducting tunneling conductance of intermetallic LaAl$_2$, using Schottky barrier probe, (E), 25:17111
Al--La, thermal capacity of intermetallic LaAl$_2$, 25:16398 (IS-2300, pp 101-86)
Ce--La-base, magnetic susceptibility of Kondo system, phenomenological model of, (E/T), 25:17307
La--Sn, superconducting tunneling conductance of intermetallic LaSn$_3$, using Schottky barrier probe, (E), 25:17111
LANTHANUM CHLORIDES
crystal structure of heptahydrates of, 25:15635
LANTHANUM ISOTOPES La-137
energy levels from cerium-137 electron-capture decay, spin assignments for, (E), 25:17922
LANTHANUM ISOTOPES La-140
beta decay of, β-γ angular correlations for, (E), 25:17943
Ba-140--La-140, diffusion in pyrolytic carbon and silicon carbide coatings, 25:16585
LANTHANUM ISOTOPES La-141
production by neutron fission of plutonium-239 and plutonium-241, 25:15690
LANTHANUM ISOTOPES La-142
beta decay of, γ spectra from, (E), 25:17941
energy-level scheme from barium-142 decay, (E), 25:17941
LANTHANUM OXYCHLORIDES
solubility in molten lithium chloride, 25:15726 (ORNL-4622, pp 199-225)
LARVAE
radiation effects on survival of third and fourth stage, of alfalfa weevils, γ, 25:16289
radioisotope incorporation into dog tick, for double tracer ecological studies, transovarial carbon-14 and strontium-90, 25:15989
radiosensitivity of premetamorphic newt, effects of age and dose on x, 25:16350
LARYNX
radiation effects on tissues of, of rats, laser, 25:16322
LASER RADIATION
comparison of retinal threshold for ruby, argon, and helium-neon systems, 25:16206
effects on eyes and physiology of man and rabbits, pathological, 25:16361(T) (JPRS-52274)
effects on skin of neck and tissues of esophagus and larynx of rats, 25:16322
hazards to man, review of protective measures, 25:16206
scattering by plasma, effect of impurities on spectra of, 25:17188
scattering on plasmas, production of electron--positron pairs in, 25:17153
LASERS
hazards of helium-neon gas, recommendations of UK Code of Practice for control of, 25:16199
performance for transient plasma diagnostics, 25:17137 (UCRL-50983)
threshold calculations for superconducting injection, self-consistent, 25:17115 (ORO-3665-24)
LEAD
alpha elastic scattering at 166 MeV, optical-model analysis of, (E/T), 25:17739
compounds, beta-particle backscattering at 0.2 to 3 MeV by, effective atomic numbers for, (E), 25:16764
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by method based on reaction of EDTA and lead iodate, 25:15479
determination in beryllium oxide, iron, steel, and uranium, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in polymetallic ores using nonspectrometric gamma-gamma method, 25:15527
determination in surface air, radiochemical, 25:15514 (HASL-239, pp I.58-62)
electron elastic scattering at 248 and 502 MeV, relativistic effects on differential cross sections for, (T), 25:17798
electron reactions at 1 to 500 MeV with, total cross sections for radiational losses from, (T), 25:17264
energy gap of tin/lead double layers as function of temperature for superconducting, forbidden-band, (T), 25:17096
gamma reactions at 2.615 MeV, pair production cross sections for, (E), 25:17808
Hall coefficient of, effects of pressure on, 25:17316
interaction parameter and lasing conditions for superconducting, (T), 25:17115 (ORO-3665-24)
magnetic response of superconducting, and superheating and supercooling critical fields, (E/T), 25:17094
neutron attenuation at 0.5 to 18 MeV, 25:17257 (NIRS-9, pp 1-14)
neutron distribution behind cylinders of, angular and energy, (E), 25:17261
neutron inelastic scattering by, cross sections for gamma yields from, (E), 25:17842
neutron total cross sections at 100 to 150 MeV, optical-model analysis of, (E/T), 25:17914
photon elastic scattering at 90 and 124.5° and 1.12 and 1.33 MeV, Delbrueck and Rayleigh amplitudes for, (E), 25:17795
superconducting tunneling conductance of, using Schottky barrier probe, (E), 25:17111
superconducting upper critical magnetic field of, as function of mean free path of electrons, 25:17105
x-ray emission from decay of K-shell vacancies in, relative rates of, (E), 25:16786
LEAD ALLOYS AND SYSTEMS
In--Pb, properties of superconducting, electron tunneling study of, 25:17099
In--Pb, superconducting surface sheath of, dynamic response of current-carrying, 25:17086
In-base--Pb, Hall coefficient of, effects of pressure on, 25:17316
Pb--rare earths, phase studies of, 25:16398 (IS-2300, pp 101-86)
LEAD FLUORIDES
radioinduced defects in single crystals of cubic, ESR and absorption spectra of γ-, (E), 25:17286
LEAD ISOTOPES
content of stable, in surface atmosphere at selected sites in western hemisphere during 1966 to 1970, monthly fallout, 25:16132(R) (HASL-239(App.))
nuclear vibrational band in, 25:18033
LEAD ISOTOPES Pb-204
nuclear mass distributions from alpha elastic scattering at low energies, (T), 25:18007
LEAD ISOTOPES Pb-206
alpha reactions (α,pxn) and (α,xn) at 60 to 150 MeV, analysis for reaction mechanisms in, (E), 25:17938
nuclear mass distributions from alpha elastic scattering at low energies, (T), 25:18007
LEAD ISOTOPES Pb-207
energy levels from lead-208 (d,t) reactions, spectroscopic factors for, (E), 25:17911

proton reactions below 5 GeV, cascade--evaporation model for analysis of low-energy particles produced in, (T), 25:17515 (JINR-P2-5549)
LEAD ISOTOPES Pb-208
alpha reactions (α,pxn) and (α,xn) at 60 to 150 MeV, analysis for reaction mechanisms in, (E), 25:17938
deuteron reactions (d,t) at 12.3 MeV, DWBA analysis of differential cross sections and vector analyzing powers from polarized, (E), 25:17911
energy levels of, two-phonon quartet, (T), 25:17867
nuclear mass distributions from alpha elastic scattering at low energies, (T), 25:18007
photon reactions (γ,xn) with, cross sections for, (E), 25:17932
proton scattering at isobaric analogue resonance of ground state of, models for, 25:18034
LEAD ISOTOPES Pb-209
energy levels of, coupling between spin-flip and non-spin-flip particle-hole, (T), 25:17868
LEAD ISOTOPES Pb-210
determination in vivo, response of lithium-drifted germanium and silicon detectors for, 25:15878 (ANL-7760(Pt.1), pp 28-32)
energy levels from proton and triton inelastic scattering, spin and parity of, (E), 25:17905
proton inelastic scattering at 20.5 MeV, differential cross sections for, (E), 25:17905
triton inelastic scattering at 20 MeV, differential cross sections for, (E), 25:17905
LEAD ORES
alpha emission by volatile fractions of zinc ore mixtures with, containing neptunium-237, 25:15761 (JINR-P6-5307)
LEAK DETECTORS
performance of radioactive material container, comparison of, 25:15871
LEPTONS
interactions with neutrinos, tests of V--A theory for, 25:17464
LEUKOCYTES
cultivation of human, with x-irradiated blastoid cells, effects of Herpes EB virus on, 25:16283
radiation effects on count of, of sheep, γ, 25:16318 (ORO-678, pp 58-64)
radiation effects on count of, of swine, effects of dose on γ, 25:16315 (ORO-678, pp 47-8)
radiation effects on post-surgical count of, in mice following exposure simulating nuclear detonation, 25:16357
role in production of antibodies, review of, 25:16061
LICENSING AND REGULATION
requirements for quality assurance programs in nuclear power plants, 25:18095 (WHAN-SA-38)
LICHENS
Cladonia cristatella, radiation effects on algal cells, pigment content, and phosphorus-32 uptake, effects of dose on γ, 25:16374(R) (COO-2085-1)
LIDOCAINE
radioinduced degradation of, effects of concentration of solution on γ, 25:16392
LIGHT
scattering of polarized, combination of Rayleigh and isotropic, (T), 25:16654
scattering on weakly ionized plasma, continuum theory for Thomson, 25:17172
LIGHT SOURCES
development of self-luminous krypton-85-excited, for overhead traffic signs, 25:15852
properties of plasma, review of, 25:17149
LIGHTNING
protection of buildings against, design and performance of americium-241-containing lightning rod for, 25:15854
LINEAR ACCELERATORS
beam injection system with stepped variation of phase velocity for 2-GeV electron, 25:17614(T) (SLAC-Trans-127)
beam optics in multisection 2-GeV electron, problems of, 25:17615(T) (SLAC-Trans-128)
cavity resonators for heavy-ion, interdigital H-type, 25:17613 (LYCEN-7055)
design for simultaneous acceleration of two proton beams to 1 GeV, 25:17660
experimental facility for 25-MeV, study of photon beam uniformity for therapeutic, 25:17661
experimental facility for ORELA, gamma flash suppression for pulsed neutron source, 25:17621
operation of NRL electron, Jan. 1--June 30, 1970, 25:17604(R) (AD-711587)
LINEAR ENERGY TRANSFER
distribution of absorbed dose in swine, table for fast neutron and fission neutron, 25:16317 (ORO-678, pp 51-7)
effects on charged particle sensitivity of biological materials, 25:16043
spectra for charged particles and high-energy protons, computer code for calculation of effects of aluminum and silicon absorbers on, 25:16188
LINOLENIC ACID
uptake of carbon-14-labeled, by adult rat brain, 25:18315 (UCLA-12-804)
LIPASE
radiation effects on activity of, in blood serum, duodenum, liver, and pancreas of rabbits, x, 25:16032
LIPOPROTEINS
radiation effects on synthesis of plasma, in rats, sub-lethal x, 25:16041
LIQUID FLOW
magnetohydrodynamic rotation of conducting, in annulus, (T), 25:16870
LIQUID METAL FAST BREEDER REACTOR
accidents in, analysis of aerosol size distribution from, (T), 25:18161
component development for, review of, 25:18104
cores for, safety problems related to design of, 25:18154 (ANL-7657)
development in U.S. of, role of electric utilities in, 25:18102
fuel cladding for, properties of Type 348 stainless steel, 25:16445 (WHAN-SA-8)
fuel element subassemblies for, design of electromagnetic flowmeter for, 25:18112
fuel elements for, design limits and transient survival criteria for, (T), 25:18142
fuel elements for, development of stainless steel clad plutonium oxide (PuO_2)--uranium oxide (UO_2), 25:18137(R) (GEAP-10028-36)
fuel pins for, effects of turbulent mixing on thermal bowing of, (T), 25:18125
fuels for, effects of fabrication variables on dissolution of, 25:15732 (WHAN-FR-34)
pumps for, design and operation of sodium, 25:15825
safety features of, design parameters for, 25:18158
LIQUIDS
neutron scattering in, comparison of spectrometers for studying, 25:15923
neutron scattering spectrum of molecular, effects of rotational motions on, (T), 25:17681
LITHIUM
corrosive effects on electric insulator materials at 375°C, 25:16405(R) (ANL-7756)
energy-level transitions in, oscillator strengths for, (T), 25:16839
hydrogen-ion (H_2^+) reactions above 100 keV, neutral beam yields from, (E), 25:17136 (UCRL-50002-70, pp 5.1-15)
plasma of, production and use in Q devices, 25:17192
LITHIUM ALLOYS AND SYSTEMS
Bi--Li, solvent properties for neodymium, 25:15726 (ORNL-4622, pp 199-225)
Bi--Li--Nd, solvent properties for thorium, 25:15726 (ORNL-4622, pp 199-225)
Li--S, corrosive effects of fused, on electromotive cell current-collector and dielectric materials, 25:16405(R) (ANL-7756)
Li--S, properties for use as electrolyte in vehicular batteries, 25:16405(R) (ANL-7756)
Li--Se, corrosive effects of electrolyte mixtures of, on alloys for use in battery capsules at 375°C, 25:16404(R) (ANL-7663)
LITHIUM BERYLLIUM FLUORIDES
separation of trivalent molybdenum from molten, effects of temperature on, 25:15625 (ORNL-4622, pp 60-118)
LITHIUM CHLORIDES
separation of rare earths from molten, by ion exchange on solid zeolite, 25:15625 (ORNL-4622, pp 60-118)
KCl--LiCl--$ZrCl_4$, solvent properties for thorium dioxide at 560 to 630°C, 25:16398 (IS-2300, pp 101-86)
LiCl--LiF--LiI, properties for use as paste electrolyte in lithium--selenium batteries, 25:16404(R) (ANL-7663)
LITHIUM FLUORIDES
defects in magnesium-doped, thermal-conductivity study of point and cluster, 25:17272 (CEA-R-4010)
molecular-beam reactions at thermal energies with (001) surfaces of, intensity data for diffraction and reflection in, (E), 25:16763
preparation and properties of thermoluminescent, for radiation dosimetry, 25:15955
radiation effects on crystals of, containing defect centers, studies on chemically bound neutron by fast neutron and γ, 25:17858(R) (COO-1716-11)
radioinduced point and cluster defects in, thermal-conductivity study of gamma, 25:17272 (CEA-R-4010)
BeF_2--CeF_3--LiF, phase diagrams for, 25:15625 (ORNL-4622, pp 60-118)
BeF_2--LiF, solvent properties for gaseous boron trifluoride, 25:15625 (ORNL-4622, pp 60-118)
BeF_2--LiF--ThF_4, electric conductivity in molten, 25:15625 (ORNL-4622, pp 60-118)
BeF_2--LiF--ThF_4, liquidus temperatures of, 25:15625 (ORNL-4622, pp 60-118)
BeF_2--LiF--ThF_4--UF_4, reprocessing of reactor fuels of, development of close-coupled system for, 25:18138 (ORNL-TM-3137)
CaF_2--LiF--MgF_2, voltammetric properties at 690°C, 25:15567(R) (ORO-3518-19)
KF--LiF--NaF, reactions with tetravalent titanium at 480 to 500°C, 25:15567(R) (ORO-3518-19)
LiCl--LiF--LiI, properties for use as paste electrolyte in lithium--selenium batteries, 25:16404(R) (ANL-7663)
LITHIUM FORMATES
radiation effects on, ESR spectral studies on hyperfine parameters of CO_2^- radicals produced by γ, 25:15646

XUM

LITHIUM HYDRIDES
neutron distribution behind cylinders of, angular and energy, (E), 25:17261
LITHIUM IODIDES
LiCl--LiF--LiI, properties for use as paste electrolyte in lithium--selenium batteries, 25:16404(R) (ANL-7663)
LITHIUM IONS
implantation in n-type zinc selenide, type conversion and junction formation, 25:17281
reactions with carbon foils at 1 to 20 keV, energy loss and angular scattering in, (E), 25:16760
reactions with carbon foils at 3 to 54 keV, angular distributions from, (E), 25:16755
LITHIUM ISOTOPES Li-5
energy levels from helium-4 proton resonances, (E), 25:17705
energy levels from resonances in helium-3 (d,p) reactions, 25:17706
LITHIUM ISOTOPES Li-6
abundance in red-giant stars, (T), 25:16655
alpha reactions (α,2α) at 55 MeV, analysis for quasi-elastic mechanism in, (E), 25:17760
alpha reactions (α,d) and (α,p) at 28 to 40 MeV, analysis for reaction mechanism in, (E), 25:17743
deuteron reactions (d,αd), (d,αHe-3), and (d,αt) at 52 MeV, coincidence measurements of, 25:17684 (KFK-1055)
deuteron reactions (d,n) at 2.5 to 3.8 MeV, DWBA analysis of cross sections and polarization distributions from, (E/T), 25:17812
deuteron reactions (d,p) at 1.88 MeV, differential cross section for, (E), 25:17713
diffusion of sodium, silver, gold, zinc, and gallium in, 25:16500
energy level at 3.562 MeV, binding energy of, (T), 25:17732
energy levels from lithium-7 (He-3,α) reactions, (E), 25:17712
proton reactions (p,n) at 25 to 100 MeV, impulse approximation calculations of polarization transfer in, 25:17714
reactions (Li-6,t) with carbon-12 and -13 at 28 MeV, angular distributions for, (E), 25:17755
triton reactions (t,d) at 1.5 to 3.5 MeV, differential cross section for, (E), 25:17746
LITHIUM ISOTOPES Li-7
abundance in red-giant stars, (T), 25:16655
alpha reactions (α,2α) at 55 MeV, analysis for quasi-elastic mechanism in, (E), 25:17760
alpha reactions (α,tα) at 50 MeV, alpha and triton energy and angular distributions from, (E), 25:17733
deuteron reactions (d,n) at 2.5 to 3.8 MeV, DWBA analysis of cross sections and polarization distributions from, (E/T), 25:17812
diffusion of sodium, silver, gold, zinc, and gallium in, 25:16500
energy level at 4.65 MeV from helium-4 triton resonances, spin-parity assignment for, (E), 25:17704
energy levels at 4.63 and 5.6 MeV from lithium-6 (d,p) reactions, widths for, (E), 25:17713
energy levels from lithium-7 (α,tα) reactions, widths of, (E), 25:17733
formation in red-giant stars, (T), 25:16655
helium-3 reactions (He-3,α) with, coincidence study of, (E), 25:17712
proton reactions (p,n) at 25 to 100 MeV, impulse approximation calculations of polarization transfer in, 25:17714
proton reactions (p,pt) at 156 MeV, angular correlation for, (E), 25:17759
reactions (Li-7,t) with argon-36, (E), 25:17837
LITHIUM ISOTOPES Li-9
beta decay of, half-life and delayed-particle spectra from, (E), 25:17767
LITHIUM SULFATES
fabrication of ultrasonic transducer of, method for, 25:16564(P)
LITHIUM URANATES
preparation and crystal structure of, 25:15569
LIVER
analysis of rat, for carbon-14, adaptation of oxygen flask method for, 25:15522
growth potential of colony-forming cells in fetal, in vitro, 25:16347
radiation effects on activity of pyrophosphate phosphohydrolase in, of mice, x, 25:16046
radiation effects on amino acid content of perfused rat liver in vitro, effects of dose on x, 25:16030
radiation effects on formation of nicotinamide-adenine dinucleotide in perfused, of normal and x-irradiated rats, methods for determining, 25:16031
radiation effects on formation of polyribosomes in, of adrenalectomized and normal rats, local and whole-body x, 25:16029
radiation effects on glycolytic enzyme activity in rat, x, 25:16025 (AD-713087)
radiation effects on growth of, of rats, effects of prenatal exposure on γ, 25:16309 (ORO-678, pp 7-13)
radiation effects on metabolism in, of rats, whole-body x, 25:16279 (NIRS-9, pp 15-53)
radiation effects on retention of tritium-labeled thymidine in, of mice, effects of dose on x, 25:16349
radiodiagnosis of diseases of, effectiveness of scintigraphy for, 25:16245
radioisotope concentrations in, of dogs, effects of DTPA on relative americium-241 and plutonium, 25:16012
radioisotope metabolism in, effects of physico-chemical characteristics on, 25:16005
radiosensitivity of colony-forming cells from fetal mouse, x, 25:16345
regeneration of, in whole-body x-irradiated rats, following partial hepatectomy effects on cobalt compounds and iron compounds on, 25:16355
scanning of blood circulation in, effectiveness of radioisotope-labeled Rose Bengal for, 25:16240
scanning using iodine-131-labeled sulfobromophthalein sodium, 25:15994
LOOPS
operation of sodium fluoroborate salt circulation, detection of water additions in, (E), 25:18101 (ORNL-4622, pp 7-59)
LOS ALAMOS AREA (N. MEX.)
radioisotope content of canyon alluvium in, plutonium-238 and plutonium-239, 25:15762 (LA-4561)
radioisotope content of soils of, from fallout from weapons testing, plutonium-238, plutonium-239, and strontium-90, 25:15763 (LA-4562)
LOS ALAMOS MESON PHYSICS FACILITY
experimental facility for, design proposal for stopped muon channel, 25:17611 (LA-4474)
LUMINESCENCE
research on bio-, at Georgia Univ, 25:18298(R) (ORO-2741-24)
LUNAR MATERIALS
age of rocks and dust, (E), 25:16744
analysis of Apollo 12, carbon, carbide, and methane contents from, (E), 25:16742
particle tracks in, (E), 25:16744
potassium abundance in Apollo 11 and 12, (E), 25:16741
rare-gas release from, under pile-irradiation, (E), 25:16737 (UCB-34-P-32-0-3)
uranium abundance in Apollo 11 and 12, (E), 25:16741
LUNGS
radiation effects on tissues of, of rabbits, effects of dose on electron, γ, and x, 25:16305(T) (LF-tr-33)
LUTETIUM
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
determination in minerals and rocks by neutron activation, comparison of atomic absorption and isotope dilution methods with, 25:15536
determination of, effects of solution composition on spectrographic, 25:15476
elastic properties of, 25:16398 (IS-2300, pp 101-86)
energy levels of atomic, double-resonance measurements of g/sub J/-factor and lifetime of (^{1}D)^{2}D/sub 3/2/, 25:16769
LUTETIUM ALLOYS AND SYSTEMS
Al--Lu, thermal capacity of intermetallic $LuAl_2$, 25:16398 (IS-2300, pp 101-86)
Er--Lu, electric conductivity at 2 to 340°K, 25:16398 (IS-2300, pp 101-86)
LUTETIUM ISOTOPES
nucleon separation and pairing energies in, (T), 25:17888
LUTETIUM ISOTOPES Lu-168
electron-capture decay scheme for, gamma spectra from, 25:17878
LUTETIUM ISOTOPES Lu-171
energy levels from thulium-169 (α,2n) reactions, (E), 25:17935
LUTETIUM ISOTOPES Lu-175
energy-level transitions in, γ circular polarization for 343-keV, (E), 25:17800
LUTETIUM OXIDES
thermal expansion at 100 to 300°K, back-reflection x-ray method for measurement of, 25:16575
LYMPH NODES
radiodiagnosis of metastases in, from testicular malignancy, effectiveness of pedal and testicular lymphangiography for, 25:16258
radiotherapy of metastases of tongue neoplasms in, of man, evaluation of effectiveness of, 25:16269
scanning using technetium-99m-labeled sulfur colloids, 25:16254
LYMPH SYSTEM
analysis for silicon by neutron activation, 25:15559
LYMPHOCYTES
radiation effects on incorporation of carbon-14 and tritium-labeled thymidine in, by extracorporeal exposure of blood, 25:16038
LYSOSOMES
radiation effects on, in dermal and myocardial cells of rat embryos, electron microscopy of fast neutron, 25:16358
LYSOZYME
chloride, radiolysis of monocrystals of, EPR spectral studies on effects of temperature on γ, 25:15670
radioprotective effects on rabbits, x, 25:16229

MAGNESIUM
abundance in 112 Her AB, (E), 25:16645
analysis for tritium by combustion in oxygen and scintillation counting, 25:15511 (CEA-R-4020)
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in beryllium oxide and uranium, effects of spark duration on relation sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in rat bone by neutron activation and γ spectrometry, 25:15558
determination of trace amounts of, in human dentine and enamel by thermal neutron activation and γ spectrometry, 25:15545
effects on age hardening of chill cast aluminum--zirconium alloy, 25:16511
elastic properties of hexagonal, calculation of x-ray, 25:16476
proton beam interactions with vapors of, hydrogen atom production by charge exchange, 25:17213(T) (UCRL-Trans-10497)
radiation effects on chemical diffusion of, in aluminum--magnesium alloy at 180 to 1400°C, fast neutron, 25:16556
MAGNESIUM ALLOYS AND SYSTEMS
Al--Mg, microstructure of unidirectionally solidified, 25:16543
Al--Mg, radiation effects on chemical diffusion of magnesium in, at 180 to 1400°C, fast neutron, 25:16556
Al-base--Mg, radiation damage in, annealing kinetics of 90°K electron, 25:17278
Mg--rare earths, phase studies of, 25:16398 (IS-2300, pp 101-86)
Mg--rare earths--Zn--Zr, production and uses of, for engine block, precautions for, 25:16433
Mg-base--Zn--Zr, diffusion of zinc in, at 310°C, calculation of, 25:16491
Mg-base--Zr, diffusional flow in dilute fine-grain, with non-Newtonian viscosity, 25:16489
MAGNESIUM FLUORIDES
CaF_2--LiF--MgF_2, voltammetric properties at 690°C, 25:15567(R) (ORO-3518-19)
MAGNESIUM FORMATES
radiation effects on, ESR spectral studies on hyperfine parameters of CO_2^- radicals produced by, 25:15646
MAGNESIUM IONS
reactions with carbon foils at 100 to 500 keV, equilibrium charge distributions from, (E), 25:16758
spectra in solar corona, (E), 25:16701
MAGNESIUM ISOTOPES Mg-24
energy levels of, calculations using multi-shell configurations, (T), 25:17781
Hartree--Fock calculations for, parity-mixed, 25:17992
helium-3 elastic scattering at 8 MeV, angular distributions for, (E), 25:17780
helium-3 reactions (He-3,α) at 8 MeV, angular distributions of alpha particles and cross sections for, (E), 25:17796
helium-3 reactions (He-3,α) at 8 MeV, angular distributions for, (E), 25:17780
nuclear binding energy, charge radius, and quadrupole moments of, Hartree--Fock calculation of, (T), 25:17727
proton inelastic scattering at 20.3 MeV using polarized beam, coupled-channel analysis of, (E/T), 25:17825
MAGNESIUM ISOTOPES Mg-26
helium-3 elastic scattering at 8 MeV, angular distributions for, (E), 25:17780
helium-3 reactions (He-3,α) at 8 MeV, angular distributions for, (E), 25:17780
helium-3 reactions (He-3,α) at 8 MeV, angular distributions of alpha particles and cross sections for, (E), 25:17796
proton inelastic scattering at 20.3 MeV using polarized beam, coupled-channel analysis of, (E/T), 25:17825
proton reactions (p,α) a 5.8 to 11.5 MeV, cross sections and α angular distributions from, (E), 25:17726
MAGNESIUM ISOTOPES Mg-28
yields in alpha fission of bismuth-209 and plutonium-239, absolute cross sections for, (E/T), 25:17898
MAGNESIUM OXIDES
radiation effects on sorptive properties for ethylene, hydrogen, methane, and oxygen, high-energy proton, 25:16619
MgO--ZrO_2-base, properties for use as SNAP-19 thermal insulation, 25:15836(R) (INSD-2873-44)
MAGNET COILS
excitation by plasma and use for plasma diagnostics, 25:17134 (AD-713104)
field homogeneity in superconducting, magnetic inserts for improving, 25:17116
symmetry optimization of toroidal, computer program for, 25:17212 (UCRL-50944)
MAGNETIC ANALYZERS
design and performance for Saturne Synchrotron, 25:17612(T) (LA-tr-71-2)
design for cyclotron beam for ultra-high resolution spectroscopy for nuclear reaction studies, 25:17623
MAGNETIC FIELDS
characteristics of, during collapse of neutron stars, (T), 25:16631
charged-particle motion in constant, coherent states for electric field excitation of, (T), 25:17438
effects of superstrong, on hydrogen atom, relativistic treatment of, (T), 25:17328
effects on carrier properties of pyrolytic graphite, up to 103 kG, 25:17297
electron motion in axially symmetric focusing-type, quantum theory of relativistic, (T), 25:17437
intensity variations of interplanetary, from simultaneous satellite flights from Earth to Venus, (E), 25:17033
relation of interplanetary, with solar-wind deformation velocity, (E/T), 25:16923
variations in quiet day, at synchronous orbit, (E/T), 25:16945
MAGNETIC MATERIALS
surface properties of, 25:18299(R) (ORO-2755-25)
MAGNETIC MIRROR MACHINES
development at LRL, engineering, 25:17211 (UCRL-50002-70, pp 6.1-22)
plasma bunch interactions with magnesium vapor in INES, charge exchange in, 25:17213(T) (UCRL-Trans-10497)
plasma electron distribution measurement from bremsstrahlung spectra, 25:17135 (ORNL-TM-3302)
plasma losses from, direct conversion of, 25:17209 (UCRL-50002-70, pp 2.1-44)
plasma production in, for shielding of Franck--Condon neutrals, (E), 25:17191
research at LRL, July 1969--June 1970, 25:17209 (UCRL-50002-70, pp 2.1-44)
MAGNETIC MIRRORS
electron diffusion in, computer simulation of, 25:17129
plasma confinement in, effect of end regions on, (E), 25:17128
plasma cyclotron radiations from loss-cone distribution, 25:17126
MAGNETIC PROBES
excitation by plasma and use for plasma diagnostics, 25:17134 (AD-713104)
performance for measuring heat transfer in liquid metals, 25:15826(R) (RLO-2227-T-4-1)
MAGNETIC STORMS
capture of 1 to 8 MeV solar alpha particles into radiation belts during, (T), 25:16884 (AD-711813)
characteristics of, relation to fine structure of polar magnetic substorm-associated precursor, (E/T), 25:16904
charged-particle distribution during recovery phase of, quasi-trapped to trapped region, (T), 25:17053
effect of polar, on day and night boundary of auroral oval, (E), 25:16998
effect of Sept. 24, 1961, on structure of magnetopause, (E), 25:16890 (N-70-37390)
effect of solar flare-associated and commencement of polar sub-, on oxygen and nitrogen auroral emission structure, (E), 25:16968
effect on electron intensity variations in inner radiation belt, solar flare-associated, (E), 25:17045
effect on vertical distribution of electrons in topside ionosphere, Sept. 14, 1963, (E), 25:16924
effects on upper atmosphere heating, (T), 25:17049
geomagnetic field configuration before and during, effect of neutral sheet on, (E/T), 25:16903
relation of weak, to N(h)-profile changes in F region at 80°N to 12°S during maximum and minimum solar activity, (E), 25:16908
structure of M-region solar, relation with recurrent solar-cosmic-ray events, 1962--1964, (E/T), 25:16697
MAGNETOHYDRODYNAMIC GENERATORS
operation in large electric power plants, method for reducing oxidant temperature during, 25:16867
secondary system of induction, study of lengthwise edge effect in, 25:16868
substitute for synchronous, parametric design study of single-phase generator-transformer cascade for, 25:16869
MAGNETOPAUSE
electric fields in, relation to charged-particle flux on Earthward side, (E), 25:16941
Kelvin--Helmholtz instability of, geomagnetic semiannual variation with equinox maxima and solstice minima, (E/T), 25:16963
pressure balance in, from solar wind and magnetic field interactions, (E/T), 25:16935
structure during magnetic storm of Sept. 24, 1961, (E), 25:16890 (N-70-37390)
MAGNETOSHEATH
electric fields in, Pioneer 8 observations of solar-wind vif, (E), 25:16936
plasma penetration to low altitudes through dayside cusps in magnetosphere, (E), 25:16940
MAGNETOSPHERE
Alfven irregularities near plasmapause, relation to Pcl-geomagnetic micropulsations, (E), 25:17028
boundary of, of nondipole geomagnetic fields, (T), 25:16914
bow shock in, gasdynamic theory applied to jump conditions in, (E/T), 25:16958
bow shock observation using dual satellites, field-determined shock structure in, (T), 25:16895
bow shock observations by dual satellites, field-aligned upstream waves, 25:16894
charged-particle density in plasma envelope, Elektron 2

XUM

and 4 measurements of, (E), 25:17051
charged-particle motion in quiet and disturbed, simulation of, (E), 25:16978
charged-particle rapid diffusion across, pitch-angle scattering and grad B drifting through electric field factors in, (T), 25:16943
current system in, associated with polar magnetic substorm precursor, (E/T), 25:16904
dynamics of outer, theoretical model of, 25:17038
effect of ionospheric cold plasma flow into, on morning energetic radiation-belt electrons, (E/T), 25:16942
electric field distribution in, fast-particle inhomogeneity-associated, (T), 25:16922
electric field in, splitting of drift shells by dawn-to-dusk, (T), 25:16955
electromagnetic wave interactions with, theory for cyclotron resonance, 25:17221 (D-1-82-1010)
electron acceleration mechanisms from, into auroral zone, (T), 25:17047
electron clouds beyond 80 R/sub E/ in, occurrence mechanisms of energetic, (E/T), 25:16966
electron intensities near, anomaly in, produced by Coulomb interactions, longitude dependence of, (T), 25:16902
electron-flux time variation in, relative to Sun direction-associated magnetic dipole soft, (E), 25:17052
electrons in, effect on cosmic-radio radiation at 200 kHz in magnetotail, (E), 25:16861
magnetic field Poynting flux measurements in, theory of Injun 5 vlf, (E/T), 25:16949
neutral sheet of, electrostatic wave amplification in, (T), 25:16896
parameters of, (T), 25:16747
plasma density in, determination from geomagnetic-pulsation periods, (E/T), 25:16913
plasma drift instabilities in, lf, 25:17020
plasma penetration to low altitudes through dayside cusps in, magnetosheath, (E), 25:16940
plasma wave amplification in neutral sheet of, electrostatic, (T), 25:16896
relation of plasma sheet, ring current, trapping boundary, and plasmapause near magnetic equator and local midnight, (E), 25:16877 (AD-710768)
solar wind interactions with, magnetic effect of inhomogeneities in, 25:17021
spectrum of Alfven oscillations of, polarization splitting of, (E/T), 25:16912
structure of near-Earth termination of plasma sheet near magnetic equator in, pre- and post-midnight, (E), 25:16877 (AD-710768)
whistler propagation in, waveguide-ducting of vlf, (T), 25:17029

MAGNETOTAIL
effect of neutral sheet in, on geomagnetic field configuration before and during substorms, 25:16903
electron clouds beyond 80 R/sub E/ in, occurrence mechanisms of energetic, (E/T), 25:16966
electron density in plasma sheet at 40 P/sub E/, spatial and geophysical parameters of energetic, (E), 25:16939
electron density in plasma sheet at 60 R/subE/, dawn-to-dusk asymmetry of energetic, (E), 25:16938
plasma tearing instability in, nonlinear evolution of, (T), 25:16899
radio flux at 200 kHz in, effect of magnetospheric electrons on cosmic, (E), 25:16861

MAGNETS
design of transiently stable superconducting, thermal properties of materials in, (T), 25:17114 (MIT-3700-13)
power supply for orange-type beta spectrometer, automatic stabilizer system for, 25:15919

MALAOXON
toxicity to adult house flies x-irradiated as pupae, synergistic effects of piperonyl butoxide on, 25:16286

MALATHION
toxicity to adult house flies x-irradiated as pupae, inhibitory effects of piperonyl butoxide on, 25:16286
toxicity to γ-irradiated pink bollworm moths, 25:16294

MALEIMIDE, N-ETHYL-
radioprotective effects of, on solutions of deoxynucleotides in relation to release of inorganic phosphate, γ, 25:16216 (UCLA-12-799)

MAMMALIA
radiation effects on oogenesis in, review on effects of age, species, and stage of growth of follicle on, 25:16102

MAMMARY GLANDS
radiography of, radiation dose to human tissues during x, 25:16255
radiotherapy of carcinomas of human, development of constrictive pericarditis following, 25:16364

MAN
calcium content in, use of cyclotron for neutron activation determination of whole body, 25:15550
cesium-137 content of diet and adult population of, during 1960 to 1969, fallout, 25:16187
cesium-137 content of diet of adult and infant, in Chicago during October, 1970, fallout, 25:16133 (HASL-239, pp III.36-9)
cesium-137 content of hair and tissues of, effects of age and sex on, 25:16121
cesium-137 content of, in Soviet Union from 1962 to 1966, 25:16069(T) (AEC-tr-7214, pp 126-42)
cesium-137 content of, residing in arctic regions of Soviet Union, effects of diet on, 25:16063(T) (AEC-tr-7214, pp 1-8)
Down's syndrome incidence in, relation of in utero exposure to diagnostic x radiation to, 25:16368
Down's syndrome incidence in, relation of natural background radiation to, 25:16367
ectopia of thyroid of, in base of tongue, iodine-131 scanning of, 25:16250
iodine-131 uptake by thyroid glands of children of, in relation to content of milk in 1962, 25:16010
mercury-203 distribution and renal clearance in, effects of cysteine and penicillamine on, 25:16253
metabolism of, effects of space flight on, 25:16360(T) (JPRS-51641)
nuclear explosion effects on, survey of, 25:16276 (FOA-1-1449)
radiation dose to bones and urinary calculi of, from deposited strontium-90, 25:16192
radiation dose to population of, in vicinity of Hanford plant during 1969 from controlled release of radioactive wastes, 25:16129 (BNWL-1505)
radiation dose to thyroid glands of, following uptake of iodine isotopes, methods for evaluation of potential, 25:16172
radiation dose to, during high-energy therapy, effects of field size and shape on, 25:16190
radiation dose to, from cesium-137 in food, 25:16127(T) (AEC-tr-7214, pp 27-36)
radiation dose to, from tritium following soil deposition and transport through human food chain, β, 25:16138(R) (ORNL-TM-3134)
radiation dose to, in Netherlands for 1967, 25:16136 (NP-18590)
radiation dosimetry in, use of urinary biochemical indicators for, ionizing, 25:16140 (RT/PROT-(70)9)
radiation effects on erythrocytes of, during extracorporeal exposure of human blood, γ, 25:16266
radiation effects on gustation in, following therapy of head and neck carcinomas, 25:16362
radiation effects on immune response of leukemic, to bone marrow transplants from histocompatible donors, effects of cyclophosphamide on x, 25:16059
radiation effects on physiology of, laser, 25:16361(T) (JPRS-52274)
radiation effects on skin in, minimal dose determination for erythemagenic, 25:16363
radiation effects on, prior to head and neck surgery, protective effects of fluorescein against, 25:16220
radiation hazards to student, during demonstrations using radioactive materials in schools, ICRP recommendations on protection against, 25:16205
radiation hazards to, during diagnosis, ICRP recommendations for protection against x, 25:16201
radiation hazards to, following accidents at Atomic Energy Research Institute in Korea, 25:16118
radiation hazards to, from electronic equipment and radioactive materials, survey of role of federal agencies in establishing or enforcing safety standards for control of, 25:16202 (BRH/DEP-70-28)
radiation hazards to, from electronic equipment, annual report of Bureau of Radiological Health on status of compliance of industry with federal programs and standards for control of, 25:16194 (BRH/OBD-70-3)
radiation hazards to, from excessive and improper medical exposure, model legislation for protection against, 25:16208 (BRH/ORO-70-8)
radiation hazards to, from wind dispersal of uranium tailing piles, 25:16177
radiation hazards to, ICRP recommendations on protection against external, 25:16200
radiation hazards to, protective measures against laser, 25:16206
radiation injuries in, following chronic low-dose exposure, ionizing, 25:16189
radiation injuries to, following accidents, treatment of, using stem cell transplants, 25:16366
radioinduced benign and malignant neoplasms in thyroid gland of, following childhood therapy of enlarged thymus, 25:16372
radioinduced chromosome aberrations in bone marrow of, 25:16306 (NIRS-9, pp 55-61)
radioinduced chromosome aberrations in children of, following in utero exposure during maternal therapy, 25:16105
radioinduced constrictive pericarditis in, following therapy for mammary gland carcinoma, 25:16364
radioinduced erythema and exudative epidermitis in skin of, following cobalt-60 teletherapy of malignant tumors, effects of dose on, 25:16369
radioinduced formation of fatty acids in, carbon-14 tracer study of, 25:16316 (ORO-678, pp 49-50)
radioinduced leukemia in, reevaluation of data on relation between low dose exposure and mortality from, 25:16373
radioinduced malignant tumors in, maximum permissible body burden for prevention of radium-226, 25:16014
radioinduced osteosarcomas in, following radium-224 therapy of diseases, α and γ, 25:16365

radioinduced thyroid carcinomas in, effects of atomic bombing on incidence in Japan of, 25:16371
radioisotope content of bones of, residing in arctic regions of Soviet Union, 25:16067(T) (AEC-tr-7214, pp 108-14)
radioisotope content of diet of, in Netherlands, 1969, 25:16003 (RA-41)
radioisotope content of Soviet Union, effects of age and geography on, 25:16066(T) (AEC-tr-7214, pp 87-107)
radioisotope content of, effects of body contour on automatic whole-body counting of cesium-132, potassium-40, and selenium-75, 25:16123
radioisotope content of, in Denmark during 1969, 25:16139 (RISO-220)
radioisotope intake by infant, in United States, use of 1954 to 1968 data on milk and minerals for estimating, 25:16088
radioisotope retention by, calculations for half-life of cesium-134, cobalt-60, and mercury-203, 25:16013
radioisotope uptake from food by, in Soviet Union during 1965 and 1966, 25:16064(T) (AEC-tr-7214, pp 37-50)
radiosensitivity of human Ewings sarcomas and metastases in relation to therapy, 25:16261
radiotherapy of bronchial and mammary carcinomas in, effects of dose fractionation and rate on, 25:16263
radiotherapy of cerebral metastases in, effectiveness of high-dose whole-brain γ, 25:16271
radiotherapy of eosinophile granulomas in, effectiveness of betatron electrons for, effects of age, dose fractionation, localization, and sex on, 25:16262
radiotherapy of esophagus cancer in man, effectiveness of gamma radiation for, in combination with colchicine or 5-fluorouracil, 25:16270
radiotherapy of leukemia, lymphomas, and polycythemia vera in, effectiveness of single whole body exposure for γ, 25:16259 (ORAU-112)
radiotherapy of lymphosarcomas in children of, combined effects of chemotherapy, surgery and, 25:16272
radiotherapy of plasma cell tumors in, monitoring of abnormal serum globulins to determine effectiveness of x, 25:16273
radiotherapy of testicular germ cell neoplasms in, combined effects of lymphadenectomy, orchiectomy and, 25:16274
radiotherapy of tinea capitis of children of, dose to brain, eyes, and thyroid gland during x, 25:16130 (BRH/DBE-70-4)
scanning of brain of, for diagnosis and post-operative supervision of hydrocephalus cases using iodine-131, 25:16237
secretion of thyroxine from thyroid gland in, in vivo tracer method for measurement of, 25:15987
strontium-85 uptake and retention by, tracer study of, 25:15998 (NIRS-9, pp 63-82)
strontium-90 content of urinary calculi from, in relation to content of diet, 25:16125
thorium-232 concentration in bones of, effects of age on measurements for, 25:16011
thyroid gland dimensions in, iodine-131 scanning for measurement of, 25:16252
water content of, tritium tracer study of, 25:15999 (NP-18392)

MANGANESE
abundance in 112 Her AB, (E), 25:16645
abundance in chondritic meteorites, (E), 25:16625
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in Antarctic snow by neutron activation, comparison of atomic absorption and isotope dilution methods with, 25:15536
determination in low and high alloy steel by flame emission spectrometry, 25:15482
determination in marine organisms by neutron activation, 25:15537
determination in seawater by solvent extraction and x-ray fluorescence, 25:15492
determination in thyroid gland in man by neutron activation and radiochemical separation, 25:16306 (NIRS-9, pp 55-61)
determination of trace amounts of, in fish, mollusks, water, and aquatic plants by neutron activation, 25:15540
determinaton in iron and uranium, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
effects on age hardening of chill cast aluminum--zirconium alloy, 25:16511
effects on reactions of hexavalent chromium with tetravalent plutonium, catalytic, 25:15571
enthalpy of solution in liquid plutonium at 700to 1000°C, 25:16440 (LA-4559)
neutron inelastic scattering by, cross sections for gamma yields from, (E), 25:17842
photoelectric work function of, (E), 25:17299
purification by sublimation, 25:16398 (IS-2300, pp 101-66)

MANGANESE ALLOYS AND SYSTEMS
Au--Mn--Te-base, band structure and transport properties of superconducting, (E/T), 25:17084
Co-base--Cr--Fe--Mn--Ni--W, corrosion of Unitemp 605, by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
Fe--Mn--Mo--Ni-base, magnetic properties of, relations with cooling rate, 25:17309
Ga--Mn--Mo, critical field for superconducting, anomalous behavior of, (T), 25:17074
Mn--Mo--Ni, mechanical properties of weld metals of, effects of aluminum, nitrogen, and vanadium on, 25:16483

MANGANESE ISOTOPES
helium-3 reactions (He-3,t) at 24.6 MeV, Q values and Coulomb displacement energies from, (E/T), 25:17823

MANGANESE ISOTOPES Mn-52
beta decay of, charge dependence of one-boson exchange potentials in, (T), 25:17988
energy levels from iron-54 (d,α) reactions, two-hole, (E), 25:17773 (LYCEN-7074)

MANGANESE ISOTOPES Mn-54
content in surface soils near Moscow, USSR, 1963 to 1966, 25:15777(T) (AEC-tr-7214, pp 9-20)
content of marine algae, fish, and invertebrates in Amchitka, Alaska, 25:16073(R) (BMI-171-113)
content of marine invertebrates in Mediterranean during 1966, effects of manganese on, 25:16124

MANGANESE ISOTOPES Mn-55
energy levels from neutron inelastic scattering, spin--parity assignments for, (E/T), 25:17813
neutron absorption by, in a 1/E neutron flux, (E), 25:17667
neutron inelastic scattering at 2.21 MeV, Hauser--Feshbach analysis of cross sections for, (E/T), 25:17813

MANY BODY PROBLEM
three-body model for resonance phenomena, 25:18005

MARITIME PRESSURIZED-WATER REACTOR
operations incident of January 21, 1971, x-ray inspection of pressurizer safety valves, 25:18222 (DOCKET-50238-77)

MARS (PLANET)
shock structure effects on orientation of interplanetary magnetic fields, (T), 25:16740

MASS SPECTROMETERS
charged-particle trajectories in rf quadrupole, calculation of, 25:17662
design for ion detection in auroral zone, aboard Kosmos 261 satellite, 25:17025
design of reactor on-line, for fission product separation, 25:18187
detectors for fast ion counting in, development of scintillation, 25:15884 (EUR-4567)

MASS TRANSFER
model for axial diffusion, for decaying products in cylindrical tubes, 25:15833

MATERIALS TESTING
plasticity experiments under biaxial stresses, apparatus for, 25:18282 (LA-4550)

MATERIALS TESTING, NONDESTRUCTIVE
methods for concrete, review on, 25:15859

MATERIALS TESTING REACTOR
core for, physics measurements for Phoenix fueled mockup, (E/T), 25:18170 (BNWL-1481)

MATHEMATICAL PHYSICS
Dirac--Hestenes theory in, kinetic and magnetic moments from, 25:17342
eigenvalues of random matrices, correlations between, 25:17340
generalized translation operators, construction of fixed-energy potentials by use of, (T), 25:17985
operators in theory of irreversible processes, projection, 25:17327
statistical mechanics of quantum-particle systems with hard cores, 25:17339
wave propagation in randomly inhomogeneous media, (T), 25:17349

MATHEMATICS
methods for evaluating accumulation and transport of radioisotopes in Amchitka, Alaska, 25:16074(R) (BMI-171-118)
research at Ames Laboratory, 25:17326 (IS-2300, pp 90-100)

MATTER
origin of, (T), 25:16735
properties of superdense, (T), 25:16627

MATTER, ANTI-
effects of sizes of, on high-energy cosmic primary flux, (T), 25:16858
role in early evolution of Universe, (T), 25:16731

MEATS
fish, cesium-137 content of, relation of, to content in man, 25:16063(T) (AEC-tr-7214, pp 1-8)
fish, effects of radiation processing on production of botulinum toxin in, methods for evaluating hazards of, 25:16395
fish, radiation processing of cod and haddock, effects of, on production of botulinum toxin, γ, 25:16391 (MIT-4049-2)
reindeer, cesium-137 content of, effects of, on radiation dose absorbed by man in arctic regions, 25:16127(T) (AEC-tr-7214, pp 27-36)
reindeer, cesium-137 content of, relation of, to content in man, 25:16063(T) (AEC-tr-7214, pp 1-8)

MECHANICAL DRIVES
gears for, inspection of fine-pitch miniature, 25:18263

(BDX-613-309)
MECHANICS
statistical mechanics of interacting systems, 25:17238
MEDICAL PERSONNEL
radiation hazards to, during care of patients containing therapeutic doses of radioisotopes, recommendations of NCRP regarding protection against, 25:16197 (NCRP-37)
training of radiology, in relation to radiological health and safety of patients, model legislation proposing standards for, 25:16208 (BRH/ORO-70-8)
MEDICAL SUPPLIES
radiosterilization of, sensitivity of bacteria to accelerated particle, cesium-137 γ, and cobalt-60 γ, 25:16396
MEDICINE
radioisotope scanning for diagnosis in clinical, effectiveness of, 25:16239
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)
research at Nat. Inst. of Radiological Sciences, Japan, 1969--1970, 25:16278(R) (NIRS-9)
MEDITERRANEAN SEA
manganese-54 content of marine invertebrates in, during 1966, effects of manganese on, 25:16124
radioisotope content in waters of, April to July 1964 measurements of cesium-137 and strontium-90, 25:15799(T) (AEC-tr-7214, pp 187-219)
radioisotope content in waters of, Aug. to Nov. 1963, 25:15800(T) (AEC-tr-7214, pp 227-48)
MEIOSIS
radiation effects on intragenic recombination during, in Saccharomyces, x, 25:16106
MEMBRANES
radiation effects on permeability of, of mitochondria and nuclei, protective effects of esculamine against, 25:16226
MERALLURIDE
effects on concentration of mercury-197-labeled chlormerodrin in tissues of mice, 25:16236
MERCAPTO GROUP
content of HeLa cells, effects of, on x-radiosensitivity, 25:16279 (NIRS-9, pp 15-53)
radioprotective effects of, against DNA breaks in mammalian cells, x, 25:16217 (UR-49-1389)
MERCURY
abundance in 112 Her AB, (E), 25:16645
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by method based on reaction of EDTA and lead iodate, 25:15479
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
handling in heat transfer studies, methods for safe, 25:15826(R) (RLO-2227-T-4-1)
hazards of environmental, 25:18290 (ORNL-NSF-EP-1)
heat transfer in, effects of base metal contaminants on, 25:15826(R) (RLO-2227-T-4-1)
heat transfer in, measurement of natural convection, 25:15826(R) (RLO-2227-T-4-1)
magnetic response of superconducting, and superheating and supercooling critical fields, (E/T), 25:17094
photon elastic scattering at 90 and 124.5° and 1.12 and 1.33 MeV, Delbrueck and Rayleigh amplitudes for, (E), 25:17795
properties of Hg_2^{2+}, in chloroaluminates, 25:15567(R) (ORO-3518-19)
superconductivity of disordered films of, containing $HgBr_2$ or $HgCl_2$ additions, (E), 25:17109
x-ray emission from decay of K-shell vacancies in, relative rates of, (E), 25:16786
MERCURY ISOTOPES
abundance in iota Cr B, (E), 25:16643
nuclear vibrational band in, 25:18033
MERCURY ISOTOPES Hg-178
alpha decay of, half-lives for, 25:17894
MERCURY ISOTOPES Hg-179
alpha decay of, half-lives for, 25:17894
MERCURY ISOTOPES Hg-193
electron-capture decay of, gamma--gamma coincidences and gold-193 energy levels in, (E), 25:17925
MERCURY ISOTOPES Hg-197
effectiveness of bromomercury-hydroxypropionate-incorporated, for labeling erythrocytes for spleen scintigraphy, 25:16246
effectiveness of hydroxypropionate-incorporated, for spleen scanning, 25:16245
reactions of recoil, in neutron-irradiated mercury derivatives of fluorescein, 25:15715
use of chlormerodrin-incorporated, for diagnosis of brain tumors in mice, effects of meralluride pretreatment on, 25:16236
MERCURY ISOTOPES Hg-198
energy-level transitions in, relativistic Hartree--Fock calculations of K-shell internal conversion coefficients, L-subshell ratios, and second-order K- and L-shell particle parameters for, (T), 25:17916
MERCURY ISOTOPES Hg-203
beta decay of, transverse polarization of K-conversion electrons following, (E), 25:17874
distribution and renal clearance in man, effects of cysteine and penicillamine on, 25:16253
retention by man, calculations of biological half-life for, 25:16013
use as source for gamma backscatter density measurements, 25:15858
MESIC ATOMS
energy-level transitions between hyperfine-structure levels of hydrogen-isotope μ-, (E), 25:16797
reactions of hydrogen-isotope μ-, in hydrogen isotope mixture, (T), 25:16797
MESONS
coupling (vector-meson--vector-meson--π) and (axial-vector-meson--axial-vector-meson--π) in chiral-invariant Lagrangian, 25:17480
couplings for vector, asymptotic symmetry for broken SU(3) sum rules for, (T), 25:17544
form factors of, current algebra for weak, (T), 25:17456
interactions of spinless, dual resonance models with residues having maximum fixed finite number of logarithmic poles for amplitudes of, (T), 25:17489
interactions of, conference on, 25:17382
interactions of, uniqueness of Paton--Chan isospin factor for exclusion of exotic states in dual resonance models for N-body, (T), 25:17491
interactions with baryons at high energies, total summation of perturbation series for diffraction, (T), 25:17499 (JINR-E2-5509)
interactions with baryons in quark model, line-reversal symmetry breaking in, 25:17505
interactions with baryons, baryon fixed poles in, 25:17510
interactions with baryons, static bootstrap models for strong coupling theory for, (T), 25:17502
interactions with mesons and baryons at high energies and small angles, quantum field theory for amplitude of diffraction, (T), 25:17476
interactions with nucleons, breaking of exchange degeneracy of vector and tensor trajectories for, 25:17509
interactions with scalar nucleons at high energies, straight-line particle paths approximation for functional integration in quantum field theory for elastic, (T), 25:17498 (JINR-E2-5217)
interactions with spinless mesons, Regge pole theory and O(3,1) group for relativistic expansions of amplitudes of two-body, (T), 25:17481
mass matrix of Goldstone bosons in spontaneously broken SU(3) x SU(3) symmetry, Mathur and Okubo domains and Kuo invariance for negative eigenvalues of square, (T), 25:17543
nonet of, crossing as group and elimination of exotic channels for quark model theory of tensor, (T), 25:17479
nonets of, algebraic realization of SU(3) symmetry for predictions for, 25:17523 (JINR-E2-5229)
production of pseudoscalar, in γ + N interactions, Stichel theorem for, (T), 25:17439
spectra of, conference on, 25:17382
structure of, deformable sphere model for level, 25:17475
theory of N + N interactions in heavy nuclei, review of Thomas--Fermi statistical approximation for, (T), 25:17953(T) (BNL-tr-368)
MESONS (eta)
decay eta → 2γ in xenon bubble chamber, branching ratio for, (E), 25:17353 (JINR-E1-5256)
decay eta → 3π° in xenon bubble chamber, branching ratio for, (E), 25:17353 (JINR-E1-5256)
decay eta → π° + 2γ in xenon bubble chamber, branching ratio for, (E), 25:17353 (JINR-E1-5256)
mixing E--eta, effects on widths of E(1420) → 2γ and E(1420) → rho(ω) + γ decays, (T), 25:17478 (JINR-E2-4976)
mixing of eta--X, SU(3) x SU(3) chiral symmetry for, 25:17541
production in γ + p → eta + p interactions at 0.8 to 1.1 GeV, counter--spark chamber study of recoil proton polarization in, (E), 25:17364
production in γ + p → p + eta at 1.22 to 1.85 GeV at small angles, Cherenkov counter hodoscope study of differential cross sections for, (E), 25:17358
MESONS (f)
mass and width of f^0 in π^- + p → K^0 + anti K^0 + n interactions at 4 and 6.2 GeV/c, spark chamber study of, (E), 25:17385
production of f^0 in π^- + p → K^0 + anti K^0 + n interactions at 4 and 6.2 GeV/c, spark chamber study of, (E), 25:17385
production of f^0 in π^+ + p → f^0 + Δ^{++} interactions at 13.1 GeV/c in hydrogen bubble chamber, differential cross sections for, (T), 25:17400
MESONS (K)
decay K → π + e + ν + γ, search for time reversal violation in, (T), 25:17539
decay K → π + l + ν, current algebra for meson and baryon weak form factors for generalized Callan--Treiman relations for, (T), 25:17456
decay K → π + l + ν, Lorentz invariance and dispersion theory for current commutators for form factors of, (T), 25:17402 (COO-264-561)
decay K → π + l + ν, second-class currents for parameters for, (T), 25:17454 (UR-875-331)

decay K + π + π + l + ν, form factors from Veneziano amplitudes for K + π + K/sub A/ + π interactions, 25:17493
decay of, scale transformations for hypothetical mass limit in two-body leptonic, (T), 25:17538
detection of very-high-energy, design of differential Cherenkov detector for, (E), 25:15937(T) (NAL-tr-3)
interactions γ + K at high energies, method for measuring total cross sections for, (T), 25:17436
interactions K + d at 1 to 5.5 GeV/c, review of Q region of Kππ mass distributions in, (E), 25:17387
interactions K + d at high energies, production of L(1775) enhancement in Kππ system in, (E), 25:17388
interactions K + N + K* + N, production of D- and S-wave Z* resonances near 1830 MeV in, (T), 25:17504
interactions K + N, cross-channel isospin analysis of peripheral single π production in, (T), 25:17490
interactions K + p + K + 2π + p, review of diffractive processes in, (T), 25:17501
interactions K + p at 1 to 15 GeV/c, review of Q region of Kππ mass distributions in, (E), 25:17387
interactions K + p at high energies, production of L(1775) enhancement in Kππ system in, (E), 25:17388
interactions K + π + K/sub A/ + π, K/sub A/ decay widths and K/sub 14/ form factors from Veneziano amplitudes for, 25:17493
interactions K + π, review of, (E/T), 25:17483
production in γ + N + K + Λ interactions, Stichel theorem for, (T), 25:17439
production in p + p interactions at 12.4 to 12.5 GeV/c, differential cross section for, (E), 25:17379
reactions with nuclei, review of diffractive processes in, (T), 25:17501

MESONS (K⁻)
decay K⁻ + π⁰ + e⁻ + ν, field and quark algebra predictions from identity for relation of current commutator with rate of, (T), 25:17455
interactions K⁻ + p at moderate energies, model-independent determination of real parts of forward amplitude for, (T), 25:17497 (JINR-E2-5216)

MESONS (K⁰)
decay K⁰ + 2π, interference effects of K_2^0--K_1^0 overlap on CP violation in, 25:17540

MESONS (K⁺)
decay K⁺ + π⁰ + e⁺ + ν, field and quark algebra predictions from identity for relation of current commutator with rate of, (T), 25:17455
decay K⁺ + π⁺ + π⁻ + l⁺ + ν, primary interaction model for form factors and rates of, 25:17462
form factor from K⁺ + p interactions, Chou--Yang model for calculation of charge, 25:17446
interactions K⁺ + d + anti Ω⁺ + 2Λ + p + π⁺ + π⁻ at 12 GeV/c in bubble chamber, production cross sections for, (E), 25:17393
interactions K⁺ + p + K⁺ + π⁻ + Δ⁺⁺ at 5.43 GeV/c in bubble chamber, K*⁰π⁺ enhancement production and K⁺ + π⁻ + K⁺ + π⁻ interaction cross sections from, (E), 25:17381
interactions K⁺ + p at 10 GeV/c in hydrogen bubble chamber, production of L(1750) in four-, five- and six-body final states in, (E), 25:17399
interactions K⁺ + p at high energies, review of three- and four-body and exotic final states in, (E), 25:17392
interactions K⁺ + p at moderate energies, model-independent determination of real parts of forward amplitude for, (T), 25:17497 (JINR-E2-5216)
interactions K⁺ + p, Chou--Yang model for calculation of charge form factor from, 25:17446
interactions K⁺ + p, dispersion relation calculation of real parts of forward amplitudes of, (T), 25:17479
interactions K⁺ + π⁻ + K⁺ + π⁻ in K⁺ + p + K⁺ + π⁻ + Δ⁺⁺ interactions at 5.43 GeV/c in bubble chamber, cross sections for, (E), 25:17381
production in γ + p + K⁺ + Λ interactions at 1.19 to 1.68 GeV, differential cross sections for, (E), 25:17361
production in γ + p + K⁺ + Λ(Σ⁰) interactions at 5 to 16 GeV, duality and Regge cuts in model for, 25:17424
production in γ + p + K⁺ + Σ⁰ interactions at 1.19 to 1.68 GeV, differential cross sections for, (E), 25:17361

MESONS (μ)
capture by oxygen-16, effects of deformed components in the ground-state wave function on rate of, (T), 25:17722
decay deep underground, scintillation counter study of rate of, (E), 25:17365
intensity measurements at 4500 m.w.e., (E), 25:16854
reactions with nuclei at 12 GeV/c in emulsions, total cross sections for particle production in, (E), 25:17367

MESONS (μ⁻)
interactions μ⁻ + p + n + ν, field and quark algebra predictions from identity for relation of current commutator with rate of, (T), 25:17455
interactions μ⁻ + p + π⁰ + μ⁻ + p, polarized incident μ⁻ for asymmetry in, (T), 25:17440
production of beams of, facility at LAMPF for, 25:17611 (LA-4474)

MESONS (μ⁺)
interactions μ⁺ + N at high energies, total cross sections for W production in, (T), 25:17453 (COO-1573-73)
production of beams of, facility at LAMPF for, 25:17611 (LA-4474)
reactions with nuclei at high energies, total W production cross sections in, (T), 25:17453 (COO-1573-73)

MESONS (ω)
decay ω + 2π from rho--ω interference in photon reactions with carbon, spectrometer study of, (E), 25:17360
interference ω--rho in hadron--hadron and photon--hadron interactions, review of, (E), 25:17383
interference rho--ω in photon reactions with carbon, spectrometer study of ω + 2π decay from, (E), 25:17360
interference rho--ω in π⁻ + p + π⁺ + π⁻ + n interactions at 2.3 GeV/c in bubble chamber, (E), 25:17384
mixing rho--ω in multichannel elastic interactions near rho mass, (T), 25:17484
production in γ + p + ω + p interactions near threshold, spark chamber and scintillation counter study of differential cross sections for, (E), 25:17355
production of ω⁰ in 8- and 10-prong π⁺ + p interactions at 8 GeV/c in hydrogen bubble chamber, (E), 25:17401
production of ω⁰ in π⁺ + n + p + π⁺ + π⁻ + π⁰ interactions at 6.95 GeV/c in deuterium bubble chamber, differential cross sections and density matrix elements for, (E), 25:17395
spin polarization in γ + p + ω + p interactions near threshold, spark chamber and scintillation counter study of, (E), 25:17355

MESONS (π)
coupling (vector-meson--vector-meson--π) and (axial-vector-meson--axial-vector-meson--π) in chiral-invariant Lagrangian, 25:17480
coupling constant for πN, model Hamiltonian for, 25:17546
decay of, scale transformations for hypothetical mass limit in two-body leptonic, (T), 25:17538
detection of very-high-energy, design of differential Cherenkov detector for, (E), 25:15937(T) (NAL-tr-3)
dynamics for A_1 rho π system, Lagrangian based on chiral SU(2) x SU(2), (T), 25:17477 (JINR-E2-5249)
exchange in π⁻ + p + K⁰ + anti K⁰ + n interactions at 4 and 6.2 GeV/c, spark chamber study of, (E), 25:17385
interactions γ + π + π + π, kinematics and cross sections for, (T), 25:17492
interactions γ + π + rho⁰ + π, parametrization correlating s-channel helicity conservation and mass-dependent phenomena in, (T), 25:17485
interactions γ + π at high energies, method for measuring total cross sections for, (T), 25:17436
interactions K + π + K/sub A/ + π, K/sub A/ decay widths and K/sub 14/ form factors from Veneziano amplitudes for, 25:17493
interactions K + π, review of, (E/T), 25:17483
interactions of, rigorous bounds on averaged cross sections for, (T), 25:17506
interactions π + N + N* below 3 GeV, isobar model for angular distributions for phenomenological Δ(1236) production in, (T), 25:17517 (ORNL-TM-3132)
interactions π + N at 1 to 8 GeV, single-particle exchange model for inelastic, (T), 25:17513
interactions π + N at high energies, modified scaling law for large-angle elastic, 25:17512
interactions π + N at low energies, model Hamiltonian for, (T), 25:17546
interactions π + N interactions at high energies, comparative evaluation of models for backward, (T), 25:17508
interactions π + N, cross-channel isospin analysis of peripheral single rho production in, (T), 25:17490
interactions π + N, cross-channel isospin analysis of peripheral single π production in, (T), 25:17490
interactions π + N, D-spin formalism for diffractive exotic hadron production in, (T), 25:17466 (COO-264-570)
interactions π + N, dispersion relations and Pomeranchukon decoupling for amplitude of, 25:17511
interactions π + N, effect on Regge parameters from phase shift ambiguity effects on finite-energy sum rules for amplitudes of, (T), 25:17500
interactions π + N, finite-energy sum rules for Regge bootstraps for resonance production in, (T), 25:17503
interactions π + N, fixed pole in partial-wave amplitude for, 25:17510
interactions π + N, rigorous bounds on averaged cross sections for, (T), 25:17506
interactions π + p + 3π + p, review of diffractive processes in, (T), 25:17501
interactions π + p at high energies, production of A_3(1640) enhancement in πππ system in, (E), 25:17388
interactions π + p, double-pole model for mass distributions for A_2 + K + anti K and A_2 + π + rho decays in, (T), 25:17482
interactions π + p, Monte Carlo method for rho mass distribution from production in, 25:17494
interactions π + p, Regge-pole eikonal scheme for partial cross sections and Argand diagrams for, 25:17495
interactions π + π, chiral SU(2) x SU(2) dynamical Lagrangian for, (T), 25:17477 (JINR-E2-5249)
interactions π + π, Coulomb production method for study

of, (T), 25:17492
interactions π + π, review of, (E/T), 25:17483
mass spectra in π⁺ + p → f⁰ + Δ⁺⁺ interactions at 13.1 GeV/c in hydrogen bubble chamber, dipion, (E), 25:17400
production in 8- and 10-prong π⁺ + p interactions at 8 GeV/c in hydrogen bubble chamber, angular correlations for, (E), 25:17401
production in γ + N → π + Δ interactions, Stichel theorem for, (T), 25:17439
production in γ + N → π + N interactions, Stichel theorem for, (T), 25:17439
production in nucleon interactions at very high energies, pionization process for N* mass limitation from, (T), 25:17473
production in p + p inelastic interactions, peripheral processes for cross sections for, (T), 25:17467
production in p + p interactions at 12.4 to 12.5 GeV/c, differential cross section for, (E), 25:17379
production of single, in K + N, N + N, and π + N interactions, cross-channel isospin analysis of peripheral, (T), 25:17490
reactions with helium-4, rigorous bounds on averaged cross sections for, (T), 25:17506
reactions with nuclei, review of diffractive processes in, (T), 25:17501
scattering by helium-4 at 1.1 GeV, differential cross section for elastic, (E), 25:17700
vertex πNN, (n-p) mass difference determination from radiative corrections to, (T), 25:17435

MESONS (π⁻)
decay π⁻ → π⁰ + l + ν, current algebra for meson and baryon weak form factors for generalized Callan--Treiman relations for, (T), 25:17456
interactions K⁺ + π⁻ → K⁺ + π⁻ in K⁺ + p → K⁺ + π⁻ + Δ⁺⁺ interactions at 5.43 GeV/c in bubble chamber, cross sections for, (E), 25:17381
interactions π⁻ + p → eta + n, double-pole model for A_2 exchange in, (T), 25:17482
interactions π⁻ + p → K⁰ + anti K⁰ + n at 4 and 6.2 GeV/c, spark chamber study of S*, f⁰, A_2, and (1420) enhancement production in, (E), 25:17385
interactions π⁻ + p → K⁻ + K_1^0 + p at 20.3 GeV/c, magnetic spectrometer study of A_2 and K⁰K⁻(1425) enhancement production in forward, (E), 25:17394
interactions π⁻ + p → p + 2π⁻ + π⁺ at 5 and 7.5 GeV/c, partial-wave analysis for spin and parity and polarization for upper and lower halves of A_2 in 3π states in, (T), 25:17486
interactions π⁻ + p → p + X⁻ at 16 GeV/c, review of U(2370) production in, (E), 25:17390
interactions π⁻ + p → p + X⁻ at high energies, spectrometer study of 2.62-to-3.535-GeV-mass nonstrange bosons in, (E), 25:17391
interactions π⁻ + p → π⁺ + π⁻ + n at 2.3 GeV/c in bubble chamber, rho--ω interference in, (E), 25:17384
interactions π⁻ + p, dispersion relation calculation of real parts of forward amplitudes of, (T), 25:17479
interactions π⁺ + π⁻, Regge-pole eikonal scheme for partial cross sections and Argand diagrams for, 25:17495
production of high-mass dipion pairs in photon reactions with beryllium at 15 GeV, (E), 25:17433
reactions with nuclei at 60 GeV with nuclei in emulsions, coherent, (E), 25:17398

MESONS (π⁰)
decay π⁰ → 2γ, asymptotic symmetry for broken SU(3) sum rules for, (T), 25:17544
decay π⁰ → 2γ, low-energy theorem for, (T), 25:17570
production in e + p → π⁰ + e + p interactions, polarized incident electron for asymmetry in, (T), 25:17440
production in μ⁻ + p → π⁰ + μ⁻ + p interactions, polarized incident μ⁻ for asymmetry in, (T), 25:17440

MESONS (π⁺)
decay π⁺ → π⁰ + l + ν, current algebra for baryon and meson weak form factors for generalized Callan--Treiman relations for, (T), 25:17456
emission in proton reactions (p,π⁺) with carbon-12 at 600 MeV, model for, (T), 25:17522
interactions π⁺ + d → d + π⁺ + π⁺ + π⁻ at 5.4 GeV/c, 3π enhancement in, (E), 25:17396
interactions π⁺ + n → p + π⁺ + π⁻ + π⁰ at 6.95 GeV/c in deuterium bubble chamber, differential cross sections and density matrix elements for ω production in, (E), 25:17395
interactions π⁺ + p → 3π⁺ + 3π⁻ + π⁰ at 11 GeV/c, 7π enhancement in, (E), 25:17397
interactions π⁺ + p → 4π⁺ + 3π⁻ + π⁰ + p at 11 GeV/c, 7π enhancement in, (E), 25:17397
interactions π⁺ + p → f⁰ + Δ⁺⁺ at 13.1 GeV/c in hydrogen bubble chamber, differential cross sections and dipion mass spectrum in, (E), 25:17400
interactions π⁺ + p → π⁺ + f⁰ + p at 13.1 GeV/c, double-Regge-pole model with duality for analysis of, (T), 25:17507
interactions π⁺ + p → π⁺ + p + anti p + p at 13.1 GeV/c in hydrogen bubble chamber, cross sections and Δ⁺⁺ production in, (E), 25:17380 (COO-1428-249)
interactions π⁺ + p → π⁺ + p + K⁺ + K⁻ at 13.1 GeV/c in hydrogen bubble chamber, cross sections and K*(890) and Δ⁺⁺ production in, (E), 25:17380 (COO-1428-249)
interactions π⁺ + p at 8 GeV/c in hydrogen bubble chamber, ω⁰, rho, and N(3695) production, π angular correlations, and dominance of central statistical interactions in 8- and 10-prong, (E), 25:17401
interactions π⁺ + p, dispersion relation calculation of real parts of forward amplitudes of, (T), 25:17479
interactions π⁺ + π⁻, Regge-pole eikonal scheme for partial cross sections and Argand diagrams for, 25:17495
photoproduction from potassium-41, copper-65, strontium-88, and barium-138, (E), 25:17789
production in ν + p → μ⁻ + π⁺ + p interactions near Δ(1236), PCAC and CVC hypotheses in model for, (T), 25:17457
production in p + p → d + π⁺ interactions at 1.1 to 1.9 GeV/c, spark chamber spectrometer study of differential cross sections for, (E), 25:17376
production in p + p → p + n + π⁺ interactions at 660 and 970 MeV, one-pion-exchange model for, (T), 25:17516 (JINR-P2-5572)
production of high-mass dipion pairs in photon reactions with beryllium at 15 GeV, (E), 25:17433

MESONS (rho)
dynamics for A_1 rho π system, Lagrangian based on chiral SU(2) x SU(2), (T), 25:17477 (JINR-E2-5249)
interactions rho + rho, crossed-channel Reggeon exchanges in elastic, 25:17496
interference ω--rho in hadron--hadron and photon--hadron interactions, review of, (E), 25:17383
interference rho--ω in photon reactions with carbon, spectrometer study of ω → 2π decay from, (E), 25:17360
interference rho--ω in π⁻ + p → π⁺ + π⁻ + n interactions at 2.3 GeV/c in bubble chamber, (E), 25:17384
mass of, Monte Carlo method for structure in, 25:17494
mixing rho--ω in multichannel elastic interactions near rho mass, (T), 25:17484
photoproduction of, s-helicity conservation in, 25:17429
production in 8- and 10-prong π⁺ + p interactions at 8 GeV/c in hydrogen bubble chamber, (E), 25:17401
production of rho⁰ in γ + p → π⁺ + π⁻ + p interactions at 2.8 and 4.7 GeV in hydrogen bubble chamber, conservation of s-channel helicity and natural parity exchange in, (E), 25:17359
production of rho⁰ in γ + π → rho⁰ + π interactions, parametrization correlating s-channel helicity conservation and mass-dependent phenomena in, (T), 25:17485
production of rho⁺ in p + p → d + rho⁺ interactions at 1.1 to 1.9 GeV/c, spark chamber study of differential cross sections for, (E), 25:17376
production of single, in K + N, N + N, and π + N interactions, cross-channel isospin analysis of peripheral, (T), 25:17490
production of, nucleon axial-vector form factors for, (T), 25:17456

MESONS (X⁰)
mixing of eta--X, SU(3) x SU(3) chiral symmetry for, 25:17541

MESONS, RESONANCE
decay A_2 → K(π) + anti K(rho), double-pole model for mass distributions for, (T), 25:17482
decay A_2^- → K_1^0 + K⁻, spectrometer study of parameters for A_2(L) and A_2(H) of split A_2 from, (E), 25:17389
decay A_2^- → rho⁰(eta) + π⁻, spectrometer study of parameters for A_2(L) and A_2(H) of split A_2 from, (E), 25:17389
decay A_3(1640) → f⁰ + π, (E), 25:17388
decay E(1420) → 2γ, E--eta mixing for width of, (T), 25:17478 (JINR-E3-4976)
decay E(1420) → rho(ω) + γ, E--eta mixing for widths of, (T), 25:17478 (JINR-E3-4976)
decay L(1750) → K(890) + rho(ω) in hydrogen bubble chamber, (E), 25:17399
decay L(1750) → K(890)(K(1420)) + π in hydrogen bubble chamber, (E), 25:17399
decay L(1775) → K(1420) + π, (E), 25:17388
decay of A_1, chiral SU(2) x SU(2) dynamical Lagrangian for, (T), 25:17477 (JINR-E2-5249)
decay of Q, 25:17387
decay of, missing-mass spectrometer for analysis of, 25:17639
decay widths of K/sub A/ from Veneziano amplitude for K + π → K/sub A/ + π interactions, 25:17493
dynamics for A_1 rho π system, Lagrangian based on chiral SU(2) x SU(2), (T), 25:17477 (JINR-E2-5249)
exchange of A_2 in π⁻ + p → eta + n interactions, double-pole model for, (T), 25:17482
existence of kappa(1100), (T), 25:17456
magnetic moment of A_1, chiral SU(2) x SU(2) dynamical Lagrangian for anomalous, (T), 25:17477 (JINR-E2-5249)
mass and width of L(1750) in K⁺ + p interactions at 10 GeV/c in hydrogen bubble chamber, (E), 25:17399
mass and width of Q, 25:17387
mass and width of S* in π⁻ + p → K⁰ + anti K⁰ + n interactions at 4 and 6.2 GeV/c, spark chamber study of, (E), 25:17385
mass and width of U(2370) in π⁻ + p → p + X⁻ interactions at 16 GeV/c and anti p + p and anti p + n interactions at 1.5 to 2.00 GeV/c, (E), 25:17390
mass structure of A_2, double-pole model for, (T), 25:17482
masses of nonstrange, in anti p + p → anti p + p

interactions, (T), 25:17378
mixing E--eta, effects on widths of E(1420) + 2γ and E(1420) + rho(w) + γ decays, (T), 25:17478 (JINR-E3-4976)
parity and spin of A_2(L) and A_2(H) of solit A_2 from spectrometer study of π^- + K_1^0 + K^- and A_2^- + rho^0(eta) + π^- decay parameters, (E), 25:17389
parity and spin of $K^{*0}\pi^+$ enhancement in K^+ + p + K^+ + π^- + Δ^{++} interactions at 5.43 GeV/c in bubble chamber, (E), 25:17381
parity and spin of Q, (E), 25:17387
parity and spin of upper and lower halves of A_2 in 3π states in π^- + p + p + $2\pi^-$ + π^+ interactions at 5 and 7.5 GeV/c, partial-wave analysis for determining, (T), 25:17486
polarization of upper and lower halves of A_2 in 3π states in π^- + p + p + $2\pi^+$ + π^- interactions at 5 and 7.5 GeV/c, partial-wave analysis of, (T), 25:17486
production in K^+ + p interactions at high energies, review of, (E), 25:17392
production of 3π enhancement in π^+ + d + d + π^+ + π^+ + π^- interactions at 5.4 GeV/c, coherent, (E), 25:17396
production of 7π enhancement in π^+ + p interactions at 11 GeV/c, 25:17397
production of A_1 in strong interactions at 3 to 21 GeV/c, review of nondiffractive, (E), 25:17386
production of A_1^- and A_1^+ in e^+ + e^- + A_1 + π interactions in colliding beams, test of hard-pion current algebra models from predicted total cross sections and angular distributions for, (T), 25:17423
production of A_2 and K^0K-(1425) enhancement in forward π^- + p + K^- + K_1^0 + p interactions at 20.3 GeV/c, magnetic spectrometer study of, (E), 25:17394
production of A_2, S*, and (1420) enhancement in π^- + p + K^0 + anti K^0 + n interactions at 4 and 6.2 GeV/c, spark chamber study of cross sections for, (E), 25:17385
production of A_3(1640) enhancement in πππ systems in π + p interactions at high energies, (E), 25:17388
production of delta(962) in p + p + d + MM interactions at 1.1 to 1.9 GeV/c, spark chamber spectrometer study of upper limit for, (E), 25:17376
production of K*(890) in π^+ + p + π^+ + p + K^+ + K^- interactions at 13.1 GeV/c in hydrogen bubble chamber, (E), 25:17380 (COO-1428-249)
production of $K^{*0}\pi^+$ enhancement in K^+ + p + K^+ + π^- + Δ^{++} interactions at 5.43 GeV/c in bubble chamber, (E), 25:17381
production of L(1750) in four-, five- and six-body final states in K^+ + p interactions at 10 GeV/c in hydrogen bubble chamber, (E), 25:17399
production of L(1775) enhancement in Kππ system in K + d and K + p interactions at high energies, (E), 25:17388
production of nonstrange 2.62-to-3.35-GeV-mass, in π^- + p + p + X^- interactions at high energies, spectrometer study of, (E), 25:17391
production of π(1050) and eta(1070) in γ + N + π(1060)(eta(1070)) + N interactions, Stichel theorem for, (T), 25:17439
production of π(980) enhancement in p + p + d + MM interactions at 1.1 to 1.9 GeV/c, spark chamber spectrometer study of differential cross sections for, (E), 25:17376
production of Q in Kππ mass distributions in K + d interactions at 1 to 5.5 GeV/c and K + p interactions at 1 to 15 GeV/c, (E), 25:17387
production of T in anti p + p + 2 rho^0 + π^0 and anti p + p + K + anti K + π interactions at 1.1 to 1.5 GeV/c, review of, (E), 25:17377
production of U(2370) in π^- + p + p + X^- interactions at 16 GeV/c and anti p + p and anti p + n interactions at 1.5 to 2.00 GeV/c, review of, (E), 25:17390
quantum numbers of A_3(1640) and L(1775) enhancements, (E), 25:17388
splitting of A_2, 405 representation of SU(6)/sub W/ for, (T), 25:17488
splitting of A_2, review of, (T), 25:17487
width of π(980) enhancement in p + p + d + MM interactions at 1.1 to 1.9 GeV/c, (E), 25:17376

MESOSPHERE
charged particles in, balance equations and research on, (T), 25:16928

METABOLIC-INHIBITOR DRUGS
effects on genetic recombination in Escherichia coli, 25:16104

METALLIC FILMS
preparation by sputtering in vacuum, electron microscopy of nucleation and growth in, 25:16277(R) (COO-1790-3)

METALLURGICAL EQUIPMENT
design and operation of, for measuring in-pile creep of LMFBR fuels, 25:16568 (BMI-1894)

METALLURGY
uses of radioisotopes in, review on, 25:16400

METALS
analysis for tritium by combustion in oxygen and scintillation counting, 25:15511 (CEA-R-4020)
book: Corrosion and Metal Protection. Collection of Papers (In Russian), 25:16407
book: Methods of Investigating the Properties of Molten Metals, 25:16471
book: Physical Nature of Plastic Deformation and Breakdown of Metals (in Russian), 25:16467
book: Ultrafine-Grain Metals, 25:16486
conference on ultrafine-grain, Raquette Lake, N.Y., Aug. 19 to 22, 1969, 25:16486
diffusion in, bibliography and data tabulations on, 25:16514
diffusional flow in fine-grain, with non-Newtonian viscosity, 25:16489
fabrication of, hot isostatic compacting method for, 25:16432
flow stress of, effects of grain size on, 25:16488
gas sorption and desorption at surface of, effects of, 25:18275(R) (COO-1383-11)
heat transfer in liquid, calculation of natural convection, 25:15826(R) (RLO-2227-T-4-1)
plasticity of, effects of grain size on super-, 25:16490
positron annihilation in, temperature effects on 2γ angular correlation from, (t), 25:17315
separation from solvent extracts of ores or waste by direct precipitation, 25:15749(P)
strains in deformed fcc, correlation of measured and calculated micro-, 25:16516(R) (ORO-3908-2)

METAMORPHIC ROCKS
density of, physical nature and significance of, 25:18324(T) (UCRL-Trans-10502)

METEORITES
abundances of iron and nickel in carbonaceous chondrites, (E), 25:16713
analysis of iron, for iridium by neutron activation, 25:15551
analysis of stony, for copper by nondestructive neutron activation, 25:15551
manganese abundance in chondritic, (E), 25:16625
properties of cosmic microtektites, chemical and physical, (E), 25:16624
sodium abundance in chondritic, (E), 25:16625
trajectory and orbit of Saint-Severin, calculation of atmospheric, 25:18267 (CEA-R-4045)

METEOROLOGY
programs for preoperational nuclear site, 25:16170

METHACRYLIC ACID
radiation effects on subsequent polymerization with cellulose, effects of solvents on kinetics of γ, 25:15656

METHACRYLIC ACID, ALLYL ESTER
radiation effects on subsequent polymerization with acrylonitrile and cellulose, effects of composition and solvent on γ, 25:15655

METHACRYLIC ACID, BUTYL ESTER
radiation effects on subsequent polymerization with acrylonitrile and cellulose, effects of composition and solvent on γ, 25:15655

METHACRYLIC ACID, DODECYL ESTER
radiation effects on subsequent polymerization with acrylonitrile and cellulose, effects of composition and solvent on γ, 25:15655

METHACRYLIC ACID, GLYCIDYL ESTER
radiation effects on subsequent polymerization with acrylonitrile and cellulose, effects of composition and solvent on γ, 25:15655

METHACRYLIC ACID, 2-HYDROXYETHYL ESTER
radiation effects on subsequent polymerization with cellulose, effects of solvents on kinetics of γ, 25:15656

METHACRYLIC ACID, 3-HYDROXYPROPYL ESTER
radiation effects on subsequent polymerization with cellulose, effects of solvents on kinetics of γ, 25:15656

METHACRYLIC ACID, METHYL ESTER
radiation effects on subsequent polymerization with acrylonitrile and cellulose, effects of composition and solvent on γ, 25:15655

METHACRYLIC ACID, METHYL ESTER, POLYMERS
density of, measurement by gamma backscatter, 25:15858

METHANE
abundance in Apollo 12 fines, (E), 25:16742
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
radiation effects on sorption by magnesium oxide, proton, 25:16619
radiolysis of, adsorbed on silica at 77°K, ESR study of trapped hydrogen atoms from γ, 25:15665
thermal decomposition in fluidized beds for deposition of pyrolytic carbon on fuel particles, 25:16561 (JUL-686-RW)
H--methane, reactions with recoil tritium, 25:15710
H--methane, reactions with recoil tritium, 25:15709

METHANE, BROMOTRICHLORO-
reactions with recoil iodine-130 from isomeric transition or neutron capture, yields from, 25:15706

METHANE, CHLORO-
radiolysis of aqueous solutions of, electron scavenging in electron pulse and γ, 25:15673
reactions with recoil iodine-128 from neutron capture, yields from, 25:15706

METHANE, CHLORODIFLUORO-
reactions with recoil iodine-128 from neutron capture, yields from, 25:15706

METHANE, CHLOROFLUORO-
reactions with recoil iodine-128 from neutron capture, yields from, 25:15706

METHANE, CHLOROTRIFLUORO-
reactions with recoil iodine-128 from neutron capture,

yields from, 25:15706
METHANE, DICHLORO-
effects on hydrogen yields from γ radiolysis of methylcyclohexane and 3-methylpentane at -196°C, 25:15686
reactions with recoil chlorine-38 or chlorine-39, secondary unimolecular processes following substitution, 25:15713
reactions with recoil iodine-128 from neutron capture, yields from, 25:15706
reactions with recoil iodine-130 from isomeric transition or neutron capture, yields from, 25:15706
METHANE, DICHLORODIFLUORO-
reactions with recoil iodine-128 from neutron capture, yields from, 25:15706
METHANE, DICHLOROFLUORO-
reactions with recoil iodine-128 from neutron capture, yields from, 25:15706
METHANE, DIFLUORO-
reactions with recoil iodine-128 from neutron capture, yields from, 25:15706
METHANE, FLUORO-
reactions with recoil iodine-128 from neutron capture, yields from, 25:15706
METHANE, IODO-
deposition on stainless steel reactor containment liner, testing of accident release conditions for, (E), 25:18176 (ORNL-4502)
removal from reactor containment exhaust air, performance of activated charcoal filters from, (E), 25:18147
removal from reactor containment structures, effectiveness of spray systems for, (E), 25:18176 (ORNL-4502)
removal from water cooled reactor containment systems, performance of engineered safeguards, (E/T), 25:18183 (WHAN-SA-39)
METHANE, TRICHLOROFLUORO-
reactions with recoil iodine-128 from neutron capture, yields from, 25:15706
METHANE, TRIFLUORO-
reactions with recoil iodine-128 from neutron capture, yields from, 25:15706
reactions with recoil iodine-130 from isomeric transition or neutron capture, yields from, 25:15706
METHANESULFONIC ACID, ETHYL ESTER
effects on chromosomes and seedling height of barley, combined effects of fission neutrons and γ radiation on, 25:16091 (ORO-678, pp 126-34)
effects on frequency of dominant lethal mutations in male germ cells of mice, 25:16227
METHANESULFONIC ACID, ISOPROPYL ESTER
effects on frequency of dominant lethal mutations in male germ cells of mice, 25:16227
METHANESULFONIC ACID, METHYL ESTER
effects on frequency of dominant lethal mutations in male germ cells of mice, 25:16227
METHANOL
complexes with erbium and 2,4-pentanedione, structure of, 25:15626(R) (ORO-2124-23)
effects on kinetics of polymerization of γ-irradiated cellulose with monomers, 25:15656
effects on polymerization of γ-irradiated cellulose with acrylonitrile and another monomer, 25:15655
effects on radiolysis chlorobenzene and its derivatives, 25:15688
separation of deuterated and normal, use of high-efficiency packed columns for gas-solid chromatographic, 25:15751
spectra of normal and deuterated, high-resolution infrared, 25:15591
METHOTREXATE
use for treatment of graft-versus-host disease in γ-irradiated dogs following allogeneic bone marrow transplants from histoincompatible donors, 25:16058
METHYL PARATHION
toxicity to γ-irradiated pink bollworm moths, 25:16294
METHYL SULFOXIDE
effects on kinetics of polymerization of γ-irradiated cellulose with monomers, 25:15656
effects on polymerization of γ-irradiated cellulose with acrylonitrile and another monomer, 25:15655
uses for denaturing hemoglobin, 25:15524
METROLOGY
theory of measurement, quantum-mechanical defense of, 25:17333
theory of, quantum, 25:17336
MEXICO
radiation monitoring in environment near nuclear center in, design of survey for preoperational, 25:16164
MIAMISBURG AREA (OHIO)
radiation monitoring during January to July 1970, 25:16077 (MLM-1784)
MICA
fission fragment tracks in, hydrofluoric acid etching of spontaneous, 25:15775
MICE
development of botulism in, following injection of extracts from γ-irradiated fish fillets, 25:16391 (MIT-4049-2)
hemopoiesis control in, relation of cellular interactions involving surface antigens to, 25:16337
iron-59 accumulation in tissues of, following intravenous injection, 25:16018
radiation effects on bone marrow colony-forming cells in limb of, effects of shielding on, 25:16347
radiation effects on bone marrow of, effects of chalone on mitotic replenishment of stem cells following x, 25:16325
radiation effects on erythropoiesis in, following transplantation with bone marrow and thymocytes, effects of splenectomy and thymectomy on x, 25:16338
radiation effects on formation of hematopoietic colonies in spleen of, x, 25:16279 (NIRS-9, pp 15-53)
radiation effects on hematopoiesis and survival of, protective effects of d actinomycin and dose fractionation against γ, 25:16228
radiation effects on hematopoiesis in bone marrow and spleen of, effects of bone marrow transplants on x, 25:16334
radiation effects on hematopoiesis in bone marrow and fetal liver transplants in, 25:16346
radiation effects on hematopoiesis in polycythemic, effects of erythropoietin on x, 25:16343
radiation effects on hematopoiesis in, effects of hydroxyurea and partial shielding on, 25:16347
radiation effects on immune reaction in, following injection of sheep erythrocytes, x, 25:16052
radiation effects on immune reactions in, following infection with smallpox virus, effects of age on whole-body x, 25:16060
radiation effects on intestinal epithelial cells of, effects of hypoxia on, 25:16222
radiation effects on metabolism of iodine-131-labeled homologous albumin in, x, 25:16021
radiation effects on mortality in, protective effects of bee venom against whole-body γ, 25:16232
radiation effects on repopulating ability of erythrocytes and granulocytes in, x, 25:16339
radiation effects on sperm of, effects of, on chromosome inversions, 25:16090(R) (NYO-3671-10)
radiation effects on survival of, effects of pre- and postexposure temperature on, 25:16354
radiation effects on survival of, evaluation of protective effects of antifungal agents on effects of fungal infections on x, 25:16224
radiation effects on survival of, following exposure of abdomen, effects of hydroxyurea on x, 25:16279 (NIRS-9, pp 15-53)
radiation effects on tolerance to surgical stress, simulated nuclear detonation, 25:16357
radiation effects on, comparison of protective effects of colony-forming units from bone marrow and spleen against x, 25:16230
radiation effects on, effects of thymectomy and transplants of fresh and frozen thymus on x, 25:16327
radiation effects on, effects of, on serial passage of immunocompetent cells, x, 25:16051
radiation effects on, injection of hemopoietic cells following x, 25:16345
radiation effects on, modifying effects of mixed allogeneic and xenogeneic hemopoietic grafts on secondary effects of whole-body, lethal, 25:16050
radiation effects on, protective effects of dithiocarbamates of aminothiophenes against γ and x, 25:16219
radiodiagnosis of brain tumors in, effects of mercaptide pretreatment on use of mercury-197-labeled chlormerodrin for, 25:16236
radioinduced brain lesion in, protective effects of cysteamine against, 25:16225
radioinduced chromosome aberrations and mutations in male germ cells of, x, 25:16103
radioinduced chromosome aberrations in, effects of saline extracts from irradiated and unirradiated mice on, 25:16097
radioinduced inhibition of healing of bone fractures in, x, 25:16321
radioinduced osteosarcomas in radiation chimeras of, chromosome analysis of, for determining cellular origin of strontium-90, 25:16329
radioinduced thrombocytopenia in, effects of blood platelet depletion on severity, 25:16348
tritium distribution in tissues of, effects of Bremsstrahlung emission on autoradiography of, 25:15988
MICROORGANISMS
radiation effects on, bibliography on ionizing, 25:16277 (AED-C-4-32)
MICROSOMES
radioisotope uptake by, in intestinal mucosa of chickens, calcium-45 and strontium-85, 25:16002 (ORO-678, pp 94-101)
MICROWAVE EQUIPMENT
design of stainless steel waveguides, for detection of boiling in liquid sodium, 25:18130
MICROWAVES
effects on metabolism of norepinephrine and serotonin in brain of rats, low dose, 25:16303(R) (AD-710005)
effects on uptake of iodine-131-labeled fibrinogen by Walker carcinomas, 25:16035
emission from negative glow helium plasma, (E), 25:17160
scattering from ionospheric irregularities, (E), 25:16886 (AD-713000)

MIHAMA POWER REACTOR, UNIT 1
lighting system for, design of, 25:18052
MILK
analysis for calcium and strontium-90, radiochemical, 25:15513 (HASL-239, pp I.23-57)
analysis for strontium by atomic absorption spectrometry, 25:15497
analysis for sulfur by oxidation using Benedict's reagent and gravimetry, 25:15516
analysis for sulfur-35 by liquid scintillation counting, 25:15516
contribution to strontium-90 intake of infants in US, 1954-68 survey of, 25:16088
iodine isotope transport from grass to, kinetics of, 25:16082
iodine isotope transport to human thyroids from, kinetics of, 25:16082
iodine-131 content of off-site environs, following Buggy I Event, 25:15786 (PNE-327)
iodine-131 content of, in 1962 in relation to iodine-131 uptake by thyroid glands of children, 25:16010
production and distribution of, in hot climates, hygiene of, 25:16086
radiation effects on yield of, of cattle, effects of thyroprotein and thyroxine replacement therapy on iodine-131, 25:16320 (ORO-678, pp 78-82)
radioisotope content of, in New Zealand during 1970, 25:16078 (NRL-F-39)
radioisotope content of, in Soviet Union during 1965 and 1966, 25:16065(T) (AEC-tr-7214, pp 70-81)
radioisotope content of, on global scale, hazards from, 25:16086
strontium-85 transfer from contaminated pasture to, measurements of, 25:16076 (FOA-4-4445)
strontium-90 content of Minnesota, as function of environmental and geographic differences, 25:16084
strontium-90 content of Switzerland, during 1967, 25:16087
strontium-90 content of, in New York during 1954 to 1970, monthly fallout, 25:16132(R) (HASL-239(App.))
strontium-90 content of, in Soviet Union during 1963 to 1966, 25:16070(T) (AEC-tr-7214, pp 249-66)
MILKY WAY
light emission from, contribution of diffuse to night skylight, (E), 25:16721
MINERAL DEPOSITS
prospecting by in situ neutron activation using californium-252 source, 25:15850
prospecting for, mathematical model for selection of programs for, 25:15796 (GJO-918-5)
MINERALS
analysis for lutetium by neutron activation, comparison of atomic absorption and isotope dilution methods with, 25:15536
content in rocks, determination using thermal neutron average lifetime measurements, 25:15767
contribution to strontium-90 intake of infants in US, 1954-68 survey of, 25:16088
radon emission from radioactive, into atmosphere and water, 25:15774
radon-219 emission from radioactive, into atmosphere and water, 25:15774
MINES
radiation hazards to personnel of uranium, radon, 25:16120
radioisotope leaching from coal, effects on environment, 25:16185
MINNESOTA
strontium-90 content of milk as function of environmental and geographic differences, analytical techniques and data for, 25:16084
MITOCHONDRIA
radiation effects on membrane permeability of, protective effects of esculamine against, 25:16226
radiation effects on, in dermal cells of rat embryos, electron microscopy of fast neutron, 25:16358
radioisotope uptake by, in intestinal mucosa of chickens, calcium-45 and strontium-85, 25:16002 (ORO-678, pp 94-101)
MITOMYCIN C
effects on frequency of dominant lethal mutations in male germ cells of mice, 25:16227
MITOSIS
radiation effects on phases of, review of, 25:16281
MIXER-SETTLERS
design for large-scale fuel processing facility, engineering drawings for, 25:15818
MOESSBAUER EFFECT
gamma-ray diffraction in single crystals, kinematic theory, 25:17322
uses of backscatter and transmission measurements of, review on, 25:15853
MOESSBAUER SPECTROMETERS
geometry of comparison of transmission and backscatter, 25:15934
instrumentation for gamma transmission-type, design of, 25:15853
sources for, preparation of simple, compact, 25:15933
MOISTURE GAGES
performance of neutron radiometric, in surface soil water measurements, effects of snow on, 25:15769
MOLECULAR BEAMS
kinetics of crossed, 25:18320 (UCRL-19654)
MOLECULES
atom reactions with diatomic, calculation using three interatomic potential energies, 25:16814
atom reactions with diatomic, quantum mechanical calculation of reactive and nonreactive scattering probabilities for, 25:16813
charged-particle reactions with, analytical representations of excitation cross sections and polarization fractions for, 25:16804
electron microscopy of organic, resolution limit due to radiation damage, (T), 25:15972
electron reactions with, excess energy in dissociative electron attachment in, 25:16812
electron reactions with, review of theory of resonances in, 25:16807
electron scattering at low energies by diatomic closed-shell, general computer code for study of, 25:16823
energy levels of, electron--photon coincidence method for measuring lifetimes of, 25:16775
energy-level transitions in, analytical representation of generalized oscillator strengths for, 25:16804
excitation energies and frequencies for, calculation using higher-order RPA as approximation to equations of motion, 25:16846
interactions of, review of singular potentials for, (T), 25:17597
properties of, calculation using Pade approximants and inner projections in configuration-interaction framework, 25:16782
MOLLUSCA
analysis for trace amounts of cesium, cobalt, manganese, scandium, and zinc by neutron activation, 25:15540
Crassostrea virginica, zinc content of tissues of, 25:16081
Crassostrea virginica, zinc-65 uptake and distribution in tissues of, from fallout in North Carolina from 1964 to 1966, 25:16081
Pinna nobilis, manganese-54 content of Mediterranean during 1966, 25:16124
Tapes decussatus, manganese-54 content of Mediterranean during 1966, 25:16124
MOLTEN SALT BREEDER EXPERIMENT
heat exchangers for, afterheat temperatures in empty, (T), 25:18101 (ORNL-4622, pp 7-59)
steam generator development for, 25:18101 (ORNL-4622, pp 7-59)
MOLTEN SALT BREEDER REACTOR
design concept for 300 MW(e) prototype, 25:18101 (ORNL-4622, pp 7-59)
development during March to September 1970, 25:18100(R) (ORNL-4622)
fuel cycle costs for, effects of thorium concentration in fuel salt on, (T), 25:18101 (ORNL-4622, pp 7-59)
fuel reprocessing for, contactor for use in, 25:15726 (ORNL-4622, pp 199-225)
fuel reprocessing for, development of frozen-wall fluorinator for use in, 25:15726 (ORNL-4622, pp 199-225)
fuel reprocessing system for 1000 MW(e), development of close-coupled, 25:18138 (ORNL-TM-3137)
fuel salt for, development of gaseous fission product removal system for, 25:18101 (ORNL-4622, pp 7-59)
fuel salt for, heat transfer and thermophysical properties of, (E/T), 25:18101 (ORNL-4622, pp 7-59)
fuels for, protactinium and rare earth removal from single-fluid, 25:15726 (ORNL-4622, pp 199-225)
operation at part-load, steady-state characteristics during, (T), 25:18101 (ORNL-4622, pp 7-59)
performance of 300 MW(e) fixed-moderator, with batch fuel processing and plutonium feed, (T), 25:18101 (ORNL-4622, pp 7-59)
physics parameters of, effects of thorium concentration in fuel salt on, (T), 25:18101 (ORNL-4622, pp 7-59)
MOLTEN SALT REACTOR EXPERIMENT
cooling system for, inspection of tubing from, 25:16399 (ORNL-4622, pp 119-98)
development during March to September 1970, 25:18100(R) (ORNL-4622)
fuel salt for, effects of temperature on fluorine recombination with, (E), 25:18148 (ORNL-4622, pp 1-6)
fuel salt for, effects of time after shutdown on fission product energy sources in, (T), 25:18148 (ORNL-4622, pp 1-6)
fuel salt for, neutron capture to absorption ratio for uranium-233 in, (E/T), 25:18101 (ORNL-4622, pp 7-59)
fuels for, chemistry of, 25:15625 (ORNL-4622, pp 60-118)
fuels for, determination of uranium(III)/uranium(IV) ratio in, 25:15625 (ORNL-4622, pp 60-118)
heat exchanger for, deposition of fission product metals on surfaces of, (E/T), 25:18148 (ORNL-4622, pp 1-6)
materials for, progress on development of, 25:16399 (ORNL-4622, pp 119-98)
operations during March to September 1970, 25:18148 (ORNL-4622, pp 1-6)
pumps for, testing of, 25:18148 (ORNL-4622, pp 1-6)
MOLYBDATES
sorptive properties of ferrocyanide loaded, for cesium-137 in presence of cerium-144 and strontium-85 in seawater, 25:17257 (NIRS-9, pp 1-14)

MOLYBDENITES
analysis for copper by nondestructive neutron activation, 25:15551
MOLYBDENUM
analysis for trace carbon, 25:15489
argon-ion reactions at 40 keV, analysis of visible emission spectra from, 25:16752
brazing of, development of bismuth-resistant filler metals for, 25:16399 (ORNL-4622, pp 119-98)
complexes with peroxy radicals, ESR studies on, 25:15638
corrosion by atomic and molecular fluorine, effects of temperature and pressure on, 25:16411
corrosion by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
deposition on alloys by reduction of molybdenum fluoride, 25:16399 (ORNL-4622, pp 119-98)
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by spectrophotometry using 1-(2-carboxy-4-sulfonatophenyl)-3-hydroxy-3-phenyltriazene, 25:15503
determination in beryllium oxide, iron, and steel, effects of spark duration on relation sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
electrochemical behavior in acidic chloride solutions, 25:16513
enthalpy of solution in liquid plutonium at 700to 1000°C, 25:16440 (LA-4559)
fabrication for use as reductive extraction test stand in purification of molten salts, 25:16399 (ORNL-4622, pp 119-98)
geochemical cycle of, marine, 25:18313 (TID-25642)
iodine-ion reactions at 30 MeV with, inner-shell-vacancy production and x-ray emission in, (E), 25:16759
mechanical properties of arc-cast and electroslag, 25:16434
oxidation at high temperatures, thermochemical studies on role of volatilization processes in, 25:16410
photoelectric work function of, (E), 25:17299
photon elastic scattering at 90 and 124.5° and 1.12 and 1.33 MeV, Delbrueck and Rayleigh amplitudes for, (E), 25:17795
preparation by reduction of molybdenum oxide using aluminum and silicon, method for, 25:16398 (IS-2300, pp 101-86)
production of ingots of, electroslag melting method for, 25:16434
production, properties, and uses of, review of, 25:16493
radiation effects on chromium carbonyl and, reactions of recoil molybdenum from proton, 25:15717
separation from solvent extracts of ores or waste by direct precipitation, 25:15749(P)
separation of trivalent, from molten lithium beryllium fluoride, effects of temperature on, 25:15625 (ORNL-4622, pp 60-118)
MOLYBDENUM ALLOYS AND SYSTEMS
Al--Co--Cr--Mo--Ni-base--Ta--Ti, corrosion by JP-5 exhaust streams, aluminide coatings for protection against, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Co--Cr--Mo--Ni-base--Ti, corrosion by JP-5 exhaust streams, aluminide coatings for protection against, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Cr--Fe--Mo--Ti, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Cr--Mo--Ni, microstructure of eutectic, electron microscopy study of, 25:16530
Al--Cr--Mo--Ni-base--Ti, mechanical properties at 1200 and 1400°F, effects of γ--γ' mismatch and volume fraction γ' on, 25:16463
Al--Cr--Mo--Ti--V, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Cr--Mo--Ti-base, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Mo--Ni, microstructure of eutectic, electron microscopy study of, 25:16530
Al--Mo--Si--Sn--Ti-base--Zr, embrittlement of α-stabilized, effects of long exposures at 800 to 1100°F on, 25:16465
Al--Mo--Sn--Ti-base--Zr, embrittlement of α-stabilized, effects of long exposures at 800 to 1100°F on, 25:16465
Al--Mo--U, phase diagrams of U--UAl_2--Al_3Mo_2--Mo, at 500 to 1250°C, partial isothermal, 25:16537
Al--Mo--Zr-base, phase transformation in, strain induced retained β--martensitic α', 25:16540
C--Fe-base--Mo, carbon content of bainite and ferrite in, electron microprobe study of, 25:16536
C--Mo--N, phase studies of, 25:16606
Cr--Mo--Ni, mechanical properties of weld metals of, effects of aluminum, nitrogen, and vanadium on, 25:16483
Cr--Mo--Ni, strength of, effects of titanium on, 25:16399 (ORNL-4622, pp 119-98)
Cr--Mo--Ni-base, corrosion-resistant properties of, 25:16418
Cr--Mo--Si, thermal conductivity and thermoelectric properties of $Mo_{0.1}Cr_{0.22}Si_{0.68}$ phase in, 25:16571
Eu--Mo--O, crystal structure of $EuMoO_3$ and $Eu_2Mo_2O_7$, 25:16603
Fe--Mn--Mo--Ni-base, magnetic properties of, relations with cooling rate, 25:17309
Ga--Mn--Mo, critical field for superconducting, anomalous behavior of, (T), 25:17074
Mn--Mo--Ni, mechanical properties of weld metals of, effects of aluminum, nitrogen, and vanadium on, 25:16483
Mo--Nb, superconductivity of, (E), 25:17076
Mo--Nb--Ti--V, phase studies of, 25:16528
Mo--Nb--V, crystal structure and lattice constants of solid-solution, 25:16524
Mo--Nb-base--Ti--Zr, preparation and properties for use as elastic sensor at 700 to 750°C, 25:16475
Mo--Ni crystal ordering processes in intermetallic Ni_4Mo, effects of aging on, 25:16516(R) (ORO-3908-2)
Mo--Ni, crystal structure of ordered intermetallic Ni_4Mo, 25:16516(R) (ORO-3908-2)
Mo--Ni, mechanical properties of ordered intermetallic Ni_4Mo, 25:16516(R) (ORO-3908-2)
Mo--Ni, ordering in, structural aspects of short range, 25:16532
Mo--Ni--Ti-base, mechanical properties of, 25:16456
Mo--Ni--TiC-base, microstructure of, 25:16594
Mo--Ni--TiC-base, wear resistance of, 25:16594
Mo--Ni-base--V, corrosion-resistant properties of, 25:16418
Mo--UN, phase studies at 2100 to 2700°C, 25:16607
MOLYBDENUM CARBIDES
Debye temperature of, from elastic constant and low-temperature heat capacity data, comparison of calculations of, 25:16576
MOLYBDENUM CARBONYLS
radiation effects on, reactions of recoil molybdenum from neutron and proton, 25:15717
MOLYBDENUM FLUORIDES
spectra of crystalline MoF_4 and MoF_5, Raman, 25:15625 (ORNL-4622, pp 60-118)
MOLYBDENUM ISOTOPES Mo-88
beta decay of, γ spectra and half-life for, (E), 25:17784
MOLYBDENUM ISOTOPES Mo-90
reactions of recoil atoms of, produced by neutron or proton irradiation of molybdenum carbonyl, 25:15717
reactions of recoil atoms of, produced by proton irradiation of cadmium, indium, molybdenum, palladium, rhodium, or silver and chromium carbonyl, 25:15717
MOLYBDENUM ISOTOPES Mo-92
deuteron reactions (d,n) with, DWBA calculations of cross sections from, (T), 25:17912
energy level of, g-factor of 8+, (E), 25:17870
helium-3 reactions (He-3,d) with, DWBA calculation of cross sections from, (T), 25:17912
MOLYBDENUM ISOTOPES Mo-93
reactions of recoil atoms of metastable, produced by neutron or proton irradiation of molybdenum carbonyl, 25:15717
reactions of recoil atoms of metastable, produced by proton irradiation of cadmium, indium, molybdenum, palladium, rhodium, or silver and chromium carbonyl, 25:15717
MOLYBDENUM ISOTOPES Mo-94
deuteron reactions (d,n) with, DWBA calculations of cross sections from, (T), 25:17912
helium-3 reactions (He-3,d) with, DWBA calculation of cross sections from, (T), 25:17912
MOLYBDENUM ISOTOPES Mo-96
deuteron reactions (d,n) with, DWBA calculations of cross sections from, (T), 25:17912
helium-3 reactions (He-3,d) with, DWBA calculation of cross sections from, (T), 25:17912
MOLYBDENUM ISOTOPES Mo-98
neutron capture at 12 to 818 eV, nonstatistical effects at p-wave resonances in, (E), 25:17886
MOLYBDENUM ISOTOPES Mo-99
decay of, gamma energies and intensities of, (E), 25:17923
deposition on graphite and Hastelloy N samples from MSRE core, 25:15625 (ORNL-4622, pp 60-118)
distribution in plutonium oxide (PuO_2)--uranium oxide (UO_2) pin type fuel elements, radiation effects on, 25:18247 (WHAN-SA-96)
reactions of recoil atoms of, produced by neutron or proton irradiation of molybdenum carbonyl, 25:15717
reactions of recoil atoms of, produced by proton irradiation of cadmium, indium, molybdenum, palladium, rhodium, or silver and chromium carbonyl, 25:15717
MOLYBDENUM ISOTOPES Mo-101
yields from fast fission of plutonium, (E), 25:17899
MOLYBDENUM OXIDES
reduction to metal using aluminum and silicon, method for, 25:16398 (IS-2300, pp 101-86)
MONKEYS
radiation effects on auditory and visual discrimination in, effects of dose on γ and neutron, 25:16302(R) (AD-709971)
radiation effects on chromosomes in cultured bone marrow cells from, following ingestion or injection of strontium-90, 25:16092(R) (ORO-3297-4)
radiation effects on hypotension in, protective effects of vasopressor drugs against mixed γ-neutron, 25:16299 (AD-702723)
MONOCHROMATORS
design of scanning, for beam--foil spectroscopy,

25:15976
MONTE CARLO METHOD
radiation transport calculations by, review of, 25:17258 (CRNL-RSIC-29)
MOON
cosmic radio-wave background in orbit of, (E), 25:16861
hydrogen atmosphere of, detection by scattered Lyman-α radiation, (T), 25:16749
MORPHINE
radioinduced degradation of, effects of concentration of solution on γ, 25:16392
MUONIUM
hyperfine-structure interval of ground state of, measurement using microwave-spectroscopy resonance method, 25:16796
MUSCLES
cesium-137 content of human, 25:16121
radiation effects on electrolyte balance in heart, of rats, effects of adrenalectomy on, 25:16351
radiation effects on retention of tritium-labeled thymidine in, of mice, effects of dose on x, 25:16349
radioisotope metabolism in, effects of physico-chemical characteristics on, 25:16005
MUTAGENS
effects on DNA of bacteria, 25:16383(R) (UCB-34-P-156-X-2)
MUTATIONS
induced in Fusilarium moniliforme by guanidine or nitrosoethyl urea, 25:16095
induction in male germ cells of mice, comparison of radiation and chemical, 25:16227
methods for selection of, in bacteria, 25:16383(R) (UCB-34-P-156-X-2)
radioinduced (Rax), in Salmonella typhimurium for promotion of tryptophan operon, uv and x, 25:16107
radioinduced dominant lethal, in male germ cells of mice, protective effects of AET and chloramphenicol against x, 25:16227
radioinduced dominant lethal, in male germ cells of guinea pigs, hamsters, mice, and rabbits, effects of species on x, 25:16103
radioinduced, for flower quality, variation, and yield in carnations, x, 25:16089(R) (EUR-4545)
radioinduced, in barley and wheat, effects of gametophyte exposure on γ, 25:16089(R) (EUR-4545)
radioinduced, in barley for chlorophyll deficiency, comparison of fast neutron, fission neutron, and γ, 25:16091 (CRO-678, pp 126-34)
radioinduced, in cultured 8-azaguanine-resistant hamster cells, effects of dose on x, 25:16101
radioinduced, in Drosophila, latent x, 25:16279 (NIRS-9, pp 15-53)
radioinduced, in eggs of Misgurnus fossilis by incubation in solutions of strontium-90 and yttrium-90, effects of activity level on frequency of, 25:16093
radioinduced, in Fusilarium moniliforme for cultural-morphological characteristics, gibberallin production, and nutritional requirements, 25:16095
radioinduced, in Fusilarium moniliforme, combined effects of ethylenimine on uv, 25:16095
radioinduced, in jute, effects of crossing of, on plant height and yield of F_1 and LF_2 populations, x, 25:16108
radioinduced, in Lespedeza, linkage relations of, with nematode-resistant strains, 25:16098
radioinduced, in potatoes for resistance to diseases and pests and yield, neutron and x, 25:16089(R) (EUR-4545)
radioinduced, in Saccharomyces cerevisiae in relation to repair of dominant lethals, uv and x, 25:16094
radioinduced, in Saccharomyces cerevisiae, uv and x, 25:16279 (NIRS-9, pp 15-53)
MYOSIN
preparation of pure radioisotope-labeled, 25:18318 (UCLA-12-808)

N

NAGASAKI
atomic bombing of, incidence of thyroid carcinoma in man following, 25:16371
NAPHTHALENE
spectra of, effects of deuterium on absorption, 25:15599
NAPHTHALENE, 2-METHYL-
spectra in naphthalene single crystals, effects of deuterium on PMR, 25:15603
NATURAL BACKGROUND RADIATION
content in underground waters, calculation of, (T), 25:15773
effects on incidence of Down's syndrome in human populations in USA, 25:16367
NATURAL GAS
prospecting for, use of natural gamma radiation measurements for, 25:15768
NATURAL WATERS
motion tracing of, using soluble metal chelates and neutron activation, 25:15549
NEBULAE
infrared emission from, containing B stars, (E), 25:16651
optical surface features and morphologic properties of Orion, (E), 25:16647
radio emission from formaldehyde in Trapezium region of Orion, (E), 25:16674
radio recombination lines for Orion and M17, (E/T), 25:16680
NEMATODA
Meloidogyne hapla, crossing of lines of Lespedeza resistant to, with radioinduced mutants, linkage relations of, 25:16098
Meloidogyne incognita acrita, crossing of lines of Lespedeza resistant to, with radioinduced mutants, linkage relations of, 25:16098
NEODYMIUM
complexes with 4,4,4-trifluoro-1-phenyl-1,3-butanedione, structure of, 25:15626(R) (ORO-2124-23)
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
photoelectric work function of, (E), 25:17299
solubility in bismuth--lithium solutions, 25:15726 (ORNL-4622, pp 199-225)
NEODYMIUM ALLOYS AND SYSTEMS
Bi--Li--Nd, solvent properties for thorium, 25:15726 (ORNL-4622, pp 199-225)
Nb--NdH, phase diagram of, 25:16611
Nd--O--Zr, phase studies of, 25:16601
NEODYMIUM HYDRIDES
Nb--NdH, phase diagram of, 25:16611
NEODYMIUM ISOTOPES Nd-138
energy levels from variable-moment-of-inertia model, simultaneous analysis of ground-state rotational and γ-vibrational bands, (T), 25:17885
NEODYMIUM ISOTOPES Nd-139
beta and electron-capture decay of, beta and gamma spectra from, (E), 25:17922
NEODYMIUM ISOTOPES Nd-140
production by proton irradiation of praseodymium-140 in variable energy cyclotron, 25:15703
NEODYMIUM ISOTOPES Nd-141
beta and electron-capture decay of, beta and gamma spectra from, (E), 25:17922
NEODYMIUM ISOTOPES Nd-142
electron scattering at high energy, differential cross section for, (E), 25:17854 (AD-712082)
neutron reactions (n,2n) at 12 to 18 MeV, total cross sections and isomeric cross-section ratios for, (E), 25:17946
nuclear charge distribution of, determination from electron scattering, (E), 25:17854 (AD-712082)
NEODYMIUM ISOTOPES Nd-144
electron scattering at high energy, differential cross section for, (E), 25:17854 (AD-712082)
energy levels from Coulomb excitation static electric-quadrupole moments of first 2+, (E/T), 25:17909
nuclear charge distribution of, determination from electron scattering, (E), 25:17854 (AD-712082)
NEODYMIUM ISOTOPES Nd-146
electron scattering at high energy, differential cross section for, (E), 25:17854 (AD-712082)
energy levels from Coulomb excitation static electric-quadrupole moments of first 2+, (E/T), 25:17909
nuclear charge distribution of, determination from electron scattering, (E), 25:17854 (AD-712082)
NEODYMIUM ISOTOPES Nd-147
yields from neutron fission of plutonium-239 and plutonium-241, 25:15689
NEODYMIUM ISOTOPES Nd-148
determination in fission product rare earths by neutron activation after ion exchange chromatographic separation, 25:15552
determination in irradiated fuels by radiochemical separation and mass spectrometry as measure of burnup, 25:15485
electron scattering at high energy, differential cross section for, (E), 25:17854 (AD-712082)
energy levels from Coulomb excitation static electric-quadrupole moments of first 2+, (E/T), 25:17909
energy levels of, g-factors for 2+, (E), 25:17900
nuclear charge distribution of, determination from electron scattering, (E), 25:17854 (AD-712082)
NEODYMIUM ISOTOPES Nd-149
production by neutron fission of plutonium-239 and plutonium-241, 25:15690
NEODYMIUM ISOTOPES Nd-150
electron scattering at high energy, differential cross section for, (E), 25:17854 (AD-712082)
energy levels from Coulomb excitation static electric-quadrupole moments of first 2+, (E/T), 25:17909
nuclear charge distribution of, determination from electron scattering, (E), 25:17854 (AD-712082)
NEON
helium-ion reactions at high energies with, oscillations of inelastic differential cross sections for, (T), 25:16828
neon-ion reactions at 10 to 75 keV with, excitation functions for, (E), 25:16809
reactions between atoms of, differential elastic scattering and ionization cross sections and interaction potentials for, (E), 25:16810
scattering by krypton and xenon, glory oscillations in velocity dependence of total collision cross sections for, (E), 25:16829

XUM

NEON IONS
implantation in metal films at 45 and 90 keV, effects on electromigration and resistivity ratio, 25:17282
ionization rate in plasma, collisional, (E), 25:17163
reactions with carbon foils at 1 to 20 keV, energy loss and angular scattering in, (E), 25:16760
reactions with carbon foils at 100 to 500 keV, equilibrium charge distributions from, (E), 25:16758
reactions with carbon foils at 3 to 54 keV, angular distributions from, (E), 25:16755
reactions with helium at 10 to 75 keV, excitation functions for, (E), 25:16808
reactions with neon at 10 to 75 keV, excitation functions for, (E), 25:16809
reactions with surfaces at 10 to 3000 eV, optical radiation from excited sputtered particles from, (E), 25:16766

NEON ISOTOPES Ne-20
deuteron reactions (d,α) at 2 to 3.2 MeV, cross-section calculations using Hauser-Feshbach theory, (E/T), 25:17838
energy levels of, calculations using multi-shell configurations, (T), 25:17781
Hartree--Fock calculations for, parity-mixed, 25:17992
helium-3 reactions (He-3,p) at 2.8 and 3 MeV, angular distributions for, (E), 25:17835
neutron reactions (n,α), (n,2α), and (n,p) at 14 MeV, cross sections for, (E), 25:17818
nuclear binding energy, charge radius, and quadrupole moments of, Hartree--Fock calculation of, (T), 25:17727
proton reactions (p,He-3) and (p,t) at 39.8 MeV, DWBA analysis of, (E/T), 25:17710
reactions with helium at 10 to 75 keV, excitation functions for, (E), 25:16808
reactions with neon gas at 10 to 75 keV, excitation functions for, (E), 25:16809

NEON ISOTOPES Ne-22
deuteron reactions (d,α) at 2 to 3.2 MeV, cross-section calculations using Hauser-Feshbach theory, (E/T), 25:17838
energy levels of, calculations using multi-shell configurations, (T), 25:17781
proton elastic and inelastic scattering at 2.4 to 3.2 MeV, differential cross sections for, (E), 25:17762
proton reactions (p,He-3) and (p,t) at 39.8 MeV, DWBA analysis of, (E/T), 25:17710
reactions with helium at 10 to 75 keV, excitation functions for, (E), 25:16808
reactions with neon gas at 10 to 75 keV, excitation functions for, (E), 25:16809

NEON SYSTEMS
D--Ne, thermal capacity of liquid mixtures of, at 24 to 27.5°K, 25:15829
H--Ne, thermal capacity of liquid mixtures of, at 24 to 30°K, 25:15828

NEPTUNIUM
production and purification of tetravalent, using hydrogen peroxide, 25:15570
production of heptavalent, by disproportionation in alkaline solutions, 25:15568

NEPTUNIUM CHLORIDES
magnetic properties of $NpCl_4$ from 2.6 to 85°K, Moessbauer and susceptibility study of, 25:17323

NEPTUNIUM FLUORIDES
sublimation of NpF_6, free energy of, 25:15633
vapor pressure of NpF_6 at 603 to 818.5°C, 25:15633

NEPTUNIUM ISOTOPES Np-235
production by 50-MeV proton irradiation of natural uranium in variable energy cyclotron, 25:15703

NEPTUNIUM ISOTOPES Np-237
content in lead--zinc ores, alpha emission from, 25:15761 (JINR-P6-5307)
gamma spectra, (E), 25:17861 (IN-1448(Rev.))
Moessbauer effect in neptunium tetrachloride at 2.6 to 85°K, 25:17323
neutron fission at 0.032 to 2.2 keV and 0.1 to 2.8 MeV in Pommard underground nuclear explosion, cross sections for, (E), 25:17926
neutron fission at 0.5 MeV with fission isomer excitation, (E), 25:17857 (CEA-N-1339)
neutron fission of, epicadmium energy integral rates for, (E/T), 25:17915

NEPTUNIUM ISOTOPES Np-238
fission of isomeric, half-life for spontaneous, (E), 25:17857 (CEA-N-1339)

NERVOUS SYSTEM
radiation effects on conditioned reflexes and visual functions of, in neonatal dogs following whole-body exposure of pregnant mother, x, 25:16356
radiation effects on functioning of, in rats, short and ultrashort radio wave, 25:16323
radiation effects on human central, following nuclear explosions, 25:16276 (FOA-1-1449)

NETHERLANDS
radioisotope content of human diet in, during 1969, 25:16003 (RA-41)

NEUTRAL RED
uptake of tritium-labeled, by parathyroid and thyroid glands of dogs, 25:16017

NEUTRINOS
emission during plasmon decay, (T), 25:16732
interactions $\nu + p \rightarrow \mu^- + \pi^+ + p$ near Δ(1236), model based on CVC and PCAC hypotheses for, (T), 25:17457
interactions with hadrons and leptons, tests of V--A theory for, 25:17464
production of virtual pairs of, effects on weak interaction cutoff from long-range corrections to Coulomb potential from corrections to photon propagator due to, (T), 25:17452 (AD-713108)

NEUTRINOS (ANTI ν)
emission during plasmon decay, (T), 25:16732
interactions anti $\nu + d \rightarrow n + p +$ anti ν, neutral leptonic-current model for nucleon energy correlations in, 25:17459
interactions anti $\nu + e$, model determination for, (E), 25:17366

NEUTRINOS (ν/sub μ/)
interactions $\nu + N$ at high energies, total cross sections for W production in, (T), 25:17453 (COO-1573-73)
reactions with nuclei at high energies, total W production cross sections in, (T), 25:17453 (COO-1573-73)

NEUTRON BEAMS
transport of, reactor beam hole guide tubes for, 25:18185
use of ferromagnetic films as filters for polarized, (E), 25:17675

NEUTRON CHOPPERS
development for scattering studies, 25:18184
development of phased, for time-of-flight spectroscopy, 25:15930
development of spin-flip, for time-of-flight spectroscopy, 25:15929
transmission functions of, with circular slits, 25:15932

NEUTRON MONOCHROMATORS
performance of distorted copper crystal, 25:17678
performance of oriented graphite, for thermal neutrons, 25:17677

NEUTRON SOURCES
calibration of californium-252, methods for, 25:15849
design parameters of cyclotron, using beryllium (d,n) reactions, 25:17646
development of hot, in reactor beam port, 25:18186
development of, based on proton or deuteron bombardment, 25:17607 (JINR-P9-5285)
evaluation of californium-252, 25:15850
evaluation of fission, for detection of land mines, 25:15841 (ORNL-TM-3305)
gamma flash suppression for ORELA pulsed, 25:17621
handling, shipping, and storage of californium-252, 25:15850
neutron dose rate and spectra from moderated californium-252, 25:16143(R) (UCRL-50007-70-2)
shielding of californium-252, materials for, 25:15849
shielding of californium-252, materials for, 25:15850
spectra of californium-252, proton-recoil proportional detector measurement of, 25:15917(T) (ORNL-tr-2415)
spectra of, containing americium and beryllium, proton-recoil proportional detector measurements of, 25:15917(T) (ORNL-tr-2415)

NEUTRON SPECTROMETERS
design and uses of lead slowing-down-time, 25:15921
design of hexapole-magnet, for detection of cold neutrons, 25:15935
development for inelastic scattering research, conference on, 25:15918 (STI/PUB-275)
development of magnetically pulsed time-of-flight, for inelastic scattering studies, 25:15928
development of spin-flip-chopper, 25:15929
development of time-of-flight, for neutron scattering studies, 25:15930
efficiency of crystal, at 4 to 10 A, 25:15926
performance for inelastic scattering studies, review on, 25:15922
performance for neutron scattering studies, comparison of, 25:15924
performance for studies of neutron scattering in liquids, comparison of, 25:15923
performance of proton-recoil proportional, 25:15917(T) (ORNL-tr-2415)
resolution for inelastic scattering studies, review on, 25:15925
theory of correlation time-of-flight, 25:15927

NEUTRON STARS
gravitational collapse of magnetic, (T), 25:16631
magnetic fields of, relativistic treatment of hydrogen atom in, (T), 25:17328
models for rotating, in nonrelativistic gravitational theory, (T), 25:16660
properties of, (T), 25:16627
theory for small, tidal gravitational accelerations near arbitrary timelike geodesic in Schwarzschild space in, (T), 25:17580

NEUTRONS
absorption in materials, lead slowing-down-time spectrometer for measuring resonance, 25:15921
capture by molybdenum-98 at 12 to 818 eV, nonstatistical effects at p-wave resonances in, (E), 25:17886
capture to absorption ratio for uranium-233 in circulating molten salt reactor fuel, (E/T), 25:18101 (ORNL-4622, pp 7-59)
chemical binding to electrons in fast neutron and γ-

irradiated lithium fluoride crystals containing defect centers at 4°K, 25:17858(R) (COO-1716-11)
decay n → p + e + anti ν, field and quark algebra predictions from identity for relation of current commutator with rate of, (T), 25:17455
detection and measurement of cosmic, coincidence-effect-compensated recording multiplicity in, (E/T), 25:16855
diffusion coefficients for water and water-d_2, temperature-dependent thermal, (T), 25:17676
diffusion in core-and-blanket configurations, spectra for fast-reactor applications, (T), 25:18232
distribution in slabs, solution to Boltzmann equation for monoenergetic, (T), 25:17670
dosimetry in slab phantoms for calculation of equivalent doses and quality factors in relation to protection, 25:16191
dosimetry of, compact silicon detector with lithium-6 foil for personnel, 25:15951 (RFP-794)
dosimetry of, lithium fluoride ribbon thermoluminescent dosimeter for personnel, 25:15952 (RFP-1581)
effects mixed with gamma radiation on liquid fluorinated liquid and liquid and vaporous hexafluorobenzene, mechanism and yields from, 25:15661(T) (BNL-tr-394)
effects of 50-MeV, on molybdenum carbonyl, reactions of recoil molybdenum from, 25:15717
effects on aromatic iodine compounds, Szilard--Chalmers reactions from, 25:15708
effects on auditory and visual discrimination in monkeys, effects of dose on, 25:16302(R) (AD-709971)
effects on behavior of miniature swine, effects of dose fractionation and time intervals on, 25:16301 (AD-709938)
effects on cardiovascular response of beagle dogs, effects of shielding on, 25:16300 (AD-709920)
effects on creep of Type EN58B steel, energy dependence of, 25:16554
effects on creep of Types 304 and 316 stainless steel, energy dependence of, 25:16554
effects on dimensions and properties of graphite, relations with crystallite orientation and size, 25:16615(R) (GA-10433)
effects on dimensions and properties of graphite, relations with original density, 25:16615(R) (GA-10433)
effects on hypotension in monkeys, protective effects of vasopressor drugs against, 25:16299 (AD-702723)
effects on materials, EPR spectrometer for studying, 25:15962 (CEA-R-4022)
effects on mercury derivatives of fluorescein, reactions of recoil mercury-197 from, 25:15715
effects on nickel carbonyl, effects of iron carbonyl or triphenylphosphine on retention of recoil nickel-65 from, 25:15712
effects on p--i--n microwave diode switches, permanent, (E), 25:15981 (SC-RR-70-853)
effects on potatoes for resistance to diseases and pests and yield, mutagenic, 25:16089(R) (EUR-4545)
effects on properties of tantalum fuel cladding, 25:16544 (ANL-EBR-31)
effects on properties of vanadium, 25:16398 (IS-2300, pp 101-86)
effects on sodium perxenates, yields of xenon-133-labeled xenon trioxide from, 25:15693
effects on survival of burros, effects of dose on, 25:16313 (ORO-678, pp 36-40)
effects on the dimensions of isotropic carbon at 1250°C, relations with density, 25:16615(R) (GA-10433)
effects on thermal decomposition induction period in pseudostable inorganic solids, 25:15644
effects on tin, yields of indium-113m from, 25:15696(P)
effects on viscoelastic properties of graphite, method of estimating, 25:16618
effects on xenon trioxide, retention of radioisotopes and isomers of xenon from, 25:15707
flux distribution in heterogeneous reactors, approximation methods for calculation of, 25:18236
flux in reactors, solution of one-group diffusion equation with angular singularities, (T), 25:18228 (HUX-3971-5)
flux monitoring of, Campbell-type circuit for, 25:15883 (CEA-R-4119)
flux spectra of, variational approach to activation detector calculations for, 25:15887 (TID-25651)
interactions anti p + n at 1.50 to 2.00 GeV/c, review of U(2370) production in, (E), 25:17390
interactions n + d, coherence and Migdal--Watson theory in, 25:17997
interactions n + p + γ + d, parity-violating internucleon potential for, (T), 25:17545
interactions n + p, parity violating effects in, 25:17545
interactions p + n at 605 MeV at 55 to 125°, Wolfenstein parameter and polarization in, (E), 25:17375
interactions p + n at high energies, compilation of cross sections for, (E), 25:17369 (CERN-HERA-70-2)
interactions $\pi^+ + n \rightarrow p + \pi^+ + \pi^- + \pi^0$ at 6.95 GeV/c in deuterium bubble chamber, differential cross sections and density matrix elements for ω production in, (E), 25:17395
mass difference (n-p), radiative corrections to πNN vertex determining, (T), 25:17435
monitoring at Syowa, Antarctica, 1967-68, (E), 25:16864
production by electronuclear method, review of possibilities for, (T), 25:17607 (JINR-P9-5285)
propagation in interference layers, 25:17682
reactions (n,f) with neptunium-237 at 0.032 to 2.2 keV and 0.1 to 2.8 MeV in Pommard underground nuclear explosion, cross sections for, (E), 25:17926
reactions (n,f) with plutonium-239, uranium-233, and uranium-235, prompt neutron emission probability from, (T), 25:18239
reactions (n,f) with uranium-235 systems, delayed neutron and photoneutron parameters for, (E/T), 25:18242
reactions (n,f) with Z = 90 to 95 nuclei, epicadmium energy integral fission rates for, (E/T), 25:17915
reactions of slow, with protactinium-231, calculations on production of thorium-228 and uranium-232 from, 25:15699
reactions with plutonium-239, plutonium-240, and americium-241, accumulation of transplutonium isotopes from, 25:15691
reactions with plutonium-239, plutonium-240, uranium-235, and uranium-238, group-averaged cross sections and resonance parameters for, (E/T), 25:17862 (JAERI-1199)
reactions with zinc, production of zinc-65 by, 25:15698
scattering by aluminum-27, statistical calculation of neutron spectra from inelastic, (T), 25:17958 (N-70-38168)
scattering by helium-3 and tritium at 6 MeV, cross sections for elastic, (E/T), 25:17971
scattering by helium-4, theory for elastic, 25:17697
scattering by ice lattice, inelastic, 25:17680
scattering by nuclei, statistical theory for energy spectra from inelastic, 25:17958 (N-70-38168)
scattering by phonons of holmium, inelastic, 25:17301
scattering from molecular liquids, effects of rotational motions on spectrum of, (T), 25:17681
scattering in liquids, comparison of spectrometers for studying, 25:15923
scattering law for polycrystalline beryllium, coherent, (T), 25:17665 (GA-9364)
scattering research, conference on instruments for inelastic, 25:15918 (STI/PUB-275)
slowing down in fast and thermal reactors, calculational models for, (T), 25:18227 (EURFNR-864)
spectra in center lattice cells of fast critical assemblies, heterogeneity effects on, (E/T), 25:18190
spectra in fast reactors, lead slowing-down-time spectrometer for production of standard, 25:15921
thermalization in solids, Einstein model for time-dependent, 25:17679
thermalization in zirconium hydride, Einstein model for time-dependent, 25:17679
transport equation for, modal approximations in time-dependent, (T), 25:17674
transport equation in an infinite cylindrical reactor, computer method for solving, (T), 25:17671
transport equation with anisotropic scattering of, particular of monoenergetic, (T), 25:17262
transport in media, generalization of nodal approximations to linear Boltzmann equation for, (T), 25:17669
transport in reactors, numerical solution of linear integral Boltzmann equation for, (T), 25:18231
transport in slabs with anisotropic scattering, calculations by transfer-matrix method of one-speed, (T), 25:17668
transport theory for, solution of time-dependent integro-differential equation in, (T), 25:17672

NEUTRONS, COLD
detection of, design of hexapole-magnet spectrometers for, 25:15935
spectra of, transmission functions of neutron choppers with circular slits for measuring, 25:15932

NEUTRONS, DELAYED
yields in pressure tube type heavy water reactors, effects of photo-reactions on effective, (T), 25:18118

NEUTRONS, EPITHERMAL
absorption by 1/v absorbers in a 1/E flux, (E), 25:17667

NEUTRONS, FAST
attenuation in shielding materials at 0.5 to 18 MeV, measurements of, 25:17257 (NIRS-9, pp 1-14)
capture by rubidium, silicon, strontium, and yttrium-89 at 14 MeV, γ spectra from, (E), 25:17834
distribution behind media with finite transverse dimensions, angular and energy, (E), 25:17261
dosimetry in mixed gamma field, performance of lithium-7 fluoride thermoluminescent dosimeter for, 25:15954
dosimetry of, calibration and readout of Kodak PNM film for personnel, 25:15949 (CLOR-80/D)
effects on Alumel/Chromel thermocouples, 25:15982 (WHAN-SA-10)
effects on barley in comparison to effects of fission neutrons and γ radiation, mutagenic for chlorophyll deficiency, 25:16091 (ORO-678, pp 126-34)
effects on cell survival in mouse mammary tumors, effects of hypoxia on, 25:16306 (NIRS-9, pp 55-61)
effects on chemical diffusion of magnesium in aluminum--magnesium alloy at 180 to 1400°C, 25:16556
effects on chromosome aberrations in rye seeds aberrant, 25:16099
effects on coated particle fuels, (E), 25:18099(R) (GA-10313)

effects on copper crystals, diffuse x-ray scattering study of defects induced in, 25:17277
effects on creep in Types 304, 316, and EN58B stainless steel at 43 to 370°C, 25:16549 (WHAN-FR-30)
effects on defects and hardening of platinum, relations with annealing temperature, 25:16553
effects on density of Nickel 200 at 700 to 1400°F, 25:16550 (WHAN-SA-9)
effects on density of Types 304 and 316 stainless steel at 700 to 1400°F, 25:16550 (WHAN-SA-9)
effects on germanium at 14 MeV and 77°K, annealing of, 25:17275
effects on helium production in reactor cladding and structural material, cyclotron simulation of, 25:16558
effects on lithium fluoride crystals containing defect centers, studies on chemically bound neutron in, 25:17858(R) (COO-1716-11)
effects on lysosomes in myocardial cells of rat embryos, electron microscopy of, 25:16358
effects on lysosomes, mitochondria, and nuclear membranes of dermal cells in rat embryos, electron microscopy of, 25:16358
effects on mechanical properties and microstructure of stainless steel, 25:18180(R) (WHAN-FR-50)
effects on mechanical properties and swelling of stainless steel fuel element cladding, (E), 25:18137(R) (GEAP-10028-36)
effects on mechanical properties of Hastelloy N, relations with hafnium, titanium, and zirconium additions, 25:16548 (ORNL-TM-3064)
effects on microstructure of graphite at high temperatures, 25:16559(R) (NYO-1710-100)
effects on microstructure of stainless steel, 25:18136(R) (GA-9838)
effects on populations of tomatoes, 25:16089(R) (EUR-4545)
effects on properties of graphite, (E), 25:18099(R) (GA-10313)
effects on reactor materials, cyclotron of simulation, 25:16557
effects on seeds of barley and rice, effects of oxygen and water on, 25:16376 (ORO-678, pp 135-51)
effects on silicon, EPR spectra of defects induced in, 25:17285
effects on structure changes in plutonium oxide (PuO_2)--uranium oxide (UO_2) fuels, (E), 25:18137(R) (GEAP-10028-36)
effects on survival of brine shrimp larvae, 25:16279 (NIRS-9, pp 15-53)
effects on survival of swine, calculation of RBE for effects of depth dose distribution on, 25:16317 (ORO-678, pp 51-7)
effects on survival time of erythrocytes of rabbits, protective effects of adenosine against, 25:16221
effects on tensile properties of recrystallized polycrystalline tungsten, 25:16546 (N-70-38376)
effects on tolerance to surgical stress in mice, 25:16357
effects on vaporization of antimony and arsenic at high temperatures, mechanism of, 25:15645
flux monitoring of, spherical paraffin-moderated indium activation detector for, 25:15912
production by reactions of 10 MeV deuterons with heavy water targets in comparison with beryllium targets for radiotherapy, 25:16265
reactions (n,2n) with nuclei at 12 to 18 MeV, total cross sections and isomeric cross-section ratios for, (E), 25:17946
reactions (n,α) with argon-40 and carbon-12 at 14 MeV, cross sections for, (E), 25:17818
reactions (n,α), (n,2α), and (n,p) with neon-20 at 14 MeV, cross sections for, (E), 25:17818
reactions (n,f) (n,n'f), and (n,2n'f) with uranium-238 at 12.2 to 18.2 MeV, angular distribution of products from, (E), 25:17949
reactions (n,f) with neptunium-237 at 0.5 MeV with fission isomer excitation, (E), 25:17857 (CEA-N-1339)
reactions (n,f) with plutonium, short-lived gamma spectra and fragment yields from, (E), 25:17899
reactions (n,f) with plutonium-239 and -240, cross sections relative to uranium-235 for, (E), 25:17920
reactions (n,f) with thorium-232 at 14.0 MeV, fragment mass--energy distributions and mass yields from, (E), 25:17901
reactions (n,f) with thorium-232 at 4.8 MeV, fragment mass--energy distributions, mass yields, and anisotropies from, (E), 25:17901
reactions (n,f) with uranium-235 and plutonium-239, tabulation of prompt and delayed product yields from, (T), 25:17855 (ANL-7678)
reactions (n,xγ) with aluminum at 5.3 to 9.0 MeV, gamma production cross sections for, (E), 25:17775 (ORNL-TM-3284)
reactions with aluminum-27, cadmium, copper, lead, and uranium at 100 to 150 MeV, optical-model analysis of, total cross sections for, (E/T), 25:17914
reactions with calcium and potassium at 1.8 to 8.3 MeV, total cross sections for, (E/T), 25:17816
reactions with hydrogen at 25 to 60 MeV, total cross sections for, (E), 25:17694
reactions with titanium at 150 to 1200 keV, intermediate structure in total cross section for, (E), 25:17839
scattering by aluminum-27 and iron-56 at 2.97 MeV, Hauser--Feshbach analysis of cross sections for inelastic, (E/T), 25:17813
scattering by aluminum-27 at 3.5 MeV, neutron and gamma angular distributions from inelastic, (E/T), 25:17815
scattering by boron-11 at 4.8 to 9.7 MeV, γ-ray angular distributions and excitation functions for inelastic, (E), 25:17749
scattering by calcium and potassium at 2.06 to 7.91 MeV, optical-model analysis including Hauser--Feshbach formalism of differential cross sections from elastic, (E/T), 25:17816
scattering by carbon-12 and oxygen-16 at 14 MeV, optical-model analysis of elastic, (E), 25:17740
scattering by carbon-12 at 14 to 20 MeV, cross sections for elastic and inelastic, (E), 25:17745
scattering by chlorine-35 and -37 at 2.54, 3.09, and 4.03 MeV, cross sections for inelastic, (E), 25:17814
scattering by chlorine-35 and -37 at 3.05 and 4.23 MeV, cross sections and gamma angular distributions from inelastic, (E), 25:17814
scattering by germanium-70, -72, -74, and -76 at 0.5 to 2.55 MeV, gamma excitation functions and Wolfenstein--Hauser--Feshbach analysis of neutron differential cross sections from inelastic, (E/T), 25:17815
scattering by manganese-55 at 2.21 MeV, Hauser--Feshbach analysis of cross sections for inelastic, (E/T), 25:17813
scattering by niobium-93 at 2.5 to 3.1 MeV, cross sections and gamma spectra from inelastic, (E), 25:17902
scattering by potassium-39 and -41 at 1.82 to 3.96 MeV, cross sections for inelastic, (E), 25:17814
scattering by sulfur at 5.4 to 8.5 MeV, cross-section calculations for elastic and inelastic, (T), 25:17830
scattering by titanium at 150 to 1200 keV, intermediate structure in cross section for elastic, (E), 25:17839
spectra from moderated californium-252 source, computer code for calculation of, 25:16143(R) (UCRL-50007-70-2)
spectra measurements of, performance of NE-213 liquid organic scintillation detector for, 25:15880 (ANL-7760(Pt.1), pp 67-73)
transport in concrete, (E), 25:17254 (AD-711840)
transport in concrete, (E), 25:17253 (AD-711839)

NEUTRONS, FISSION
effects on barley in comparison to effects of fast neutrons and γ radiation, 25:16091 (ORO-678, pp 126-34)
effects on barley seeds, effects of oxygen, packaging materials, and water on, 25:16376 (ORO-678, pp 135-51)
effects on chromosomes and seedling height of barley, combined effects of 5-bromouracil, EMS, and γ radiation on, 25:16091 (ORO-678, pp 126-34)
effects on leukocytes of man and swine in vitro, 25:16315 (ORO-678, pp 47-8)
effects on rare-gas release from Moon rocks, (E), 25:16737 (UCB-34-P-32-0-3)
effects on survival of swine, calculation of RBE for effects of depth dose distribution on, 25:16317 (ORO-678, pp 51-7)
scattering by metals, cross sections for gamma yields from inelastic, (E), 25:17842

NEUTRONS, FUSION
production in dense deuterium focus discharges, model for, 25:17205 (AD-712692)

NEUTRONS, PILE
detection of, development of self-powered flux monitors for, 25:15966 (WHAN-SA-23)
effects on clad ceramic fuel rods at 800 W/cm power, 25:16614 (EURAEC-2146)
effects on electrochemical properties of Type 304 stainless steel, 25:16438 (IN-1295)
effects on tensile properties of Type A350 steel, 25:16547 (NRL-7211)

NEUTRONS, THERMAL
attenuation in shielding materials, (E), 25:18171 (CEA-N-1386)
capture by natural argon, gamma spectra from, (E), 25:17850
capture by oriented praseodymium -141, anisotropies of distributions of gamma radiation from, (E), 25:17947
capture by silicon-28, silicon-29, or silicon-30, gamma spectra from thermal, 25:17849
dosimetry in gamma field with shielded photographic film, correction coefficients for, 25:15950 (CLOR/IBJ-78)
effects on molybdenum carbonyl, reactions of recoil molybdenum from, 25:15717
effects on tomato pollen, 25:16089(R) (EUR-4545)
flux density measurements of, properties of surface-barrier detectors for in-core, 25:15890
flux distributions in reactors, effects of fuel element deformations on, (T), 25:18233
flux measurements of, performance of uranium foil--mica track detectors for, 25:15879 (ANL-7760(Pt.1), pp 57-66)
lifetime in rocks, correlation between mineral density in rocks and average, 25:15767
reactions (n,f) with plutonium-239 and plutonium-241, 25:15690
reactions (n,f) with plutonium-239 and plutonium-241, yields of rare earth isotopes from, 25:15689

reactions (n,f) with uranium-235 and plutonium-239, tabulation of prompt and delayed product yields from, (T), 25:17855 (ANL-7678)
reactions (n,f) with uranium-235, alpha and fission-fragment mass and energy distributions from, (E/T), 25:17917
reactions (n,f) with uranium-235, polar α emission in, (E), 25:17869
reactions (n,f) with uranium-235, time-dependent yields of beta particles from fission fragments in, (E), 25:17919
transport in a cylindrical cell, (T), 25:17673
NEW JERSEY
radiation monitoring in, methods and objectives of programs for environmental, 25:16169
radiological health program of, evaluation of, 25:16209 (CONF-691129-1)
NEW YORK
cesium-137 ratio to strontium-90 in tap water of, during 1965 to 1970, monthly fallout, 25:16132(R) (HASL-239(App.))
strontium-90 content of milk and tap water in, during 1954 to 1970, monthly fallout, 25:16132(R) (HASL-239(App.))
NEW ZEALAND
radiation monitoring of air and rainwater during 1970, 25:16078 (NRL-F-39)
NICHROME
electrochemical properties of, galvanostatic measurements of, 25:16438 (IN-1295)
NICKEL
abundance in 112 Her AB, (E), 25:16645
abundance in corona, photosphere, and carbonaceous chondrites, (E), 25:16713
complexes with alkyl phosphites, crystal and molecular structure of, 25:15562 (IS-2300, pp 21-89)
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by method based on reaction of EDTA and lead iodate, 25:15479
determination in Antarctic snow by neutron activation, comparison of atomic absorption and isotope dilution methods with, 25:15536
determination in beryllium oxide, iron, and uranium, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in seawater by solvent extraction and x-ray fluorescence, 25:15492
diffusion in nickel oxide, isotope effect in, 25:17302
diffusion of cobalt in single crystals of, at 970 to 1200°C, isotope effects on, 25:15611
diffusion of iron-59 in single crystals of, at 815 to 1200°C, 25:15611
effects on deuterium exchange with hydrogen, catalytic, 25:15622
effects on enhancing sintering of tungsten, mechanism for, 25:16435
effects on tritium-hydrogen exchange in fluoroborate coolant salt, 25:15625 (ORNL-4622, pp 60-118)
electron scattering at 2 to 100 eV by single atoms of, phase shifts for, (T), 25:16751 (NP-18640)
ion reactions at 10 to 3000 eV with surfaces of, optical radiation from excited sputtered particles from, (E), 25:16766
magnetic coercive force of, effects of thermomechanical treatment in magnetic field on, 25:16469
microstructure of interface between explosion weld of copper to, effects of heat treatments at 500 to 1100°C on, 25:16529
neutron inelastic scattering by, cross sections for gamma yields from, (E), 25:17842
photoelectric work function of, (E), 25:17299
properties for use as heat block and shielding for thermoelectric generators, 25:15840 (ORNL-TM-3213)
radioinduced void growth in, at 280 to 480°C, electron, 25:16551
separation from solvent extracts of ores or waste by direct precipitation, 25:15749(P)
strains in deformed fcc crystals of, at 25°C, measurement of micro-, 25:16516(R) (ORO-3908-2)
NICKEL 200
corrosion by chlorine pentafluoride, fluorine, and nitrogen oxide, 25:16413
radiation effects on density of, at 700 to 1400°F, fast neutron, 25:16550 (WHAN-SA-9)
NICKEL ALLOYS AND SYSTEMS
book: Phase Analysis of Nickel Alloys (In Russian), 25:16612
properties for use in gas turbine blades, 25:16420 (AGARD-CP-73-71, Paper 21)
properties for use in high-temperature gas turbines, 25:16419 (AGARD-CP-73-71, Paper 18)
Al--Co--Cr--Mo--Ni-base--Ta--Ti, corrosion by JP-5 exhaust streams, aluminide coatings for protection against, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Co--Cr--Mo--Ni-base--Ti, corrosion by JP-5 exhaust streams, aluminide coatings for protection against, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Cr--Mo--Ni, microstructure of eutectic, electron microscopy study of, 25:16530
Al--Cr--Mo--Ni-base--Ti, mechanical properties at 1200 and 1400°F, effects of γ--γ' mismatch and volume fraction γ' on, 25:16463
Al--Cr--Ni, microstructure of eutectic, electron microscopy study of, 25:16530
Al--Mo--Ni, microstructure of eutectic, electron microscopy study of, 25:16530
Al--Ni, mechanical properties of, effects of precipitation hardening on, 25:16510
Cd--Co--Ni, deposition of ternary, sulfate bath electro-method for, 25:16424
Co-base--Cr--Fe--Mn--Ni--W, corrosion of Unitemp 605, by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
Cr--Mo--Ni, mechanical properties of weld metals of, effects of aluminum, nitrogen, and vanadium on, 25:16483
Cr--Mo--Ni, strength of, effects of titanium on, 25:16399 (ORNL-4622, pp 119-98)
Cr--Mo--Ni-base, corrosion-resistant properties of, 25:16418
Cr--Ni, creep of single phase, at 850°C, effects of strain and time on, 25:16452
Cr--Ni--Ti, corrosion of Uniloy, by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
Fe--Mn--Mo--Ni-base, magnetic properties of, relations with cooling rate, 25:17309
Fe--Ni, creep of single phase, at 850°C, effects of strain and time on, 25:16452
Fe-base--Ni, corrosion by chlorine pentafluoride, fluorine, and nitrogen oxide, 25:16413
Mn--Mo--Ni, mechanical properties of weld metals of, effects of aluminum, nitrogen, and vanadium on, 25:16483
Mo--Ni crystal ordering processes in intermetallic Ni_4Mo, effects of aging on, 25:16516(R) (ORO-3908-2)
Mo--Ni, crystal structure of ordered intermetallic Ni_4Mo, 25:16516(R) (ORO-3908-2)
Mo--Ni, mechanical properties of ordered intermetallic Ni_4Mo, 25:16516(R) (ORO-3908-2)
Mo--Ni, ordering in, structural aspects of short range, 25:16532
Mo--Ni--Ti-base, mechanical properties of, 25:16456
Mo--Ni--TiC-base, microstructure of, 25:16594
Mo--Ni--TiC-base, wear resistance of, 25:16594
Mo--Ni-base--V, corrosion-resistant properties of, 25:16418
Ni--V, phase studies of, 25:16398 (IS-2300, pp 101-86)
Ni--W, growth of eutectic, effects of unidirectional solidification on, 25:16535
Ni-base--Re--W, properties of rhenium--tungsten fiber-reinforced, for use in turbine blades, 25:16437 (AGARD-CP-73-71, Paper 19)
Ni-base--Ti, interactions with uranium dioxide in argon at 1500°C, microcharacterization of zone of, 25:16586
Ni-base--W, microstructure of eutectic, electron microscopy study of, 25:16530
Ti-base--Ni, mechanical properties of, 25:16456
NICKEL CARBONYLS
radiation effects on, effects of iron carbonyl or triphenylphosphine on retention of recoil nickel-65 from neutron, 25:15712
NICKEL FLUORIDES
effects on precipitation of protactinium oxide from molten fluorides, 25:15625 (ORNL-4622, pp 60-118)
NICKEL IONS
effects as retaining ion on chromatographic separation of rare earths using EDTA, 25:15731(T) (UCRL-Trans-10513)
NICKEL ISOTOPES
energy levels from cobalt (He-3,t) reactions, isobaric-analog, (E/T), 25:17823
energy levels of even, pair-distribution coefficients of ground-state, (T), 25:17999
NICKEL ISOTOPES Ni-56
energy levels of, shell-model calculation using Fabakin potential for 2p-2h, (T), 25:17967
NICKEL ISOTOPES Ni-57
effects on diffusion of nickel cation in nickel oxide, 25:17302
NICKEL ISOTOPES Ni-58
alpha elastic scattering by, microscopic analysis using nonlocal potential, (T), 25:17960
deuteron elastic scattering by, microscopic analysis using nonlocal potential, (T), 25:17960
energy levels from copper-58 decay, (E), 25:17782
energy levels from proton inelastic scattering, (E), 25:17783
proton inelastic scattering at 7.8 to 8.6 MeV, p-γ angular correlations for, (E), 25:17783
NICKEL ISOTOPES Ni-60
energy-level transitions from cobalt-60 beta decay, branching ratios for, (E), 25:17803
energy-level transitions in, directional correlation of successive γ rays from, (E), 25:17807
proton elastic scattering at 1.8 to 3.3 MeV, differential cross sections for, (E), 25:17841
NICKEL ISOTOPES Ni-62
deuteron reactions (d,p) at 7.5 MeV, energy levels of nickel-63 from, (E), 25:17846
proton elastic scattering at 1.8 to 3.3 MeV, differential cross sections for, (E), 25:17841
NICKEL ISOTOPES Ni-63
energy levels from nickel-62 (d,p) reactions at 7.5 MeV,

XUM

(E), 25:17846
NICKEL ISOTOPES Ni-64
alpha elastic and inelastic scattering at 19.5 MeV, angular distributions from, (E/T), 25:17793
deuteron reactions (d,p) at 7.5 MeV, energy levels of nickel-65 from, (E), 25:17846
proton elastic scattering at 1.8 to 3.3 MeV, differential cross sections for, (E), 25:17841
proton reactions (p,α) at 10 MeV, alpha and gamma spectra from, (E), 25:17810
NICKEL ISOTOPES Ni-65
energy levels from nickel-64 (d,p) reactions at 7.5 MeV, (E), 25:17846
reactions of recoil, in neutron-activated nickel carbonyl, effects of iron carbonyl and triphenylphosphine on, 25:15712
NICKEL ISOTOPES Ni-66
effects on diffusion of nickel cation in nickel oxide, 25:17302
yields in alpha fission of bismuth-209 and plutonium-239, absolute cross sections for, (E/T), 25:17898
NICKEL OXIDES
diffusion of nickel cation in single crystals of, isotope effect in self-, 25:17302
reduction by carbon, mechanisms of, 25:16559(R) (NYO-1710-100)
NICKEL SULFATES
$CdSO_4$--$CoSO_4$--$NiSO_4$, cadmium--cobalt--nickel alloy electrodeposition from baths of, 25:16424
NICKEL URANYL VANADATES
crystal structure of tetrahydrate, 25:15640
NICOTINAMIDE-ADENINE DINUCLEOTIDE
radiation effects on formation of, in isolated and perfused liver of normal and x-irradiated rats, methods for determining, 25:16031
NIMONIC 75
corrosion by high-temperature turbine gases, aluminum--chromium coating for protection against, 25:16402 (AGARD-CP-73-71, Paper 20)
NINE MILE POINT POWER REACTOR
radiation monitoring of environment of, design of graded program for, 25:16166
startup of, test program for, 25:18069
NIOBIUM
analysis for trace carbon, 25:15489
corrosion by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
determination in beryllium oxide, iron, and steel, effects of spark duration on relation sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in low and high alloy steel by flame emission spectrometry, 25:15482
determination of trace amounts of, by proton activation, method for, 25:15557
effects on creep rupture properties of irradiated Hastelloy N, 25:16399 (ORNL-4622, pp 119-98)
electric conductivity of polycrystalline wires of, at -200 to +260°C, effects of deformation temperature and strain rate on stage III recovery of, 25:17308
enthalpy of solution in liquid plutonium at 700to 1000°C, 25:16440 (LA-4559)
flow stress of monocrystalline, measurement of athermal component of, 25:16461
flow stress of tension-deformed, effects of grain size on, 25:16488
magnetic properties of enameled, static temperature-dependent, 25:18328 (UCSD-34-P-143-34)
mechanical properties of monocrystalline, effects of hydrogen and oxygen on, 25:16482
nuclear magnetic resonance, pressure dependence of Knight shift in, (E/T), 25:17320
oxidation at high temperatures, thermochemical studies on role of volatilization processes in, 25:16410
photoelectric work function of, (E), 25:17299
preparation by carbon reduction of niobium pentoxide at 1050 to 2300°C, mechanism and thermodynamic equilibrium of, 25:16578
production, properties, and uses of, review of, 25:16493
purification by electron beam melting, parameters for, 25:16429
separation of water-soluble compounds of, from 4-methyl-2-pentanone by steam distillation, 25:15746(P)
superconducting mixed state of, study using polarized neutrons, (E), 25:17088
surface vibrations in (100) plane of, low-energy electron reflection study of, 25:17276
tensile strength of single crystals of, effects of anisotropic deformation on ultimate, 25:16468
NIOBIUM ALLOYS AND SYSTEMS
welding by electron beam and gas-tungsten arc methods, evaluation of, 25:16421 (N-70-36774)
Al--Ge--Hf--Nb, superconductivity of, (E), 25:17076
Al--Ge--Hf--Nb, superconductivity of, (E), 25:17076
Al--Ge--Nb, crystal structure of intermetallic $Nb_{12}Al_3Ge$ in, 25:16526
Al--Ge--Nb--Ti, superconductivity of, (E), 25:17076
Al--Ge--Nb--Zr, superconductivity of, (E), 25:17076
Al--Nb, phases in, electron-probe microanalysis in diffusion layers, 25:16525
C--Nb-base--V--Zr, properties of, chemical, mechanical, and physical, 25:16447(P)
Cu--Nb, phase studies of, 25:16398 (IS-2300, pp 101-86)
Cu--Nb, tensile properties of vacuum roll-formed, effects of rolling conditions on, 25:16485
Fe-base--Nb, hardening in, Laves phases in precipitation, 25:16512
Hf--Nb, phase studies of precipitation reactions at 600 to 1400°C, 25:16531
Mo--Nb, superconductivity of, (E), 25:17076
Mo--Nb--Ti--V, phase studies of, 25:16528
Mo--Nb--V, crystal structure and lattice constants of solid-solution, 25:16524
Mo--Nb-base--Ti--Zr, preparation and properties for use as elastic sensor at 700 to 750°C, 25:16475
Nb--Sn, first-order structural transformation in intermetallic Nb_3Sn, (E/T), 25:17306
Nb--Sn, martensitic transformation and superconducting transition temperature of Nb_3Sn, alloying effects of aluminum on, 25:17082
Nb--Ti-base, superconducting transition temperature of, effects of mixed phases on, 25:16518(R) (RLO-2225-T-13-6)
Nb--U-base, crystal lattice parameters at -200 to +400°C, effects of composition on, 25:16517 (RFP-1535)
Nb--U-base, dimensional stability of polycrystalline, at -200 to +400°C, effects of composition, time at temperature, and strain on, 25:16441 (RFP-996)
Nb--U-base, phase transformation in, reversible martensitic transitions during γ--α, 25:16517 (RFP-1535)
Nb--Zr, superconducting transitions in, relations with phase separation, 25:16518(R) (RLO-2225-T-13-6)
Nb--Zr, superconductivity of, (E), 25:17076
Nb--Zr-base, fabrication and mechanical properties for use as pressure tube material, 25:16496
Nb--Zr-base, properties for use as fuel cladding and pressure tubes in water-cooled reactors, 25:16498
Nb-base--W, flow stress of monocrystalline, measurement of athermal component of, 25:16461
Nb-base--Zr, corrosion by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
Nb-base--Zr, preparation of longitudinal and transverse section foils from wires of, ion beam thinning method for, 25:16431
Ti-base--Nb, superconducting transitions in, relations with phase separation, 25:16518(R) (RLO-2225-T-13-6)
NIOBIUM BROMIDES
complexes with tetrahydrothiophene, magnetic properties and spectra of, 25:15562 (IS-2300, pp 21-89)
reactions with tetraethylammonium chloride or triphenylphosphine oxide in anhydrous ethanol, products from, 25:15577
NIOBIUM CARBIDES
diffusion of carbon in NbC and Nb_2C, 25:16580
preparation of NbC and Nb_2C, rate constants for layer growth in, 25:16580
properties of, elastic and thermodynamic, 25:16576
Co--NbC--TaC--TiC--WC, mechanical properties of, effects of heat treatment and stresses on, 25:16573
NIOBIUM CHLORIDES
complexes with tetrahydrothiophene, magnetic properties and spectra of, 25:15562 (IS-2300, pp 21-89)
reactions with tetraethylammonium chloride or triphenylphosphine oxide in anhydrous ethanol, products from, 25:15577
NIOBIUM FLUORIDES
mass spectrometric studies of, 25:15625 (ORNL-4622, pp 60-118)
preparation of niobium tetrafluoride by reduction of niobium pentafluoride using niobium metal, 25:15625 (ORNL-4622, pp 60-118)
NIOBIUM ISOTOPES Nb-87
decay of, half-life and γ spectra for, (E), 25:17784
NIOBIUM ISOTOPES Nb-88
beta decay of ground-state and isomeric, γ spectra and half-lives for, (E), 25:17784
NIOBIUM ISOTOPES Nb-93
energy levels from neutron inelastic scattering, spin--parity assignments for, (E), 25:17902
energy-level transitions from neutron inelastic scattering, probabilities for, (E), 25:17902
neutron inelastic scattering at 2.5 to 3.1 MeV, cross sections and gamma spectra from, (E), 25:17902
neutron reactions (n,2n) at 12 to 18 MeV, total cross sections and isomeric cross-section ratios for, (E), 25:17946
photon reactions (γ,xn) with, cross sections for, (E), 25:17932
NIOBIUM ISOTOPES Nb-95
content in surface soils near Leningrad, USSR, 1954 to 1965, 25:15757(T) (AEC-tr-7214, pp 21-6)
deposition on graphite and Hastelloy N samples from MSRE core, 25:15625 (ORNL-4622, pp 60-118)
effects on burros, late, 25:16313 (ORO-678, pp 36-40)
separation of zirconium-95 from, by precipitation as phosphate, 25:15481
NIOBIUM NITRIDES
crystal structure of Nb_4N_5 and Nb_5N_6, 25:16610
NIOBIUM OXIDES
elastic properties of Nb_2O_5, effects of temperature on, 25:16569 (IS-2300, pp 1-5)
reduction of Nb_2O_5 by carbon at 1050 to 2300°C to prepare niobium mechanism and thermodynamic equilibrium of,

25:16578
NIOBIUM OXYCHLORIDES
chlorination by phosgene in tube-flow reactor, kinetics of, 25:15561 (IS-2300, pp 7-20)
NIPAGIN
effects on radiolysis of cymarin, erysimin, and strophanthin, 25:15687
NITRATES
effects on spectrographic determination of rare earths, 25:15476
NITRIC ACID
determination of free, in uranyl nitrate solutions, 25:15496
radiolysis of stored aqueous solutions of, by plutonium, gas evolution from, 25:15660(T) (AEC-tr-7217)
separation from 2-ethyl-1-hexanol in sol--gel process using anion exchange resins, 25:15727 (ORNL-TM-3226)
separation of erbium, holmium, and yttrium from aqueous solutions of, by solvent extraction using D2EHPA, 25:15561 (IS-2300, pp 7-20)
separation of yttrium from aqueous solutions of, by solvent extraction using D2EHPA, 25:15561 (IS-2300, pp 7-20)
NITRITES
determination by controlled-potential coulometry, 25:15501
NITROGEN
abundance in OB stars, (E), 25:16641
abundance of metastable molecular, resonance-backscattering investigation in upper atmosphere of, (T), 25:17034
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
collisions of molecular, estimation of vibrational temperature relaxation time of ionospheric, (T), 25:16917
determination by alpha or proton irradiation, activation curves for, 25:15555
determination by alpha, deuteron, helium-3, or proton activation, method for, 25:15556
determination by photon activation, 25:15553
determination in uranium and vanadium nitrides, 25:15500
effects on mechanical properties of monocrystalline niobium, 25:16482
effects on mechanical properties of rhenium--tantalum alloy and monocrystalline tantalum at 4.2 to 550°K, 25:16478
effects on tensile properties of vanadium at -60 to +27°C, 25:16504
electron reactions with molecular, excitation functions and lifetimes of metastable states produced in, (E), 25:16816
emission structure of auroral, effect of solar flare-associated magnetic storm and commencement of polar substorm on, (E), 25:16968
energy levels of molecular, lifetime of C³PI/sub u/ state, (E), 25:16775
hydrogen-ion (H_3^+) reactions above 100 keV, neutral beam yields from, (E), 25:17136 (UCRL-50002-70, pp 5.1-15)
proton reactions at 1 to 150 keV with molecular, cross sections for emission of first negative band system in, (E), 25:16801
reactions between molecules of, differential elastic scattering and ionization cross sections and interaction potentials for, (E), 25:16810
spectral emission profile in ultraviolet aurorae, Vegard--Kaplan, (E), 25:16951
effects on mechanical properties of chromium--molybdenum--nickel and manganese--molybdenum--nickel alloy weld metals, 25:16483
NITROGEN IONS
ionization rate in plasma, collisional, (E), 25:17163
reactions with carbon foils at 3 to 54 keV, angular distributions and energy losses from, (E), 25:16755
NITROGEN IONS (N^+)
reactions with carbon foils at 1 to 20 keV, energy loss and angular scattering in, (E), 25:16760
reactions with carbon foils at 100 to 500 keV, equilibrium charge distributions from, (E), 25:16758
NITROGEN IONS (N_2^+)
abundance in upper atmosphere, resonance-backscattering investigation of, (T), 25:17034
emission of midlatitude atmospheric, first negative band, (E), 25:17039
reactions with electrons in eV range, dissociative recombination in, 25:16800(R) (ORO-3771-3)
reactions with surfaces at 10 to 3000 eV, optical radiation from excited sputtered particles from, (E), 25:16766
NITROGEN ISOTOPES N-14
determination of abundance of, relative to nitrogen-15 by emission spectrometry, 25:15477
deuteron reactions (d,p) at 3 MeV, angular distributions for, (E), 25:17832
energy level from proton inelastic scattering, first-excited, (E), 25:17741
exchange with nitrogen-15 over reduced iron synthetic ammonia catalyst, 25:15620
helium-3 reactions (He-3,p) at 3 MeV, analysis for reaction mechanism in, (E), 25:17751
proton inelastic scattering at 24 MeV using polarized beam, DWBA analysis of, (E), 25:17741
reactions with gold-197 at 5 to 10 MeV/nucleon, production of spontaneously fissioning isomers by, (E), 25:17924
NITROGEN ISOTOPES N-15
determination of abundance of, relative to nitrogen-14 by emission spectrometry, 25:15477
energy levels from nitrogen-14 (d,p) reactions, spectroscopic factors for, (E), 25:17832
exchange with nitrogen-14 over reduced iron synthetic ammonia catalyst, 25:15620
helium-3 reactions (He-3,p) at 18 MeV, angular distributions for, (E), 25:17754
proton reactions ($p,2\gamma$) at 8.30 and 8.83 MeV, gamma singles and coincidence spectra and branching ratios from, (E), 25:17736
use as tracer for studies on nitrogen fixation in bacteria, 25:16089(R) (EUR-4545)
use for labeling fertilizers for uptake studies on maize, 25:15986 (STI/DOC-10/121)
NITROGEN MUSTARDS
effects on rat bone marrow, role of endothelial and reticular cells and lymphocytes in regeneration following, 25:16341
NITROGEN OXIDES
corrosive effects on aluminum, aluminum--titanium-base--vanadium alloys, and stainless steel, 25:16413
corrosive effects on copper, Invar 36, and Nickel 200, 25:16413
NITROGEN OXIDES NO
content in lower D region, mechanisms of, (E/T), 25:16967
density profile of ionized, at 100 to 450 km in nighttime ionosphere, (E/T), 25:17036
density profiles at 70 to 110 km in ionosphere, fluorescence-scattered solar-radiation measurements for, (E), 25:16962
electrochemical behavior of, kinetic studies on, 25:15630
NITROGEN OXIDES NO_2 OR N_2O_4
abundance of lower ionospheric ionized, relation of corpuscular ionizing radiation to, (E/T), 25:16905
NITROGEN OXIDES N_2O
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
effects on hydrogen yields from γ radiolysis of methylcyclohexane and 3-methylpentane at -196°C, 25:15686
effects on radiolysis of chlorobenzene and its derivatives in lower aliphatic alcohols, 25:15688
radiation effects of cyclohexane solutions of, effects of LET on yields from γ and helium ion, 25:15648
sorption by rhenium filaments at 298 to 1220°K, chemical, 25:16448
NITROGEN SYSTEMS
Ar--N, thermodynamic properties of high-temperature, (T), 25:17180
C--Mo--N, phase studies of, 25:16606
He--N, thermodynamic properties of high-temperature, (T), 25:17180
N--U, thermodynamic properties of, review of, 25:16604
N--Xe, thermodynamic properties of high-temperature, (T), 25:17180
NITROUS ACID
electrochemical behavior of, kinetic studies on, 25:15630
NOVAE
spectra of Del 1967 from March to Nov., 1969, near-infrared, (E), 25:16649
NPD REACTOR
operation of, performance of components and systems during, 25:18073
NUCLEAR AUXILIARY POWER SYSTEMS
cost estimate for Thermionic Reactor Experiment facility, design data in support of, 25:18198 (GESR-2123)
design of 5 kW(e) radioisotope-fueled organic Rankine cycle, reference, 25:15839 (ORNL-TM-2960)
fuel elements for, optimum design parameters for series connected thermionic, 25:18202
heat source for DART I, metallographic analysis of capsule materials for, 25:15837 (MLM-1578)
kinetics of fast uranium nitride fueled lithium cooled reactor in hot startup, (T), 25:18200 (N-70-39389)
NUCLEAR CHEMISTRY
bibliography on, 25:15718
NUCLEAR EMULSIONS
meson (μ) reactions with nuclei at 12 GeV/c in K5, total cross sections for particle production in, (E), 25:17367
meson (π^-) reactions with nuclei at 60 GeV in, coherent, (E), 25:17398
photon reactions with nuclei at high energies in, cross sections for triplet production in, (E), 25:17362
photon reactions with nuclei in, asymmetry ratio and differential cross sections in opening angle for electron pair production in, (E), 25:17364
NUCLEAR EXPLOSIONS
radiation hazards from, calculation of shielding efficiencies of materials for protection against, 25:15863
NUCLEAR EXPLOSIONS, ATMOSPHERIC
effects of, blast and thermal, 25:16276 (FOA-1-1449)

effects on man, survey of, 25:16276 (FOA-1-1449)
fallout from 1968 French South Pacific, effects on stratospheric inventories of strontium-90 and zirconium-95, 25:15784 (HASL-239, pp I.80-91)
fallout from Sept. 29, 1969 Chinese, effects on stratospheric inventories of strontium-90 and zirconium-95, 25:15784 (HASL-239, pp I.80-91)
NUCLEAR EXPLOSIONS, HIGH-ALTITUDE
particle injection into trapping regions from Starfish, (E), 25:17042
NUCLEAR EXPLOSIONS, UNDERGROUND
effects of Milrow Event, on buildings, ground surfaces, and water surfaces, (E), 25:15805 (NVO-79, pp 20-40)
effects of Milrow, at Amchitka Island, Alaska, biological and physical, 25:15802 (NVO-79)
effects of Milrow, on ecology at Amchitka Island, 25:16079 (NVO-79, pp 49-71)
effects on environment of Amchitka, Alaska, simulation studies, 25:16074(R) (BMI-171-118)
ground motion from Milrow Event, measurement of surface and sea-bottom, 25:15804 (NVO-79, pp 9-19)
neptunium-237 fission cross section measurements in Pommard, 25:17926
radiation hazards from Milrow Event, evaluation of, 25:15806 (NVO-79, pp 41-8)
seismic effects of Milrow Event, (E), 25:15807 (NVO-79, pp 72-96)
site selection for Milrow Event, history of Amchitka Island, Alaska, 25:15803 (NVO-79, pp 1-8)
tsunami effects of Milrow Event, (E), 25:15808 (NVO-79, pp 97-106)
NUCLEAR MODELS
collective, formulation for K = 0 states of even nuclei, 25:17979
drop, divergence of Garvey et al. mass formula from, (T), 25:18016
optical potential, for Λ binding energy in excited levels of hyperfragments, 25:17514 (INR-P-1222)
optical, potential for the deuteron, triton, and helium-3, (T), 25:17984
rotational levels of deformed doubly even nuclei, 25:18003
shell, calculation of matrix elements of Nilsson's Hamiltonian for, 25:17963
shell, corrections for oscillations of nuclear density in, 25:17961
shell, effective interaction in modified, 25:17982
shell, for dipole states of mass-15 nuclei, (T), 25:17981
vibrational, possible consistency check for Bohr, 25:18033
NUCLEAR ORIENTATION
theory of dynamic nuclear polarization, 25:17310
NUCLEAR PHYSICS
bibliography on radiochemistry in, 25:15718
research at Ames Laboratory, (E), 25:17403 (IS-2300, pp 187-251)
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)
NUCLEAR POWER
production of, review on methods for increased, 25:15813
NUCLEAR POWER PLANTS
component failures in, tabular summary of, 25:18064(T) (LIB/Trans-322)
construction in Pakistan, planning for, 25:18050
construction of, need for standardization in, 25:18042
control of, review of digital computer methods for automatic, 25:18051
development in India, 25:18076
economics of, 25:18077
economics of U.S., model for simulation of, 25:18066
economics of U.S., trends in, 25:18079
economics of, comparison of steam power plants with, 25:18057 (BNL-50235)
effluent releases from, systems for control of, 25:18055
effluents from, aerosol model studies of radioactivity releases from gaseous, 25:15874
effluents from, environmental effects of radioactive and thermal, 25:18048
effluents from, environmental effects of radioactive and thermal, 25:18044
electric generators for, design of large-capacity turbo-, 25:15816
operation in U. S., conference on, 25:18036
operation in U.S., status and outlook for, 25:18037
operation in utility systems, advance planning for, 25:18067
operation in utility systems, effects of load factor changes on optimization of, (T), 25:18075
quality assurance programs for, licensing requirements for, 25:18095 (WHAN-SA-38)
radiation monitoring in environment of, comparison of recommendations of FAO, IAEA, ICRP, and WHO regarding programs for, 25:16159
radiation monitoring of environment of operating, summary of information regarding programs for, 25:16160
radiation monitoring of environment of, comparison of absolute contribution, graded, and threshold approaches to development of programs for, 25:16162
radiation monitoring of environment of, criticism and recommendations for, 25:16167
radiation monitoring of environment of, design and performance of program for, 25:16161
radiation monitoring of environment of, panel discussion on objectives of, 25:16158
radiation monitoring of environment of, survey of methods and objectives of, 25:16157
radioactive effluents from, dose rates from projected release of, 25:18080 (BNWL-SA-3665)
radioactive effluents from, safety aspects of, 25:18081 (BRH/OCS-70-1)
radionuclide release under normal operating conditions, compilation of average annual totals for, 25:16175
sales in 1971, outlook for U.S, 25:18049
site for, effects of earthquake motions on selection requirements of, 25:18317 (UCLA-12-807)
sites for, preoperational meteorological surveys of, 25:16170
stack effluent of, comparison of calculated and measured long term γ radiation dose to environment from, 25:16176
steam generators for, calculation methods for design of, 25:15815
structures for, design requirements for earthquake resistant, 25:18317 (UCLA-12-807)
thermal effluents from, environmental effects in California of, 25:18096
turbines for large Brayton cycle, description of closed cycle, 25:15821
turbines for, problems in fabrication of large steam, 25:15822
turbines for, tracer techniques for determination of wet steam enthalpy in, 25:18097
NUCLEAR REACTIONS
conference on mechanism for, (E/T), 25:18019
Coulomb stripping in heavy-ion induced, (T), 25:18031
cross sections for photon-induced, calculations using non-local forces, (T), 25:18027
description of two-nucleon transfer, using DWBA with finite range interaction, (T), 25:18030
evaporation spectra from compound, computer program for calculation of, 25:17952 (BNL-50246)
Faddeev--Lovelace equations for, angular momentum analysis assuming non-central pair forces of, 25:17991
gamma-ray spectroscopy in, survey on, 25:17930
matrix elements for photodisintegration and direct-capture radiative tri-nucleon, 25:17990
mechanisms in, analysis using direct-interaction Feynman diagrams, (T), 25:18028
research on photon-induced, survey of, 25:18022
resonance parameters in, graphical method for determining, (T), 25:17955 (JINR-E4-5456)
resonances in, widths of isobaric analog, (T), 25:18029
resonant states in, probabilistic interpretation of expansion coefficients for, (T), 25:17966
Schroedinger equation model for 4-nucleon, coupled channel, 25:17971
spectroscopic analysis of stripping into resonance states, (T), 25:18017
strong second-order processes in (p,t), with deformed nuclei, (T), 25:18015
theory of compound, 25:18021
theory of deuteron breakup, model for, 25:17964
theory of, normalization of Gamow functions in, 25:18011
transfer amplitudes in zero-range DWBA and vertex functions for, normalization constant for, 25:17974
NUCLEAR REACTIONS (DIRECT)
description of transfer, using DWBA, 25:18025
NUCLEAR STRUCTURE
calculations in 2s-1d shell using Hartree--Fock--Skyrme method, (T), 25:17965
collective K = 0 states in even nuclei, transition spherical → deformed for, 25:17979
Coulomb displacement energy for isobaric analog states in, 25:18008
determination of cluster, from angular distributions for d* singlet and triplet in d + p → 2p + n interactions at 52 MeV, (E), 25:17371 (NP-18561)
electromagnetic transitions from the compound states in deformed nuclei, 25:17956 (JINR-P4-5562)
evidence for quartet, in medium and heavy even-even nuclei, (T), 25:17666
microscopic description for 2p-1f shell nuclei, (T), 25:17967
pairing in light nuclei, Hartree--Fock--Bogolyubov calculations of T = 0 and T = 1, (T), 25:17969
rotational levels of deformed doubly even nuclei, 25:18003
shell model of the dipole states of mass-15 nuclei, 25:17981
use of projection methods in the stretch scheme, 25:17976
NUCLEAR THEORY
baryon resonances and the two-nucleon system in, 25:18000
calculation of nuclear rotational energies, 25:18014
charge dependence of one-boson exchange potentials, 25:17988
cluster motion in deformed harmonic oscillator potential, calculations of, 25:17972
deformations of light nuclei in the local-density approximation, 25:17727
effect of particle-number projection on determination of

ground states of superconducting nuclei, 25:17999
effective interaction in a modified shell model, 25:17982
electromagnetic transitions from the compound states in deformed nuclei, 25:17956 (JINR-P4-5562)
forces in, review of N + N interaction effects on, (T), 25:17953(T) (BNL-tr-368)
gamma transitions in finite Fermi systems, 25:17983
gamma-ray mixing ratios in mirror nuclei, 25:18006
generator-coordinate method and random-phase approximation in, 25:18035
Hartree--Fock energy gap for deformed nuclei, 25:17978
internucleon potential in, parity-violating, 25:17545
isobaric-multiplet mass equation, nonperturbative corrections to first-order, 25:17970
model of s-wave potentials with a hard core, 25:17993
nucleon exchange between two identical nuclear cores, interaction induced by, 25:17994
nucleon--nucleon interactions in, velocity-dependent, 25:17998
optical potential for the deuteron, triton, and helium-3, (T), 25:17984
potentials at fixed energy, construction using generalized translation operators, 25:17985
residual interactions of pairing and quadrupole-pairing type in, 25:17954 (INR-P-1215)
resonant approximation for single-particle resonances in the renormalized RPA problem, 25:17977
rotational levels of deformed doubly even nuclei, 25:18003
separable tensor potentials, relation between triton energy and neutron--deuteron doublet scattering length for, 25:18013
single-particle states in a spheroidal harmonic oscillator potential with a deformed spin-orbit interaction and hexadecapole deformation, 25:18004
three-body model for resonance phenomena, 25:18005
three-body systems in, energy levels from resonant two-body forces in, 25:17966
use of projection methods in the stretch scheme, 25:17976

NUCLEI
alpha elastic scattering by, microscopic model for, (T), 25:17960
alpha reactions (α,2α) with, analysis using Shapiro model and three-body theory, (T), 25:18032
alpha reactions (α,xn) with, method for estimation of excitation functions for, 25:18018
charge distribution of, effect of Jastrow correlation factor on, (T), 25:18012
Coulomb energy differences in N = 82 to 126, effect of deformation on, (E), 25:17936
decay by double-neutron emission, possibility for, (T), 25:17896
deuteron elastic scattering by, calculation of optical potentials for, 25:17987
deuteron elastic scattering by, microscopic model for, (T), 25:17960
deuteron reactions (d,xn) with, method for estimation of excitation functions for, 25:18018
dipole states of mass-15, shell model calculations for, 25:17981
electron pair production in fields of, angular distributions and polarization of, (T), 25:17427
elementary particle scattering at 1 GeV, analysis of elastic and inelastic, 25:18020
energy levels for N = 29 and Z = 29, intermediate-coupling model for calculation of, 25:18010
energy levels of 2s-1d shell, based on four particle--four hole state in oxygen-16, (E), 25:17989
energy levels of deformed doubly even, rotational, (T), 25:18003
energy levels of superconducting, effect of particle-number projection on determination of ground-state, (T), 25:17999
energy of, calculation of effects of deformation on total, 25:17963
energy-level transitions from compound states in deformed, electromagnetic, (T), 25:17956 (JINR-P4-5562)
gamma-ray mixing ratios in mirror, (T), 25:18006
Hartree--Fock calculations for N = Z even, of 2s-1d shell, parity-mixed, 25:17992
Hartree--Fock energy gap in deformed, for Rosenfeld interaction, 25:17978
helium-3 elastic scattering at 10 to 40 MeV by A = 40 to 210, optical-model analysis of, (E/T), 25:17823
helium-3 elastic scattering by calculation of optical potentials for, 25:17987
helium-3 reactions (He-3,d) with light, transfer amplitudes in DWBA and vertex functions for, 25:17974
hyperfine fields in ferromagnetic materials at implanted, review, 25:17273 (COO-7-585)
meson (K) reactions with, review of diffractive processes in, (T), 25:17501
meson (μ) reactions at 12 GeV/c in emulsions, total cross sections for particle production in, (E), 25:17367
meson (μ+) reactions at high energies, total W production cross sections in, (T), 25:17453 (COO-1573-73)
meson (π) reactions with, review of diffractive processes in, (T), 25:17501
meson (π-) reactions at 60 GeV in emulsions, coherent, (E), 25:17398
neutrino reactions at high energies, total W production cross sections in, (T), 25:17453 (COO-1573-73)
neutron inelastic scattering by, statistical theory of neutron energy spectra from, 25:17958 (N-70-38168)
nucleon density in, corrections for oscillations in calculations of, 25:17961
nucleon scattering by, microscopic analysis using optical potential, 25:18023
nucleon--nucleon interactions in heavy, review of Thomas--Fermi statistical approximation for meson theory of, (T), 25:17953(T) (BNL-tr-368)
parity states of A = 15, weak coupling calculation for positive, 25:17980
photon reactions (γ,n) with light, mesonic contributions to, (T), 25:17957 (LUNP-7010)
photon reactions at 2.62 MeV, streamer chamber study of pair production in, (E), 25:17363
photon reactions at high energies in emulsions, cross sections for triplet production in, (E), 25:17362
photon reactions in emulsions, asymmetry ratio and differential cross sections in opening angle for electron pair production in, (E), 25:17364
photon reactions with, single-difference unfolding method for measuring cross sections for, 25:17624
polarization of, effects of electron resonance saturation on dynamic, (T), 25:17310
proton inelastic scattering by octupole and quadrupole levels of even--even medium-weight, at 11 MeV, 25:17996
proton inelastic scattering by, effect of L-S interaction on, (T), 25:18026
proton inelastic scattering by, spectroscopic factors from isobaric analog resonances in, 25:17973
proton reactions (p,2p) at 600 MeV, magnet--spark chamber system for studying, 25:17619
proton reactions with, review of diffractive processes in, (T), 25:17501
resonances in, baryon, (T), 25:18000
rotational energy of deformed, (T), 25:18014
triton elastic scattering at 10 to 40 MeV by A = 40 to 210, optical-model analysis of, (E/T), 25:17823
triton elastic scattering by, calculation of optical potentials for, 25:17987

NUCLEI (CELLS)
radiation effects on membrane permeability of, protective effects of esculamine against, 25:16226
radioisotope uptake by, in intestinal mucosa of chickens, calcium-45 and strontium-85, 25:16002 (ORO-678, pp 94-101)

NUCLEIC ACID, DEOXYRIBO-
effects on RNA synthesis in liver of irradiated rats, 25:16027
macromolecular structure of, effects of chemical modifications on, 25:18279 (CU-3957-10)
radiation effects on base ratios of, in bacteria exposed to sunlight, uv, 25:16383(R) (UCB-34-P-156-X-2)
radiation effects on biological and physical properties of, from disintegration of incorporated phosphorus-32 or tritium, 25:16048
radiation effects on content in bone marrow and spleen of rats, protective effects of mumie against x, 25:16231
radiation effects on content of, in organs of rats, effects of prenatal exposure on, 25:16309 (ORO-678, pp 7-13)
radiation effects on incorporation of of phage phie, into spores of Bacillus subtilis, effects of phosphorus-32 decay on electron, 25:16386
radiation effects on rate of synthesis of, in cultured cells, x, 25:16279 (NIRS-9, pp 15-53)
radiation effects on, in bacterial and mammalian cells, autoradiography studies on, 25:15992
radiation effects on, of Micrococcus radiodurans, dose fractionation of degratory, 25:16385
radioinduced electrical conductivity in films of, x, 25:16036
radioinduced inactivation of bacteriophage, fast proton, 25:16387
radioinduced single and double breaks in, of mammalian cells, effects of hydrated electrons, hydroxyl radicals, and hydrogen atoms on x, 25:16217 (UR-49-1389)
radioinduced strand breaks in bacteriophage, effects of LET on charged particle, 25:16043

NUCLEIC ACID, RIBO-
radiation effects on content in bone marrow and spleen of rats, protective effects of mumie against x, 25:16231
radiation effects on synthesis of, in liver of rats, effects of calf thymus, dactinomycin, histones, and trypsin on, 25:16027
radioinduced inactivation of bacteriophage, fast proton, 25:16387
synthesis by chick embryo cells following infection with uv-irradiated Newcastle Disease Virus, 25:16054

NUCLEONS
correlations from electron elastic and quasi-elastic scattering by helium-4 at high energies, short-range nucleon-nucleon, 25:17421 (LNF-70/47)
coupling constant for πN, model Hamiltonian for, 25:17546
density in nuclei, corrections for oscillations in

XUM

calculations of, 25:17961
exchange between two identical nuclear cores, interaction induced by, (T), 25:17994
form factors for rho production, axial-vector, (T), 25:17456
interactions at very high energies, fireball model with N* excitation and particle anisotropy from pionization process in, (T), 25:17473
interactions e + N + e + hadrons in dispersion-theoretic models, Bjorken limit and scaling behavior of structure functions for, 25:17430
interactions e + N, models with isobar resonances for deep inelastic, (T), 25:17442
interactions γ + N + K(π) + Λ(Δ), Stichel theorem for, (T), 25:17439
interactions γ + N + π + N, Stichel theorem for, (T), 25:17439
interactions γ + N + ω(1060)(eta(1070)) + N, Stichel theorem for, (T), 25:17439
interactions γ + N, Stichel theorem for pseudoscalar meson production in, (T), 25:17439
interactions K + N + K* + N, production of D- and S-wave Z* resonances near 1830 MeV in, (T), 25:17504
interactions K + N, cross-channel isospin analysis of peripheral single ω production in, (T), 25:17490
interactions K + N, cross-channel isospin analysis of peripheral single rho production in, (T), 25:17490
interactions μ+ + N at high energies, total cross sections for W production in, (T), 25:17453 (COO-1573-73)
interactions N + N + N + N + γ, review of, (E/T), 25:17372 (UCD-CNL-EX-130)
interactions N + N + N* + N(N*) below 3 GeV, isobar model for angular distributions for phenomenological Δ(1236) production in, (T), 25:17517 (ORNL-TM-3132)
interactions N + N at high energies, straight-line particle paths approximation for functional integration in quantum field theory for meson production in, (T), 25:17498 (JINR-E2-5217)
interactions N + N in heavy nuclei, review of Thomas--Fermi statistical approximation for meson theory of, (T), 25:17953(T) (BNL-tr-368)
interactions N + N in U(6,6) and chiral-dynamic models, one-pion-exchange and two-pion-exchange contributions to, 25:17520
interactions N + N in U(6,6) and chiral-dynamic models, phase parameters for, 25:17521
interactions N + N, cross-channel isospin analysis of peripheral single ω production in, (T), 25:17490
interactions N + N, cross-channel isospin analysis of peripheral single rho production in, (T), 25:17490
interactions N + N, review of effects on nuclear forces from, (T), 25:17953(T) (BNL-tr-368)
interactions N + N, velocity-dependent, 25:17998
interactions ν + N at high energies, total cross sections for W production in, (T), 25:17453 (COO-1573-73)
interactions ν + N + N* below 3 GeV, isobar model for angular distributions for phenomenological Δ(1236) production in, (T), 25:17517 (ORNL-TM-3132)
interactions ν + N at 1 to 8 GeV, single-particle exchange model for inelastic, (T), 25:17513
interactions ν + N at high energies, modified scaling law for large-angle elastic, 25:17512
interactions ν + N at low energies, model Hamiltonian for, (T), 25:17546
interactions π + N interactions at high energies, comparative evaluation of models for backward, (T), 25:17508
interactions ν + N, cross-channel isospin analysis of peripheral single ω production in, (T), 25:17490
interactions ν + N, cross-channel isospin analysis of peripheral single rho production in, (T), 25:17490
interactions ν + N, D-spin formalism for diffractive exotic hadron production in, (T), 25:17486 (COO-264-570)
interactions ν + N, dispersion relations and Pomeranchukon decoupling for amplitude of, 25:17511
interactions ν + N, effect on Regge parameters from phase shift ambiguity effects on finite-energy sum rules for amplitudes of, (T), 25:17500
interactions ν + N, finite-energy sum rules for Regge bootstraps for resonance production in, (T), 25:17503
interactions ν + N, fixed pole in partial-wave amplitude for, 25:17510
interactions ν + N, rigorous bounds on averaged cross sections for, (T), 25:17506
interactions with mesons, breaking of exchange degeneracy of vector and tensor trajectories for, 25:17509
interactions with vector mesons at high energies, straight-line particle paths approximation for functional integration in quantum field theory for elastic, (T), 25:17498 (JINR-E2-5217)
reactions and scattering in 4-particle system of, coupled channel Schroedinger equation model for, 25:17971
scattering by nuclei, microscopic analysis using optical potential, 25:18023
vertex πNN, (n-p) mass difference determination from radiative corrections to, (T), 25:17435

NUCLEOTIDES
radioinduced release of inorganic phosphate from solutions of deoxy-, comparison of protective effects of sulphydryl compounds against γ, 25:16216 (UCLA-12-799)

O

OBRIGHEIM POWER REACTOR (GERMANY)
radioactive effluents from, distribution in Necker River of, 25:18094 (NP-18622)

OCEANOGRAPHY
activation analysis in, conference on use of, Brussels, Belgium, June 17 to 22, 1968, 25:15535
activation analysis in, development of equipment and method at Ispra, Italy for, 25:15539

OOGENESIS
radiation effects on, in mammals, review of effects of age, species, and stage of growth of follicle on, 25:16102

OPTICAL SYSTEMS
design for beam--foil spectroscopy, 25:15974
performance of pantographic, for producing natural-size copies of x-ray tomograms for use in radiation dose planning for therapy, 25:16146

ORDNANCE MATERIEL
detection of land mine-type, evaluation of neutron-induced gamma radiation for, 25:15841 (ORNL-TM-3305)

ORES
analysis for tantalum by neutron activation and radiochemical separation, 25:15532
analysis of polymetallic, nonspectrometric gamma--gamma method for, 25:15527
analysis of processing intermediates of, for sulfur by beta-backscattering method, 25:15510(T) (AEC-tr-7196)

ORGANIC COMPOUNDS
analysis by elastic scattering of α particles, 25:15528
analysis for 28 elements by neutron activation and radiochemical separation, 25:15531
analysis for absolute carbon, 25:15489
analysis of labeled gas-phase, for carbon-14, sulfur-35, or tritium by beta counting, microchemical, 25:15520
electron microscopy of, radiation damage and image resolution in, 25:15971

ORGANIC COMPOUNDS, FLUORO-
radiolysis of liquid, mechanism and yields from γ and neutron, 25:15661(T) (BNL-tr-394)

ORGANIC COMPOUNDS, SELENO-
radioprotective effects in gamma irradiated rats, 25:16233

ORGANS
cesium-137 content of, in pregnant rabbits and rats following administration during pregnancy, 25:16024

OSMIUM
compounds of, magnetic properties of, effects of oxidation state on, 25:15562 (IS-2300, pp 21-89)
determination by catalytic method, 25:15490

OSMIUM ALLOYS AND SYSTEMS
Os--Zr-base, crystal lattice parameters of $Zr_{11}Os_4$, 25:17319
Os--Zr-base, superconducting transition temperature of, 25:17319

OSMIUM ISOTOPES Os-186
energy levels from variable-moment-of-inertia model, simultaneous analysis of ground-state rotational and γ-vibrational bands, (T), 25:17885
energy-level transitions in, relativistic Hartree--Fock calculations of K-shell internal conversion coefficients, L-subshell ratios, and second-order K- and L-shell particle parameters for, (T), 25:17916

OSMIUM ISOTOPES Os-188
energy levels from Coulomb excitation, static electric-quadrupole moments for first 2+, (E/T), 25:17908
energy levels of, g-factors for 2+, (E), 25:17900
energy-level transitions from Coulomb excitation, probabilities for E2, (E/T), 25:17908
energy-level transitions in, relativistic Hartree--Fock calculations of K-shell internal conversion coefficients, L-subshell ratios, and second-order K- and L-shell particle parameters for, (T), 25:17916

OSMIUM ISOTOPES Os-190
energy levels from Coulomb excitation, static electric-quadrupole moments for first 2+, (E/T), 25:17908
energy levels of, g-factors for 2+, (E), 25:17900
energy-level transitions from Coulomb excitation, probabilities for E2, (E/T), 25:17908

OSMIUM ISOTOPES Os-192
energy levels from Coulomb excitation, static electric-quadrupole moments for first 2+, (E/T), 25:17908
energy levels of, magnetic moments of first 2+, (E), 25:17859 (COO-1746-53)
energy-level transitions from Coulomb excitation, probabilities for E2, (E/T), 25:17908
energy-level transitions in, relativistic Hartree--Fock calculations of K-shell internal conversion coefficients, L-subshell ratios, and second-order K- and L-shell particle parameters for, (T), 25:17916
neutron reactions (n,2n) at 12 to 18 MeV, total cross sections and isomeric cross-section ratios for, (E), 25:17946

OSMIUM ISOTOPES Os-193
beta decay of, gamma--gamma coincidences and iridium-193 energy levels in, (E), 25:17925

XUM

OSTEICHTHYES
Carassius auratus, radiation effects on uptake of tritium-labeled thymidine by intestinal cells in, effects of cysteamine on x, 25:16279 (NIRS-9, pp 15-53)
Chasichthys gulosus, radiation effects on function of nervous system in, uv, 25:16279 (NIRS-9, pp 15-53)
development of Savannah River, effects of reactor effluents on, 25:18225 (TID-25634)
Euynnis japonicus, radioisotope uptake and retention by, cesium-137 and strontium-85, 25:15998 (NIRS-9, pp 63-82)
Lateolabrax japonicus, radioisotope uptake and retention by, cesium-137 and strontium-85, 25:15998 (NIRS-9, pp 63-82)
Misgurnus fossilis, radioinduced mutations in eggs of, following incubation in solutions of strontium-90 and yttrium-90, effects of development stage on β, 25:16093
Mystus vittatus, radiation effects on thyroid activity of, effects of dose on x, 25:16332
Oncorhynchus tshawytscha, effects of temperature on development of eggs and young of, in Columbia River, 25:18264 (BNWL-1538)
Oplegnathus fasciatus, radioisotope uptake and retention by, cesium-137 and strontium-85, 25:15998 (NIRS-9, pp 63-82)
radioisotope content of marine, in Amchitka, Alaska,, 25:16073(R) (BMI-171-113)
radioisotope content of, in Amchitka Island, Alaska, cesium-137, potassum-40, and strontium-90, 25:16072(R) (BMI-171-110)
Tilapia aurea, radiation effects on growth and reproduction of, effects of dose on γ, 25:16326
OTTAWA RIVER
radioactive waste disposal in, evaluation of environmental contamination from, 25:16156
OTTERS
population dynamics of, in Amchitka, Alaska, development of model for, 25:16074(R) (BMI-171-118)
radioisotope content of, in Amchitka Island, Alaska, cesium-137, potassum-40, and strontium-90, 25:16072(R) (BMI-171-110)
OTTO HAHN REACTOR
construction during 1968, 25:18223(R) (EUR-4487)
operations during 1968, 25:18223(R) (EUR-4487)
OVARIES
radiation effects on, of rats, effects of dose and dose rate on γ, 25:16310 (ORO-678, pp 25-7)
radiation effects on, of sheep, effects of, on efficacy of luteinizing hormone for prolonging life span of corpus luteum, x, 25:16324
1,3,4-OXADIAZOLE, 2-(4-BIPHENYLYL)-5-(4'-tert-BUTYLPHENYL)-, properties with naphthalene in dioxane for scintillation counting of animal tissues, 25:15529
OXIDES
diffusion in, bibliography and data tabulations on, 25:16514
OXYGEN
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
binding by subunits of human hemoglobin, effects of deuterium oxide on, 25:16045
desorption from tungsten surfaces, measurements of flash, 25:16472
determination by alpha, deuteron, helium-3, or proton activation, method for, 25:15556
determination by alpha, helium-3, or proton irradiation, activation curves for, 25:15555
determination by photon activation, 25:15553
determination in iodine compounds by photoactivation, 25:15534
diffusion in carbon-containing hyperstoichiometric uranium dioxide, mechanism of thermal, 25:16587
diffusion in uranium dioxide at 925 to 1425°C, oxygen-18 (p,γ) reaction study of self-, 25:16581
diffusion in yttrium oxide at 850 to 1100°C, kinetics of, 25:16569 (IS-2300, pp 1-5)
effects of dissolved, on corrosive reactions of sodium with Inconel, 25:16398 (IS-2300, pp 101-86)
effects of partial pressure of, on sputtering of tantalum in argon--oxygen mixtures, 25:16497
effects of reduced-pressure, on ignition of plutonium and plutonium alloys, 25:16442 (RFP-1566)
effects on fast neutron radiosensitivity of seeds of barley and rice, 25:16376 (ORO-678, pp 135-51)
effects on fission neutron radiosensitivity of barley seeds, 25:16376 (ORO-678, pp 135-51)
effects on mechanical properties of monocrystalline niobium, 25:16482
effects on mechanical properties of rhenium--tantalum alloy and monocrystalline tantalum at 4.2 to 550°K, 25:16478
effects on radiosensitivity and survival of Escherichia coli in freezing medium, 25:16384
effects on sensitivity of human kidney tissue, to helium ion beams, use of phantoms for studies on, 25:16142 (UCRL-20190)
effects on tensile properties of vanadium at -60 to +27°C, 25:16504
emission structure of auroral, effect of solar flare-associated magnetic storm and commencement of polar substorm on, (E), 25:16968
intensity of atmospheric O I 4278-A, relation to N_2^+ first negative bands, (E), 25:17039
photo-ionization of metastable molecular, effect of carbon dioxide absorption on D-region, (E/T), 25:16954
radiation effects on sorption by magnesium oxide, proton, 25:16619
reactions of gaseous, with molten zirconium at high temperatures, free fall method for studying kinetics of, 25:16460
reactions with cadmium--silver solid solution at 600 to 800°C, study of microstructure from internal oxidation, 25:16406
reactions with electron and hydroxyl group adducts in radiolysis of aqueous thymine solutions, 25:15674
reactions with evaporated monocrystalline tantalum films in electron microscope, oxidation, 25:16401 (AD-711634)
reactions with pyrolytic graphite, effects of temperature on, 25:16559(R) (NYO-1710-100)
reactions with thorium nitrides at 340 to 480°C at 0.20 atm pressure, 25:16560
relaxation strength in annealed and oxidized vanadium, internal friction study of, 25:16481
sorption by graphon, effects of pressure and temperature on, 25:16559(R) (NYO-1710-100)
sticking probability on rhenium filaments at 298 and 1000°K, 25:16449
OXYGEN IONS
abundance of lower ionospheric molecular, relation of corpuscular ionizing radiation to, (E/T), 25:16905
detection of O VI doublet in spectra of stars and planetary nebulae, (E), 25:16642
ionization rate in plasma, collisional, (E), 25:17163
radio emission from O VII in solar corona, (E), 25:16688 (AD-713112)
scattering by gadolinium-154 at 36 MeV, inelastic, (E), 25:17900
OXYGEN IONS (O^+)
density at 100 to 450 km in nighttime ionosphere, (E/T), 25:17036
reactions with carbon foils at 100 to 500 keV, equilibrium charge distributions from, (E), 25:16758
OXYGEN IONS (O_2^+)
density at 100 to 450 km in nighttime ionosphere, (E/T), 25:17036
production in D region from metastable oxygen photo-ionization, effect of carbon dioxide absorption on, (E/T), 25:16954
OXYGEN ISOTOPES O-15
energy levels of, weak coupling calculation for positive-parity, (T), 25:17980
OXYGEN ISOTOPES O-16
alpha reactions (α,2α) at 55 MeV, analysis for quasi-elastic mechanism in, (E), 25:17760
alpha reactions (α,γ) at 0.85 to 1.8 MeV, excitation functions for, (E), 25:17737
alpha reactions at 32 MeV, excitation function for fluorine-18 production in, (E), 25:17738
energy levels from proton inelastic scattering, spin--parity assignments for, (E/T), 25:17735
energy levels from three-, four-, and five-nucleon transfer reactions, (E), 25:17756
energy levels in, four particle--four hole, (T), 25:17989
Hartree--Fock calculations for, parity-mixed, 25:17992
Hartree-Fock calculations for, 25:17998
helium-3 reactions at 35 MeV, excitation function for fluorine-18 production in, (E), 25:17738
interactions with oxygen-16, determination of potential using two-center shell model, (T), 25:17717
meson (μ) capture by, effects of deformed components in the ground-state wave function on rate of, (T), 25:17722
neutron elastic scattering at 14 MeV, optical-model analysis of, (E), 25:17740
nuclear binding energy, charge radius, and quadrupole moments of, Hartree--Fock calculation of, (T), 25:17727
proton elastic and inelastic scattering at 21.25 to 38.50 MeV, optical-model and coupled-channels analysis of angular distributions and excitation functions from, (E/T), 25:17735
proton reactions (p,α), (p,d), and (p,t) at 21.25 to 38.50 MeV, excitation functions for, (E/T), 25:17735
proton reactions (p,He-3) and (p,t) at 49.5 MeV, effects of beam polarization on differential cross sections for, (E), 25:17715
reactions (O-16,f) with samarium-154 at 137 MeV, total cross sections and fragment angular distributions from, (E), 25:17860 (CU-1019-76)
reactions with chromium-52, compound-nucleus decay in, (E), 25:17824
reactions with gold-197 and thorium-232 at 137 MeV, differential cross sections for formation of light-element isotopes by nucleon exchange in, (E), 25:17891
reactions with gold-197 at 5 to 10 MeV/nucleon, production of spontaneously fissioning isomers by, (E), 25:17924
scattering by carbon-12, nucleon exchange in, (T), 25:17994

XUM

scattering by palladium-106 and -110 at 25 and 30 MeV, gamma and oxygen-16 angular distributions and attenuations of gamma distributions from inelastic, (E/T), 25:17910
scattering by palladium-108 and -110 and cadmium-110 at 2.8 to 42 MeV, gamma spectra from inelastic, (E), 25:17893
scattering by platinum isotopes at 35 and 41 MeV, gamma energy and angular distributions from inelastic, (E), 25:17904
OXYGEN ISOTOPES O-17
energy levels from neon-20 (n,α) reactions at 14 MeV, (E), 25:17818
energy levels from nitrogen-15 (He-3,p) reactions, 2p-1t, (E), 25:17754
proton reactions (p,He-3) and (p,t) at 39.8 MeV, DWBA analysis of, (E/T), 25:17710
OXYGEN ISOTOPES O-18
interactions with oxygen-18, determination of potential using two-center shell model, (T), 25:17717
proton reactions (p,γ) at 1.085 MeV, use to measure oxygen self-diffusion in uranium dioxide, 25:16581
proton reactions (p,He-3) and (p,t) at 39.8 MeV, DWBA analysis of, (E/T), 25:17710
OXYGEN SYSTEMS
Eu--Mo--O, crystal structure of $EuMoO_3$ and $Eu_2Mo_2O_7$, 25:16603
Eu--O--W, crystal structure of $EuWo_4$ and Eu_6WO_{12}, 25:16603
H--O, properties of premixed flames of, for use in flame spectroscopy, 25:15562 (IS-2300, pp 21-89)
Nd--O--Zr, phase studies of, 25:16601
O--U, thermodynamic properties at 300 to 1300°K, 25:16579
O--V, phase studies of, 25:16398 (IS-2300, pp 101-86)
OYSTER CREEK POWER REACTOR, UNIT 1
operations incident of December 18, 1970, surveillance test failure of vacuum breaker block valves, 25:18062 (DOCKET-50219-122)
startup of, test program for, 25:18069
steam condensate treatment system for, performance of, 25:18046
OZONE
determination in presence of nitrogen using time-of-flight spectrometer, 25:15977

P

PACKAGING
effects on fission neutron radiosensitivity of barley seeds, 25:16376 (ORO-678, pp 135-51)
leak tightness of, for radioactive materials, comparison of methods for testing, 25:15871
PAIR PRODUCTION
research in γ + e interactions and γ reactions with nuclei at 2.62 MeV, streamer chamber, (E), 25:17363
PAKISTAN
nuclear power plant construction in, planning for, 25:18050
PALISADES POWER REACTOR
design features of, 25:18041
PALLADIUM
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
photoelectric work function of, (E), 25:17299
radiation effects on chromium carbonyl and, reactions of recoil molybdenum from proton, 25:15717
recovery from alkaline waste from Purex Process using activated charcoal, 25:15720 (ARH-1552)
PALLADIUM ALLOYS AND SYSTEMS
Ag--Pd, electric conductivity of, 25:16398 (IS-2300, pp 101-86)
Au--Pd, electric conductivity of, 25:16398 (IS-2300, pp 101-86)
Pd--Pu--Rh--Ru--U, occurrence of inclusions of, in irradiated plutonium carbide--uranium carbide, 25:16541
PALLADIUM ISOTOPES Pd-102
neutron reactions (n,2n) at 12 to 18 MeV, total cross sections and isomeric cross-section ratios for, (E), 25:17946
PALLADIUM ISOTOPES Pd-106
energy levels from Coulomb excitation, static quadrupole moments for 2+, (E/T), 25:17910
oxygen-16 inelastic scattering at 25 and 30 MeV, gamma and oxygen-16 angular distributions and attenuations of gamma distributions from, (E/T), 25:17910
sulfur-32 inelastic scattering at 55 and 56 MeV, gamma and sulfur-32 angular distributions and attenuations of gamma distributions from, (E/T), 25:17910
PALLADIUM ISOTOPES Pd-108
alpha inelastic scattering at 7 to 10 MeV, gamma spectra from, (E), 25:17893
energy levels from alpha and oxygen-16 inelastic scattering, (E), 25:17893
oxygen-16 inelastic scattering at 28 to 42 MeV, gamma spectra from, (E), 25:17893
PALLADIUM ISOTOPES Pd-110
alpha inelastic scattering at 7 to 10 MeV, gamma spectra from, (E), 25:17893
energy levels from alpha and oxygen-16 inelastic scattering, (E), 25:17893
energy levels from Coulomb excitation, static quadrupole moments for 2+, (E/T), 25:17910
neutron reactions (n,2n) at 12 to 18 MeV, total cross sections and isomeric cross-section ratios for, (E), 25:17946
oxygen-16 inelastic scattering at 25 and 30 MeV, gamma and oxygen-16 angular distributions and attenuations of gamma distributions from, (E/T), 25:17910
oxygen-16 inelastic scattering at 28 to 42 MeV, gamma spectra from, (E), 25:17893
sulfur-32 inelastic scattering at 55 and 56 MeV, gamma and sulfur-32 angular distributions and attenuations of gamma distributions from, (E/T), 25:17910
PANCREAS
radiodiagnosis of diseases of, effectiveness of selenium-75-labeled methionine scanning for, 25:16245
PAPER
radiation effects on properties of, γ, 25:15651
PARAFFIN
density of, measurement by gamma backscatter, 25:15858
neutron attenuation at 0.5 to 18 MeV, 25:17257 (NIRS-9, pp 1-14)
PARATHYROID GLANDS
uptake of tritium-labeled neutral red and toluidine blue by, of dogs, 25:16017
PARTICLES
fields on homogeneous space of Poincare group for, 25:17532
interactions of massive, with gravitational fields, asymptotic states for, (T), 25:17578
phase shifts for, complex vector parameter of Lorentz group for, (T), 25:17524
radioactive, contamination of air by, relation of, to contamination of surfaces, 25:16117
size distribution of beta emitting dust, use of autoradiography for determining, 25:16122
symmetry for free nonrelativistic, relation to canonical formalism for class of solvable Lie groups in, 25:17534
symmetry for relativistic free, spectrum-generating nilpotent Lie group in, 25:17536
symmetry for, fields on homogeneous space of Poincare group in, 25:17532
PEACH BOTTOM POWER REACTOR, UNIT 1
control rods for Core 2, reactivity worth measurements of, 25:18063(R) (GA-10400)
coolant purification system for, performance of helium, 25:18063(R) (GA-10400)
operations during August to October 1970, 25:18063(R) (GA-10400)
operations history for December 1970, 25:18061 (DOCKET-50171-77)
physics measurements for Core 2, 25:18063(R) (GA-10400)
PENICILLAMINE
effects on renal clearance of mercury-203-labeled chlormerodrin in man, 25:16253
PENNSYLVANIA
radioisotope content of Kiskiminetas and Susquehanna Rivers of, effects of coal mining on, 25:16185
PENTACENE
inhalation for removal of deposited plutonium-239, effectiveness of, 25:16113(T) (AEC-tr-7172)
PENTANE, 3-METHYL-
radiolysis at -196°C, effects of chloromethanes and electron scavengers on hydrogen yields from γ, 25:15686
2,4-PENTANEDIONE
complexes with erbium and methanol, structure of, 25:15626(R) (ORO-2124-23)
complexes with iron, radiation effects on Moessbauer line widths for, γ, 25:15647
2,4-PENTANEDIONE, 1,1,1,5,5,5-HEXAFLUORO-
complexes with lanthanum, structure of, 25:15626(R) (ORO-2124-23)
2-PENTANONE, 4-METHYL-
separation from water-soluble compounds of niobium and tantalum by steam distillation, 25:15746(P)
1-PENTENE, 3,3,4,4,5,5,5-HEPTAFLUORO-
radioinduced polymerization of, effects of pressure and temperature on γ, 25:15649
PENTOSANS
effects of SP 54 on Agar-binding reactions in human leukemias and neoplasms, 25:16047
PEPTIDES
polymers, radiolysis in aqueous oxygen-saturated solutions, 25:15672
PERCHLORIC ACID
radiolysis of stored aqueous solutions of, by plutonium, gas evolution from, 25:15660(T) (AEC-tr-7217)
acetic acid--chloroacetic acid--HCl--$HClO_4$, performance in electrolytic polishing of zirconium and zirconium alloys, 25:16427(P)
PERIODATES
separation from xenon oxides by thin-layer chromatography, 25:15693
PERIODIC SYSTEMS
arrangement of actinides and rare earths in revised,

25:15563(T) (UCRL-Trans-10510)
PERSONNEL
certification requirements for weldment, in industrial radiography, 25:16111
plutonium-239 contamination of, review of treatment of, 25:16004 (RT/PROT-(70)10)
protection against hazards of tritiated water, 25:16195 (CEA-Bib-179)
radiation dose to Japanese, estimation of genetically significant, 25:17257 (NIRS-9, pp 1-14)
radiation dose to tissues of, following internal radioisotope contamination, ICRP report on, 25:16148
radiation dose to, review of maximum permissible, 25:16115 (NP-18513)
radiation dose to, review of maximum permissible x, 25:16135 (NP-18514)
radiation dose to, use of changes in blood cells for measurement of low-dose ionizing, 25:16189
radiation hazards to, from electronic equipment and radioactive materials, survey of role of federal agencies in establishing or enforcing safety standards for control of, 25:16202 (BRH/DEP-70-28)
radiation hazards to, of uranium mines, radon, 25:16120
radiation protection of factory, handling promethium-147 and tritium, 25:16204
radiation protection of, against helium-neon gas lasers, 25:16199
radioisotope metabolism and retention in tissues of, following internal contamination, ICRP report on mathematical parameters for, 25:16148
training in decontamination procedures in postattack situations, guidelines for, 25:16112(R) (AD-711972)
training programs for radiological health, institutions offering federal grant-supported, 25:16193 (BRH/OBD-70-2)
PERTURBATION THEORY
density matrices for, formalism of reduced, 25:17334
PETROLEUM
prospecting for, use of natural gamma radiation measurements for, 25:15768
PHAEOPHYTA
radioisotope content of, in Amchitka, Alaska, 25:16073(R) (BMI-171-113)
PHANTOMS
development of human child head tissue equivalent, for measurement of dose of x radiation to brain, eyes, and thyroid during therapy of tinea capitis, 25:16130 (BRH/DBE-70-4)
neutron dosimetry in slab, for calculation of equivalant doses and quality factors in relation to protection, 25:16191
radiation dose distribution in chest and pelvis, for studies on rotational radiation for therapy, 25:16149
radiation dose distribution in water, calculations for 1250 keV photons, 25:16145
radiation dosimetry in graphite, calculations for 1250 keV photons, 25:16145
use of Lucite, for measurements of biological effectiveness and oxygen enhancement ratio at different depths for 910-MeV helium ion beams, 25:16142 (UCRL-20190)
PHOSGENE
reactions with niobium oxychloride in tube-flow reactor, kinetics of chlorination, 25:15561 (IS-2300, pp 7-20)
PHOSPHATES
radioinduced release of inorganic, from solutions of deoxynucleotides, comparison of protective effects of sulphydryl compounds against γ, 25:16216 (UCLA-12-799)
PHOSPHINE OXIDE, TRIOCTYL-
solvent properties for uranyl compounds, NMR studies of effects of anions on, 25:15739
PHOSPHINE OXIDE, TRIPHENYL-
complexes with cerium nitrates and thorium nitrates, crystal and molecular structure of, 25:15636
reactions with metal pentabromides or pentachlorides in anhydrous ethanol, acetonitrile, or dichloromethane, 25:15577
PHOSPHINE, TRIPHENYL-
effects on retention of nickel-65 recoil in neutron-activated nickel carbonyl, 25:15712
PHOSPHONIC ACID, METHYL-, DIISOPENTYL ESTER
solvent properties for uranyl compounds, NMR studies of effects of anions on, 25:15739
PHOSPHORIC ACID, ALKYL ESTERS
solvent properties for metals, 25:15742
PHOSPHORIC ACID, ARYL ESTERS
solvent properties for metals, 25:15742
PHOSPHORIC ACID, BIS(2-ETHYLHEXYL) ESTER
solvent properties for americium, 25:15741
solvent properties for cerium, 25:15740
bis(2-etylhexyl) phosphate--TBP, solvent properties for thorium, 25:15738
PHOSPHORIC ACID, OCTYL ESTER
solvent properties for europium, 25:15742
PHOSPHORIC ACID, TRIBUTYL ESTER
complexes with uranyl nitrate, recovery of uranium from, by distillation and ignition, 25:15750(P)
solvent properties for uranyl compounds, NMR studies of effects of anions on, 25:15739
bis(2-etylhexyl) phosphate--TBP, solvent properties for thorium, 25:15738
dodecane--TBP, solvent properties for ruthenium as nitrosyl complex, 25:15725 (NP-18656)
PHOSPHORUS
abundance in 112 Her AB, (E), 25:16645
determination in beryllium oxide and iron, effects of spark duration on relation sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
PHOSPHORUS IONS
implantation in metal films at 45 and 90 keV, effects on electromigration and resistivity ratio, 25:17282
PHOSPHORUS ISOTOPES P-29
energy levels of, lifetimes from Doppler-shift attenuation for, (E/T), 25:17821
energy-level transitions in, single-particle-model, shell-model, and Nilsson-rotational-model analysis of matrix elements for, (E/T), 25:17821
nuclear deformation parameter from rotational-model analysis of, (E/T), 25:17821
PHOSPHORUS ISOTOPES P-30
energy level at 0.709 MeV from aluminum-27 (α,n) reactions, lifetime of, (E), 25:17750
energy levels from aluminum-27 (α,n) reactions at 65 MeV, lifetimes of excited, (E), 25:17777
PHOSPHORUS ISOTOPES P-31
deuteron reactions (d,nγ) at 4.0 MeV, gamma and neutron spectra from, (E), 25:17851
proton elastic scattering at 3.150 to 3.300 MeV, excitation functions and angular distributions from, (E), 25:17774 (NP-18623)
proton inelastic scattering at 3.150 to 3.300 MeV, excitation functions for, (E), 25:17774 (NP-18623)
proton reactions (p,α) a 5.8 to 11.5 MeV, cross sections and α angular distributions from, (E), 25:17726
proton reactions (p,α) and (p,γ) at 3.150 to 3.300 MeV, excitation functions for, (E), 25:17774 (NP-18623)
proton reactions (p,γ) with, angular distributions and excitation functions for, (E), 25:17853
PHOSPHORUS ISOTOPES P-32
decay of, effects on incorporation of electron-irradiated phage into spores of Bacillus subtilis, 25:16386
determination in colored plant extracts by Cherenkov counting, 25:15517
effectiveness for diagnosis of gastric diseases following intravenous injection of sodium diphosphate radiometric studies on, 25:16251
effects of disintegration of incorporated, on biological and physical properties of DNA, 25:16048
radiation effects on uptake of, by lichens, γ, 25:16374(R) (COO-2085-1)
use for labeling fertilizers for uptake studies on maize, 25:15986 (STI/DOC-10/121)
PHOSPHORUS OXIDES
effects on radiosensitivity of Micrococcus radiodurans, combined effects of time and temperature on, 25:16385
PHOSPHORYLASE KINASE
radiation effects on activity of, in liver of rats, x, 25:16025 (AD-713087)
PHOTOMULTIPLIER TUBES
operation and performance for photon detection in beam-foil spectroscopy, 25:15973
PHOTONS
detection of neutron-induced, feasibility of locating land mines by, 25:15841 (ORNL-TM-3305)
dose rate calculations for 1250 keV, in graphite and water phantoms, 25:16145
dosimetry above 10 keV, tissue-equivalent pocket proportional detector for, 25:15948 (CEA-N-1393)
interactions γ + d → p + n, parity-violating internucleon potential for, (T), 25:17545
interactions γ + e at 2.62 MeV, streamer chamber study of pair production in, (E), 25:17363
interactions γ + γ → π + π, kinematics and cross sections for, (T), 25:17492
interactions γ + γ at high energies, method for measuring total cross sections of, (T), 25:17436
interactions γ + γ at high energies, total summation of perturbation series for forward, (T), 25:17499 (JINR-E2-5509)
interactions γ + K at high energies, method for measuring total cross sections for, (T), 25:17436
interactions γ + N → K(π) + Λ(Δ), Stichel theorem for, (T), 25:17439
interactions γ + N → π + N, Stichel theorem for, (T), 25:17439
interactions γ + N → π(1060)(eta(1070)) + N, Stichel theorem for, (T), 25:17439
interactions γ + N, Stichel theorem for pseudoscalar meson production in, (T), 25:17439
interactions γ + p → eta + p at 0.8 to 1.1 GeV, counter-spark chamber study of recoil proton polarization in, (E), 25:17354
interactions γ + p → K⁺ + Λ(I⁰) at 1.19 to 1.68 GeV, differential cross sections for, (E), 25:17361
interactions γ + p → K⁺ + Λ(I⁰) at 5 to 16 GeV, duality and Regge cuts in model for, 25:17424
interactions γ + p → n + π⁺ at 320 and 345 MeV, model for, 25:17425
interactions γ + p → ω + p near threshold, spark chamber and scintillation counter study of differential cross sections and ω spin polarization in, (E), 25:17355

XUM

interactions γ + p → p + eta at 1.22 to 1.85 GeV at small angles, Cherenkov counter hodoscope study of interference between $S_{11}(1550)$ and $P_{11}(1785)$ in differential cross sections for, (E), 25:17358
interactions γ + p → p + π^0 at 320 and 360 MeV, model for, 25:17425
interactions γ + p → p + π^0 + p at 0.65 to 1.375 GeV, counter--spark chamber system study of recoil proton polarization in, (E), 25:17356
interactions γ + p → π^+ + π^- + p at 2.8 and 4.7 GeV in hydrogen bubble chamber, conservation of s-channel helicity and natural parity exchange in rho^0 production in, (E), 25:17359
interactions γ + p at high energies, total summation of perturbation series for forward, (T), 25:17499 (JINR-E2-5509)
interactions γ + p, fixed pole at J = 0 in Compton, 25:17448
interactions γ + π → rho^0 + π, parametrization correlating s-channel helicity conservation and mass-dependent phenomena in, (T), 25:17485
interactions γ + π at high energies, method for measuring total cross sections for, (T), 25:17436
interactions with hadrons, review of ω--rho interference in hadron production in, (E), 25:17383
interactions with hadrons, s-helicity conservation in rho^0 production in, 25:17429
production in N + N → N + N + γ interactions, review of, (E/T), 25:17372 (UCD-CNL-EX-130)
production in p + p → p + p + γ interactions, proton electromagnetic structure effects on cross sections for, (T), 25:17519
reactions (γ,n) and (γ,2n) with gold-197 at 0.3 to 1 GeV, yields from, (E), 25:17357
reactions (γ,n) and (γ,p) with carbon-12, leading to low-lying mass-11 states, continuum calculation of, (T), 25:17729
reactions (γ,n) with light nuclei, mesonic contributions to, (T), 25:17957 (LUNP-7010)
reactions (γ,xn) with lead-208, niobium-93, strontium-, and yttrium-89, cross sections for, (E), 25:17932
reactions with beryllium at 15 GeV, high-mass dipion pair production in, (E), 25:17433
reactions with carbon, spectrometer study of ω → 2π decay from rho--ω interference in, (E), 25:17360
reactions with deuterium, helium-3, and helium-4, survey of research on, 25:18022
reactions with nuclei at 2.62 MeV, streamer chamber study of pair production in, (E), 25:17363
reactions with nuclei at high energies in emulsions, cross sections for triplet production in, (E), 25:17362
reactions with nuclei in emulsions, asymmetry ratio and differential cross sections in opening angle for electron pair production in, (E), 25:17364
reactions with nuclei, single-difference unfolding method for measuring cross sections for, 25:17624
spin formalism in quantum electrodynamics, (T), 25:17572
transport in reactors, numerical solution of linear integral Boltzmann equation for, (T), 25:18231

PHOTOSPHERE
abundances of iron and nickel in, (E), 25:16713
eruptions in, (E), 25:16707

PHYSICAL CHEMISTRY
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)

PHYSICAL CONSTANTS TESTING REACTOR
neutron cross section evaluation in, use of Fast Neutron Cavity for, 25:18098(R) (BNWL-1522-1)

PIGMENTS
radiation effects on content of, in lichens, effects of dose on γ, 25:16374(R) (COO-2085-1)

PINCH DEVICES
neutron production in dense deuterium focus, model for, 25:17205 (AD-712692)

PINCH EFFECT
skin effect in conductivity of turbulent z discharges, (E), 25:17201

PIPERONYL BUTOXIDE
effects on toxicity of malaoxon or malathion respectively to adult house flies x-irradiated as pupae, synergistic and inhibitory, 25:16286

PIPES
design requirements for high pressure and high temperature systems, for water cooled power reactors, 25:18131
development in Japan for liquid metal cooled fast breeder reactor cooling system, 25:18132
mechanical properties of reactor primary cooling system, design requirements for, 25:18255
mechanical properties of reactor primary cooling system, design requirements for, 25:18254
mechanical properties of reactor primary cooling system, design requirements for, 25:18253
mechanical properties of reactor primary cooling system, design requirements for, 25:18256

PLACENTA
cesium-137 content of, in rabbits and rats following administration to mother, 25:16024
radioisotope content of, of rats following subcutaneous injection into mother, calcium-47, cesium-134, and strontium-85, 25:16000 (ORO-678, pp 14-24)

PLACER DEPOSITS
radioisotope content of Los Alamos, N. Mex. area stream bed, plutonium-238 and plutonium-239, 25:15762 (LA-4561)

PLANETARY NEBULAE
classification of symmetrical, morphological, (T), 25:16665
formation in highly evolved stars, (T), 25:16656
spectra of, detection of O VI doublet in, (E), 25:16642

PLANETS
atmosphere of, ionization of cosmic and solar radiations in, (T), 25:16738
formation of, (T), 25:16690
ionosphere of, ionization of cosmic and solar radiations in, (T), 25:16738
Kepler problem for, classical scalar fields theories for relativistic, (T), 25:17549

PLANKTON
production in North Pacific Ocean, 25:18304 (RLO-1725-187)

PLANTS
age of woody, carbon-14 method for estimation of, 25:15771
analysis for calcium and strontium-90, radiochemical, 25:15513 (HASL-239, pp I.23-57)
analysis of aquatic, for trace amounts of cesium, cobalt, manganese, scandium, and zinc by neutron activation, 25:15540
ecology of, at Amchitka Island, Alaska, effects of Milrow underground explosion on, 25:16079 (NVO-79, pp 49-71)
fission product uptake by, effects of soil conditions and seed characteristics on, (E), 25:15764 (ORO-678, pp 124-5)
radioisotope content of, in Greenland during 1969, 25:16080(R) (RISO-222)
separation of strontium-90 from, evaluation of methods for, 25:15753

PLASMA
bibliography on, 25:17119
bibliography on, 25:17120
boundary sheath in positive column discharges, (T), 25:17178
boundary sheath of, ion acceleration in, (E/T), 25:17147
capacitor immersion in collisionless, Bernstein mode excitation by plane grid, 25:17238
charged-particle acceleration in weakly turbulent, (T), 25:17182
charged-particle beam interactions with magnetized, parametric, (T), 25:17170
charged-particle beam interactions with magneto-, excitation of surface waves in, (T), 25:17189
charged-particle beam interactions with, growth rates and stability limits for, (T), 25:17185
charged-particle beam interactions with, wave excitation in, (T), 25:17184
charged-particle motion in axisymmetric systems with toroidal electric fields, single, (T), 25:17122 (CLM-R-105)
charged-particle motion in electromagnetic waves propagating in uniform magnetic fields, (T), 25:17186
charged-particle motion in self-consistent continuous spectrum of waves, (T), 25:17230
collision measurements in magnetized, by pulse response, 25:17144
collisional effects on Rayleigh--Taylor and Kelvin--Helmholtz instabilities in, 25:17195
conference on plasma waves in space and laboratory, Roeros, Norway, 4/68, 25:17002
confinement and heating in Doublet and Tokamak devices, 25:17131
confinement and penetration by rf electromagnetic fields, (T), 25:17130
confinement in levitated spherator, helium, 25:17127
confinement in levitron device, research on, 25:17124 (UCRL-50002-70, pp 4.1-17)
confinement in magnetic mirrors, direct conversion of losses, 25:17209 (UCRL-50002-70, pp 2.1-44)
confinement in magnetic mirrors, effect of end regions on, (E), 25:17128
confinement in mirror fields, cyclotron radiations from, 25:17126
confinement in Tor-1 stellarator, effects of resonance structure on, (T), 25:17123(T) (CTO-740)
confinement of laser-produced, in resonant cavities by electromagnetic fields, (E), 25:17121 (AD-713064)
confinement of neutral-injected, in superconducting Levitron, 25:17125 (UCRL-50976)
diagnostics of laboratory, review of, 25:17140
diagnostics of mirror-confined, bremsstrahlung spectra for electron distribution, 25:17135 (ORNL-TM-3302)
diagnostics of transient, performance of pulsed laser interferometer for, 25:17137 (UCRL-50983)
diagnostics of, absorption of infrared radiation for temperature determination, 25:17145
diagnostics of, continuum theory of spherical electrostatic probes for, 25:17139
diagnostics of, magnetic probe induction theory for, 25:17134 (AD-713104)
diagnostics of, spectroscopic technique for electric field measurement, 25:17136 (UCRL-50002-70, pp 5.1-15)

diagnostics of, using circular polarization from electrons in, 25:17141(P)
diagnostics of, using electron cyclotron harmonic wave propagation, (E/T), 25:17143
diagnostics using optical and Mach--Zehnder interferometers, 25:17142
diffusion in arc discharges in magnetic fields, quasi-ambipolar, (T), 25:17187
diffusion in magnetic mirrors, computer simulation of, 25:17129
diffusion in magnetically driven shock tubes, effect on current-sheet speed, 25:17155
electric discharges in, theory of positive column, 25:17171
electron beam interactions with inhomogeneous, oscillations from, (T), 25:17183
electron beam interactions with, beam distribution functions for, 25:17156
electron beam interactions with, instabilities from, (E/T), 25:17151
electron beam interactions with, properties of relativistic, 25:17166 (AD-713576)
electron runaway in Lorentz, in time-varying electric fields, (T), 25:17179
equilibrium in toroidal geometries with symmetric revolution, magnetohydrodynamic, (T), 25:17193 (EUR-CEA-FC-551)
flow around disk, Langmuir-probe study of, 25:16875
flow of rarefied, around two-dimensional bodies, supersonic, (T), 25:17138
heating and confinement in Doublet and Tokamak devices, 25:17131
heating in high-current discharges, collisional effects on, 25:17132
heating in nonuniform magnetic fields, Stix coil for ion cyclotron, 25:17133
injection and confinement in superconducting Levitron, neutral, 25:17125 (UCRL-50976)
interactions of astrophysical, with neutral gases, (T), 25:16703
interactions with low-frequency magnetic fields, diffusion in, (E/T), 25:17154
ionization and recombination rates in cesium-seeded argon, nonequilibrium, (E), 25:17158 (AD-712710)
ionization measurements in electromagnetically driven shock tubes, precursor, 25:17190
ionization rates for carbon, nitrogen, oxygen, and neon, collisional, (E), 25:17163
kinetic theory of classical Coulomb, effective field formulation for, 25:17175
kinetic theory of fully ionized, statistical, 25:17169
kinetic theory of homogeneous, quantum, 25:17176
kinetics of, particle flux from stochastic scattering, (T), 25:17164 (AD-713124)
laser beam scattering by, effect of impurities on spectra of, 25:17188
laser scattering on dense, electron--positron pair production in, 25:17153
light scattering on weakly ionized, continuum theory for Thomson, 25:17172
motion of collisionless, effects of finite Larmor radius on, (T), 25:17174
oscillations in inhomogeneous magnetic fields, cyclotron, (T), 25:17248
oscillations in, effect of symmetric double-humped velocity distribution on, (T), 25:17232
oscillations in, relation to anomalous diffusion, 25:17229
pinch in turbulent z discharges, skin effect in conductivity of, (E), 25:17201
production of turbulently heated electron, for shielding of Franck--Condon neutrals, (E), 25:17191
properties of anisotropic, pressure and dielectric tensor, (T), 25:17181
properties of, Debye approximation for avalanche-to-streamer transition, 25:17146 (JINR-P13-5504)
prospects of controlled fusion, final report of IAEA panel on, 25:17218
radiation emission and absorption in nonequilibrium, synchrotron, (T), 25:16692
radiations from discharge, electron cyclotron frequency, (E), 25:17161
radiations from helium negative glow, microwave, (E), 25:17160
radiations from hot electron, photon transport in, (T), 25:17165 (AD-713485)
radiations from magneto-, dispersion equation coefficients for synchrotron, 25:17228
research at Institut fuer Plasmaphysik, 1969, 25:17117(R) (NP-18496)
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)
research at Lawrence Radiation Lab., Nov. 1969 to June 1970, (E/T), 25:17351(R) (UCRL-20120)
research at LRL, July 1969-June 1970, 25:17118(R) (UCRL-50002-70)
research on controlled fusion, review of, 25:17217
shock wave production in collisionless, kinetic theory of, 25:17220 (CU-3954-7)
shock wave propagation in mixtures of deuterium, hydrogen, and helium, normal ionizing, 25:17157
shock wave propagation in, effect of radiation on magnetohydrodynamic, 25:17177
simulation of drift loss cone instabilities, computer, 25:17168 (UCRL-50002-70, pp 1.1-36)
simulation of electron diffusion in magnetic mirrors, computer, 25:17129
simulation of, modified particle-in-cell method for collisional, 25:17167 (CU-3954-6)
simulation of, research on computer, 25:17169 (UCRL-50002-70, pp 1.1-36)
spectra from highly ionized dense, x-ray, (E), 25:17162
spectral polarization shifts in, self-consistent field formulation of, (T), 25:17173
stability criteria for self-consistent low-β, low-frequency interchange, (T), 25:17200
stability in current layer of turbulent z discharges, ion-acoustic, (E), 25:17201
stability of afterglow, drift-dissipative, (E), 25:17197
stability of anisotropic, effect of self-gravitation or finite ion mass on, (T), 25:16691
stability of column of, in Tokamak TM-3 by correlation techniques, (E/T), 25:17204
stability of finite-pressure, with trapped particles, (T), 25:17194
stability of rotating streaming, Kelvin--Helmholtz, 25:17196
stability of rotating, cyclotron resonance, (T), 25:17199
stability of, analysis using collisionless Boltzmann--Vlasov equation, 25:16734
stability of, computer simulation of drift loss cone, 25:17168 (UCRL-50002-70, pp 1.1-36)
stability of, effect of nonuniform electric fields on drift, (T), 25:17198
stability, theory of conditions for hydromagnetic, 25:17203
thermodynamic properties of high-temperature rare gas mixtures, (T), 25:17180
use as light source, review of, 25:17149
wave coupling in, grid assembly development for analyzing, 25:17241
wave damping in cyclotron wave interaction experiment, Landau, (E), 25:17240
wave damping in fully ionized collisional, velocity space diffusion and Landau, (T), 25:17169
wave damping in, large-amplitude, (E), 25:17233
wave excitation and spatial response in, ion-acoustic, (E), 25:17225
wave excitation by oscillating electric fields, parametric, (T), 25:17231
wave excitation by plane grid capacitors in collisionless, Bernstein modes of, (T), 25:17238
wave excitation in collisionless, ion-acoustic and solitary, (T), 25:17220 (CU-3954-7)
wave excitation in crossed electric and magnetic fields, cyclotron resonance instability in rotating, (T), 25:17199
wave excitation in hollow-cathode arcs, relation to anomalous diffusion, 25:17229
wave excitation in inhomogeneous, by external electric fields, (T), 25:17224
wave interactions in waveguides in magnetic fields, nonlinear properties of, (T), 25:17237
wave interactions in waveguides, volume and surface, (T), 25:17236
wave interactions in, effect of collisions on nonlinear resonant three-, (T), 25:17227
wave interactions in, nonlinear coherent electron, 25:17250
wave interactions in, nonlinear resonance conditions for three, (T), 25:17246
wave interactions with density gradients in inhomogeneous, Vlasov solutions for, 25:17226
wave interactions with dispersive, nonlinear, (T), 25:17223 (SU-IPR-396)
wave interactions with hot dense, electromagnetic, (T), 25:17130
wave interactions with magnetized column of, transmission from electric dipoles, 25:17239
wave interactions with, acoustic instabilities from transverse electromagnetic, 25:17245
wave interactions with, theory for cyclotron resonance electromagnetic, 25:17221 (D-1-82-1010)
wave packets in hot inhomogeneous, (T), 25:17242
wave propagation in cold rotating, in presence of Coriolis force, 25:17249
wave propagation in magneto-, synchrotron emissivity coefficients from dispersion relation for, 25:17228
wave propagation in vacuum channel with magnetic fields, electromagnetic, (T), 25:17251
wave propagation in warm homogeneous magneto-, cyclotron harmonic, (T), 25:17234
wave propagation in weakly inhomogeneous, WKB approximation for energy transfer in, (T), 25:17244
wave propagation in, charged-particle motion in self-consistent spectrum of, (T), 25:17230
wave propagation in, instabilities from whistler, (T), 25:17243
wave propagation in, oblique cyclotron harmonic, 25:17235
wave propagation in, quasi-static ion cyclotron, (E), 25:17222 (ORO-3871-5)

wave resonances in Tor-2 stellarator, compensation of perturbations of, (T), 25:17219(T) (CTO-741)
wave resonances in, asymptotic time behavior of, 25:17011
wave resonances in, higher-order cyclotron harmonic, 25:17008
wave--particle interactions in weakly turbulent, stochastic acceleration in, (T), 25:17182
waves in, conference on space and laboratory, Roeros, Norway, 4/68, 25:17002
PLASMA ACCELERATORS
jet flow velocities and temperatures in, correlation between experimental and theoretical predictions, 25:17148
neutron production in dense deuterium focus, model for, 25:17205 (AD-712692)
performance of coaxial discharge, 25:17216
performance of coaxial, (E), 25:17215
properties of conical z-pinch, (E), 25:17159
PLASMA JETS
flow of rarefied, around two-dimensional bodies, supersonic, (T), 25:17138
stability of interstreaming, growth rates and frequency range of, (T), 25:17202
velocity and temperature of, correlation between experimental and theoretical predictions, 25:17148
wave propagation on boundary of adjacent, electrostatic surface, (T), 25:17247
PLASMAPAUSE
position of, Elektron 2 and 4 detection of time-dependent, (E), 25:17051
relation to plasma sheet, trapping boundary, and ring current near magnetic equator and local midnight, (E), 25:16877 (AD-710768)
PLATES
bending of rectangular, effects of circular holes on thermal, 25:16505
convection velocity and temperature profiles for heated, in liquid metals, 25:15826(R) (RLO-2227-T-4-1)
neutron transport in, numerical solution of linear integral Boltzmann equation for, (T), 25:18231
neutron transport with anisotropic scattering in, calculations by transfer-matrix method of one-speed, (T), 25:17668
photon transport in, numerical solution of linear integral Boltzmann equation for, (T), 25:18231
thickness measurements of rolled, gamma radiometric gage for, 25:15960
PLATINUM
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
deuterium-beam scattering from graphite overlayers on single crystals of, (E), 25:16753
electron reactions at 25 to 45 MeV with, effect of thickness on bremsstrahlung produced in, (E), 25:17658
photoelectric work function of, (E), 25:17299
radiation effects on defects and hardening of, relations of annealing temperature with fast neutron, 25:16553
PLATINUM ALLOYS AND SYSTEMS
Cu--Pt, hardness of intermetallic CuPt, relations with ordering, 25:15516(R) (ORO-3908-2)
Pt--Rh, properties for use as DART I fuel capsule cladding, 25:15837 (MLM-1578)
PLATINUM ISOTOPES Pt-189
electron-capture decay of, gamma--gamma coincidences and iridium-189 energy levels in, (E), 25:17925
PLATINUM ISOTOPES Pt-191
electron-capture decay of, gamma--gamma coincidences and iridium-191 energy levels in, (E), 25:17925
PLATINUM ISOTOPES Pt-192
alpha inelastic scattering at 10 and 15 MeV, gamma energy and angular distributions from, (E), 25:17904
energy levels from Coulomb excitation, g-factors, lifetimes, and transition probabilities for, (E), 25:17904
energy levels of, magnetic moments of first 2+, (E), 25:17859 (COO-1745-53)
oxygen-16 inelastic scattering at 35 and 41 MeV, gamma energy and angular distributions from, (E), 25:17904
PLATINUM ISOTOPES Pt-194
alpha inelastic scattering at 10 and 15 MeV, gamma energy and angular distributions from, (E), 25:17904
energy levels from Coulomb excitation, g-factors, lifetimes, and transition probabilities for, (E), 25:17904
oxygen-16 inelastic scattering at 35 and 41 MeV, gamma energy and angular distributions from, (E), 25:17904
PLATINUM ISOTOPES Pt-195
alpha inelastic scattering at 10 and 15 MeV, gamma energy and angular distributions from, (E), 25:17904
energy level at 199.3 keV from Coulomb excitation, spin and parity of, (E), 25:17904
energy levels from Coulomb excitation, g-factors, lifetimes, and transition probabilities for, (E), 25:17904
oxygen-16 inelastic scattering at 35 and 41 MeV, gamma energy and angular distributions from, (E), 25:17904
PLATINUM ISOTOPES Pt-196
alpha inelastic scattering at 10 and 15 MeV, gamma energy and angular distributions from, (E), 25:17904
energy levels from Coulomb excitation, g-factors, lifetimes, and transition probabilities for, (E), 25:17904
oxygen-16 inelastic scattering at 35 and 41 MeV, gamma energy and angular distributions from, (E), 25:17904
PLATINUM ISOTOPES Pt-198
alpha inelastic scattering at 10 and 15 MeV, gamma energy and angular distributions from, (E), 25:17904
energy levels from Coulomb excitation, g-factors, lifetimes, and transition probabilities for, (E), 25:17904
neutron reactions (n,2n) at 12 to 18 MeV, total cross sections and isomeric cross-section ratios for, (E), 25:17946
oxygen-16 inelastic scattering at 35 and 41 MeV, gamma energy and angular distributions from, (E), 25:17904
PLATINUM METALS
separation from solvent extracts of ores or waste by direct precipitation, 25:15749(P)
PLOWSHARE PROJECT
fallout from Buggy I Event in, off-site monitoring of, 25:15786 (PNE-327)
ground motion from proposed detonations in Piceance Creek basin, Colo., methods for predicting, 25:15801 (NVO-1163-TM-18)
history and current status of, review of, 25:15810
PLUTONIUM
diffusion in mixed oxide fuels during irradiation, 25:18098(R) (BNWL-1522-1)
distribution in plutonium carbide--uranium carbide pellets, effects of annealing in thermal gradients on, 25:16597 (ANL-7703)
distribution in plutonium dioxide--uranium dioxide pellets, effects of annealing in thermal gradients on, 25:16597 (ANL-7703)
distribution in tissues of dogs following wound contamination as plutonium oxides in comparison to americium-241, effects of DTPA on, 25:16012
effects on gas evolution from aqueous solutions by radiolysis during storage, 25:15660(T) (AEC-tr-7217)
fuel cycle for thermal reactors, operation aspects of, 25:18143
grain size of β, relations with plasticity, 25:16533
Hall effect in oriented and random α-, 25:17317
ignition of, effects of oxygen, solvent vapor, and water vapor on, 25:16442 (RFP-1566)
neutron fission of, short-lived delayed gamma spectra and fragment yields from fast, (E), 25:17899
physics calculations for thermal reactor fuels, (E/T), 25:18135 (EUR-4477)
reactions of tetravalent, with hexavalent chromium, catalytic effects of cerium, manganese, and silver on, 25:15571
reduction in Purex Process, efficiency of hydroxylamine nitrate for, 25:15721 (DP-1248)
separation from fast reactor fuels, design of pyrochemical facility for, 25:15817
separation from formic acid by electrodeposition, 25:15748
solubility in MSBR solvent salt, 25:15625 (ORNL-4622, pp 60-118)
solvent properties of liquid, for carbon at 700 to 1000°C, 25:16440 (LA-4559)
solvent properties of liquid, for thulium at 700 to 1000°C, 25:16440 (LA-4559)
solvent properties of liquid, for transition metals at 700 to 1000°C, 25:16440 (LA-4559)
spectra of trivalent, in molten fluorides, 25:15625 (ORNL-4622, pp 60-118)
PLUTONIUM ALLOYS AND SYSTEMS
C--Pu, thermodynamic properties of, review of, 25:16604
Ga--Pu, diffusion in, computer programs for determination of, 25:15627 (RFP-1544)
Ga--Pu-base, ignition of, effects of oxygen, solvent vapor, and water vapor on, 25:16442 (RFP-1566)
Pd--Pu--Rh--Ru--U, occurrence of inclusions of, in irradiated plutonium carbide--uranium carbide, 25:16541
Pu--U, physics calculations for thermal reactor fuels, (E/T), 25:18135 (EUR-4477)
Pu-base--U, density and viscosity of liquid, at 620 to 900°C, 25:16466
PLUTONIUM CARBIDES
PuC--UC, inclusions in irradiated, occurrence of palladium--plutonium--rhodium--ruthenium--uranium, 25:16541
PuC--UC, plutonium distribution in pellets of, effects of annealing in thermal gradients on, 25:16597 (ANL-7703)
PLUTONIUM ISOTOPES Pu-236
production by 50-MeV proton irradiation of natural uranium in variable energy cyclotron, 25:15703
PLUTONIUM ISOTOPES Pu-238
content in canyon alluvium in Los Alamos, N. Mex. area, 25:15762 (LA-4561)
content in ground-level atmosphere at Ispra, Italy, July to Oct. 1970, 25:15785 (HASL-239, pp III.40-4)
content in soils at Espanola, Los Alamos, and Santa Fe, New Mex, 25:15763 (LA-4562)
content of atmosphere and surface waters in vicinity of Mound Lab., Miamisburg, Ohio, during January to July

1970, 25:16077 (MLM-1784)
determination in surface air, radiochemical, 25:15514 (HASL-239, pp I.58-62)
gamma spectra, (E), 25:17861 (IN-1448(Rev.))
PLUTONIUM ISOTOPES Pu-239
alpha fission of, mass-yield curves and absolute cross sections for various fission products from binary and ternary, (E/T), 25:17898
content in canyon alluvium in Los Alamos, N. Mex. area, 25:15762 (LA-4561)
content in ground-level atmosphere at Ispra, Italy, July to Oct. 1970, 25:15785 (HASL-239, pp III.40-4)
content in soils at Espanola, Los Alamos, and Santa Fe, New Mex, 25:15763 (LA-4562)
determination in surface air, radiochemical, 25:15514 (HASL-239, pp I.58-62)
distribution in bone marrow and bone surfaces of rabbits following intramuscular and intravenous injection of plutonium nitrates, 25:16015
gamma spectra, (E), 25:17861 (IN-1448(Rev.))
neutron fission of, cross section relative to uranium-235 for fast, (E), 25:17920
neutron fission of, epicadmium energy integral rates for, (E/T), 25:17915
neutron fission of, prompt neutron emission probability from, (T), 25:18239
neutron fission of, tabulation of prompt and delayed product yields from thermal and fast, (T), 25:17855 (ANL-7678)
neutron fission of, yields of rare earth isotopes from thermal, 25:15690
neutron fission of, yields of rare earth isotopes from thermal, 25:15689
neutron reactions with, accumulation of transplutonium isotopes from, 25:15691
neutron reactions with, group-averaged cross sections and resonance parameters for, (E/T), 25:17862 (JAERI-1199)
proton fission at 20 to 85 MeV, charge distribution of products from, (E), 25:17927
removal of inhaled, effectiveness of pentacene, 25:16113(T) (AEC-tr-7172)
uptake by tissues in plant personnel, review of treatment of, 25:16004 (RT/PROT-(70)10)
PLUTONIUM ISOTOPES Pu-240
gamma spectra, (E), 25:17861 (IN-1448(Rev.))
neutron fission of, cross section relative to uranium-235 for fast, (E), 25:17920
neutron fission of, epicadmium energy integral rates for, (E/T), 25:17915
neutron reactions with, accumulation of transplutonium isotopes from, 25:15691
neutron reactions with, group-averaged cross sections and resonance parameters for, (E/T), 25:17862 (JAERI-1199)
triton reactions (t,pf) at 18 MeV, proton spectra, fission probabilities, and fission-fragment angular distributions from, (E/T), 25:17918
PLUTONIUM ISOTOPES Pu-241
gamma spectra, (E), 25:17861 (IN-1448(Rev.))
neutron fission of, epicadmium energy integral rates for, (E/T), 25:17915
neutron fission of, yields of rare earth isotopes from thermal, 25:15689
neutron fission of, yields of rare earth isotopes from thermal, 25:15690
PLUTONIUM ISOTOPES Pu-242
triton reactions (t,pf) at 18 MeV, proton spectra, fission probabilities, and fission-fragment angular distributions from, (E/T), 25:17918
PLUTONIUM NITRIDES
thermodynamic functions of, 25:16590
PLUTONIUM OXIDES PuO_2
development of ceramic fuels of, review of, 25:18245 (WHAN-SA-70)
effects of content of, on thermal conductivity of plutonium dioxide--uranium dioxide solid solutions at 100 to 1200°C, 25:16592
reactions of microspheres of, with DART I fuel capsule materials, 25:15837 (MLM-1578)
criticality parameters of unmoderated plutonium-240 enriched, effects of composition and configuration on, 25:18098(R) (BNWL-1522-1)
PuO_2--UO_2, dissolution of fast reactor fuels of, in boiling nitric acid, effects of fabrication variables on, 25:15732 (WHAN-FR-34)
PuO_2--UO_2, distribution uniformity of plutonium oxide (PuO_2) in pellets of, (E/T), 25:18140 (WHAN-SA-7)
PuO_2--UO_2, fission product distribution in pin type fuel elements of, radiation effects on molybdenum, 25:18247 (WHAN-SA-96)
PuO_2--UO_2, irradiation testing of recycle fuels of, 25:18098(R) (BNWL-1522-1)
PuO_2--UO_2, plutonium distribution in pellets of, effects of annealing in thermal gradients on, 25:16597 (ANL-7703)
PuO_2--UO_2, preparation of low-density fuel pellets and shards of, flowsheets for, 25:16562 (NP-18650)
PuO_2--UO_2, properties of fuels of, mechanical, physical, and thermal, (E), 25:18137(R) (GEAP-10028-36)
PuO_2--UO_2, radiation effects on dense clad fuel rods of, at 800 W/cm power, pile neutron, 25:16614 (EURAEC-2146)
PuO_2--UO_2, radiation effects on gas cooled fast breeder reactor fuels of, 25:18136(R) (GA-9838)
PuO_2--UO_2, radiation effects testing of fuels of, 25:18137(R) (GEAP-10028-36)
PuO_2--UO_2, thermal conductivity of, effects of composition and temperature on, (E), 25:18246 (WHAN-SA-80)
PuO_2--UO_2-base, creep behavior during irradiation, design and operation of equipment for studying, 25:16568 (BMI-1894)
PuO_2--UO_2-base, thermal conductivity of solid solutions of, at 100 to 1200°C, effects of plutonium dioxide content on, 25:16592
PLUTONIUM OXYFLUORIDES
stability of PuOF, 25:15525 (ORNL-4622, pp 60-118)
PLUTONIUM RECYCLE CRITICAL FACILITY
core of, physics measurements for Phoenix fueled MTR mockup, (E/T), 25:18170 (BNWL-1481)
PLUTONIUM RECYCLE TEST REACTOR
fuels for, irradiation performance of mixed oxide, 25:18098(R) (BNWL-1522-1)
PNEUMATIC SYSTEMS
design for master--slave manipulator motion lock, engineering drawings for, 25:15875
POLLEN
radiation effects on development of, of hemp, sterility of male plants following γ, 25:16382
POLONIUM ISOTOPES
fission of isomers of, search for spontaneous, 25:17924
POLONIUM ISOTOPES Po-210
content of atmosphere and surface waters in vicinity of Mound Lab., Miamisburg, Ohio, during January to July 1970, 25:16077 (MLM-1784)
content of human bones from residents of arctic regions of Soviet Union sampled during 1965, 25:16067(T) (AEC-tr-7214, pp 108-14)
content of man in Soviet Union, effects of age and geography on, 25:16066(T) (AEC-tr-7214, pp 87-107)
POLONIUM ISOTOPES Po-215
alpha decay of, alpha intensity and gamma spectra from, (E), 25:17879
energy levels from alpha decay of radon-219, 25:17948
energy levels from radon-219 decay, spin and parity of, (E), 25:17879
POLYMERS
concretes--polymers, preparation and properties for, in highway construction, 25:16621
concretes--polymers, production of radiation-cured pipes of, economic evaluation of, 25:16620 (RISO-M-1295)
POPULATIONS
cesium-137 content of adult human, in California during 1960 to 1969, fallout, 25:16187
dynamics of sea otter, in Amchitka, Alaska, development of model for, 25:16074(R) (BMI-171-118)
radiation dose to, from low-level environmental contamination, techniques for estimation of, 25:16174
radiation dose to, of Windscale, England from radioactive waste discharge, external γ, 25:16173
radiation dosimetry in reproductive systems of human, fallout and natural background γ, 25:16152
radiation hazards to human, from waste disposal in Clinch River, 25:16180
radiation protection of, following nuclear accidents, recommendations for development of emergency procedures for, 25:16207
PORPHYRINS
ion reactions with, kinetic, magnetic, and Moessbauer studies of, 25:18314(R) (TID-25652)
PORTLAND CEMENTS
analysis for strontium by atomic absorption spectrometry, 25:15497
POSITRONIUM
decay of, angular and momentum correlations in three-photon, (E), 25:16795
POSITRONS
annihilation in metals, temperature effects on 2γ angular correlation from, (T), 25:17315
annihilation lifetime spectra, computer programs for data reduction in analysis of, 25:16794 (NYO-3661-34)
interactions $e^+ + e^- \rightarrow A_1 + \nu$ in colliding beams, test of hard-pion current algebra models from predicted total cross sections and angular distributions for, (T), 25:17423
interactions $e^+ + e^-$ + mesons cross section for, (T), 25:17450
interactions $e^+ + e^- \rightarrow N +$ hadrons in dispersion-theoretic models, Bjorken limit and scaling behavior of structure functions for, 25:17430
lifetime spectrum in irradiated sodium chloride, correlation of long-lived component with V centers, 25:17291
production in photon reactions with liquid xenon at 35 to 2000 MeV, (E), 25:17255 (JINR-P1-5482)
scattering by hydrogen atoms, optical potential calculation of elastic, 25:16819
stopping power for aluminum, copper, gold, and silver at <500 keV, (T), 25:17962
POTASSIUM
abundance in Apollo 11 and 12 samples, (E), 25:16741
content of human adult and infant diet in Chicago during October, 1970, fallout, 25:16133 (HASL-239, pp III.36-9)

determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
distribution in metal transfer process for removing rare earths from MSBR fuel solvent, 25:15625 (ORNL-4622, pp 60-118)
neutron elastic scattering at 2.06 to 7.91 MeV, optical-model analysis including Hauser--Feshbach formalism of differential cross sections from, (E/T), 25:17816
neutron total cross sections at 1.8 to 8.3 MeV, (E/T), 25:17816
radiation effects on content of, in cardiac muscle of rats, effects of adrenalectomy on, 25:16351

POTASSIUM AZIDES
radiation effects on, reactions of recoil carbon-14 from, 25:15705(R) (COO-1620-6)

POTASSIUM BROMATES
effects on oxidation of hexavalent neptunium ions, 25:15568

POTASSIUM CHLORATES
effects on oxidation of hexavalent neptunium ions, 25:15568

POTASSIUM CHLORIDES
effects on ionization of strontium, 25:15497
radioinduced color center formation at 15°K in crystals of, role of excitons in electron-pulse, (E), 25:17287
HCl--KCl, effects on electrochemical behavior of molybdenum, 25:16513
KCl--LiCl--$ZrCl_4$, solvent properties for thorium dioxide at 560 to 630°C, 25:16398 (IS-2300, pp 101-86)

POTASSIUM CYANATES
radiolysis of single crystals of, ESR studies of CN molecule from γ, 25:15679

POTASSIUM FLUORIDES
KF--LiF--NaF, reactions with tetravalent titanium at 480 to 500°C, 25:15567(R) (ORO-3518-19)

POTASSIUM FORMATES
radiation effects on, ESR spectral studies on hyperfine parameters of CO_2^- radicals produced by γ, 25:15646

POTASSIUM IONS
reactions with carbon foils at 1 to 20 keV, energy loss and angular scattering in, (E), 25:16760

POTASSIUM ISOTOPES K-37
energy levels at 2.750 MeV from argon-36 (p,γ) reactions, lifetime of, (E), 25:17852

POTASSIUM ISOTOPES K-38
energy levels of, shell-model calculation using modified surface delta interaction with tensor force, (T), 25:17779

POTASSIUM ISOTOPES K-39
deuteron reactions (d,pγ) at 3.5 and 3.7 MeV, coincidence measurements on, 25:17776
energy levels from argon-38 (p,γ) reactions, lifetimes of, (E), 25:17852
energy levels from neutron inelastic scattering, spin--parity assignments for, (E), 25:17814
helium-3 elastic scattering by, optical-model analysis of, (E), 25:17822
helium-3 reactions (He-3,d) at 29.3 MeV, DWBA analysis of angular distributions from, (E/T), 25:17822
neutron inelastic scattering cross sections at 1.82 to 3.96 MeV, (E), 25:17814

POTASSIUM ISOTOPES K-40
content of algae, birds, crustaceans, fish, and otters in Alaska, 25:16072(R) (BMI-171-110)
content of man in Soviet Union, effects of age and geography on, 25:16066(T) (AEC-tr-7214, pp 87-107)
content of man, effects of body contour on automatic whole-body counting of, 25:16123
content of marine algae, fish, and invertebrates in Amchitka, Alaska, 25:16073(R) (BMI-171-113)
content of naturally occurring, in adult human population in California during 1960 to 1969 in comparison to content of cesium-137, 25:16187
energy levels from potassium-39 (d,pγ) reactions, gamma branching ratios of transitions of, 25:17776

POTASSIUM ISOTOPES K-41
energy levels from neutron inelastic scattering, spin--parity assignments for, (E), 25:17814
neutron inelastic scattering cross sections at 1.82 to 3.96 MeV, (E), 25:17814
photon reactions (γ,e^+) with, meson (e^+) yields from, (E), 25:17789

POTASSIUM ISOTOPES K-42
determination in colored plant extracts by Cherenkov counting, 25:15517

POTASSIUM ISOTOPES K-43
uptake by leaves of bean plants, 25:16089(R) (EUR-4545)

POTASSIUM PERMANGANATES
radiation effects on thermal decomposition induction period in, 25:15644

POTASSIUM SILICATES
radiation effects at 78°K on glasses of, absorption-center formation from ^{60}Co γ-, (E), 25:17270(T) (BNWL-tr-62)

POTASSIUM URANATES
preparation and crystal structure of, 25:15569

POWER CYCLES
efficiency of organic Rankine, for power system using strontium-90 titanate fuel, 25:15839 (ORNL-TM-2960)
turbines for large nuclear-powered Brayton, description of, 25:15821

POWER PLANTS
construction in U.S., environmental aspects of, 25:18039
construction in U.S., proposal for joint planning of, 25:18038
operation of, programming methods for economic, 25:18068
oxidant temperature in large electric, using MHD generators, method for reducing, 25:16867
pump and turbine water discharge rates in Flatiron and Pole Hill, tracer measurements of, 25:15827 (TID-25395)
startup in Germany, table of 1969 to 1974, 25:18053

PRASEODYMIUM
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
complexes with nitrilotriacetic acid, crystal and molecular structure of, 25:15562 (IS-2300, pp 21-89)
heavy ion reactions with, fission fragments from, (E)), 25:17924

PRASEODYMIUM ALLOYS AND SYSTEMS
Ba--Pr, phase studies of, 25:16398 (IS-2300, pp 101-86)
Bi--Pr, phase studies of, 25:16398 (IS-2300, pp 101-86)
Cs--Pr, phase studies of, 25:16398 (IS-2300, pp 101-86)
Pr--transition metals, phase studies of binary, with 6th period non-rare earths, 25:16398 (IS-2300, pp 101-86)
Pr--Zn, phase studies of, 25:16398 (IS-2300, pp 101-86)

PRASEODYMIUM CHLORIDES
crystal structure of heptahydrates of, 25:15635

PRASEODYMIUM ISOTOPES Pr-139
energy levels from neodymium-139 beta and electron-capture decay, spin--parity assignments for, (E), 25:17922

PRASEODYMIUM ISOTOPES Pr-141
energy levels from neodymium-141 beta and electron-capture decay, spin assignments for, (E), 25:17922
neutron capture in oriented, anisotropies of distributions of gamma radiation from thermal, (E), 25:17947

PRASEODYMIUM ISOTOPES Pr-142
energy levels from thermal neutron capture by praseodymium-141, spins of, (E), 25:17947

PRASEODYMIUM ISOTOPES Pr-143
yields from neutron fission of plutonium-239 and plutonium-241, 25:15689

PRASEODYMIUM ISOTOPES Pr-144
content in surface soils near Leningrad, USSR, 1954 to 1965, 25:15757(T) (AEC-tr-7214, pp 21-6)
content of atmosphere over Soviet Union during 1965 and 1966, 25:16065(T) (AEC-tr-7214, pp 70-81)

PRASEODYMIUM ISOTOPES Pr-145
production by neutron fission of plutonium-239 and plutonium-241, 25:15690

PRESSURE VESSELS
design of, finite element method for, (T), 25:18257
design requirements of prestressed concrete, for high temperature gas cooled reactors, 25:18134
development of reactor prestressed concrete, review of, 25:18127
response of walls of prestressed concrete, to increasing internal pressure, analytical method for determining, 25:15861
thermoviscoelastic analysis of prestressed concrete, 25:16622
weldments on Type A302B steel, effects of flaws on fatigue strength of, 25:16443 (SwRI-1228-P-2-47)

PROMETHIUM
bibliography on analytical chemistry of, 25:15470
book: Analytical Chemistry of Technetium, Promethium, Astatine, and Francium, 25:15470

PROMETHIUM ISOTOPES Pm-145
Pm-145--Sm-145, preparation and properties of x-ray sources of, 25:15835 (ANL-7760(Pt.1), pp 33-5)

PROMETHIUM ISOTOPES Pm-147
content of marine invertebrates in Mediterranean during 1966, effects of manganese on, 25:16124
radiation protection for factory personnel handling, 25:16204
yields from neutron fission of plutonium-239 and plutonium-241, 25:15689

PROMETHIUM ISOTOPES Pm-148
energy levels of, coupling between spin-flip and non-spin-flip particle-hole, (T), 25:17868

PROMETHIUM ISOTOPES Pm-149
production by neutron fission of plutonium-239 and plutonium-241, 25:15690

PROMETHIUM ISOTOPES Pm-151
production by neutron fission of plutonium-239 and plutonium-241, 25:15690

1-PROPANOL
effects on radiolysis chlorobenzene and its derivatives, 25:15688

PROPELLANTS
corrosive effects of combustion products of, on rocket nozzles, 25:16414

PROPENE
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
thermal decomposition in fluidized beds for deposition of pyrolytic carbon on fuel particles, 25:16561 (JUL-686-RW)

PROPENE POLYMERS
radiosterilization of heat-stabilized, effects of thiodipropionate on γ, 25:15653(P)
PROPIONIC ACID, 2-MERCAPTO-
radioprotective effects of, on solutions of deoxynucleotides in relation to release of inorganic phosphate, γ, 25:16216 (UCLA-12-799)
PROPIONIC ACID, 3,3'-THIODI-
esters, effects on γ radiosterilization of propene polymers, 25:15653(P)
PROPYNE
alpha-particle stopping power of gaseous, at 300 keV to 2 MeV, (E), 25:17265
PROTACTINIUM
extraction from molten salt reactor fuels, development of close-coupled system for, 25:16138 (ORNL-TM-3137)
precipitation as oxide from molten beryllium fluoride--lithium fluoride--thorium tetrafluoride--uranium tetrafluoride, 25:15726 (ORNL-4622, pp 199-225)
separation from single-fluid MSBR fuel salt by fluorination-reductive extraction, 25:15726 (ORNL-4622, pp 199-225)
spectra of tetravalent, in molten fluorides, 25:15625 (ORNL-4622, pp 60-118)
PROTACTINIUM BROMIDES
reactions with tetraethylammonium chloride or triphenylphosphine oxide in anhydrous ethanol, acetonitrile, or dichloromethane, products from, 25:15577
PROTACTINIUM CHLORIDES
reactions with tetraethylammonium chloride or triphenylphosphine oxide in anhydrous ethanol, acetonitrile, or dichloromethane, products from, 25:15577
PROTACTINIUM ISOTOPES Pa-231
neutron reactions with, calculations on production of thorium-228 and uranium-232 from, 25:15699
PROTACTINIUM ISOTOPES Pa-233
gamma spectra, (E), 25:17861 (IN-1448(Rev.))
PROTACTINIUM OXIDES
precipitation from molten fluorides, effects of oxidizing and reducing agents on, 25:15625 (ORNL-4622, pp 60-118)
PROTACTINIUM PHOSPHATES
phase studies on pentavalent, at 800 and 1050°C by thermogravimetry, radiocrystallography, and infrared spectroscopy, 25:15641
PROTEINS
radiation effects on content of, in blood plasma of sheep, effects of skin exposure to strontium-90--yttrium-90 β, 25:16026 (ORO-678, pp 74-7)
radiation effects on content of, in spring wheat, effects of variety on γ, 25:16381
radioinduced changes in electrophoretic pattern of blood serum, in rabbits, protective effects of injections of lysozyme against x, 25:16229
PROTON-SCATTERING ANALYSIS
sensitivity for impurities in thin samples, 25:15528
PROTONS
absorption of high-energy, at 20 to 150 km, relation to tropospheric and stratospheric circulation, (E), 25:16969
abundance in mid-latitude trough region and plasmasphere of H^+, altitude-dependent, (E), 25:16892 (N-70-39303)
attenuation of high-energy, in aluminum and silicon absorbers, 25:16188
auroral precipitation of, ionization cross sections and hydrogen-emission excitations during, (E/T), 25:16887 (AD-713691)
channeling in silicon at 6.72 MeV and at different temperatures, 25:17293
current-intensity profile over auroral homogeneous arc to 135 km, (E), 25:16964
dechanneling in silicon at 0.3 and 0.6 MeV, (E/T), 25:17288
detection in auroral zones and radiation belts by equipment on Kosmos 261 satellite, 25:17026
detection of very-high-energy, design of differential Cherenkov detector for, (E), 25:15937(T) (NAL-tr-3)
dosimetry for therapy, performance of semiconductor detectors for 19.68- to 45.3-MeV, 25:16188
effects of 600-MeV, on cadmium, indium, molybdenum, palladium, rhodium, or silver and chromium carbonyl, reactions of recoil molybdenum from, 25:15717
effects of 600-MeV, on molybdenum carbonyl, reactions of recoil molybdenum from, 25:15717
effects of cyclotron-produced, on bacteria and solutions, experimental facilities for studies of, 25:16042
effects of solar, on F region variations, (E), 25:16986
effects on bacteriophages, effects of energy on inactivation of nucleic acids by, 25:16387
effects on bone marrow in dogs, protective effects of partial-body shielding against, 25:16196(T) (JPRS-52121, pp 25-9)
effects on diffusion of boron in monocrystalline silicon at 10 to 50 keV, 25:16616
effects on sorptive properties of magnesium oxide for ethylene, hydrogen, methane, and oxygen, 25:16619
effects on surface reactivity of thorium dioxide, zinc oxide, and zirconium oxide, 25:16619
electromagnetic structure effects on cross sections for p + p → p + p + γ interactions, (T), 25:17519
energy flux at 6.6 R/sub E/ during magnetopause crossings, effect on electric fields, (E), 25:16941
energy spectra in radiation belts, variable-thickness spinning wheel simulation of, (T), 25:16891 (N-70-37510)
energy spectra of 200 eV to 1 MeV, in outer radiation belts, (E), 25:16878 (AD-710769)
flux measurements in exosphere by Elektron satellites, 25:17022
flux of high-energy geomagnetically trapped, long-term variations of, (E/T), 25:16893 (N-70-40998)
heating of solar wind, in colliding streams, (E), 25:16698
intensity fluxes near ionospheric equator, late-evening soft-, (E), 25:16959
intensity in early-morning pulsating aurorae, energetic, Dec. 18, 1968, (E), 25:16950
intensity in upper atmosphere, measurement of 1- to 20-MeV, 25:17032
interactions anti p + p → anti p + p at 0.70 to 2.37 GeV/c, differential cross sections for backward, (E), 25:17373
interactions anti p + p → anti p + p, prediction of slope changes and corresponding nonstrange meson masses in, (T), 25:17378
interactions anti p + p → K + anti K + ω at 1.1 to 1.5 GeV/c, review of T production in, (E), 25:17377
interactions anti p + p → rho^0 + rho^0 + π^0 at 1.1 to 1.5 GeV/c, review of T production in, (E), 25:17377
interactions anti p + p at 1.50 to 2.00 GeV/c, review of U(2370) production in, (E), 25:17390
interactions d + p → 2p + n at 52 MeV, angular distributions, and cross sections for singlet and triplet d^* production in, (E), 25:17371 (NP-18561)
interactions e + p → e + N^*, quark-model predictions of form factors for N^* resonances from, 25:17445
interactions e + p → e + p + γ, Bethe--Heitler calculation of wide-angle bremsstrahlung contribution to proton spectra in, (T), 25:17447
interactions e + p → π^0 + e + p, polarized incident electron for asymmetry in, (T), 25:17440
interactions e + p at high energies, broken scale invariance and kinematic moments of cross sections for, 25:17449
interactions e + p, parton--duality model for structure functions for deep-inelastic, (T), 25:17441
interactions e + p, scale invariance breaking from models for Q^2 dependence of structure functions for inelastic, (T), 25:17422 (SU-1206-236)
interactions e + p, Schwinger-term sum rule for structure function in inelastic, 25:17434
interactions γ + p → eta + p at 0.8 to 1.1 GeV, counter--spark chamber study of recoil proton polarization in, (E), 25:17354
interactions γ + p → K^+ + $A(I^0)$ at 1.19 to 1.68 GeV, differential cross sections for, (E), 25:17361
interactions γ + p → K^+ + $A(I^0)$ at 5 to 16 GeV, duality and Regge cuts in model for, 25:17424
interactions γ + p → n + π^+ at 320 and 345 MeV, model for, 25:17425
interactions γ + p → ω + p near threshold, spark chamber and scintillation counter study of differential cross sections and ω spin polarization in, (E), 25:17355
interactions γ + p → p + eta at 1.22 to 1.85 GeV at small angles, Cherenkov counter hodoscope study of interference between $S_{11}(1550)$ and $P_{11}(1785)$ in differential cross sections for, (E), 25:17358
interactions γ + p → p + π^0 at 320 and 360 MeV, model for, 25:17425
interactions γ + p → p + π^0 + p at 0.65 to 1.375 GeV, counter--spark chamber system study of recoil proton polarization in, (E), 25:17356
interactions γ + p → π^+ + π^- + p at 2.8 and 4.7 GeV in hydrogen bubble chamber, conservation of s-channel helicity and natural parity exchange in rho^0 production in, (E), 25:17359
interactions γ + p at high energies, total summation of perturbation series for forward, (T), 25:17499 (JINR-E2-5509)
interactions γ + p, fixed pole at J = 0 in Compton, 25:17448
interactions K + p → K + 2π + p, review of diffractive processes in, (T), 25:17501
interactions K + p at 1 to 15 GeV/c, review of Q region of Kπ mass distributions in, (E), 25:17387
interactions K + p at high energies, production of L(1775) enhancement in Kπ system in, (E), 25:17388
interactions K^+ + p → K^+ + π^- + Δ^{++} at 5.43 GeV/c in bubble chamber, $K^{*0}\pi^+$ enhancement production and K^+ + π^- → K^+ + π^- interaction cross sections from, (E), 25:17381
interactions K^+ + p at 10 GeV/c in hydrogen bubble chamber, production of L(1750) in four-, five- and six-body final states in, (E), 25:17399
interactions K^+ + p at high energies, review of three- and four-body and exotic final states in, (E), 25:17392
interactions K^+ + p at moderate energies, model-independent determination of real parts of forward amplitude for, (T), 25:17497 (JINR-E2-5216)
interactions K^- + p at moderate energies, model-

XUM

independent determination of real parts of forward amplitude for, (T), 25:17497 (JINR-E2-5216)
interactions K+ + p, Chou--Yang model for calculation of charge form factor from, 25:17446
interactions K+ + p, dispersion relation calculation of real parts of forward amplitudes of, (T), 25:17479
interactions K- + p, dispersion relation calculation of real parts of forward amplitudes of, (T), 25:17479
interactions K- + p, dispersion relation calculation of real parts of forward amplitudes of, (T), 25:17479
interactions μ- + p + n + ν, field and quark algebra predictions from identity for relation of current commutator with rate of, (T), 25:17455
interactions μ- + p + π0 + μ- + p, polarized incident μ- for asymmetry in, (T), 25:17440
interactions n + p + γ + d, parity-violating internucleon potential for, (T), 25:17545
interactions n + p, parity violating effects in, 25:17545
interactions ν + p + μ- + π+ + p near Δ(1236), model based on CVC and PCAC hypotheses for, (T), 25:17457
interactions p + d + p + d at 1 GeV, real part of p + n + p + n amplitude from, (E), 25:17374
interactions p + d at high energies, compilation of cross sections for, (E), 25:17369 (CERN-HERA-70-2)
interactions p + n + p + n in p + d + p + d interactions at 4 GeV, real part of amplitude of, (E), 25:17374
interactions p + n at 605 MeV at 55 to 125°, Wolfenstein parameter and polarization in, (E), 25:17375
interactions p + n at high energies, compilation of cross sections for, (E), 25:17369 (CERN-HERA-70-2)
interactions p + p + 2p + 2π, review of diffractive processes in, (T), 25:17501
interactions p + p + d + MM at 1.1 to 1.9 GeV/c, spark chamber spectrometer study of differential cross sections for π+, rho+, and π(980) enhancement production and upper limit for delta(962) production in, 25:17376
interactions p + p + p + n + π+ at 660 and 970 MeV, one-pion-exchange model for, (T), 25:17516 (JINR-P2-5572)
interactions p + p + p + p + γ, proton electromagnetic structure effects on cross sections for, (T), 25:17519
interactions p + p + π+ + n + p at 650 MeV, triple differential cross sections for, (E), 25:17370 (JINR-P1-5570)
interactions p + p at 12.4 to 12.5 GeV/c, differential cross section for π, K, anti p, and p production in, (E), 25:17379
interactions p + p at 300 to 640 MeV, strong absorption and pp(2050) resonance in, (T), 25:17518
interactions p + p at high energies, compilation of cross sections for, (E), 25:17369 (CERN-HERA-70-2)
interactions p + p, crossed-channel Reggeon exchanges in elastic, 25:17496
interactions p + p, one-boson-exchange potentials in bremsstrahlung production in, (T), 25:17995
interactions p + p, peripheral and central processes for cross sections of π and p production in inelastic, (T), 25:17467
interactions π + p + 3π + p, review of diffractive processes in, (T), 25:17501
interactions π + p at high energies, production of A_3(1640) enhancement in πππ system in, (E), 25:17388
interactions π + p, double-pole model for mass distributions for A_2 + K + anti K and A_2 + π + rho decays in, (T), 25:17482
interactions π + p, Monte Carlo method for rho mass distribution from production in, 25:17494
interactions π + p, Regge-pole eikonal scheme for partial cross sections and Argand diagrams for, 25:17495
interactions π+ + p + 3π+ + 3π- + π0 at 11 GeV/c, 7π enhancement in, (E), 25:17397
interactions π+ + p + 4π+ + 3π- + π0 + p at 11 GeV/c, 7π enhancement in, (E), 25:17397
interactions π- + p + eta + n, double-pole model for A_2 exchange in, (T), 25:17482
interactions π+ + p + f0 + Δ++ at 13.1 GeV/c in hydrogen bubble chamber, differential cross sections and dipion mass spectrum in, (E), 25:17400
interactions π- + p + K0 + anti K0 + n at 4 and 6.2 GeV/c, spark chamber study of S0, f0, A_2, and (1420) enhancement production in, (E), 25:17385
interactions π- + p + K- + K_1^0 + p at 20.3 GeV/c, magnetic spectrometer study of A_2 and K^0K^-(1425) enhancement production in forward, (E), 25:17394
interactions π- + p + p + 2π- + π+ at 5 and 7.5 GeV/c, partial-wave analysis for spin and parity and polarization for upper and lower halves of A_2 in 3π states in, (T), 25:17486
interactions π- + p + p + X- at 16 GeV/c, review of U(2370) production in, (E), 25:17390
interactions π- + p + p + X- at high energies, spectrometer study of 2.62-to-3.535-GeV-mass nonstrange bosons in, (E), 25:17391
interactions π+ + p + π+ + f0 + p at 13.1 GeV/c, double-Regge-pole model with duality for analysis of, (T), 25:17507
interactions π+ + p + π+ + p + anti p + p at 13.1 GeV/c in hydrogen bubble chamber, cross sections and Δ++ production in, (E), 25:17380 (COO-1428-249)
interactions π+ + p + π+ + p + K+ + K- at 13.1 GeV/c in hydrogen bubble chamber, cross sections and K*(890) and Δ++ production in, (E), 25:17380 (COO-1428-249)
interactions π- + p + π+ + π- + n at 2.3 GeV/c in bubble chamber, rho--ω interference in, (E), 25:17384
interactions π+ + p at 8 GeV/c in hydrogen bubble chamber, ω0, rho, and N(3695) production, π angular correlations, and dominance of central statistical interactions in 8- and 10-prong, (E), 25:17401
interactions π+ + p, dispersion relation calculation of real parts of forward amplitudes of, (T), 25:17479
interactions π- + p, dispersion relation calculation of real parts of forward amplitudes of, (T), 25:17479
mass difference (n-p), radiative corrections to πNN vertex determining, (T), 25:17435
polarization of recoil, in counter--spark chamber study of γ + p + π0 + p interactions at 0.65 to 1.375 GeV, (E), 25:17356
polarization of recoil, in γ + p + eta + p interactions at 0.8 to 1.1 GeV, counter--spark chamber study of, (E), 25:17354
production in p + p inelastic interactions, central processes for cross sections for, (T), 25:17467
production in p + p interactions at 12.4 to 12.5 GeV/c, differential cross section for, (E), 25:17379
range in elements, atomic number--energy nomogram for determining, 25:17260
reactions (p,2γ) with nitrogen-15 at 8.30 and 8.83 MeV, gamma singles and coincidence spectra and branching ratios from, (E), 25:17736
reactions (p,2p) with calcium, carbon, silicon, and vanadium at 600 MeV, (E), 25:17757
reactions (p,2p) with calcium-40 and carbon-12 at 156 MeV, analysis using impulse approximation, (E/T), 25:17758
reactions (p,2p) with deuterium at 156 MeV, differential cross sections for, (E), 25:17701
reactions (p,2p) with deuterium at 25 to 40 MeV, differential cross sections for, (E), 25:17703
reactions (p,2p) with nuclei at 600 MeV, magnet--spark chamber system for studying, 25:17619
reactions (p,3α) with boron-11 at 0.2 to 2 MeV, sequential mechanism in, 25:17766
reactions (p,α) and (p,γ) with phosphorus-31 at 3.150 to 3.300 MeV, excitation functions for, (E), 25:17774 (NP-18623)
reactions (p,α) with beryllium-9, mechanism in, 25:17765
reactions (p,α) with boron-11 at 12 to 30 MeV, plane wave analysis of, (E), 25:17752
reactions (p,α) with boron-11 at 2.65 MeV, three-α final state interactions in, (T), 25:17769
reactions (p,α) with nickel-64 at 10 MeV, alpha and gamma spectra from, (E), 25:17810
reactions (p,α) with sodium-23, silicon-30, magnesium-26, phosphorus-31, and aluminum-27 at 5.8 to 11.5 MeV, (E), 25:17726
reactions (p,α), (p,d), and (p,t) with oxygen-16 at 21.28 to 38.50 MeV, excitation functions for, (E/T), 25:17735
reactions (p,d) and (p,α) with beryllium-9 at 0.20 to 2.5 MeV, differential cross sections for, (E), 25:17723
reactions (p,d) with calcium-40 and silicon-28 at 30 to 45 MeV, cross sections for, 25:17828
reactions (p,d) with iron-57, tin-118, tin-119, titanium-49, and zirconium-91 using polarized beam, differential cross section and asymmetries for, (E), 25:17831
reactions (p,d) with tin-118, DWBA analysis of asymmetries and scattering amplitudes from, (T), 25:17856 (CEA-CONF-1652)
reactions (p,f) with bismuth-209 at 30 to 40 MeV, energies and angular distributions of fragments from, (E), 25:17937
reactions (p,f) with plutonium-239, thorium-232, uranium-233, uranium-235, and uranium-238 at 20 to 85 MeV, charge distribution of products from, (E), 25:17927
reactions (p,f) with radium-226, mass-yield distributions of fragments from, (E/T), 25:17884
reactions (p,γ) with argon-38, Q value for, (E), 25:17852
reactions (p,γ) with oxygen-18 at 1.085 MeV, use to measure oxygen self-diffusion in uranium dioxide, 25:16581
reactions (p,γ) with phosphorus-31, angular distributions and excitation functions for, (E), 25:17853
reactions (p,γ) with sulfur-34 at 2.079 MeV, gamma spectra from, (E), 25:17817
reactions (p,γ) with titanium-46 at 1.363-MeV resonance, gamma branching ratio in, (E), 25:17845
reactions (p,He-3) and (p,t) at 156 MeV, two-nucleon final state interactions in, (E), 25:17696
reactions (p,He-3) and (p,t) with carbon-14, oxygen-17, oxygen-18, neon-20, and neon-22 at 39.8 MeV, DWBA analysis of, (E/T), 25:17710
reactions (p,He-3) and (p,t) with chlorine-35 and -37 at 40 MeV, (E), 25:17753
reactions (p,He-3) and (p,t) with oxygen-16 at 49.5 MeV, effects of beam polarization on differential cross sections for, (E), 25:17715
reactions (p,He-3) with boron-10 at 49.5 MeV, differential cross sections for, (E/T), 25:17688
reactions (p,n) with beryllium-9 at 2.8 to 4.1 MeV, neutron angular distributions from, (E), 25:17744
reactions (p,n) with copper-65 at 2.6 to 3.1 MeV,

electromagnetic branching in zinc-65 from, (E), 25:17804
reactions (p,n) with deuterium, lithium-6, and lithium-7 at 25 to 100 MeV, impulse approximation calculations of polarization transfer in, 25:17714
reactions (p,n) with tin-112 and zirconium-90, neutron spectra determined from (p,np') reactions, (E), 25:17882
reactions (p,n) with titanium-46 at 8 to 12 MeV, n-γ coincidence spectra and excitation function for, (E), 25:17840
reactions (p,n) with tritium at 156 MeV, differential cross sections for, (E), 25:17699
reactions (p,n) with tritium at 6.4 MeV, cross sections for, (E/T), 25:17971
reactions (p,n) with vanadium-51 at 4.013 and 5.016 MeV, Hauser--Feshbach analysis of angular distributions from, (E/T), 25:17820
reactions (p,n) with zinc-68 at 4.0 to 5.0 MeV, Hauser--Feshbach analysis of, angular distributions, spectra, and excitation functions for, (E/T), 25:17820
reactions (p,np') with tin-112 at 13.9 to 17.5 MeV, excitation functions and proton and low-energy neutron spectra for (p,n) reactions determined from, (E), 25:17882
reactions (p,np') with zirconium-90 at 13.9 to 17.5 MeV, calculation of proton and low-energy neutron spectra for (p,n) reactions from, (E), 25:17882
reactions (p,pn) with deuterium at 8 to 13 MeV, proton--proton scattering length in, (E), 25:17691
reactions (p,pt) with lithium-7 at 156 MeV, angular correlation for, (E), 25:17759
reactions (p,π+) with carbon-12 at 600 MeV, model for π+ emission in, (T), 25:17522
reactions (p,t) and (p,He-3) with chlorine-35 at 40 MeV, angular distributions for, (E), 25:17788
reactions (p,t) with carbon-12 and silicon-28 at 49.5 MeV, effects of beam polarization on differential cross sections for, (E), 25:17715
reactions (p,t) with deformed nuclei, strong second-order processes in, (T), 25:18015
reactions with aluminum-27 at 20 GeV, spectra of light fast fragments from, (E), 25:17827
reactions with carbon foils at 1 to 20 keV, energy loss and angular scattering in, (E), 25:16760
reactions with carbon foils at 3 to 54 keV, angular distributions from, (E), 25:16755
reactions with helium at 10 to 75 keV, excitation functions for, (E), 25:16808
reactions with helium at 300 keV, angular and energy distributions of electrons from excitation and ionization in, (T), 25:16817
reactions with helium at high energies, compilation of cross sections for, (E), 25:17369 (CERN-HERA-70-2)
reactions with helium, Born-approximation calculation of differential and total cross sections for simultaneous charge exchange and ionization in, 25:16818
reactions with helium, excitation cross sections for, (T), 25:16804
reactions with hydrogen atoms at high energies, energy dependence of charge exchange in, (T), 25:16825
reactions with hydrogen excited atoms, computer program for calculation of charge-transfer and excitation probabilities for, 25:16822
reactions with magnesium vapor, hydrogen atom production by charge exchange in, 25:17213(T) (UCRL-Trans-10497)
reactions with nitrogen molecules at 1 to 150 keV, cross sections for emission of first negative band system in, (E), 25:16801
reactions with nuclei below 5 GeV, cascade--evaporation model for analysis of low-energy particles produced in, (T), 25:17515 (JINR-P2-5549)
reactions with nuclei, review of diffractive processes in, (T), 25:17501
scattering at isobaric analogue resonance of ground state of lead-208, models for, 25:18034
scattering at isobaric analogue resonance of ground state of zirconium-91, models for elastic, 25:18034
scattering by aluminum-27, beryllium-9, and boron-10, depolarization parameters for elastic, (E), 25:17826
scattering by beryllium-9 at 1.97 to 2.18 MeV, angular distributions for elastic, (E), 25:17709 (JINR-P15-5519)
scattering by beryllium-9, mechanism in elastic, 25:17765
scattering by boron-11 at 1.1 to 3 MeV, excitation function for elastic, (E), 25:17763
scattering by calcium-40 and -48 at 25 to 40 MeV, optical-model determination of charge radii from elastic, (E), 25:17778
scattering by calcium-40 at 10 to 11 MeV, p-γ angular correlations from inelastic, (E), 25:17794
scattering by carbon-12 at 140 MeV, bremsstrahlung amplitudes from elastic, (E/T), 25:17728
scattering by deformed carbon-12, differential cross sections for elastic, (T), 25:17707 (INP-721)
scattering by deuterium, helium-3, helium-4, and hydrogen at 600 MeV, differential cross sections for, (E), 25:17687 (N-70-36659)
scattering by even tin isotopes at 156 MeV, DWBA analysis of, (E/T), 25:17931
scattering by even--even medium-weight nuclei at 11 MeV, inelastic, 25:17996
scattering by helium-3 and tritium at 156 MeV, differential cross sections for, (E), 25:17699
scattering by helium-3 at 5.5 MeV and tritium at 6.5 MeV, cross sections for elastic, (E/T), 25:17971
scattering by helium-4 at 0.5 to 2 MeV, cross section for elastic, (E), 25:17705
scattering by helium-4 at 600 MeV, differential cross section for elastic, (E), 25:17700
scattering by iron-54 at 49.35 MeV, angular distribution for 11 excited states in inelastic, (E/T), 25:17844
scattering by lead-210 at 20.5 MeV, differential cross sections for inelastic, (E), 25:17905
scattering by magnesium-24, magnesium-26, and silicon-28 at 20.3 MeV, coupled-channel analysis of polarized inelastic, (E/T), 25:17825
scattering by neon-22 at 2.4 to 3.2 MeV, differential cross sections for elastic and inelastic, (E), 25:17762
scattering by nickel-58 at 7.8 to 8.6, p-γ angular correlations from inelastic, (E), 25:17783
scattering by nickel-60, -62, and -64 at 1.8 to 3.3 MeV, differential cross sections for elastic, (E), 25:17841
scattering by nitrogen-14 at 24 MeV, DWBA analysis of inelastic polarized, (E), 25:17741
scattering by nuclei, effect of L-S interaction on inelastic, (T), 25:18026
scattering by nuclei, spectroscopic factors from isobaric analog resonances in inelastic, 25:17973
scattering by oxygen-16 at 21.25 to 38.50 MeV, optical-model and coupled-channels analysis of angular distributions and excitation functions from elastic and inelastic, (E/T), 25:17735
scattering by phosphorus-31 at 3.150 to 3.300 MeV, excitation functions and angular distributions for elastic and inelastic, (E), 25:17774 (NP-18623)
scattering by tantalum-181, tin-120, and zirconium-90 at 9.7 MeV, optical-model analysis of elastic, (E/T), 25:17873
scattering by ytterbium isotopes at 10 to 13 MeV, excitation functions and isobaric analogue resonances for elastic, (E), 25:17945
storage near Sun, relation of differential-energy spectra of 0.3- to 25-MeV protons with, (E/T), 25:16696
PROTONS (anti p)
interactions anti p + n at 1.50 to 2.00 GeV/c, review of U(2370) production in, (E), 25:17390
interactions anti p + p → anti p + p at 0.70 to 2.37 GeV/c, differential cross sections for backward, (E), 25:17373
interactions anti p + p → anti p + p, prediction of slope changes and corresponding nonstrange meson masses in, (T), 25:17378
interactions anti p + p → K+ anti K + ω at 1.1 to 1.5 GeV/c, review of T production in, (E), 25:17377
interactions anti p + p → rho0 + rho0 + π0 at 1.1 to 1.5 GeV/c, review of T production in, (E), 25:17377
interactions anti p + p at 1.50 to 2.00 GeV/c, review of U(2370) production in, (E), 25:17390
production in p + p interactions at 12.4 to 12.5 GeV/c, differential cross section for, (E), 25:17379
PROTOZOA
development of Savannah River, effects of reactor effluents on, 25:18225 (TID-25634)
PULSARS
data tables for, position and dispersion measure, 25:16684
NP 0532, pulsed x-ray emission from, (E), 25:16685
NP 0532, x-ray spectra of, (E), 25:16675
PULSE DISCRIMINATORS
design of germanium tunnel diode, 25:15969
PUMPS (LIQUID METAL)
design and operation of, for liquid metal fast breeder reactors, 25:15825
development in Japan for liquid metal cooled fast breeder reactor cooling system, 25:18132
development of ac sodium, 25:15820
PUPAE
radiation effects on survival of, of alfalfa weevils, γ, 25:16289
radiation effects on, of Sarcophaga peregrine, recovery from low dose β, 25:16297
PUREX PROCESS
plutonium reduction in, efficiency of hydroxylamine nitrate for, 25:15721 (DP-1248)
waste from, recovery of palladium from, using activated charcoal, 25:15720 (ARH-1552)
PYROMETERS
design and performance of high-temperature microwave, for advanced reactors, 25:15967 (WHAN-SA-24)
design of radiation, for in-core measurements, 25:15978(P)
PYRROLIDINONE, VINYL-
radiation effects on subsequent polymerization with acrylonitrile and cellulose, effects of composition and solvent on, γ, 25:15655

Q DEVICES
plasma contact ionization in Barbara, lithium and strontium, 25:17192
QUANTUM ELECTRODYNAMICS
axial-vector current in spinor, 25:17570
formulation of finite, 25:17555 (NYO-1932(2)-183)
photon spin formalism in, 25:17572
radiative processes in, direct interparticle action in relativistic, 25:17564
QUANTUM FIELD THEORY
asymptotic theorems at high energies in local, validity of, 25:17574
distribution theory for, Hermite expansions of, 25:17573
field as wave function in relativistic quantum mechanics, classical two-component spinor, 25:17562
field equations in, extremum principles for, 25:17567
fields in, spin-1/2 fermion interactions with external electromagnetic field in two-component spinor, 25:17562
formulation of local gauge Yang--Mills, for strong interactions, 25:17558
functional integration method for nucleon elastic interactions with vector mesons and meson production in N + N interactions at high energies in, straight-line particle paths approximation for, 25:17498 (JINR-E2-5217)
gauge transformations in, unitary operator in canonical commutation relations for local, 25:17571
Lagrangian theory for paraparticles, symmetry in, 25:17565
metric in, dilatations for model with indefinite, 25:17469
models of interaction, Poincare group elements for, 25:17553 (JINR-P2-5513)
operators for interacting system, Lorentz invariance and normal product of, 25:17569
operators in, Lorentz invariance and normal product of, 25:17560
Pade approximants for extraction of magnetic moments from vertex parts in, 25:17552 (AD-711404)
propagators of high-spin particles in, unitarity condition for, 25:17568
renormalized series in, principle of minimum maximum modulus for, 25:17561
scattering amplitudes in local, increasing order of, 25:17603
space--time in local Poincare covariant, dimensionality of, 25:17566
wave functions and field operators in, Poincare group elements for, 25:17553 (JINR-P2-5513)
QUANTUM MECHANICS
bosons in relativistic, bound-state and scattering problems for scalar, 25:17559
causal interpretation of wave mechanics, point dynamic model for, 25:17335
Dirac plane waves in relativistic, mathematical property of, 25:17563
Dirac--Hestenes theory in, kinetic and magnetic moments from, 25:17342
Feynman's approach to, possible relativistic generalization of, 25:17348
Galilean transformations in relativistic, 25:17554 (JINR-P2-5523)
inverse problem in complex lambda plane in presence of Coulomb interactions, 25:17331
Lie algebras and groups in, survey, 25:16832 (CEA-R-4112)
measurement theory in, 25:17336
random-phase approximation in, relation between generator-coordinate method and, 25:18035
Schroedinger solutions for nuclear Coulomb potential in lambda plane, 25:17330
time correlation functions in, calculation using Wigner's representation, 25:17327
uncertainty principle and statistical interpretation of, 25:17350
use in defense of measurement theory, 25:17333
wave equation with multiple representations for spin-1 bosons in, relativistic, 25:17557
wave equations with multiple Lorentz group representations for fermions, matrix structure of, 25:17556
wave function in relativistic, classical two-component spinor field as, 25:17562
wave functions in, Poincare group elements for, 25:17553 (JINR-P2-5513)
wave propagation in randomly inhomogeneous media, (T), 25:17349
QUASARS
composition of central regions of, chemical, (T), 25:16669
gamma reactions in central regions of, (T), 25:16669
light variations of 3C 273 and 3C 454.3, short-time-scale, (E), 25:16673
light variations of, short-time-scale, (E), 25:16673
spectra of 4C 05.34, absorption-line, (E), 25:16671
spectra of PKS 1116 + 12, models for absorption, (T), 25:16722
spectra of, x-ray,(T), 25:16670

R

RABBITS
cesium-137 distribution in amniotic fluid, embryos, organs, and placenta of pregnant, 25:16024
penetration of injected calcium-45-labeled calcium chloride into aqueous and corneas of eyes of, effects of alloxan on, 25:15996
plutonium-239 distribution in bone marrow and bone surfaces of, following intramuscular and intravenous injection of plutonium nitrates, 25:16015
radiation effects on activity of esterases in blood serum and visceral organs of, x, 25:16032
radiation effects on blood serum proteins and survival of, protective effects of injections of lysozyme against x, 25:16229
radiation effects on brain of, after exposure of embryo, x, 25:16352
radiation effects on hematopoiesis and survival of, protective effects of bone marrow hydrolysate against x, 25:16333
radiation effects on lung tissues of, effects of dose on electron, γ, and x, 25:16305(T) (LF-tr-33)
radiation effects on metabolism of bilirubin in liver of, effects of dose on γ, 25:16039
radiation effects on survival of, effects of bone marrow removal on, 25:16354
radiation effects on survival of, effects of vegetable diet on, 25:16354
radiation effects on survival time of erythrocytes of, protective effects of adenosine against fast neutron and x, 25:16221
radioinduced brain lesion in, protective effects of cysteamine against, 25:16225
radioinduced chromosome aberrations and mutations in male germ cells of, x, 25:16103
radioinduced injuries of eyes of, laser, 25:16361(T) (JPRS-52274)
thrombopoiesis in, use of selenium-75-labeled selenomethionine platelets for investigation of, 25:15991
RADIATION
book: Shielding Against Ionizing Radiation from Nuclear Explosions (in Russian), 25:15863
detection and measurement of, Bayes estimation principle for, 25:15891
dose to human population in vicinity of Hanford plant during 1969 from controlled release of radioactive wastes, 25:16129 (BNWL-1505)
dose to man from low-level environmental contamination, model assessment of, 25:16174
dose to tissues of personnel following internal radioisotope contamination, ICRP report on, 25:16148
dosimetry for personnel, use of changes in blood cells for low-dose ionizing, 25:16189
effectiveness for therapy of Ewing sarcomas and metastases in man, effects of dose on, 25:16261
effectiveness for therapy of thrombophlebitis in man, 25:16238
effects of nuclear explosion, on human genetics, 25:16276 (FOA-1-1449)
effects on aerated aqueous solutions of N-(3-phenyl-L-alanyl)glycine, comparison of mechanism of photolysis with, 25:15678
effects on animals, oscillation of erythropoiesis following, 25:16336
effects on aqueous thymine solutions, reactions of electron and hydroxyl group adducts in, 25:15674
effects on biological materials, bibliography on ionizing, 25:16277 (AED-C-4-32)
effects on brain in mice and rabbits, protective effects of cysteamine against pathological, 25:16225
effects on chromosomes in children following in utero exposure during maternal therapy, aberrant, 25:16105
effects on chromosomes in human bone marrow, aberrant, 25:16306 (NIRS-9, pp 55-61)
effects on chromosomes of mice, effects of saline extracts from irradiated and unirradiated mice on aberrant, 25:16097
effects on cymarin, erysimin, and strophanthin, effects of Nipagin on, 25:15687
effects on DNA synthesis and mitotic cycle, review of, 25:16281
effects on dyes, review on, 25:15667
effects on electrolytes in heart muscle of rats, effects of adrenalectomy on, 25:16351
effects on erythrocyte population in rats, analysis of cell volume for determination of, 25:16304 (CEA-CONF-1591)
effects on Escherichia coli in freezing medium, effects of oxygen and strain on, 25:16384
effects on formation of fatty acids in animals and man, carbon-14 tracer study of, 25:16316 (ORO-678, pp 49-50)
effects on frogs, effects of temperature on, 25:16354
effects on growth of parental bone marrow in F_1 hybrid mice, 25:16337
effects on gustation in man following use for therapy of

head and neck carcinomas, 25:16362
effects on hematopoiesis in mice, effects of bone marrow and fetal liver transplants on recovery from, 25:16346
effects on hematopoiesis in mice, effects of hydroxyurea and partial shielding on in vitro and in vivo, 25:16347
effects on hemopoiesis and sinusoidal structure of bone marrow of animals after local and whole-body exposure, 25:16342
effects on human pericardium following therapy of mammary carcinomas, pathological, 25:16364
effects on human population, reevaluation of data on relation between low dose exposure and mortality from leukemogenic, 25:16373
effects on human skin, minimal energy dose determination for erythemagenic, 25:16363
effects on human thyroid following exposure to atomic bombing, incidence of neoplastic, 25:16371
effects on human thyroid gland following childhood therapy of enlarged thymus, neoplastic, 25:16372
effects on immune reactions, review of, 25:16061
effects on incorporation of carbon-14 and tritium-labeled thymidine in lymphocytes by extracorporeal exposure of blood, 25:16039
effects on intestinal epithelial cells in mice, effects of dose on effects of hypoxia on, 25:16222
effects on livestock, description of pathological changes following necropsy, 25:16319 (ORO-678, pp 65-73)
effects on man prior to head and neck surgery, protective effects of fluorescein against, 25:16220
effects on membrane permeability of mitochondria and nuclei, protective effects of esculamine against, 25:16226
effects on mice, effects of bone marrow transplants on, 25:16053
effects on mice, modifying effects of mixtures of allogeneic and xenogeneic hemopoietic grafts on secondary effects of whole-body lethal, 25:16050
effects on Micrococcus radiodurans, combined effects of phosphorus oxide, time, temperature, and dose fractionation on, 25:16385
effects on monkeys, effects of stem cell transplants on, 25:16366
effects on oogenesis in mammals, review of effects of age, species, and stage of growth of follicle on, 25:16102
effects on production of botulinum toxin in processed fish, methods for evaluating hazards of, 25:16395
effects on production of thymidine by mammalian cells, autoradiography studies on, 25:15992
effects on rat bone marrow, role of endothelial and reticular cells and lymphocytes in regeneration following, 25:16341
effects on RNA synthesis in liver of rats, effects of calf thymus, histones, dactinomycin, and trypsin on, 25:16027
effects on sprouting of potatoes in comparison to effects of chemical inhibitors, 25:16394
effects on stem cells of mice, comparison of recovery following erythropoietin and hydroxyurea treatment and, 25:16344
effects on stem cells, relation between leukemia induction and, 25:16280
effects on survival of mice, effects of pre- and postexposure temperature on, 25:16354
effects on survival of rabbits, effects of bone marrow removal on, 25:16354
effects on survival of rabbits, effects of vegetable diet on, 25:16354
escape probability for cylinders, 25:17269
hazards to man from excessive and improper medical exposure, model legislation for protection against, 25:16208 (BRH/ORO-70-8)
hazards to man, ICRP recommendations on protection against external, 25:16200
hazards to medical personnel during care of patients containing therapeutic doses of radioisotopes, recommendations of NCRP regarding protection against, 25:16197 (NCRP-37)
hazards to personnel and public in general from electronic equipment and radioactive materials, survey of role of federal agencies in establishing or enforcing safety standards for control of, 25:16202 (BRH/DEP-70-28)
hazards to public from electronic equipment, annual report of Bureau of Radiological Health on status of compliance of industry with federal programs and standards for control of, 25:16194 (BRH/OBD-70-3)
hazards to students during demonstrations using radioactive materials in schools, ICRP recommendations on protection against, 25:16205
theory for unpolarized, 25:17405
use for food processing, bibliography on ionizing, 25:16389 (AED-C-6-8)

RADIATION DETECTORS
book: Medical Radiation Physics, 25:16275
calibration for radioprotection, 25:15882 (CEA-R-4009(1))
deadtime correction for pulsed beams, 25:15903
description of gamma monitoring, for atomic energy, 25:15789
design of computer-controlled many-component system of, 25:15899
development of self-powered, for in-core fast-neutron flux monitoring, 25:15966 (WHAN-SA-23)
operation and use in space flight studies, 25:15896

RADIATION DETECTORS, ACTIVATION
calculation of neutron flux spectra from, variational method for, 25:15887 (TID-25651)
performance of spherical paraffin-moderated indium, for fast neutron flux monitoring, 25:15912

RADIATION DETECTORS, BUBBLE CHAMBER
design of high-resolution and -data-acquisition-rate high-field, 25:15939

RADIATION DETECTORS, CHERENKOV
design and operation of separated function shower, for detection of electrons and gamma rays at 300 to 1600 MeV, 25:15938
design and performance of balloon-borne gas Cherenkov--scintillator telescope for measuring charge spectra of cosmic particles, 25:15944
design and performance of helium differential, for detecting very-high-energy particles, 25:15937(T) (NAL-tr-3)

RADIATION DETECTORS, DIELECTRIC TRACK
performance of uranium foil--mica track detector for thermal neutron flux measurements, 25:15879 (ANL-7760(Pt.1), pp 57-66)

RADIATION DETECTORS, FISSION CHAMBER
circuit for neutron flux monitoring, Campbell type, 25:15883 (CEA-R-4119)
efficiency of, lead slowing-down-time spectrometer for measurement of, 25:15921
uses of back-to-back, 25:15909

RADIATION DETECTORS, FISSION FOIL
performance of uranium foil--mica track detector for thermal neutron flux measurements, 25:15879 (ANL-7760(Pt.1), pp 57-66)

RADIATION DETECTORS, GEIGER-MUELLER
design and performance for surface monitoring of T_2O for tritium, 25:15892
design of system of, for scanning bidimensional radiochromatograms, 25:15911
development in Poland, review of, 25:15907
operation and performance for photon detection in beam--foil spectroscopy, 25:15973

RADIATION DETECTORS, IONIZATION CHAMBER
circuit for neutron flux monitoring, Campbell type, 25:15883 (CEA-R-4119)
electrometers for standard, comparison of, 25:15904
performance for dosimetry of charged particles, 25:16043
performance of γ, for power distribution measurements in reactor fuel channels, (E/T), 25:18047

RADIATION DETECTORS, PROPORTIONAL
beta-particle energy deposition spectra in, effects of gas--solid interface on carbon-14, (E), 25:15913
design and performance of large multiwire, 25:15942
development in Poland, review of, 25:15907
development of hybrid spark chamber--, 25:15940
development of tissue-equivalent pocket, for electrons and photons, 25:15948 (CEA-N-1393)
filling gas mixture for high-resolution, 25:15895
performance of proton-recoil, for neutron spectra measurements of radioisotope sources, 25:15917(T) (ORNL-tr-2415)
performance of xenon, for x-ray detection relative to other detectors, 25:15900
readout system for 5000-wire design of, 25:15941
resolution of, measurement of, 25:15894

RADIATION DETECTORS, SCINTILLATION
calibration for iodine-131 monitoring in water, 25:15881 (BNWL-B-41)
design and operation of separated function shower, for detection of electrons and gamma rays at 300 to 1600 MeV, 25:15938
design and performance of balloon-borne gas Cherenkov--scintillator telescope for measuring charge spectra of cosmic particles, 25:15944
design and performance of liquid, for low-level detection of low-energy beta particles, 25:15886 (NP-18661)
design for electron and proton detection in auroral zones and radiation belts of, aboard Kosmos 261 satellite, 25:17026
design for photoelectron detection in auroral zone aboard Kosmos 261 satellite, 25:17024
design for reactor fuel element burnup measurement, 25:18248
development for fast ion counting in mass spectrometers, 25:15884 (EUR-4567)
geometrical attenuation factors for thallium-activated sodium-iodide, due to finite solid angle for gamma-ray energies of 0.51 to 6.1 MeV, 25:15897
light guide for hodoscope of, preparation of Plexiglas, 25:15885 (LUSY-6903)
luminescence spectra of liquid organic, after excitation by α, β, and γ radiation and ultraviolet light, 25:15898
performance of NE-213 liquid organic, for fast neutron spectroscopy, 25:15880 (ANL-7760(Pt.1), pp 67-73)
performance of sodium iodide, for x-ray detection relative to other detectors, 25:15900
pulse shapes from, differences between noise and scintillation, 25:15901

XUM

response of plastic, to weakly ionizing radiation, model for nonlinear, 25:15906
RADIATION DETECTORS, SEMICONDUCTOR
data analysis system for telescope, for on-line particle identification using table look-up method, 25:15905
energy-loss mechanisms in, model for, 25:15910
performance for dosimetry of charged particles and high-energy protons, 25:16168
performance for measurements of activity of cyclotron-produced He ions and protons, 25:16042
performance of cooled surface-barrier, 25:17774 (NP-18623)
properties of surface-barrier, in in-core thermal neutron flux density measurements, 25:15890
RADIATION DETECTORS, SEMICONDUCTOR (GERMANIUM)
characteristics of, research on, 25:17294(R) (NBS-TN-560)
design for reactor fuel element burnup measurement, 25:18248
performance for x-ray detection relative to other detectors, 25:15900
response of lithium-drifted, to 46.5-keV gamma ray from lead-210, 25:15878 (ANL-7760(Pt.1), pp 28-32)
testing of lithium-drifted, high-energy gamma source for, 25:15931(P)
RADIATION DETECTORS, SEMICONDUCTOR (SILICON)
characteristics of, research on, 25:17294(R) (NBS-TN-560)
design and performance of boron and phosphorus ion-implanted, 25:15888
development of compact, with lithium-6 foil for personnel neutron dosimetry, 25:15951 (RFP-794)
performance for x-ray detection relative to other detectors, 25:15900
pulse-height anomaly in lithium-drifted, temperature effects on, 25:15908
response of lithium-drifted, to 46.5-keV gamma ray from lead-210, 25:15878 (ANL-7760(Pt.1), pp 28-32)
RADIATION DETECTORS, SPARK CHAMBER
avalanche amplification in streamer, calculations for, 25:15943
design of missing-mass spectrometer, 25:17639
development of hybrid proportion detector--, 25:15940
performance of wire, with magnetic analyzer for studying (p,2p) reactions, 25:17619
RADIATION DOSE
calculation for internally deposited radionuclides in Amchitka, Alaska, 25:16074(R) (BMI-171-118)
calculation of internal, to man following environmental contamination in Alaska, 25:16072(R) (BMI-171-110)
calculations for 1250 keV photons in graphite and water phantoms, 25:16145
distribution in therapy, phantom method for determining rotational, 25:16149
effects on therapy of human bronchial and mammary carcinomas, effects of fractionation and rate on, 25:16263
methods for determining, for therapy, using pantographic natural-size copies of x-ray tomograms of tumors, x, 25:16146
RADIATION DOSIMETERS
calibration for radioprotection, 25:15882 (CEA-R-4009(1))
uses in environmental monitoring around atomic energy installations, 25:15789
RADIATION DOSIMETERS, BIOLOGICAL
evaluation of urinary biochemistry for, 25:16140 (RT/PROT-(70)9)
use of changes in blood cells as, for low-dose exposure of personnel, 25:16189
RADIATION DOSIMETERS, CALORIMETRIC
performance for absorbed dose measurements in Melusine reactor graphite, comparison of, (E), 25:18191
RADIATION DOSIMETERS, CHEMICAL
performance for measurements of activity of cyclotron-produced He ions and protons, 25:16042
RADIATION DOSIMETERS, EXOELECTRON
response of lithium fluoride, effects of thermal annealing and environmental gases on, 25:15953
RADIATION DOSIMETERS, PHOTOGRAPHIC FILM
calibration of Kodak PNM, for fast neutron personnel monitoring, 25:15949 (CLOR-80/D)
readout of Kodak PNM, for fast neutron personnel monitoring, 25:15949 (CLOR-80/D)
readout of thermal neutron dose equivalents in gamma field, correction coefficients for, 25:15950 (CLOR/IBJ-78)
RADIATION DOSIMETERS, PHOTOLUMINESCENT
characteristics of silver phosphate glass, spectral, 25:15946 (ANL-7760(Pt.1), pp 13-20)
readout system for, development of ultrasensitive, 25:15946 (ANL-7760(Pt.1), pp 13-20)
readout system for, uv Kerr cell for, 25:15961 (ANL-7760(Pt.1), pp 1-12)
RADIATION DOSIMETERS, THERMOLUMINESCENT
calibration of lithium fluoride ribbon, for personnel neutron dosimetry, 25:15952 (RFP-1581)
characteristics of thulium-activated calcium sulfate, at high gamma doses, 25:15956
development of polyethylene moderated, for neutron dosimetry, 25:15849
efficiency of, measurement of intrinsic, 25:15945 (AD-711588)
performance of lithium fluoride ribbon, for personnel neutron dosimetry, 25:15952 (RFP-1581)
performance of lithium-7 fluoride, for neutron dosimetry in mixed gamma field, 25:15954
preparation and properties of lithium fluoride materials for, 25:15955
response of lithium-7 fluoride, relation between encapsulation and apparent fast neutron-induced fading of, 25:15947 (ANL-7760(Pt.1), pp 21-7)
RADIATION DOSIMETRY
book: Medical Radiation Physics, 25:16275
catalogue of data sheets obtainable from IAEA, 25:16151
development of instruments for, in Netherlands, progress report for 1970, 25:16089(R) (EUR-4545)
methods for diagnosis and therapy, 25:16150
methods for fallout and natural environmental γ, in human reproductive system using analytical transport theory, 25:16152
methods for human populations following accidental release of isotopes, 25:16172
methods for rotational therapy, 25:16149
methods for therapy, 25:16186
methods using urinary biochemical indicators in man, ionizing, 25:16140 (RT/PROT-(70)9)
RADIATION MONITORING
accuracy of laboratory air, effects of collector location, measuring method, and time on, 25:16153
book: Environmental Surveillance in the Vicinity of Nuclear Facilities, 25:16154
data handling in, description of on-line computer, 25:16183
development of environmental, recommendations for, 25:16207
equipment for environmental, description of data handling, 25:16182
equipment, methods, and results for off-site environmental, following Buggy I Event, 25:15786 (PNE-327)
gamma spectroscopy in emergency, 25:16184
methods for control of occupational exposure, 25:16135 (NP-18514)
methods for environmental, at atomic energy facilities, 25:15790
methods for environmental, at atomic energy facilities, 25:15789
methods for environmental, at nuclear power plants, survey of, 25:16157
objectives of environmental, around nuclear power plants, panel discussion on, 25:16158
program for environmental nuclear power plant, design of graded, 25:16166
program for environmental, around nuclear power plant, design and performance of, 25:16161
program for environmental, of γ emitting isotopes from Brookhaven Reactor, 25:16178
program for environmental, of radioactve waste discharge in U.K., results of, 25:16173
program for volatile fission product release to environment from LOFT, 25:16166
program for waste disposal in Clinch River, objectives and results of, 25:16180
program in New Jersey, evaluation of, 25:16209 (CONF-691129-1)
programs for emergency environmental, criteria for, 25:16171
programs for environmental nuclear power plant, summary of information regarding, 25:16160
programs for environmental nuclear site, economics of preoperational, 25:16155
programs for environmental, around nuclear facilities, comparison of absolute contribution, graded, and threshold approaches to development of, 25:16162
programs for environmental, around nuclear power plants, comparison of recommendations of FAO, IAEA, ICRP, and WHO regarding, 25:16159
programs for environmental, in environs of Hanford during 1969, 25:16075 (BNWL-1505(App.))
programs for environmental, in New Jersey, methods and objectives of, 25:16169
programs for environmental, near nuclear facilities, use of radionuclide effluent release data for planning, 25:16175
programs for environmetal, near nuclear facilities, criticisms and recommendations for, 25:16167
programs for natural waters used for radioactive waste disposal, 25:16185
programs for radioactive wastes, at atomic energy establishments in United Kingdom, 25:16128 (AHSB(RP)R-105)
programs in Canada for environmental, 25:16156
programs in U.K. for environmental, near nuclear facilities, objectives of, 25:16155
RADIATION PROTECTION
book: Medical Radiation Physics, 25:16275
legislation for, in medicine, 25:16208 (BRH/ORO-70-8)
planning accident, recommendations for, 25:16207
programs in Thailand for, during 1970, 25:16137 (NP-18658)
recommendations for demonstrations using radiation sources in schools, ICRP, 25:16205

recommendations for man in relation to external sources, ICRP, 25:16200
recommendations for patients during diagnostic radiographhy, ICRP, 25:16201
research on, in Netherlands, progress report for 1970, 25:16089(R) (EUR-4545)
review of human, 25:16115 (NP-18513)
review of human, 25:16135 (NP-18514)
standards for nuclear power plant radioactive effluents, 25:18081 (BRH/DCS-70-1)
survey of methods for, against x ray installations in Thailand during 1969, 25:16198(R) (RPS-AR-3)
RADIATION TARGET CANS
design parameters of thermal neutron research reactor, 25:18189
RADIATION TARGET CHAMBERS
description of Harwell variable-energy cyclotron, for fission studies, 25:17647
design for beam--foil spectroscopy, 25:15975
design for ion channeling studies, 25:17625
design for low-yield neutron and gamma ray measurements, 25:17626
design for measurement of high energy photonuclear cross sections, 25:17624
design for radiation damage studies in metals, 25:17651
RADIATION TARGETS
bremsstrahlung production in thick, calculation of spectra for, 25:17618
bremsstrahlung production in, effects of thickness and Z on, (E), 25:17658
design for cyclotron for radioisotope production for medical use, 25:17644
design for cyclotrons for radioisotope production, 25:17650
design for Harwell variable-energy cyclotron, for radioisotope production, 25:15703
design for IPhPE cyclotron for radioisotope production, 25:17645
design of differentially pumped gas, 25:17620
thickness of, development of torque-motor balances for measuring, 25:17657
RADIATORS
materials for SNAP-23A, properties and selection of, 25:15846(R) (WANL-4182-3)
RADIO GALAXIES
flux densities at 8 GHz of sixty, (E), 25:16726
RADIO WAVES
absorption in auroral zone, correlation to ionospheric--magnetic activity with riometer cosmic, (E), 25:16987
absorption in high-latitude ionosphere, relation with magnetically disturbed and quiet periods, (E), 25:16997
absorption in ionosphere, diurnal-variation comparison at Loparskaya and College of auroral, (E), 25:16988
effects on conditioned reflexes in rats, effects of short and ultrashort, 25:16323
emission from auroral zone, vlf, 25:17014
emission from Sun, periodic fluctuations of, (E), 25:16687(T) (AD-712020)
propagation and reflection in ionosphere, parameters affecting initial behavior of, (T), 25:16982
propagation in auroral region, observation of vlf, 25:17013
propagation in ionosphere, interaction of vertical disturbed-pulsed, (T), 25:16974
propagation in ionosphere, mode theory of whispering-gallery guidance at hf and vhf, (T), 25:17037
propagation in ionospheric sporadic E and F layers, second-order theory of phase-path difference of, (E/T), 25:16881 (AD-711394)
propagation of ionospheric multipath short, effect on communication equipment, (E/T), 25:16930
spectra of galactic and extragalactic background, in circumlunar space, (E), 25:16861
RADIOACTIVE CONTAMINATION
dispersion in air and surfaces, mechanisms for, 25:16117
effects of internal, on man, 25:16276 (FOA-1-1449)
effects on man following accidents at Atomic Energy Research Institute in Korea, 25:16118
RADIOACTIVE MATERIALS
containers for, comparison of methods for testing leak tightness of, 25:15871
handling by personnel and public in general, survey of role of federal agencies in establishing or enforcing safety standards to control hazards from, 25:16202 (BRH/DEP-70-28)
packaging and shipping of, regulations for safe, 25:15864 (CONF-700549-1)
possession and use by Member States of Euratom Community, comparative study of programs for compulsory authorization and declaration regarding, 25:16210 (EUR-4515)
shielded container for ion exchange material-absorbed, design of, 25:15872(P)
RADIOACTIVE WASTE
analysis of, development of calorimeters and gamma spectrometers for, 25:15916(R) (GEAP-12114-3)
bibliography on disposal of, 25:15869 (ORNL-TM-3301)
diffusion rates of radioactivity from encapsulated, method of leach testing, 25:15868 (ORNL-TM-3232)
discharge to environment near Windscale Nuclear Facility, results of monitoring of, 25:16173
disposal at Hanford plant during 1969, radiation dose to off-site human population from controlled, 25:16129 (BNWL-1505)
disposal from nuclear facility in Canada, environmental contamination from, 25:16156
disposal in Clinch River, long term effects of, 25:16180
disposal to Neckar River of Obrigheim Power Reactor, 25:18094 (NP-18622)
distribution in Clinch River, evaluation of, 25:16180
effluents from power reactors, environmental effects of, 25:18044
fixation of medium-level, in bituminous materials, Eurochemic method for, 25:15865 (NP-18574)
monitoring at United Kingdom atomic energy establishments during 1969, 25:16128 (AHSB(RP)R-105)
monitoring near nuclear facilities in U.K. evaluation of program for, 25:16155
processing of, suitability and reliability of installations for, 25:15724 (NP-18621)
processing systems at water cooled reactors, review of, 25:18043
solidification of high-level, in basalt, effects on basalt properties, 25:15873
treatment of liquid, from irradiated-fuel processing plants for removal of ruthenium-106 nitrosyl, use of chitin or chitosan for, 25:16116
RADIOACTIVITY
diffusion from encapsulated wastes, method for analysis of, 25:15868 (ORNL-TM-3232)
monitoring in ecosystems near Caseccia Nuclear Center in Italy in relation to critical crops, critical population groups, and maximum rates of discharge of radioisotopes, 25:16163
monitoring in environment of nuclear center in Mexico, design of survey for preoperational, 25:16164
monitoring in surface atmosphere at selected sites in western hemisphere during 1963 to 1970, monthly fallout gross γ, 25:16132(R) (HASL-239(App.))
RADIOAPPLICATORS
comparison of cesium-137, cobalt-60, iridium-192, and radium-226, 25:16260 (SZS-16/70)
implantation of radium, local anesthesia for uterine, 25:16268
RADIOBIOLOGY
applications of closed circuit television in reactor research in, 25:16359 (AD-710375)
research in agricultural, 25:16307(R) (ORO-678)
research on space flight, in USSR, 25:16213(T) (JPRS-52121)
research programs at Argonne Cancer Research Hospital during 1970, 25:16234(R) (ACRH-34)
RADIOCHEMICAL PROCESSING PLANTS
design for separation of plutonium and uranium from fast reactor fuels, engineering drawings for, 25:15817
development for oxide fuel reprocessing at Windscale, 25:15735
nuclear materials accounting in, for reactor burnup verification, 25:15866 (NP-18575)
radioactive wastes from Eurochemic, bitumen fixation for disposal of, 25:15865 (NP-18574)
RADIOCHEMISTRY
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)
RADIOFREQUENCY SPECTROMETERS
design of EPR, for studying radiation effects, 25:15962 (CEA-R-4022)
RADIOGRAPHY, BIOMEDICAL
book: Medical Radiation Physics, 25:16275
data from tomographic, performance of optic pantograph for producing natural-size copies for use in radiation dose planning for therapy, x, 25:16146
evaluation for diagnosis of kidney mass lesions in man, 25:16248
image quality for fast neutron, theory of, 25:16242
methods for diagnosis of thrombophlebitis in man in combination with radioisotope methods, 25:16238
neutron source for, evaluation of californium-252, 25:15849
performance for diagnosis of human upper gastrointestinal tract hemorrhages, effects of combined use of endoscopy on, 25:16243
radiation dose to human fetuses during diagnostic, relation of Down's syndrome incidence to x, 25:16368
radiation dose to human tissues during mammary gland, x, 25:16255
radiation hazards to patients during, ICRP recommendations for protection against x, 25:16201
use for diagnosis of lymphosarcomas in children, review of, 25:16272
use of pedal and testicular lymphangiography, for diagnosis of nodal metastases from testicular malignancy, 25:16258
RADIOGRAPHY, INDUSTRIAL
certification requirements for weldment inspection personnel in, 25:16111
film exposure time for gamma and x, formula for calculation of optimum, 25:15862
gamma sources for, of welds, performance of iridium-192, 25:15857
neutron source for, evaluation of californium-252, 25:15849

neutron source for, evaluation of californium-252, 25:15850
RADIOIMMUNOASSAY
methods for determination of ovine FSH using FSH-specific immune serums from guinea pigs, 25:16049
RADIOISOTOPE SCANNERS
book: Medical Radiation Physics, 25:16275
data processing for, optimal, 25:17257 (NIRS-9, pp 1-14)
RADIOISOTOPES
analysis of environmental samples for, from Amchitka Island, Alaska, 25:16072(R) (BMI-171-110)
contamination of food by, bibliography on mechanisms of, 25:16071 (AED-C-2-10)
contamination of personnel, ICRP report on dose to tissues following internal, 25:16148
content in stratosphere over Australia and North America from Jan. 1969 to June 1970, (E), 25:16114 (HASL-239, pp II.1-129)
content of marine organisms in Amchitka, Alaska, 25:16073(R) (BMI-171-113)
content of milk on global scale, hazards from, 25:16086
content of surface atmosphere at selected sites in western hemisphere during 1963 to 1970, monthly fallout, 25:16132(R) (HASL-239(App.))
decay rates of, comments on use in turbulent diffusion studies of atmosphere, (T), 25:15793
determination in mixtures, computer programs for resolution of γ spectra for, 25:15543
discharge into ecosystems surrounding Casaccia Nuclear Center in Italy, determination of maximum rates for, 25:16163
effectiveness of Rose Bengal-incorporated, for studies of activity of polygonal hepatic cells and hepatic blood circulation, 25:16240
metabolism and retention in tissues of personnel following internal contamination, ICRP report on mathematical parameters for, 25:16148
metabolism in biological materials, effects of physico-chemical characteristics on, 25:16005
production by charged-particle irradiation, definition of terms used in, 25:15704
production for medical use, cyclotron target designs for, 25:17644
production in IPhPE cyclotron, data tabulation on, 25:17645
production of IPhPE cyclotron target designs for, 25:17645
production of, cyclotron target designs for, 25:17650
release from nuclear power plants during normal operation, compilation of, 25:16175
separation of short-lived, in far-off stability regions, on-line electromagnetic method for, 25:15848
transport in marine environment of Amchitka, Alaska, development of model for determining, 25:16074(R) (BMI-171-118)
transport in model river system, mathematical simulation of, 25:16083
use for diagnosis in clinical medicine, evaluation of methods for, 25:16239
use for diagnosis of thrombophlebitis in man, methods for, 25:16238
RADIOLOGY
personnel training programs for, institutions offering federal grant-supported, 25:16193 (BRH/OBD-70-2)
radiation protection legislation for, 25:16208 (BRH/ORO-70-8)
research at ANL, July 1969--June 1970, 25:16212(R) (ANL-7760(Pt.1))
research at Nat. Inst. of Radiological Sciences, Japan, 1969--1970, 25:16278(R) (NIRS-9)
RADIOMETRIC ANALYSIS
development for industrial uses in Poland, review on, 25:15526
RADIOMETRIC TESTING
method for graphite and hydrocarbons by gamma backscatter, 25:15858
RADIOPROTECTIVE COMPOUNDS
effectiveness for spaceship crews, 25:16215(T) (JPRS-52121, pp 21-4)
effectiveness of biological and chemical, for acute and chronic irradiation of animals during space flight, 25:16214(T) (JPRS-52121, pp 15-20)
effects of cobalt, on regeneration of liver in whole-body x-irradiated rats with partial hepatectomy, 25:16355
effects of ferrant, on regeneration of liver in whole-body x-irradiated rats with partial hepatectomy, 25:16355
effects on mice, use of dithiocarbamates of aminothiophenes for γ and x, 25:16219
mumie, radioprotective effects on DNA and RNA of bone marrow and spleen of rats, x, 25:16231
testing of organic selenium, in gamma irradiated rats, 25:16233
RADIOTHERAPY
book: Medical Radiation Physics, 25:16275
combination with chemotherapy and surgery for lymphosarcomas in children, effects of, 25:16272
combination with lymphadenectomy and orchiectomy for testicular germ cell malignancies, 25:16274
effectiveness for lymph node metastases from tongue neoplasms, evaluation of, 25:16269
effectiveness of electron beam in relation to tissue interactions, 25:16264
equipment for neutron, design parameters for cyclotron, 25:17646
methods for betatron electrons, for beam homogeneity, 25:16147
methods for cobalt-60 γ, comparison of 1cm and 2cm diameter sources for, photometric studies on, 25:16144
methods for production of fast neutrons for, 25:16265
methods for rotational, phantom studies on, 25:16149
neutron source for, evaluation of californium-252, 25:15849
neutron source for, evaluation of californium-252, 25:15850
radiation sources for gamma, comparison of, 25:16260 (SZS-18/70)
terminology for high-energy x-ray, 25:17257 (NIRS-9, pp 1-14)
RADIUM
of sealed sources of, in Thailand during 1969 survey of methods for protection against, 25:16198(R) (RPS-AR-3)
x-ray emission from decay of K-shell vacancies in, relative rates of, (E), 25:16786
RADIUM ISOTOPES
use for therapy of human diseases, incidence of α and γ radioinduced osteosarcomas following, 25:16365
RADIUM ISOTOPES Ra-222
energy level at 50 keV, g-factor for, (E), 25:17903
RADIUM ISOTOPES Ra-226
content of Kiskiminetas River, Pennsylvania, effects of coal mine drainage on, 25:16185
content of man in Soviet Union, effects of age and geography on, 25:16066(T) (AEC-tr-7214, pp 87-107)
determination in nonequilibrium state by γ scintillation spectrometry, 25:15523
deuteron fission of, mass-yield distributions of fragments from, (E/T), 25:17884
effects on incidence of malignant tumors in man, maximum permissible body burden for prevention of, 25:16014
effects on mammalian chromosomes, 25:16291
hazards to man following accidental leakage from capsule, 25:16118
proton fission of, mass-yield distributions of fragments from, (E/T), 25:17884
RADON
content in underground uranium mine air, methods for control of, 25:15792
decay products of, in underground uranium mine air, methods for control of, 25:15792
electromigration of oxidized, in fluoride solutions, 25:15572
emission from radioactive minerals into atmosphere and water, 25:15774
hazards to personnel of uranium, 25:16120
oxidation by bromine fluorides, chlorine fluorides, iodine heptafluoride, and fluoronickelate ion in hydrogen fluoride at -195 to 25°C, 25:15572
x-ray emission from decay of K-shell vacancies in, relative rates of, (E), 25:16786
RADON ISOTOPES
fission of isomers of, search for spontaneous, 25:17924
RADON ISOTOPES Rn-219
alpha decay of, α--γ linear polarization measurements for spin determination in, (E), 25:17948
alpha decay of, gamma spectra and α--γ angular correlations for, (E), 25:17879
emission from radioactive minerals into atmosphere and water, 25:15774
RAINWATER
radioisotope content of Fayetteville, Arkansas, following 8th Chinese nuclear explosion, effects of rainfall rate and storm type on, 25:15791
tungsten-181 content of, 1968 to 1969, 25:15794
RARE EARTH ALLOYS AND SYSTEMS
Au--rare earths, crystal structure of intermetallic compounds of, 25:16398 (IS-2300, pp 101-86)
Mg--rare earths, phase studies of, 25:16398 (IS-2300, pp 101-86)
Mg--rare earths--Zn--Zr, production and uses of, for engine block, precautions for, 25:16433
Pb--rare earths, phase studies of, 25:16398 (IS-2300, pp 101-86)
RARE EARTH CHLORIDES
separation of chloride from solutions of, by solvent extraction using D2EHPA, 25:15561 (IS-2300, pp 7-20)
separation of lanthanum from, by solvent extraction using D2EHPA, 25:15561 (IS-2300, pp 7-20)
RARE EARTH FLUORIDES
preparation of high--purity, methods for, 25:16398 (IS-2300, pp 101-86)
properties of high-purity, physical and structural, 25:16398 (IS-2300, pp 101-86)
RARE EARTH ISOTOPES
production by neutron fission of plutonium-239 and plutonium-241, 25:15690
yields from neutron fission of plutonium-239 and plutonium-241, 25:15689
RARE EARTH NITRATES
separation of cerium from solutions of, by hydrolysis in presence of hydrogen peroxide, 25:15730(T) (UCRL-Trans-10512)

RARE EARTHS
analysis of fission product, for neodymium-148 by neutron activation after ion exchange chromatographic separation, 25:15552
arrangement in revised periodic system, 25:15563(T) (UCRL-Trans-10510)
complexes of, differential scanning calorimetry and thermogravimetric analysis of, 25:18297 (ORO-2124-24)
crystal lattice parameters of, effects of impurities on, 25:16398 (IS-2300, pp 101-86)
determination of, effects of solution composition on spectrographic, 25:15476
diffusion in thorium at 1185 to 1480°C, 25:16398 (IS-2300, pp 101-86)
effects on high temperature tensile properties of copper and copper alloys, 25:16455
electric conductivity of single crystals of heavy, Fermi-surface effects in total-spin-disorder, (T), 25:17324
microstructure of high-purity, 25:16398 (IS-2300, pp 101-86)
preparation of high-purity, methods for, 25:16398 (IS-2300, pp 101-86)
preparation of monocrystalline, by arc-zone melting, 25:16398 (IS-2300, pp 101-86)
properties of, effects of atomic number on, 25:15565 (INR-1212)
separation as pivaloyl trifluoroacetonate from cobalt and thorium pivaloyl trifluoroacetonates by gas chromatography, 25:15752
separation by chromatography using EDTA, effects of retaining ions on, 25:15731(T) (UCRL-Trans-10513)
separation by solvent extraction using fluorinated β-diketones and gas chromatography, 25:15562 (IS-2300, pp 21-89)
separation from lithium chlorides by ion exchange on solid zeolite, 25:15625 (ORNL-4622, pp 60-118)
separation from single-fluid MSBR fuels salt by metal transfer process, 25:15726 (ORNL-4622, pp 199-225)
separation from thorium in acidic aqueous solutions containing ferric ions by solvent extraction using organic phosphorus compounds, 25:15747(P)
separation from uranium by cation exchange using sulfonic KU-2 resin, 25:15729(T) (UCRL-Trans-10509)
RARE GAS IONS
production of focused beams of, design of Plasmatron ion source for, 25:15844 (SGAE-PH-101/1970)
scattering by rare gases at 25, 50, and 1000 keV, calculation of interaction potentials from differential cross sections for, 25:16811
RARE GASES
determination in neutron-irradiated Moon rocks, (E), 25:16737 (UCB-34-P-32-0-3)
rare-gas-ion scattering at 25, 50, and 10 keV by, calculation of interaction potentials from differential cross sections for, 25:16811
RATS
cesium-134 retention in, combined effects of age, sex, and temperature on, 25:16007
cesium-137 distribution in amniotic fluid, embryos, organs, and placenta of pregnant, 25:16024
radiation effects on activity of glycolytic enzymes in liver of, x, 25:16025 (AD-713087)
radiation effects on activity of hydrolases in liver of, whole-body γ, 25:16279 (NIRS-9, pp 15-53)
radiation effects on amino acid content of perfused liver of, in vitro, x, 25:16030
radiation effects on bone marrow of, hematopoietic regenerative activity following, 25:16341
radiation effects on content of histamine and mast cells in skin of, at 12 and 30 keV, x, 25:16353
radiation effects on DNA and RNA content of bone marrow and spleen of, protective effects of mumie against x, 25:16231
radiation effects on electrolytes in heart muscle of, effects of adrenalectomy on, 25:16351
radiation effects on erythocyte population in, analysis of cell volume for determination of whole body, 25:16304 (CEA-CONF-1591)
radiation effects on eyes and testes of, effects of dose rate and prenatal exposure on γ, 25:16308 (ORO-678, pp 4-6)
radiation effects on formation of nicotinamide-adenine dinucleotide in perfused liver of normal and x-irradiated, methods for determining, 25:16031
radiation effects on formation of polyribosomes in liver of, local and whole-body x, 25:16029
radiation effects on functioning of central nervous system of, short and ultrashort radio wave, 25:16323
radiation effects on growth of organs of, effects of prenatal exposure on γ, 25:16309 (ORO-678, pp 7-13)
radiation effects on immune reactions in, effects of bone marrow cells on γ, 25:16055
radiation effects on immune reactions of, following injection of spleen cells from donors with heliotrine-induced cirrhosis of liver, x, 25:16062
radiation effects on lysosomes in dermal and myocardial cells of embryos of, electron microscopy of fast neutron, 25:16358
radiation effects on metabolism in liver of, whole-body x, 25:16279 (NIRS-9, pp 15-53)
radiation effects on metabolism of norepinephrine and serotonin in brain of, effects of low dose on microwave, 25:16303(R) (AD-710005)
radiation effects on neurons in brain of, electron microscopy of x, 25:16331
radiation effects on plasma lipoprotein synthesis in, sub-lethal x, 25:16041
radiation effects on regeneration of liver in, with partial hepatectomy, effects of cobalt compounds and ferrant on whole-body x, 25:16355
radiation effects on reproductive system of female, effects of dose and dose rate on γ, 25:16310 (ORO-678, pp 25-7)
radiation effects on RNA synthesis in liver of, 25:16027
radiation effects on skin of neck and tissues of esophagus and larynx of, laser, 25:16322
radiation effects on survival of erythrocytes in, effects of dose on whole-body x, 25:16284
radiation effects on survival of, following exposure of kidneys with subsequent nephrectomy, protective effects of prednisolone on x, 25:16218
radiation effects on survival of, in comparison to predicted data, 25:16335
radiation effects on, protective effects of organic selenium compounds against cobalt-60 γ, 25:16233
radioinduced thrombocytopenia in, effects of blood platelet depletion on severity, 25:16348
radioisotope distribution in tissues of pregnant, and fetuses of, following subcutaneous injection of calcium-47, cesium-134, and strontium-85, 25:16000 (ORO-678, pp 14-24)
REACTIVITY
calculation of available reserve, statistical model for, 25:18235
calculation of fast reactor, comparison of two and three dimensional models for, (T), 25:18181 (WHAN-SA-11)
measurement of plutonium fueled reactor core, (E/T), 25:18170 (BNWL-1481)
REACTOR CONTAINMENT STRUCTURES
fission product deposition on stainless steel lined, testing of accident release conditions for, (E), 25:18176 (ORNL-4502)
leakage from, flow analysis for viscous, turbulent, and orifice, (T), 25:18244 (WHAN-SA-40)
REACTOR CONTAINMENT SYSTEMS
methyl iodide removal from, performance of activated charcoal filters for, (E), 25:18147
REACTOR CONTROL ELEMENTS
drives for rod type, development and testing of servomechanism, 25:18251
position indicators for rod type, development and testing of, 25:18251
reactivity worth of rod type, in gas cooled reactors, 25:18063(R) (GA-10400)
REACTOR CONTROL SYSTEMS
development in Japan of fast breeder reactor, 25:18120
development of digital computer, review of, 25:18051
REACTOR EXPERIMENTAL FACILITIES
design of high pressure helium, for irradiation of breeder fuel pins, 25:18192
development of neutron scattering, 25:18184
neutron guide tubes for, 25:18185
neutron sources, development of hot, 25:18186
REACTOR FUEL ELEMENTS
bowing of cluster arranged rod type, in forced convection annular flow channels, (T), 25:18243 (TRG-Report-1915)
bowing of pin type, effects of coolant turbulent mixing on thermal, (T), 25:18125
bowing of rod type, effects on neutron flux distributions of, (T), 25:18233
burnout of, effects of hot spot occurrences on probability of, (T), 25:18241
burnup in rod-type, scintillation counters, γ spectrometers, semiconductor radiation detectors for measurement of, (E), 25:18248
cladding for mixed oxide fast, development and testing of stainless steel, 25:18137(R) (GEAP-10028-36)
cladding for, burst and quench tests on irradiated Zircaloy, 25:18139 (WCAP-7379(Vol.2))
coolant flow and heat transfer in rod bundle, computer code development for, 25:18098(R) (BNWL-1522-1)
deformation during thermal neutron irradiation, dilatometer for measurement of, 25:15965 (UJV-2490-R-A)
design of cluster type, with means to prevent melting of fuel during transients, 25:18249(P)
design parameters for series connected thermionic, optimum, 25:18202
distribution uniformity of plutonium oxide (PuO_2) in plutonium oxide (PuO_2)--uranium oxide (UO_2) pellet type, (E/T), 25:18140 (WHAN-SA-7)
failure of liquid sodium cooled, safety problems related to, 25:18154 (ANL-7657)
fission product distribution in plutonium oxide (PuO_2)--uranium oxide (UO_2) pin type, radiation effects on molybdenum, 25:18247 (WHAN-SA-96)
friction and wear between spacer grids and rod-type, in sodium at 680°C, 25:16439 (KFK-1290)
gamma dose rates from mixed oxide recycle, 25:18098(R) (BNWL-1522-1)
hold-down and tightening mechanism for, design of, 25:18250(P)
meltdown of liquid metal cooled, effects of configuration

and materials on, 25:18168 (ANL-7752)
neutron dose rates and yields from mixed oxide recycle, 25:18098(R) (BNWL-1522-1)
performance during power transients, effects of plutonium oxide (PuO_2) particle size on mixed oxide, 25:18098(R) (BNWL-1522-1)
performance of defective mixed oxide, in flowing sodium, (E), 25:18137(R) (GEAP-10028-36)
performance of rod type, effects of internal fins on, 25:18141
radiation effects on viscoelastic response of graphite-matrix, neutron, 25:16618
radiation effects testing of mixed oxide fast, 25:18137(R) (GEAP-10028-36)
radiation testing of plutonium oxide (PuO_2)--uranium oxide (UO_2), for gas cooled fast breeder reactors, 25:18136(R) (GA-9838)
radiation testing of Zircaloy clad plutonium oxide (PuO_2)--uranium oxide (UO_2), 25:18098(R) (BNWL-1522-1)
vibration of 19-rod cluster, effects of two-phase coolant flow on, (E), 25:18129
vibration of grid-supported fundamental frequency and end slope of, (T), 25:18226

REACTOR FUELS
analysis for uranium-235, operator's manual for Baird Atomic enrichment tester for, 25:15915 (DUN-M-30)
analysis of coated high-temperature, for radial profiles of fissionable materials and fission products by recoil and chemical etching methods, 25:15521
analysis of, development of calorimeters and gamma spectrometers for, 25:15916(R) (GEAP-12114-3)
burnup analysis by neutron activation determination of neodymium-148, 25:15552
burnup in boiling water reactors, two-dimensional method for analysis of, 25:18111
burnup in reactors, accountability verification by reprocessing plant measurements, 25:15866 (NP-18575)
burnup of mixed oxide, analysis of neutron cross section ratios from, 25:18098(R) (BNWL-1522-1)
burnup of, analysis for neodymium-148 as measure of, 25:15485
coating of particulate, by pyrolysis of methane or propene in fluidized beds, 25:16561 (JUL-686-RW)
cycle for, technology for development of economic, 25:18054
development of plutonium-enriched ceramic, review of, 25:18245 (WHAN-SA-70)
development of, description of Japanese facilities for, 25:15823
economics of U.S., review of future, 25:18149
fabrication methods for coated particle type, (E), 25:18099(R) (GA-10313)
neutron resonance absorption in, lead slowing-down-time spectrometer for measuring, 25:15921
properties of coated particle, for high temperature gas cooled reactors, 25:18144
properties of mixed oxide fast, 25:18180(R) (WHAN-FR-50)
radiation effects on coated particle type, fast neutron, (E), 25:18099(R) (GA-10313)
radiation effects on fission product and plutonium migration in mixed oxide, 25:18098(R) (BNWL-1522-1)
radiation testing of mixed oxide fast, 25:18180(R) (WHAN-FR-50)
reactivity worths of large samples of, comparison of calculated and measured, 25:18182 (WHAN-SA-12)
reprocessing of fast, design of pyrochemical facility for, 25:15817
reprocessing of light-water, commercial, 25:15745
reprocessing of oxide, Windscale plant for, 25:15735
requirements for natural uranium in power systems, linear programming technique for optimization of, 25:18152
thermal conductivity of plutonium oxide (PuO_2)--uranium oxide (UO_2), effects of composition and temperature on, (E), 25:18246 (WHAN-SA-80)

REACTOR LOADING MACHINES
design problems for prototype liquid sodium cooled fast breeder reactors, 25:18115
development of gas cooled reactor, 25:18099(R) (GA-10313)

REACTOR SAFETY
analysis of, summary of procedures for, 25:18157 (WHAN-SA-43)
coolant loss accident conditions in water cooled power reactor, effects of delayed bubble growth on blowdown during, (T), 25:18153 (AHSB(S)R-189)
coolant loss accidents in boiling and pressurized water reactors, evaluation of recorded data for analysis of, 25:18155(R) (BMI-1897)
core meltdown in aircraft reactors, criticality of fuel mass configurations following, (T), 25:18199 (N-70-36660)
core meltdown in liquid metal cooled reactor, effects of fuel materials and configuration on, 25:18168 (ANL-7752)
cores for liquid metal cooled fast breeder reactor, problems related to design of, 25:18154 (ANL-7657)
seismic response of internal components, effects of structure--foundation interaction on, (T), 25:18160
temperature excursion actuated fail-safe latch for use in, 25:15812(P)

REACTOR SAFETY EXPERIMENTS
radiation monitoring program for LOFT, design of, 25:16168

REACTOR SIMULATORS
use of analog and digital computer, for optimum core performance of boiling reactors, 25:18151

REACTORS
components for, reliability analyses of, 25:18110
cooling system for, structural design requirements for piping of primary, 25:18254
cooling system for, structural design requirements for piping of primary, 25:18256
cooling system for, structural design requirements for piping of primary, 25:18255
cooling system for, structural design requirements for piping of primary, 25:18253
criticality factor of two-core, experimental design and regression analysis technique for, (T), 25:18238
dynamics of, study of space--time behavior using semidirect modal synthesis, (T), 25:18240
kinetics of, computer program algorithm based on Simpson's rule for, (T), 25:18237
materials for, cyclotron simulation of fast neutron effects on, 25:16557
materials in lead slowing-down-time spectrometer for measurement of neutron resonance absorption in, 25:15921
neutron diffusion in one-dimensional, method for solution of equations for, 25:18234
neutron emission probability in, binomial distributions of prompt, 25:18239
neutron flux distributions in, effects of fuel element deformations on, (T), 25:18233
neutron flux in, solution of one-group diffusion equations with angular singularities, (T), 25:18228 (HUX-3971-5)
neutron transport in, numerical solution of linear integral Boltzmann equation for, (T), 25:18231
photon transport in, numerical solution of linear integral Boltzmann equation for, (T), 25:18231
pressure vessels for, finite element method for design of, (T), 25:18257
reactivity reserve in, statistical model for, 25:18235
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)
temperature measurement in, design and performance of microwave cavities for, 25:15967 (WHAN-SA-24)
thermal energy from, method for storage of, 25:15830(P)
xenon spatial instability in, XITRAN-2 computer program for, 25:18229 (ORNL-TM-2580)

REACTORS, AIRCRAFT
core meltdown in, criticality of fuel mass configurations following, (T), 25:18199 (N-70-36660)
development potential for, 25:18201

REACTORS, BOILING
component failures in, tabular summary of, 25:18064(T) (LIB/Trans-322)
coolant loss accidents in, evaluation of recorded data for safety analysis of, 25:18155(R) (BMI-1897)
core performance of, real-time simulation and monitoring requirements for optimum, 25:18151
fuels for, two-dimensional method for burnup analysis of, 25:18111
nuclear characteristics of heavy water moderated pressure tube, comparison with heavy water and carbon dioxide cooled, 25:18126
steam condensate treatment systems for, 25:18145

REACTORS, BREEDER
boilers for fast, development in Japan of liquid metal heated, 25:18133
components for fast, design requirements in Japan for, 25:18113
components for prototype liquid sodium cooled fast, development problems in Japan with, 25:18115
control systems for fast, development in Japan of, 25:18120
coolant pumps for sodium-cooled fast, development of electromagnetic, 25:15820
cooling systems for liquid metal cooled fast, development in Japan of piping, pumps, and valves for, 25:18132
core development for gas cooled, November 1969 to February 1970, 25:18136(R) (GA-9838)
development in Europe of, status of programs for, 25:18103
development of molten salt, review of, 25:18106
fuel composition in, integrated model for time-dependent and equilibrium, (T), 25:18150
fuel elements for fast, effects of internal fins on performance of rod type, 25:18141
heat exchangers in Japan for fast, development of liquid metal--liquid metal intermediate, 25:18133

REACTORS, FAST
boilers for breeder, development in Japan of liquid metal heated, 25:18133
components for breeder, design requirements in Japan for, 25:18113
components for prototype liquid sodium cooled breeder, development problems in Japan with, 25:18115
control systems for breeder, development in Japan of, 25:18120
coolant for liquid metal cooled, purification techniques and equipment for liquid sodium, 25:18128
cooling channels for liquid sodium cooled, hot spot

analysis for optimum design of, (T), 25:18122 (EURFNR-863)
cooling systems for liquid metal cooled breeder, development in Japan of piping, pumps, and valves for, 25:18132
core development for gas cooled, November 1969 to February 1970, 25:18136(R) (GA-9838)
core structure for sodium cooled, with orificing pattern for hydraulic clamping, 25:18109(P)
development in Europe of, status of programs for, 25:18103
fuel composition in, integrated model for time-dependent and equilibrium, (T), 25:18150
fuel elements for breeder, effects of internal fins on performance of rod type, 25:18141
fuel elements for, distribution uniformity of plutonium oxide (PuO_2) in plutonium oxide (PuO_2)--uranium oxide (UO_2) pellet type, (E/T), 25:18140 (WHAN-SA-7)
heat exchangers in Japan for breeder, development of liquid metal--liquid metal intermediate, 25:18133
neutron diffusion in, spectra from space--energy synthesis of multigroup, (T), 25:18232
neutron slowing down in, calculational models for, (T), 25:18227 (EURFNR-864)
reactivity of plutonium oxide (PuO_2)--uranium oxide (UO_2) fueled, (E/T), 25:18173 (EURFNR-861)

REACTORS, FRANCE
development of dual purpose desalination and power, 25:18216

REACTORS, GAS-COOLED
component failures in, tabular summary of, 25:18064(T) (LIB/Trans-322)
control characteristics of high temperature, review of, 25:18162
cooling systems for high temperature, design requirements for primary and secondary, 25:18134
core development for fast breeder, November 1969 to February 1970, 25:18136(R) (GA-9838)
design parameters of 1100 MW(e) high temperature, 25:18105
development of high temperature, review of, 25:18114
fuel particles for high temperature, properties of, 25:18144
nuclear characteristics of heavy water moderated pressure tube carbon dioxide, comparison with heavy water and boiling water cooled of, 25:18126
pressure vessels for high temperature, design requirements of prestressed concrete, 25:18134
safety characteristics of high temperature, review of, 25:18162

REACTORS, GRAPHITE-MODERATED
moderator stack assembly for, support and keying means for, 25:18108(P)

REACTORS, GREAT BRITAIN
development of dual purpose desalination and power, 25:18210

REACTORS, HEAVY WATER-MODERATED
component failures in, tabular summary of, 25:18064(T) (LIB/Trans-322)
coolants for pressure-tube type, comparison of carbon dioxide, heavy water, and boiling water, 25:18126
development in U.K. of water cooled, for desalination and power, 25:18210
neutron fission reactions in uranium-235 fueled, delayed neutron and photoneutron parameters for, (E/T), 25:18242
neutron yield in pressure tube type, effects of photo-reactions on effective delayed, (T), 25:18118

REACTORS, HETEROGENEOUS
neutron flux distribution in, approximation methods for calculation of, 25:18236

REACTORS, INDIA
development of power, 25:18076

REACTORS, JAPAN
boilers for fast breeder, development of liquid metal heated, 25:18133
components for fast breeder, design requirements of, 25:18113
components for prototype liquid sodium cooled fast breeder, development problems with, 25:18115
control systems for fast breeder, 25:18120
cooling systems for liquid metal cooled fast breeder, development of piping, pumps, and valves for, 25:18132
development of dual purpose desalination and power, 25:18217
development of dual purpose desalination and power, 25:18221
heat exchangers for fast breeder, development of liquid metal--liquid metal intermediate, 25:18133

REACTORS, LIQUID METAL-COOLED
component failures in, tabular summary of, 25:18064(T) (LIB/Trans-322)
components for prototype fast breeder, development problems in Japan with, 25:18115
coolant boiling in liquid sodium cooled, design of stainless steel acoustic waveguide for detection of, (E/T), 25:18130
coolant boiling in sodium cooled, system for detection of, 25:18146(P)
coolant flow in fuel bundles of sodium cooled, description of flow measuring device for, 25:18123(P)
coolant for fast, purification techniques and equipment for liquid sodium, 25:18128
cooling channels for fast, hot spot analysis for optimum design of, (T), 25:18122 (EURFNR-863)
cooling systems for fast breeder, development in Japan of piping, pumps, and valves for, 25:18132
core structure for sodium cooled, with orificing pattern for hydraulic clamping, 25:18109(P)
core vessel for sodium cooled, sealing means and cover gas circulation system for, 25:18124(P)
safety of, effects of fission gas solubility in sodium on, 25:15573

REACTORS, MOLTEN-SALT
development during March to September 1970, 25:18100(R) (ORNL-4622)
development of power, review of, 25:18106
development of, review of U.S, 25:18107
fuels for, development and evaluation of analytical methods for, 25:15625 (ORNL-4622, pp 60-118)

REACTORS, POWER
boilers for fast breeder, development in Japan of liquid metal heated, 25:18133
central systems for fast breeder, development in Japan of, 25:18120
component failures in, tabular summary of, 25:18064(T) (LIB/Trans-322)
components for fast breeder, design requirements in Japan for, 25:18113
construction in Japan of, development of technology for, 25:18056
construction of large pressurized water, development of technology for, 25:18116
coolant loss accident conditions in water cooled, effects of delayed bubble growth on blowdown during, (T), 25:18153 (AHSB(S)R-189)
cooling system for high temperature gas cooled, design requirements for primary and secondary, 25:18134
cooling systems for liquid metal cooled fast breeder, development of piping, pumps, and valves for, 25:18132
design parameters for large pressurized water, development of technology for, 25:18116
design parameters of 1100 MW(e) HTGR-type, 25:18105
development in France of dual purpose desalination, 25:18216
development in Israel of dual purpose desalination, 25:18211
development in Japan of dual purpose desalination, 25:18217
development in Spain of dual purpose desalination, 25:18212
development in U.K. of dual purpose desalination, 25:18210
development in U.S. of dual purpose desalination, 25:18214
development of dual purpose desalination, 25:18207
development of dual purpose desalination, 25:18208
development of dual purpose desalination, analysis of optimum economic, 25:18209
development of dual purpose desalination, in Japan, 25:18221
development of dual purpose desalination, review of, 25:18219
development of molten salt, review of, 25:18106
development of, description of Japanese facilities for, 25:15823
dynamic characteristics of, effects of power demand and control system variations on, (T), 25:18119
economics for industrial power and steam production, (T), 25:18220
economics for small dual purpose desalination, 25:18215
economics of dual purpose desalination, analysis of optimum, 25:18218
economics of U.S., review of future, 25:18149
environment survey for, economic planning of, 25:16165
fuel cycle for, technology for development of economic, 25:18054
fuel elements for CIRENE, effects of two-phase coolant flow on vibration of, (E), 25:18129
fuels for thermal, physics calculations for plutonium and plutonium--uranium alloy, (E/T), 25:18135 (EUR-4477)
fuels for, optimization of requirements for natural uranium, (T), 25:18152
heat exchangers for fast breeder, development of liquid metal--liquid metal intermediate, 25:18133
kinetics of conceptual El-600, effects of cooling system rupture and slow xenon poisoning on, (T), 25:18117 (CEA-CONF-1726)
operation in Europe of, review of, 25:18078
piping systems for water cooled, design requirements for high pressure and high temperature, 25:18131
power conversion systems for, evaluation of combined-cycle steam and gas turbines in, 25:18164
pressure vessels for high temperature gas cooled, design requirements of prestressed concrete, 25:18134
pressure vessels for, development of prestressed concrete, 25:18127
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)
safety of, procedures for analysis of, 25:18157 (WHAN-SA-43)
seismic effects on dynamic response of, structure--foundation interaction factors in, (T), 25:18160

XUM

site requirements for, effects of thermal effluents on, 25:18159
sites for agro-industrial complexes, criteria for potential, 25:18204 (ORNL-4293)
sites in Japan for, safety aspects of, 25:18056
thermal effluents from, effects on site requirements of, 25:18159
turbines for, design of low-pressure steam, 25:18165
REACTORS, PRESSURIZED-WATER
boilers for, effects of design parameters on heat transfer characteristics of once-through, 25:18252
coding channels for, effects of design parameters on heat transfer characteristics of, 25:18252
component failures in, tabular summary of, 25:18064(T) (LIB/Trans-322)
construction of large power, development of technology for, 25:18116
coolant loss accidents in, evaluation of recorded data for safety analysis of, 25:18155(R) (BMI-1897)
design parameters for large power, development of technology for, 25:18116
dynamic characteristics of, effects of power demand and control system variations on, (T), 25:18119
REACTORS, PROCESS HEAT
design parameters of 222 MW ROVI, 25:18213
development in France of dual purpose desalination and power, 25:18216
development in Israel of dual purpose desalination and power, 25:18211
development in Japan of dual purpose desalination and power, 25:18217
development in Spain of dual purpose desalination and power, 25:18212
development in U.K. of dual purpose desalination and power, 25:18210
development in U.S. of dual purpose desalination and power, 25:18214
development of dual purpose desalination and power, 25:18207
development of dual purpose desalination and power, 25:18208
development of dual purpose desalination and power, in Japan, 25:18221
development of dual purpose desalination and power, analysis of optimum economic, 25:18209
development of dual purpose desalination and power, review of, 25:18219
economics for industrial power and steam production, (T), 25:18220
economics for iron and steel production, 25:18206
economics for small dual purpose desalination and power, 25:18215
economics of desalination, DRVE code for calculations of, 25:18205 (ORNL-TM-3149)
economics of dual purpose desalination and power, analysis of optimum, 25:18218
operation aspects of 222 MW ROVI, 25:18213
sites for agro-industrial complexes, criteria for potential, 25:18204 (ORNL-4293)
REACTORS, RESEARCH
development of high flux thermal neutron, 25:18188
development of, description of Japanese facilities for, 25:15823
experimental channels in IR-100, neutron fluxes and γ doses in, (E), 25:18194
experimental helium high pressure facility in FR-2, design for irradiation of breeder fuel pins of, 25:18192
kinetics of University of Missouri, three-node model of region-dependent, (E/T), 25:18193
operation of IR-100, feasibility of power level increase during, 25:18194
operations aspects for SM-2 Reactor (U.S.S.R.), 25:18188
radiation target cans for SM-2 Reactor (U.S.S.R.), design parameters of, 25:18189
research programs at Virginia Polytechnic Institute during January 1960 to August 1968, review of, 25:18178 (TID-25646)
REACTORS, THERMAL
development of high flux research, 25:18188
fuel cycle for, operation aspects of plutonium, 25:18143
fuels for power, physics calculations for plutonium and plutonium--uranium alloy, (E/T), 25:18135 (EUR-4477)
neutron slowing down in, calculational models for, (T), 25:18227 (EURFNR-864)
REACTORS, WATER-COOLED
component failures in, tabular summary of, 25:18064(T) (LIB/Trans-322)
coolant loss accident conditions in, effects of delayed bubble growth on blowdown during, (T), 25:18153 (AHSB(S)R-189)
coolant loss accidents in, fission product release from, (E/T), 25:18163
development in U.K. of heavy water moderated, for desalination and power, 25:18210
engineered safeguards for, performance of air cleaning, (E/T), 25:18183 (WHAN-SA-39)
fuels for, two-dimensional method for burnup analysis of, 25:18111
piping systems for power, design requirements for high pressure and high temperature, 25:18131
steam condensate treatment systems for, 25:18145
waste management systems for, review of, 25:18043
REACTORS, WATER-MODERATED
component failures in, tabular summary of, 25:18064(T) (LIB/Trans-322)
reactivity of mixed oxide fueled, effects of plutonium oxide (PuO_2) particle size on, 25:18098(R) (BNWL-1522-1)
RECOILS
reactions in solids, review on chemical effects of, 25:15714
REFRACTORY MATERIALS
book: Methods of Studying Refractory Materials (In Russian), 25:16595
diffusion in, bibliography and data tabulations on, 25:16514
reactions with dissociated gases, kinetics of, 25:16459
resistivity measurements of, space-charge effects at high temperatures on, 25:15968 (WHAN-SA-69)
testing for SNAP-19 fuel capsule coating, 25:15836(R) (INSD-2873-44)
REGENERATION
radiation effects on, in Tubularia, effects of dose on γ, 25:16298
REGGE POLE THEORY
amplitudes of spinless meson two-body interactions with spinless mesons in, O(3,1) group for relativistic expansions of, 25:17481
Argand diagrams and partial cross sections for eikonal scheme in, 25:17495
bootstraps for resonance production in π + N interactions in, finite-energy sum rules for, 25:17503
cuts and duality for γ + p → K^+ + Λ(I^0) interactions in, 25:17424
dual loop terms and counterterms in, projective group for unified treatment of, 25:17583 (COO-264-567)
dual N-point amplitudes in, loops in coherent-state model for factorization of, 25:17585 (JINR-E2-5568)
dual resonance models for meson N-body interactions in, uniqueness of Paton--Chan isospin factor for exclusion of exotic states in, 25:17491
dual resonance models with residues having maximum fixed finite number of logarithmic poles for amplitudes of spinless particles, 25:17489
duality in double-Regge-pole model for π^+ + p → π^+ + f^0 + p interactions at 13.1 GeV/c, 25:17507
exchange degeneracy of vector and tensor trajectories in, breaking of, 25:17509
model for Q^2 dependence of structure functions for inelastic e + p interactions in, scale invariance breaking in, 25:17422 (SU-1206-236)
multi-Regge model for multiproduction in stong interactions at high energies in, review of, 25:17470
parton--duality model for structure functions for deep inelastic e + p interactions in, 25:17441
pole exchange in strong interactions, multiple scattering corrections to, 25:17472
Pomeranchukon decoupling from amplitude for π + N interactions, 25:17511
Regge parameter effects from phase shift ambiguity effects on finite-energy sum rules for amplitudes of π + N interactions in, 25:17500
scattering amplitudes in, Bethe--Salpeter, 25:17595
scattering amplitudes in, crossed-channel Reggeon exchanges in elastic, 25:17496
trajectory for impact-parameter amplitude, direct-channel, 25:17599
unitarity relation in, introduction of parallel daughter trajectories for, 25:17594
RELATIVE BIOLOGICAL EFFECTIVENESS
calculation for fast neutron, fission neutron, and γ for effects on survival of swine, 25:16317 (ORO-678, pp 51-7)
calculation for γ and x radiation, effects of dose rate on, 25:16126 (AD-713557)
determination for 5.2 MeV/n carbon-12 ions in chlorella, 25:16375(T) (JPRS-52121, pp 58-62)
RELATIVITY THEORY
Einstein--Maxwell fields with matter and pressure in, 25:17577
equations of motion in general, group theory for, 25:17575 (AD-713140)
fields in general, gravitational radiation propagation in exact solutions of cylindrically symmetric null, 25:17576
geometries at moment of time symmetry in general, Regge calculus for Schwarzschild and Reissner--Nordstrom, 25:17581
gravitational accelerations near arbitrary timelike geodesic in Schwarzschild space in general, tidal, 25:17580
relation to cosmology and thermodynamics, (T), 25:16736
research on general, development of free-precession nuclear gyroscope for, 25:15877 (AD-713633)
singularity in general, tidal gravitational accelerations near arbitrary timelike geodesic in Schwarzschild space for definition of, 25:17580
solution of Einstein field equations for evolution of homogeneous cosmological models, 25:16733
surfaces in general, development of trapped, 25:17575 (AD-713140)
Vierbein formalism in general, nonlinear realization of

GL(4,R) symmetry for, 25:17582
REMOTE-HANDLING EQUIPMENT
motion lock for master--slave, design of pneumatic, 25:15875
REPRODUCTION
radiation effects on capacity for, in adult dog ticks raised from radioisotope-labeled larvae, chronic β, 25:16295
radiation effects on, of crickets, effects of dose on γ, 25:16288
radiation effects on, of rats, effects of dose and dose rate on γ, 25:16310 (ORO-678, pp 25-7)
REPRODUCTIVE SYSTEM
radiation dosimetry in human, methods for fallout and natural environmental γ, 25:16152
REPUBLIC OF KOREA
radiation accidents at Atomic Energy Institute in, hazards to man following, 25:16118
RESPIRATION
measurement of human, biochemical, physical, and technical factors for use of carbon-14-labeled carbon dioxide for, 25:16016
radiation effects on rate of, of ponies, effects of work on γ, 25:16314 (ORO-678, pp 41-6)
RHEINSBERG POWER REACTOR
operation limits of, analysis of increase to 80 MW(e), 25:18074
RHENIUM
carbon monoxide surface properties on surface of, field emission study of, 25:16450
desorption of carbon monoxide from surface of, field emission study of, 25:16450
elastic properties of hexagonal, calculation of x-ray, 25:16476
enthalpy of solution in liquid plutonium at 700 to 1000°C, 25:16440 (LA-4559)
oxygen sticking probability on filaments of, at 298 and 1000°K, 25:16449
sorptive properties of filaments of, for nitrous oxide at 298 to 1220°K, chemical, 25:16448
RHENIUM ALLOYS AND SYSTEMS
Ir--Re--W, phase studies of, 25:16527
Ni-base--Re--W, properties of rhenium--tungsten fiber-reinforced, for use in turbine blades, 25:16437 (AGARD-CP-73-71, Paper 19)
Re--Ta, mechanical properties at 4.2 to 550°K, effects of carbon, nitrogen, and oxygen interstitials on, 25:16478
RHENIUM ISOTOPES Re-186
beta decay of polarized, in iron at low temperatures, β- and γ angular distributions from, (E), 25:17889
RHENIUM ISOTOPES Re-188
beta decay of polarized, in iron at low temperatures, β- and γ angular distributions from, (E), 25:17889
RHENIUM OXIDES
magnetic properties of high-purity, 25:16398 (IS-2300, pp 101-86)
RHODIUM
radiation effects on chromium carbonyl and, reactions of recoil molybdenum from proton, 25:15717
RHODIUM ALLOYS AND SYSTEMS
Pd--Pu--Rh--Ru--U, occurrence of inclusions of, in irradiated plutonium carbide--uranium carbide, 25:16541
Pt--Rh, properties for use as DART I fuel capsule cladding, 25:15837 (MLM-1578)
RHODIUM ISOTOPES Rh-103
neutron reactions (n,2n) at 12 to 18 MeV, total cross sections and isomeric cross-section ratios for, (E), 25:17946
RHODIUM ISOTOPES Rh-106
beta decay scheme of, 4π β--γ coincidence measurement of, 25:15914 (CEA-R-4131)
content of atmosphere over Soviet Union during 1965 and 1966, 25:16065(T) (AEC-tr-7214, pp 70-81)
RHODOPHYTA
radioisotope content of, in Amchitka, Alaska, 25:16073(R) (BMI-171-113)
RIBONUCLEASE
content of tissues of tobacco plants, assay of, 25:16089(R) (EUR-4545)
radioinduced inactivation of, mechanism of effects of sulfur and tyrosine on, 25:16034
spectra at 77°K, absorption and circular dichroism, 25:18316 (UCLA-12-806)
RIBOSOMES
radiation effects on formation of poly-, in liver of adrenalectomized and normal rats, local and whole-body x, 25:16029
RICHLAND AREA (WASH.)
radiation dose to population of, from controlled release of radioactive waste at Hanford, 25:16129 (BNWL-1505)
radiation monitoring during 1969, 25:16075 (BNWL-1505(App.))
RING CURRENT
effect of intensity of, on day and night boundary of auroral oval, (E), 25:16998
relation to plasma sheet, trapping boundary, and plasmapause near magnetic equator and local midnight, (E), 25:16877 (AD-710768)
RIVERS
radioisotope transport in model, comparison of calculated and measured, 25:16083
waste disposal and distribution in Neckar, from Obrigheim Power Reactor, 25:18094 (NP-18622)
ROBERT E. GINNA POWER REACTOR, UNIT 1
startup of, test program for, 25:18070
ROCKET MOTOR NOZZLES
corrosion by propellant gases, chemical and thermal aspects of, 25:16414
ROCKS
analysis by neutron activation, separation of sodium activity to increase sensitivity of, 25:15560
analysis for copper by neutron activation and radiochemical separation, 25:15533
analysis for copper by nondestructive neutron activation, 25:15551
analysis for hafnium and zirconium by neutron activation, 25:15536
analysis for lutetium by neutron activation, comparison of atomic absorption and isotope dilution methods with, 25:15536
analysis for tantalum by neutron activation and radiochemical separation, 25:15532
analysis for trace amounts of iodine, spectrophotometric, 25:15494
gamma radiation in, gas and oil prospecting methods using measurements of natural, 25:15768
mineral content of, determination using thermal neutron average lifetime measurements, 25:15767
motion of surface, from Milrow Event, (E), 25:15805 (NVO-79, pp 20-40)
radioactivity of underground, calculation of natural, 25:15773
ROTORS
wear in carbon and metal, radioactive tracer methods for measuring, 25:15847
RUBIDIUM
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
neutron capture at 14 MeV, γ spectra from, (E), 25:17834
RUBIDIUM CHLORIDES
preparation of targets of, strontium-85 production by deuteron reactions with, 25:15702
RUBIDIUM ISOTOPES Rb-78
decay of isomeric, γ energies and half-life for, (E), 25:17784
RUBIDIUM ISOTOPES Rb-79
decay of, gamma and positron spectra for, (E), 25:17787
RUBIDIUM ISOTOPES Rb-81
energy levels from strontium-81 decay, spin-parity assignments for, (E), 25:17784
RUBIDIUM ISOTOPES Rb-86
uptake by leaves of bean plants, 25:16089(R) (EUR-4545)
RUBIDIUM ISOTOPES Rb-88
decay of, gamma spectra for, (E), 25:17786
RUBIDIUM ISOTOPES Rb-89
yields from fast fission of plutonium, (E), 25:17899
RUBIDIUM ISOTOPES Rb-90
yields from fast fission of plutonium, (E), 25:17899
RUBIDIUM PERMANGANATES
radiation effects on thermal decomposition induction period in, 25:15644
RUTHENIUM
carbon monoxide surface properties on surface of, field emission study of, 25:16450
complexes of, research on chemistry of, 25:18301(R) (ORO-3542-8)
desorption of carbon monoxide from surface of, field emission study of, 25:16450
determination by atomic absorption spectrophotometry, effects of uranium on, 25:15493
determination by catalytic method, 25:15490
determination by ring colorimetry after separation by thin-layer chromatography, 25:15487
physical chemistry of, in seawater, effects of environmental purity on, 25:15624 (CEA-R-4125)
separation as nitrosyl complex from nitric acid solutions of uranyl nitrate by solvent extraction using dodecane--TBP, 25:15725 (NP-18656)
RUTHENIUM ALLOYS AND SYSTEMS
Pd--Pu--Rh--Ru--U, occurrence of inclusions of, in irradiated plutonium carbide--uranium carbide, 25:16541
RUTHENIUM ISOTOPES
content in MSRE salt samples, 25:15625 (ORNL-4622, pp 60-118)
RUTHENIUM ISOTOPES Ru-96
neutron reactions (n,2n) at 12 to 18 MeV, total cross sections and isomeric cross-section ratios for, (E), 25:17946
RUTHENIUM ISOTOPES Ru-100
proton reactions below 5 GeV, cascade--evaporation model for analysis of low-energy particles produced in, (T), 25:17515 (JINR-P2-5549)
RUTHENIUM ISOTOPES Ru-101
energy levels from technetium-101 decay, spin and parity of, (E), 25:17906
RUTHENIUM ISOTOPES Ru-103
content in surface soils near Leningrad, USSR, 1954 to 1965, 25:15757(T) (AEC-tr-7214, pp 21-6)
deposition on graphite and Hastelloy N samples from MSRE

core, 25:15625 (ORNL-4622, pp 60-118)
RUTHENIUM ISOTOPES Ru-104
neutron reactions (n,2n) at 12 to 18 MeV, total cross sections and isomeric cross-section ratios for, (E), 25:17946
RUTHENIUM ISOTOPES Ru-106
beta decay scheme of, 4π β--γ coincidence measurement of, 25:15914 (CEA-R-4131)
content in surface soils near Leningrad, USSR, 1954 to 1965, 25:15757(T) (AEC-tr-7214, pp 21-6)
content in surface soils near Moscow, USSR, 1963 to 1966, 25:15777(T) (AEC-tr-7214, pp 9-20)
content of atmosphere over Soviet Union during 1965 and 1966, 25:16065(T) (AEC-tr-7214, pp 70-81)
content of marine algae and invertebrates in Amchitka, Alaska, 25:16073(R) (BMI-171-113)
deposition on graphite and Hastelloy N samples from MSRE core, 25:15625 (ORNL-4622, pp 60-118)
diffusion in pyrolytic carbon and silicon carbide coatings, 25:16585
RUTHENIUM NITROSYLS
removal from contaminated seawater and irradiated-fuel processing plant waste solutions, use of chitin or chitosan for, 25:16116

S

S-MATRIX
construction of, spin algebras and Poincare group representations for, 25:17404
SACLAY PROTON SYNCHROTRON (SATURNE)
experimental facilities for, design of high-energy nuclear spectrometer, 25:17652
SACLAY REACTORS (OSIRIS)
experimental facility for, on-line isotope separator, 25:18187
SAFETY
quarterly report of Oarai Research Establishment for April to June, 1970, 25:16203(R) (JAERI-Memo-4112)
standards for control of radiation hazards to personnel and public in general from electronic equipment and radioactive materials, survey of role of federal agencies in establishing or enforcing, 25:16202 (BRH/DEP-70-28)
SAMARIUM
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
photoelectric work function of, (E), 25:17299
SAMARIUM ALLOYS AND SYSTEMS
Al--Sm, aluminum-27 Knight shift in $SmAl_2$, effects of crystalline field on, (T), 25:17321
Sm--Sn, tin-119 Knight shift in $SmSn_3$, effects of crystalline field on, (T), 25:17321
SAMARIUM ISOTOPES Sm-145
Pm-145--Sm-145, preparation and properties of x-ray sources of, 25:15835 (ANL-7760(Pt.1), pp 33-5)
SAMARIUM ISOTOPES Sm-148
energy levels from Coulomb excitation static electric-quadrupole moments of first 2^+, (E/T), 25:17909
energy-level transitions from Coulomb excitation, probability for E2, (E/T), 25:17909
SAMARIUM ISOTOPES Sm-150
energy levels of, g-factors for 2^+, (E), 25:17900
SAMARIUM ISOTOPES Sm-152
energy levels from variable-moment-of-inertia model, simultaneous analysis of ground-state rotational and γ-vibrational bands, (T), 25:17885
energy levels of, anharmonic pairing-plus-quadrupole calculation of, (T), 25:17913
SAMARIUM ISOTOPES Sm-153
production by neutron fission of plutonium-239 and plutonium-241, 25:15690
SAMARIUM ISOTOPES Sm-154
energy levels from variable-moment-of-inertia model, simultaneous analysis of ground-state rotational and β-vibrational bands, (T), 25:17885
oxygen-16 fission at 137 MeV, total cross sections and fragment angular distributions from, (E), 25:17860 (CU-1019-76)
SAMARIUM ISOTOPES Sm-156
production by neutron fission of plutonium-239 and plutonium-241, 25:15690
SAN ONOFRE POWER REACTOR, UNIT 1
core performance in, determination of initial, 25:18072
startup of, test program for, 25:18071
SANTA FE AREA (N. MEX.)
radioisotope content of soils of, from fallout from weapons testing, plutonium-238, plutonium-239, and strontium-90, 25:15763 (LA-4562)
SAP (SINTERED ALUMINUM POWDERS)
radioinduced helium production in, cyclotron simulation of neutron, 25:16558
SARAMYCETINS
radioprotective effects of, on mice infected with fungi, evaluation of x, 25:16224
SATURN (PLANET)
radio brightness temperature and spectra at 19 to 36 GHz, (E), 25:16746
SAVANNAH RIVER
ecosystems of, effects of reactor effluents on, 25:18225 (TID-25634)
SAVANNAH RIVER PRODUCTION REACTORS
effluents from, effects on Savannah River ecosystems of chemical and thermal, 25:18225 (TID-25634)
SCANDIUM
abundance in 112 Her AB, (E), 25:16645
analysis for trace amounts of hafnium by ion exchange and neutron activation, 25:15544
complexes with DTPA and EDTA, determination in water by neutron activation, 25:15549
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
determination of trace amounts of, in fish, molluska, water, and aquatic plants by neutron activation, 25:15540
photoelectric work function of, (E), 25:17299
separation from thorium in acidic aqueous solutions containing ferric ions by solvent extraction using organic phosphorus compounds, 25:15747(P)
SCANDIUM ISOTOPES
helium-3 reactions (He-3,t) at 24.6 MeV, Q values and Coulomb displacement energies from, (E/T), 25:17823
SCANDIUM ISOTOPES Sc-43
energy levels from calcium-42 (d,n) and (He-3,d) reactions, (E), 25:17785
SCANDIUM ISOTOPES Sc-44
beta decay of, charge dependence of one-boson exchange potentials in, (T), 25:17988
SCANDIUM ISOTOPES Sc-46
helium-3 reactions (He-3,t) at 24.6 MeV, angular distributions from, (E/T), 25:17823
metabolism in calves following intravenous and oral administration, 25:16001 (ORO-678, pp 83-8)
SCANDIUM ISOTOPES Sc-47
energy levels from titanium-48 (t,α) reactions, (E), 25:17833
SCANDIUM TRITIDES
radiation damage from tritium decay to helium-3, calculations of lattice constant change, 25:17274 (SC-RR-70-753)
SCATTERING
amplitudes in generalized Veneziano model, operator formalism for factorization of nonplanar dual, 25:17590
amplitudes in impact-parameter formalism, direct-channel resonances on, 25:17599
amplitudes of elastic, crossing matrix for, 25:17593
amplitudes of, generalized Lee model for properties of, 25:17588
amplitudes of, local quantum field theory for increasing order of, 25:17603
amplitudes of, loops in coherent-state model for factorization of dual N-point, 25:17585 (JINR-E2-5568)
amplitudes of, relativistic quantum mechanics of string for dual, 25:17598
amplitudes of, two-variable expansions based on Lorentz and conformal groups for review of, 25:17586 (TID-25654)
amplitudes on elastic, corrections to eikonal approximation in quasipotential equation for, 25:17584 (JINR-E2-5244)
bound-state particles in, kinetic equations for, 25:17591
bound-states in potential well in, normalization of higher-order phase-integral approximations for wavefunctions of, 25:17602
cross sections for relativistic, (T), 25:17589
cross sections for Rutherford, probabilistic interpretation of, 25:17601
eikonal approximation in, quasi-potential approach for corrections to, 25:17592
integral equations for, generalized Lee model for approximate solutions for, 25:17588
Levinson theorem and dispersion relations for Coulomb, in lambda plane, 25:18009
models for, in vicinity of isobaric analogue resonances, 25:18034
multiple, enhancement of acausal effects in, 25:17596
nuclear elastic, inelastic, and quasi-elastic, review of research on, 25:18024
partial-wave method for nonspherical scatterer in, 25:17587
potential elastic, multiple asymptotic series for Yukawa, 25:17600
potential, by central field, variation--perturbation treatment of, 25:16815
potential, principle of minimum maximum modulus for generalized moment problems for, 25:17561
potentials in, review of singular, 25:17597
random-phase approximation theory of, partial widths and transition rates in, 25:17986
transport equation for, particular solution of, 25:17267
SCHIZOMYCOTA
Bacillus subtilis, radiation effects on incorporation of phage DNA into spores of, effects of phosphorus-32 decay on electron, 25:16386
Escherichia coli, radiation effects on genetic

recombination in, comparison of metabolic inhibitors with uv and x, 25:16104
Escherichia coli, radiation effects on, in freezing medium, effects of oxygen and strain on, 25:16384
irradiation with cyclotron-produced He ions and protons, experimental facilities for, 25:16042
Micrococcus radiodurans, radiation effects on, combined effects of phosphorus oxide, time, temperature, and dose fractionation on, 25:16385
Mycobacterium avium, radiosensitivity of intracellular phage in lysogenic strains of, uv, 25:16109
radiation effects on DNA base ratios of, following exposure to sunlight, uv, 25:16383(R) (UCB-34-P-156-X-2)
radiation effects on survival of, effects of LET on charged particle, 25:16043
radiosensitivity of spores of, in relation to sterilization of medical supplies, factors affecting charged particle and cesium-137 or cobalt-60 γ, 25:16396
Salmonella typhimurium, development of cultures of, for studies on gene function, 25:16383(R) (UCB-34-P-156-X-2)
Salmonella typhimurium, radioinduced (Rax) mutations in, for promotion of tryptophan operon, uv and x, 25:16107
SCINTILLATION CAMERAS
development of, based on delay line time conversion, 25:17257 (NIRS-9, pp 1-14)
SEALS AND GLANDS
design of cover gas leaking, for sodium cooled reactor core vessels, 25:18124(P)
development for lithium--selenium batteries, 25:16404(R) (ANL-7663)
SEAWATER
analysis for strontium-90, effects of reagents on chemical, 25:15471(T) (AEC-tr-7214, pp 220-6)
analysis for trace elements by neutron activation and atomic absorption spectrophotometry, 25:15542
analysis for trace elements by neutron activation, pre-treatment of samples for, 25:15538
analysis for trace elements by solvent extraction and x-ray fluorescence, 25:15492
analysis for trace elements by thermal neutron activation and multiparametric spectrometry, 25:15541
analysis for zirconium by neutron activation, 25:15536
radioisotope content of, in Greenland during 1969, 25:16080(R) (RISO-222)
removal of ruthenium-106 nitrosyl from contaminated, use of chitin or chitosan for, 25:16116
ruthenium physical chemistry in, effects of environmental purity on, 25:15524 (CEA-R-4125)
separation of cesium-137 from, in presence of cerium-144 and strontium-85 by ion exchange on ferrocyanide molybdate resin, 25:17257 (NIRS-9, pp 1-14)
strontium-90 content of Great Bahama Bank, June 1967 to Aug. 1970 measurements of, 25:15782 (HASL-239, pp I.2-22)
trace element content in, on United Kingdom coast, 25:15542
SEED
radiation effects on, of hemp, effects on pollen development of γ, 25:16382
radiation effects on, of hybrid wheat, effects of, on segregation of dominant characters in second generation, γ, 25:16100
radiation effects on, of sunflowers, latent, γ, 25:16380
radiosensitivity of barley, effects of oxygen, packaging materials, and water on fission neutron, 25:16376 (CRO-678, pp 135-51)
SEISMIC WAVES
amplitude and frequency of, generated by proposed Piceance Creek basin, Colo. underground nuclear explosions, methods for predicting, 25:15801 (NVO-1163-TM-18)
amplitude of Milrow Event-generated, (E), 25:15807 (NVO-79, pp 72-96)
effects of Milrow Event-generated, on nearby buildings, ground surfaces, and water surfaces, (E), 25:15805 (NVO-79, pp 20-40)
measurement of Milrow Event-generated, at ground surface and sea-bottom, methods and results for, 25:15804 (NVO-79, pp 9-19)
SELENIUM
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
separation from hydrochloric acid or sulfuric acid solutions by solvent extraction using thionaphthenic acids, 25:15737
SELENIUM ISOTOPES Se-71
beta decay of, γ energies and half-life for, 25:17784
SELENIUM ISOTOPES Se-72
energy levels from bromine-72 decay, spin-parity assignments for, (E), 25:17784
SELENIUM ISOTOPES Se-73
electron-capture decay scheme for, gamma spectra from, (E), 25:17847
SELENIUM ISOTOPES Se-75
content of man, effects of body contour on automatic whole-body counting of, 25:16123
effectiveness of methionine-incorporated, for pancreas scanning, 25:16245
incorporation of methionine incorporated, in blood platelets of rabbits, 25:15991
use as gamma source for determining zinc and lead in polymetallic ores, 25:15527
SELENIUM ISOTOPES Se-82
energy levels from beta decay of two arsenic-82 isomers, 25:17843
SELENIUM SYSTEMS
Li--Se, corrosive effects of electrolyte mixtures of, on alloys for use in battery capsules at 375°C, 25:16404(R) (ANL-7663)
SEMICONDUCTORS
dielectric properties of cubic, effects of electronic structure on, (T), 25:18323 (UCRL-20377)
diffusion in, bibliography and data tabulations on, 25:16514
properties of, research on, 25:17294(R) (NBS-TN-560)
SEROTONIN
radiation effects on metabolism of, in brain of rats, effects of low dose on microwave, 25:16303(R) (AD-710005)
SERPUKHOV SYNCHROTRON
experimental facility for, CERN--IHEP boson spectrometer, 25:17639
SEX
effects on cesium-134 retention in rats, combined effects of age and temperature on, 25:16007
effects on radiosensitivity of eosinophile granulomas in man in relation to therapy, 25:16262
SEYFERT GALAXIES
hydrogen in NGC 1068, NGC 3227, NGC 4051, and NGC 4151, radio observations of neutral, (E), 25:16728
spectra of, x-ray,(T), 25:16670
spectrophotometry of, photoelectric, (E), 25:16723
SF MATERIALS ACCOUNTING
methods for reactor, by measurements of fuel in reprocessing plants, 25:15866 (NP-18575)
SHEEP
radiation effects on body weight and hematology of, effects of skin exposure to strontium-90--yttrium-90 on β, 25:16026 (ORO-678, pp 74-7)
radiation effects on ovaries of, effects of, on efficacy of luteinizing hormone for prolonging life span of corpus luteum, x, 25:16324
radiation effects on survival of, effects of ingestion of yttrium-90-labeled sand on γ, 25:16318 (ORO-678, pp 58-64)
radiation effects on, description of pathological changes following necropsy, 25:16319 (ORO-678, pp 65-73)
radiation effects on, effects of dose rate and prenatal exposure on γ, 25:16308 (ORO-678, pp 4-6)
SHEETS
thickness measurements of rolled, gamma radiometric gage for, 25:15960
SHIELDED CONTAINERS
design and fabrication for safe shipping of fissile and radioactive materials, regulations for, 25:15864 (CONF-700549-1)
design for ion exchange material-absorbed radioactive materials, 25:15872(P)
leak tightness of, for radioactive materials, comparison of methods for testing, 25:15871
structure reinforcing steel fins for, testing under impact loading, 25:15867 (ORNL-TM-1312(Vol.9))
SHIELDING
effects of partial-body, during exposure of dogs to protons, 25:16196(T) (JPRS-52121, pp 25-9)
effects on development of γ-irradiated Drosophila, 25:16290
radiation escape probability for cylinders, 25:17269
radiation protection properties of concrete, effects of cracks on, 25:17266
SHIELDING MATERIALS
efficiency for protection against nuclear explosion-produced ionizing radiation, method for calculating, 25:15863
SHIPPING
containers for californium-252 sources, availability of commercial, 25:15850
SHOCK TUBES
current-sheet speed in magnetically driven, effect of diffusion on, 25:17155
design and performance of explosively-driven Foulness, for simulation of nuclear explosions, 25:15814
ionization measurements in electromagnetically driven, precursor, 25:17190
SHOCK WAVES
effects of Milrow explosion, on ecology of Amchitka, Alaska, 25:16079 (NVO-79, pp 49-71)
production by liquids frozen by shock processes, 25:18326(T) (UCRL-Trans-10507)
production in solar wind, effect of finite electric conductivity on, (T), 25:16897
propagation in mixtures of deuterium, hydrogen, and helium, normal ionizing, 25:17157
propagation in plasma, effect of radiation on magnetohydrodynamic, 25:17177
propagation in solar wind, effect of finite conductivity

XUM

on, (T), 25:16898
structure of hydromagnetic, dissipation discontinuities in, (T), 25:17152
SILANE, CHLOROTRIMETHYL-
radiolysis at 77°K, ESR studies on methylsilyl radicals produced from γ, 25:15682
SILANE, METHYL-
radiolysis at 77°K, ESR studies on methylsilyl radicals produced from γ, 25:15682
SILANE, TRIMETHYL-
radiolysis at 77°K, ESR studies on methylsilyl radicals produced from γ, 25:15682
SILICATES
effects on strontium-90 determination in cereals and plant materials, 25:15753
SILICON
abundance in 112 Her AB, (E), 25:16645
alpha elastic scattering at 166 MeV, optical-model analysis of, (E/T), 25:17739
analysis for trace impurities by thermal neutron activation and radiochemical separation, 25:15547
charged particle attenuation at high energies, 25:16188
determination by activation, evaluation of beryllium--plutonium-238 and californium-252 sources for, 25:15849
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in beryllium oxide and uranium, effects of spark duration on relation sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in lymphatic glands by neutron activation, 25:15559
effects on age hardening of chill cast aluminum--zirconium alloy, 25:16511
ion reactions at 10 to 3000 eV with surfaces of, optical radiation from excited sputtered particles from, (E), 25:16766
neutron capture at 14 MeV, γ spectra from, (E), 25:17834
oxidation at high temperatures, thermochemical studies on role of volatilization processes in, 25:16410
properties for use in bomb reduction of molybdenum oxide, 25:16398 (IS-2300, pp 101-86)
properties of, research on, 25:17294(R) (NBS-TN-560)
proton and deuteron dechanneling at 0.3 and 0.6 MeV in, electronic scattering contribution to, (E/T), 25:17288
proton attenuation at high energies, 25:16188
proton channeling in, at 6.72 MeV and at different temperatures, 25:17293
proton reactions (p,2p) at 600 MeV, (E), 25:17757
radiation effects on diffusion of boron in monocrystalline, 10 to 50 keV proton, 25:16616
radioinduced EPR spectra in p-type, spin-Hamiltonian parameters for fast-neutron and 2.5-MeV electron, 25:17285
spectra in solar corona, (E), 25:16701
SILICON CARBIDES
diffusion of fission products in coatings of, 25:16585
removal of thorium carbide--uranium carbide fuel coating of, by pickling, composition and kinetics of solution for, 25:16565
SILICON ISOTOPES Si-28
alpha reactions (α,γ) at 1.4 to 2.7 MeV, excitation functions for, (E), 25:17737
energy levels from aluminum-27 (d,nγ) reactions, analog, (E), 25:17851
energy levels from electron inelastic scattering, particle-hole, 25:17772 (AD-712083)
energy levels of, multiconfiguration Hartree--Fock calculation of ground-state, 25:17790
Hartree--Fock calculations for, parity-mixed, 25:17992
helium-3 elastic scattering at 8 MeV, angular distributions for, (E), 25:17780
helium-3 reactions (He-3,α) at 8 MeV, angular distributions for, (E), 25:17780
helium-3 reactions (He-3,α) at 8 MeV, angular distributions of alpha particles and cross sections for, (E), 25:17796
helium-3 reactions (He-3,α) near Coulomb barrier, angular distribution for, (E), 25:17829
neutron capture by, binding energies and gamma spectra for thermal, (E), 25:17849
nuclear binding energy, charge radius, and quadrupole moments of, Hartree--Fock calculation of, (T), 25:17727
proton inelastic scattering at 20.3 MeV using polarized beam, coupled-channel analysis of, (E/T), 25:17825
proton reactions (p,d) at 30 to 45 MeV, cross section for, 25:17828
proton reactions (p,t) at 49.5 MeV, effects of beam polarization on differential cross sections for, (E), 25:17715
SILICON ISOTOPES Si-29
neutron capture by, binding energies and gamma spectra for thermal, (E), 25:17849
SILICON ISOTOPES Si-30
energy level at 3.79 MeV from aluminum-27 (α,p) reactions, lifetime of, (E), 25:17750
energy levels from aluminum-27 (α,p) reactions at 4.6 MeV, lifetimes of excited, (E), 25:17777
helium-3 elastic scattering at 8 MeV, angular distributions for, (E), 25:17780
helium-3 reactions (He-3,α) at 8 MeV, angular distributions for, (E), 25:17780
helium-3 reactions (He-3,α) at 8 MeV, angular distributions of alpha particles and cross sections for, (E), 25:17796
neutron capture by, binding energies and gamma spectra for thermal, (E), 25:17849
proton reactions (p,α) a 5.8 to 11.5 MeV, cross sections and α angular distributions from, (E), 25:17726
SILICON JUNCTIONS
radiation effects on surface states and hole mobility at Si/SiO_2 interface in MOS transistors, gamma, 25:17290
SILICON OXIDES
sorptive properties of colloidal, for gallium and germanium, 25:15692
sorptive properties of colloidal, for hafnium and zirconium, 25:15743
SILICON SYSTEMS
Al--Mo--Si--Sn--Ti-base--Zr, embrittlement of α-stabilized, effects of long exposures at 800 to 1100°F on, 25:16465
Al-base--Fe--Si--Zr, properties for use as dip-coating bath for protection of steel--zirconium alloy joints against hydrogen embrittlement, 25:16473(P)
Al-base--Si, electrochemical properties of, 25:16438 (IN-1295)
Cr--Mo--Si, thermal conductivity and thermoelectric properties of $Mo_{0.1}Cr_{0.22}Si_{0.68}$ phase in, 25:16571
Fe--Si, creep of single phase, at 850°C, effects of strain and time on, 25:16452
SILTS
analysis of marine, for trace elements by atomic absorption spectrophotometry of neutron activation, 25:15542
carbon-14 content of, use for estimation of variations in prehistoric atmosphere, 25:15771
trace element content in, on United Kingdom coast, 25:15542
SILVER
alpha inelastic scattering at 54 MeV, statistical analysis of, (E/T), 25:17939
argon-ion reactions at 40 keV, analysis of visible emission spectra from, 25:16752
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by ring colorimetry after separation by thin-layer chromatography, 25:15487
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in ores using Compton scatter for matrix compensation, radioisotopic x-ray, 25:15499
diffusion in lithium-6 and -7, tracer studies of, 25:16500
effects on reactions of hexavalent chromium with tetravalent plutonium, catalytic, 25:15571
electron stopping power at <500 keV, (T), 25:17962
ion implantation in films of, effects on electromigration and resistivity ratio, 25:17282
photoelectric work function of, (E), 25:17299
photon elastic scattering at 90 and 124.5° and 1.12 and 1.33 MeV, Delbrueck and Rayleigh amplitudes for, (E), 25:17795
positron stopping power at <500 keV, (T), 25:17962
radiation effects on chromium carbonyl and, reactions of recoil molybdenum from proton, 25:15717
separation from solvent extracts of ores or waste by direct precipitation, 25:15749(P)
solute thermotransport in liquid, 25:18272 (COO-841-22)
SILVER ALLOYS AND SYSTEMS
Ag--Al, microstructure of unidirectionally solidified, 25:16543
Ag--Al-base, radiation damage in, annealing kinetics of 90°K electron, 25:17278
Ag--Pd, electric conductivity of, 25:16398 (IS-2300, pp 101-86)
Ag-base--Cd, oxidation of solid solution of, at 600 to 800°C, study of microstructure from internal, 25:16406
SILVER ISOTOPES Ag-108
decay of isomeric, gamma energies and intensities of, (E), 25:17923
proton reactions below 5 GeV, cascade--evaporation model for analysis of low-energy particles produced in, (T), 25:17515 (JINR-P2-5549)
SILVER ISOTOPES Ag-109
proton reactions below 5 GeV, cascade--evaporation model for analysis of low-energy particles produced in, (T), 25:17515 (JINR-P2-5549)
SILVER ISOTOPES Ag-110
beta decay of isomeric, multipole mixing ratios of gamma transitions in cadmium-110 from, (E), 25:17887
decay of isomeric, gamma energies and intensities of, (E), 25:17923
use of metastable, as tracer for measuring wear in brush-rotor systems, 25:15847
SILVER ISOTOPES Ag-112
beta decay of, gamma spectra from, (E), 25:17877
SILVER ORES
analysis for silver using Compton scatter for matrix compensation, radioisotopic x-ray, 25:15499
SILVER OXIDES
effects on oxidation of hexavalent neptunium ions,

25:15568
SINGLE CRYSTALS
gamma-ray resonant Bragg scattering in, kinematic theory of, 25:17322
SKELETAL SYSTEM
radioisotope metabolism in, effects of physico-chemical characteristics on, 25:16005
SKIN
blood circulation in normal and psoriatic human, use of technetium-99m for studying, 25:16244
radiation effects on content of histamine and mast cells in, of rats at 12 and 30 keV, x, 25:16353
radiation effects on human, minimal dose determination for erythemagenic, 25:16363
radiation effects on, of neck of rats, laser, 25:16322
radiation effects on, of sheep, strontium-90--yttrium-90 β, 25:16026 (ORO-678, pp 74-7)
radioinduced erythema and exudative epidermitis in human, following teletherapy of malignant tumors, effects of dose on γ, 25:16369
SNOW
analysis of Antarctic, for manganese and nickel by neutron activation, comparison of atomic absorption and isotope dilution methods with, 25:15536
effects on neutron radiometric measurement of moisture in surface soils, 25:15769
SODIUM
abundance in chondritic meteorites, (E), 25:16625
boiling in reactor cores, design of stainless steel acoustic waveguide for detection of, (E/T), 25:18130
boiling in sodium cooled reactors, system for detection of, 25:18146(P)
boiling of liquid, reactor safety problems related to, 25:18[illegible] (ANL-7657)
combustion of liquid and vapors, reactor safety problems related to, 25:18154 (ANL-7657)
corrosive effects of EBR-II coolant, on tantalum, 25:16544 (ANL-EBR-31)
corrosive effects on Inconel at high temperatures, effects of oxygen on, 25:16398 (IS-2300, pp 101-86)
corrosive effects on vanadium at high temperatures, relations with barium getter content, 25:16398 (IS-2300, pp 101-86)
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in rat bone by neutron activation and γ spectrometry, 25:15558
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
determination of trace amounts of, in human dentine and enamel by thermal neutron activation and γ spectrometry, 25:15545
diffusion in lithium-6 and -7, tracer studies of, 25:16500
distribution in metal transfer process for removing rare earths from MSBR fuel solvent, 25:15625 (ORNL-4622, pp 60-118)
effects of flowing, at 600 to 750°C on tensile properties of vanadium--titanium, Vanstar-7, Vanstar-8, and Vanstar-9 alloys, 25:16499
effects on friction and wear between fuel rods and spacer grids at 680°C, 25:16439 (KFK-1290)
effects on friction and wear of Hastelloy, stainless steel, and Stellite ball bearings at 400°C, 25:16409
flow measurement of liquid, description of device for in-pile, 25:18123(P)
neutron inelastic scattering by, cross sections for gamma yields from, (E), 25:17842
pumps for liquid, development of electromagnetic, 25:15820
purification of liquid, techniques and equipment for, 25:18128
purification systems for reactor coolant, development of, 25:18180(R) (WHAN-FR-50)
radiation effects on content of, in cardiac muscle of rats, effects of adrenalectomy on, 25:16351
sampling systems for reactor coolant, development of, 25:18180(R) (WHAN-FR-50)
separation from rock samples and biological materials to increase sensitivity of neutron activation analysis, 25:15560
solvent properties for rare gases, effects of gas partial pressure, purity, and temperature on, 25:15573
sorption by hydrobiotite and vermiculite, mechanism of, 25:15728 (ORO-678, pp 102-13)
SODIUM BORATES
radiation effects at 78°K on glasses of, absorption-center formation from ^{60}Co γ-, (E), 25:17270(T) (BNWL-tr-62)
SODIUM BOROSILICATES
radiation effects at 78°K on glasses of, absorption-center formation from ^{60}Co γ-, (E), 25:17270(T) (BNWL-tr-62)
SODIUM CHLORIDES
corrosive effects of aqueous, on beryllium, 25:16416
radiation effects on damping coefficient of single crystals of, effects of interruption on gamma, 25:17283
radioinduced color center formation at 15°K in crystals of, role of excitons in electron-pulse, (E), 25:17287
radioinduced V centers and positron lifetime in single crystals of, correlation of x, 25:17291
SODIUM FLUORIDES
BeF_2--NaF, glass transition temperatures in, 25:15625 (ORNL-4622, pp 60-118)
KF--LiF--NaF, reactions with tetravalent titanium at 480 to 500°C, 25:15567(R) (ORO-3518-19)
$NaBF_4$--NaF, reactions with water, 25:15625 (ORNL-4622, pp 60-118)
$NaBF_4$--NaF, spectra of molten, Raman, 25:15625 (ORNL-4622, pp 60-118)
$NaBF_4$--NaF, tritium exchange with hydrogen in, effects of chromium, Hastelloy N, and nickel on, 25:15625 (ORNL-4622, pp 60-118)
SODIUM FLUOROBORATES
spectra of molten, Raman, 25:15625 (ORNL-4622, pp 60-118)
$NaBF_4$--NaF, reactions with water, 25:15625 (ORNL-4622, pp 60-118)
$NaBF_4$--NaF, spectra of molten, Raman, 25:15625 (ORNL-4622, pp 60-118)
$NaBF_4$--NaF, tritium exchange with hydrogen in, effects of chromium, Hastelloy N, and nickel on, 25:15625 (ORNL-4622, pp 60-118)
SODIUM FORMATES
radiation effects on, ESR spectral studies on hyperfine parameters of CO_2^- radicals produced by γ, 25:15646
radiolysis of oxygen-17-labeled, ESR studies of CO_2^- radical from x, 25:15680
SODIUM HYDROXIDES
radiolysis of frozen, optical absorption and photobleaching of trapped electrons from γ, 25:15677
SODIUM IONS
reactions with carbon foils at 100 to 500 keV, equilibrium charge distributions from, (E), 25:16758
SODIUM ISOTOPES Na-22
determination in colored plant extracts by Cherenkov counting, 25:15517
exchange between saturated solutions of sodium metasilicate and its nonahydrate, 25:15580
exchange between saturated solutions of sodium metasilicate and its nonahydrate, 25:15581
migration in soil columns, 25:16089(R) (EUR-4545)
uptake by leaves of bean plants, 25:16089(R) (EUR-4545)
SODIUM ISOTOPES Na-23
energy level at 11.85 MeV from neon-22 proton resonances, isobaric analog, (E), 25:17762
energy levels from magnesium-26 (p,α) reactions, collective nature of low-lying, (E), 25:17726
SODIUM ISOTOPES Na-24
determination in colored plant extracts by Cherenkov counting, 25:15517
SODIUM PERMANGANATES
radiation effects on thermal decomposition induction period in, 25:15644
SODIUM PERXENATES
radiation effects on, yields of xenon-133-labeled xenon trioxide from neutron, 25:15693
SODIUM SILICATES
radiation effects at 78°K on glasses of, absorption-center formation from ^{60}Co γ-, (E), 25:17270(T) (BNWL-tr-62)
SODIUM URANATES
preparation and crystal structure of, 25:15569
SOILS
fission product content of Moscow, USSR surface, 1963 to 1966, 25:15777(T) (AEC-tr-7214, pp 9-20)
fission product movement through, role of diffusion in, 25:15764 (ORO-678, pp 124-5)
gamma radiation in, gas and oil prospecting methods using measurements of natural, 25:15768
moisture content of surface, effects of snow cover on neutron radiometric measurement of, 25:15769
motion of surface, from Milrow Event, (E), 25:15805 (NVO-79, pp 20-40)
radioisotope content of Espanola, Los Alamos, and Santa Fe, N. Mex., plutonium-238, plutonium-239, and strontium-90, 25:15763 (LA-4562)
radioisotope content of Leningrad, USSR area surface, 1954 to 1965, 25:15757(T) (AEC-tr-7214, pp 21-6)
radioisotope distribution in USSR, 1964 measurements of cesium-137 and strontium-90, (E), 25:15758(T) (AEC-tr-7214, pp 82-6)
sorptive properties for iodide from solutions, effects of concentration on, 25:15772
strontium-90 distribution in USSR, effects of soil type on, (E), 25:15759(T) (AEC-tr-7214, pp 143-60)
strontium-90 uptake from, by field crops, effects of agricultural practices, hydrology, and soil type on, 25:16085
tritium contamination of, and subsequent transport through human food chain, role of rainfall in, 25:16138(R) (ORNL-TM-3134)
SOL-GEL PROCESS
development for production of carbide and oxide fuels, 25:16562 (NP-18650)
ethylhexanol recycle for, anion exchange method for, 25:15727 (ORNL-TM-3226)
water monitoring in 2-ethyl-1-hexanol in, 25:15473 (MLM-1777)
SOLAR ACTIVE REGIONS
observations on, (E), 25:16689(R) (AD-713229)

XUM

SOLAR CELLS
radiation effects on carrier diffusion length in silicon, gamma, 25:15985
radiation effects on lithium-doped silicon, charged-particle, 25:15980 (N-70-36928)
SOLAR CORONA
abundances of iron and nickel in, (E), 25:16713
electron densities in active regions of, relation to temperature, (T), 25:16714
electron densities in, (E), 25:16688 (AD-713112)
heat conduction in transition layer, (T), 25:16714
ionizing states in, auto-, (E), 25:16701
observational data on, from different stations, (E/T), 25:16704
radio emission from O VII in, (E), 25:16688 (AD-713112)
spectra of, electric-field effects on line profiles in, (E/T), 25:16705
SOLAR DISTURBANCES
daily-variation field during IGY, relation of ionospheric auroral-zone electric currents, (E/T), 25:17041
effect on N(h)-profile changes in F-region at 80°N to 12°S before weak magnetic storms, maximum and minimum, (E), 25:16908
effects on intensity of atomic oxygen red line in day airglow, (E), 25:16934
eruptions in photosphere-chromosphere, (E), 25:16707
time variations of, (E), 25:16689(R) (AD-713229)
SOLAR FLARES
catalog of, for IGY--IQSY, (E), 25:16710
charged-particle propagation in interplanetary medium, model of escaped, (E/T), 25:16970
charged-particle propagation in solar atmosphere, model of accelerated, (E/T), 25:16970
effect of proton flare-associated low-energy solar plasma of F-region variations, (E), 25:16986
effect on corpuscular-radiation intensity in upper atmosphere, altitude-dependent, (E), 25:17035
effect on May 23, 1967, on electron intensity variations in inner radiation belt, (E), 25:17045
effects on cosmic-ray geomagnetic cutoff rigidity, (T), 25:16850(T) (AD-712344)
eruptive phase of, main, (E/T), 25:16706
observations on, (E), 25:16689(R) (AD-713229)
parameters of, relation between different, (E/T), 25:16708
proton energy spectra from Jan. 24, 1969, implications of storage near Sun from, (E/T), 25:16696
ultraviolet emission during, extreme, (E), 25:16699
x-ray emission during, hard, (E), 25:16699
x-ray emission from calcium ions during Nov. 2, 1969, (E), 25:16700
SOLAR PARTICLES
capture of 1 to 8 MeV alpha, into radiation belts during magnetic storms, (T), 25:16884 (AD-711813)
detection of low-energy ions and electrons on Kosmos 261, 25:17023
effects on track production in lunar rocks, (E), 25:16744
storage of protons near Sun, relation of differential-energy spectra of 0.3- to 25-MeV protons with, (E/T), 25:16696
transport in interplanetary space, convection-dominated, (T), 25:16857
SOLAR POWER
production of, review on methods for increased, 25:15813
SOLAR PROMINENCES
plasma interactions in, (T), 25:16703
SOLAR RADIATION
effects on ionization of atmospheres and ionospheres of planets, (T), 25:16738
relation of recurrent events with structure of solar M-region magnetic storms, (E/T), 25:16697
streaming of corpuscular, angular dimensions of, (E/T), 25:16702
SOLAR RADIO BURSTS
synchrotron emission and absorption in, (T), 25:16692
SOLAR SYSTEM
accretion processes in, planet and satellite, (T), 25:16690
evolution of, (T), 25:16690
origin of, (T), 25:16690
SOLAR WIND
characteristics of vlf electric fields in, in magnetosheath and interplanetary space, (E), 25:16936
deformation velocity of, correlation with interplanetary magnetic field and K/sub p/ index variations, (E/T), 25:16923
effect of seasonal--latitudinal variations in solar energy on noon-F2 ionization, (T), 25:16975
effect on F2-layer seasonal anomaly, (E), 25:16906
effect on occurrence of midlatitude spread F and geomagnetic activity, (T), 25:17027
electromagnetic wave interactions with, theory for cyclotron resonance, 25:17221 (D-1-82-1010)
energy transfer in colliding streams of, (E), 25:16698
flux in interplanetary space, correlation with electromagnetic-field micropulsation intensities and short-period disturbances, (E), 25:16957
interaction with Jovian magnetosphere, (T), 25:16747
interactions with magnetosphere, magnetic effect of inhomogeneities in, 25:17021
ion flux in, relation with simultaneous electromagnetic-field periods, (E), 25:17048
irregularities in, small-scale, (E), 25:16716
motion close to Sun, (E), 25:16717
plasma emission from coronal, variable-temperature analysis of viscous and thermally conductive, (T), 25:16977
plasma instability in composite hydromagnetic system, Kelvin, 25:17001
shock wave propagation in, effect of finite conductivity on, (T), 25:16898
shock waves in, effect of finite electric conductivity on interplanetary, (T), 25:16897
streaming in magnetopause, relation to magnetospheric-flank magnetic field, (E/T), 25:16963
wave packet in interplanetary plasma, OGO 5 observations of upstream discrete, (E), 25:16937
SOLAR X-RAY BURSTS
emission during solar flares, (E), 25:16699
SOLID SOLUTIONS
crystal lattice parameters of, model for prediction of, 25:16519
SOLID STATE PHYSICS
book: Applied Solid-State Physics, 25:17296
research at Ames Laboratory, (E/T), 25:17403 (IS-2300, pp 187-251)
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)
SOLIDS
electron reactions with surfaces of, review of ion emission in, 25:16767
neutron thermalization in, Einstein model for time-dependent, 25:17679
radiation damage in, review of ion, 25:17289
SOLUTIONS
analysis of colored plant extract, for β and γ emitting radioisotopes by Cherenkov counting, 25:15517
irradiation with cyclotron-produced He ions and protons, experimental facilities for, 25:16042
SOUTHWEST EXPERIMENTAL FAST OXIDE REACTOR
core for, revised safety limits for 20 MW(t) operation with guinea pig fuel rods in, 25:18172 (DOCKET-50231-70)
fuel element cladding for, operation procedures with failed, 25:18172 (DOCKET-50231-70)
SOVIET UNION
cadmium-109 content of atmospheric precipitation in, 1964 to 1965, 25:15779(T) (AEC-tr-7214, pp 62-9)
cesium-137 content of man in, from 1962 to 1966, 25:16069(T) (AEC-tr-7214, pp 126-42)
cesium-137 uptake by man residing in arctic regions of, effects of consumption of reindeer meat on, 25:16127(T) (AEC-tr-7214, pp 27-36)
fallout monitoring during 1959 to 1966, 25:15776(T) (AEC-tr-7214)
fallout monitoring during 1963 to 1966, 25:16070(T) (AEC-tr-7214, pp 249-66)
fallout monitoring during 1965 and 1966, 25:16065(T) (AEC-tr-7214, pp 70-81)
fallout monitoring of surface soils near Leningrad, 1954 to 1965, 25:15757(T) (AEC-tr-7214, pp 21-6)
fission product content of ground-level atmosphere and atmospheric precipitation in Leningrad, 1959 to 1966, 25:15778(T) (AEC-tr-7214, pp 51-61)
geologic deposits in lower Volga region of, gamma well logging measurements of lithology of, 25:15766
radiation monitoring of ground-level atmosphere and surface soils near Moscow, 1963 to 1966, gross beta, 25:15777(T) (AEC-tr-7214, pp 9-20)
radioisotope content of human bones from residents of arctic regions of, 25:16067(T) (AEC-tr-7214, pp 108-14)
radioisotope content of man in, effects of age and geography on, 25:16066(T) (AEC-tr-7214, pp 87-107)
radioisotope distribution in soils of, 1964 measurements of cesium-137 and strontium-90, 25:15758(T) (AEC-tr-7214, pp 82-6)
radioisotope uptake by man from food in, during 1965 and 1966, 25:16064(T) (AEC-tr-7214, pp 37-50)
strontium and strontium-90 content and distribution in brackish and fresh waters, 1966 measurements of, 25:15760(T) (AEC-tr-7214, pp 161-86)
strontium-90 content of human bones in, 25:16068(T) (AEC-tr-7214, pp 115-25)
strontium-90 distribution in soils of, effects of soil type on, (E), 25:15759(T) (AEC-tr-7214, pp 143-60)
SPACE
cosmic-radio flux in circumlunar, time-dependent, (E), 25:16861
dust in interplanetary, origin of, (T), 25:16748
electric fields in interplanetary, Pioneer 8 observations of solar-wind vlf, (E), 25:16936
magnetic fields in interplanetary flight from Earth to Venus, simultaneous satellite measurements of, (E), 25:17033
magnetic fields in interplanetary, relation with solar-wind deformation velocity, (E/T), 25:16923
solar radiation transport in interplanetary, convection-dominated, (T), 25:16857
solar-wind flux in interplanetary, correlation with electromagnetic-field micropulsation intensities and short-period disturbances, (E), 25:16957

wave-packet generation in solar-wind plasma in interplanetary, OGO 5 observation of upstream discrete, 25:16937
SPACE FLIGHT
effects on man, 25:16360(T) (JPRS-51641)
effects on xanthine dehydrogenase activity in Drosophila and Habrobracon, effects of γ radiation on, 25:16028
radiation dose to personnel during, calculations for heavy charged particle and secondary electron, 25:16134(T) (JPRS-52121, pp 51-7)
radiation protection during, effectiveness of biological and chemical compounds for, 25:16214(T) (JPRS-52121, pp 15-20)
radiation protection of personnel during, use of radioprotective compounds for, 25:16215(T) (JPRS-52121, pp 21-4)
radiobiology during, 25:16213(T) (JPRS-52121)
SPACE VEHICLES
radio blackout during re-entry of, electric dipole studies for, 25:17239
SPECTRA
bibliography on atomic, for elements Z = 2 through 23, 25:16773
SPECTROMETERS
design and operation of Missouri Univ. time-of-flight, 25:15977
readout system for large-aperture magnetic, design of 5000-wire proportional-chamber, 25:15941
uses in environmental monitoring around atomic energy installations, 25:15789
SPECTROPHOTOMETRY
data reduction and report generation for flame, computer method for, 25:15472 (IN-1460)
SPECTROSCOPY
conference on beam--foil, Lysekil, Sweden, June 7 to 12, 1970, 25:16750
SPERM
properties of, correlation of biological and physical, 25:18322 (UCRL-20219)
radiation effects on, of mice, effects of, on chromosome inversions in relation to frequency of first anaphase bridges in meiotic cells of offspring, x, 25:16090(R) (NYO-3671-10)
radioinduced dominant lethal mutations in, of mice, protective effects of AET, chloramphenicol, and dose on frequency of x, 25:16227
radioinduced lethal mutations in, of guinea pigs, hamsters, mice, and rabbits, effects of species on x, 25:16103
SPHERES
neutron transport in, numerical solution of linear integral Boltzmann equation for, (T), 25:18231
photon transport in, numerical solution of linear integral Boltzmann equation for, (T), 25:18231
SPLEEN
cell colony formation in, of x-irradiated mice, hematopoietic, 25:16345
hematopoiesis in, of mouse radiation chimeras, in comparison to bone marrow, 25:16334
immunological function of injected cells of, in neonatal chickens, 25:16057
radiation effects on growth of, of rats, effects of prenatal exposure on γ, 25:16309 (ORO-678, pp 7-13)
radiation effects on restorative capacity of cells of, in rats, effects of bone marrow cells on recovery following γ, 25:16055
radiation effects on retention of tritium-labeled thymidine in, of mice, effects of dose on x, 25:16349
radioinduced inhibition of colony forming cells of, effects of testosterone propionate on whole-body x, 25:16223
radioprotective effects of colony-forming units of, on mice, x, 25:16230
removal of, effects on erythropoiesis in mouse chimeras, 25:16338
scanning of human, for diagnosis of disease using mercury-197-labeled erythrocytes, 25:16246
scanning of human, using gold-198, 25:16245
STACK DISPOSAL
control of emission levels of coal fired steam power plants, 25:18045
monitoring for tritium, method for, 25:16143(R) (UCRL-50007-70-2)
radiation dose to environment from nuclear power plant, comparison of calculated and measured long term gamma, 25:16176
radioactivity releases from nuclear power plant off-gases, aerosol model for studying, 25:15874
STAINLESS STEEL
coating with molybdenum or tungsten, 25:16399 (ORNL-4622, pp 119-98)
corrosion by chlorine pentafluoride, fluorine, and nitrogen oxide, 25:16413
corrosion of boronated Type 304, effects of steam on boron loss during, 25:18099(R) (GA-10313)
corrosion of Type 316, by water at 289°C, electrochemical polarization measurements of, 25:16417
corrosion of Types 17-4 PH and 17-7 PH, mechanisms of stress, 25:16415
corrosion of Types 205, 347, and 2RK65, by lithium--sulfur mixtures at 375°C, 25:16405(R) (ANL-7756)
corrosion of Types 405 and 440, by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
electrochemical properties of Types 304, 309, 316, and 347, galvanostatic measurements of, 25:16438 (IN-1295)
friction and wear of ball bearings of Type 316, in liquid sodium at 400°C, 25:16409
Moessbauer effect transmission spectra of Types 201 and AM355, using iron-57 source, 25:15853
properties of Type 316, for use in SNAP-23A fuel capsule, 25:15846(R) (WANL-4182-3)
properties of Type 348, for use as fuel cladding for LMFBR, 25:16445 (WHAN-SA-8)
radiation effects on creep of tubes of, in-pile, 25:16545(T) (EURFNR-783)
radiation effects on creep of Types 304 and 316, energy dependence of neutron, 25:16554
radiation effects on density of Types 304 and 316, at 700 to 1400°F, fast neutron, 25:16550 (WHAN-SA-9)
radiation effects on electrochemical properties of Type 304, in-pile, 25:16438 (IN-1295)
radiation effects on microstructure of, fast neutron, 25:18136(R) (GA-9838)
radiation effects on swelling and mechanical properties of Type 304 and Type 316, fast neutron, (E), 25:18137(R) (GEAP-10028-36)
radiation effects on, fast neutron, 25:18180(R) (WHAN-FR-50)
radioinduced creep in Types 304, 316, and EN58B, at 42 to 370°C, mechanisms of fast neutron, 25:16549 (WHAN-FR-30)
radioinduced helium production in Type 304, cyclotron simulation of neutron, 25:16558
rupture of Type 316, at 700°C in vacuum, effects of helium on stress, 25:16464
sorptive properties of, testing for fission product, (E), 25:18176 (ORNL-4502)
tensile properties of solution-treated irradiated austenitic, at 500 to 800°C, 25:16495
welding to Zircaloy-2 at 25 and 300°C, friction method for, 25:16423
STAR CLUSTERS
classification of 42 globular, multidimensional, (E), 25:16727
evolution of red supergiants in h and chi Persei, (E/T), 25:16632
star membership of NGC 6823, (E), 25:16668
STARCHES
radiolysis of, formation of formaldehyde following γ, 25:16040
STARS
atmosphere analysis of 112 Her AB, model, (E), 25:16645
atmospheres of K-giant, effects of opacity sources on models for, (T), 25:16650
atmospheres of, convective energy transport in, (T), 25:16633
atmospheres of, Feautrier-type method for model, (T), 25:16664
book: Problems of Stellar Evolution and Variable Stars, 25:16659
carbon abundance in OB, (E), 25:16641
carbon monoxide abundance in zeta Oph, (E), 25:16644
color excess of K giants at north galactic pole, (E), 25:16634
critical mass limit for main-sequence, lower, (T), 25:16657
darkening of secondary component of Algol, gravity, (E), 25:16646
density distribution of K giants at north galactic pole, (E), 25:16634
envelope of HD 37202, instabilities in, (E), 25:16663
evolution of carbon, (T), 25:16656
evolution of red supergiant, in h and chi Persei, (E/T), 25:16632
evolution of, role of variable stars in, 25:16659
gravitational collapse of, tidal gravitational accelerations near arbitrary timelike geodesic in Schwarzschild space for, (T), 25:17580
infrared emission from B, associated with nebulosity, (E), 25:16651
infrared emission from carbon, M, and S, (E), 25:16652
light curves of S Cancri, computer solution for,, 25:16658
light scattering in atmospheres of, (T), 25:16654
lithium abundance in red-giant, (T), 25:16655
luminosities of red-supergiant, (E), 25:16666
magnitude from moderate-dispersion spectra, absolute, (E), 25:16635
mass exchange in close-binary, gasdynamical model for, (T), 25:16661
mass ratios of nine unresolvable binary, (E), 25:16640
masses of red-supergiant, (E), 25:16666
mercury isotope abundances in iota Cr B, (E), 25:16643
metallicity of K giants at north galactic pole, (E), 25:16634
model for infrared, circumstellar dust, 25:16629
models for rotating, in nonrelativistic gravitational theory, (T), 25:16660
nature of Clairaut theory, asymptotic, (T), 25:16648
nitrogen abundance in OB, (E), 25:16641
period changes for 44i Boo and VW Cep, from photoelectric observations, 25:16637
period of RR Cen, photoelectric investigation of,

XUM

25:16639
periodicities of red-supergiant, (E), 25:16666
photometry in range 1900 to 3000A of B0--B9.5, absolute, (E), 25:16630
photometry of V701 Cen, (E), 25:16638
polarimetry of Mira variable, multicolor, (E), 25:16636
properties of white-dwarf, (T), 25:16627
radiation transfer in distant circumstellar dust envelopes of, (T), 25:16653
spectra of, detection of O VI doublet in, (E), 25:16642
spectral types of bright, in stellar ring 373, (E), 25:16667
spectral-classification notation of OB, (E), 25:16641
thermonuclear chain reactions in, 25:16628
ultraviolet observations from early-type, (E), 25:16626 (AD-712691)
STATISTICS
Bayes estimation principle for radiation detection and measurement, 25:15891
statistical mechanics of interacting systems, 25:17338
STEAM
corrosive effects on boronated Type 304, stainless steel, 25:16099(R) (GA-10313)
corrosive effects on Hastelloy N, 25:16399 (ORNL-4622, pp 119-98)
STEAM POWER PLANTS
air pollution from, emission levels and control methods for, 25:18045
economics of, comparison of nuclear power plants with, 25:18057 (BNL-50235)
effluents from, environmental effects of, 25:18044
STEEL
analysis for trace amounts of impurities, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
analysis for tungsten by isotope dilution, 25:15548
analysis of low and high alloy, by flame emission spectrometry, 25:15482
coatings on, thermal stability and wear resistance of titanium boride, 25:16596
corrosion of Types 440C, 4340, and Hy-TuF, mechanisms of stress, 25:16415
ductility of, effects of grain size on, 25:16487
fatigue strength of A302B and 304, measurement of low cycle and thermal, 25:18254
fatigue strength of A302B and 304L, measurement of low cycle and thermal, 25:18253
fatigue strength of welds on Type A302B, effects of flaws on, 25:16443 (SwRI-1228-P-2-47)
fatigue strength of, measurement of low cycle, 25:18256
mechanical properties of, effects of precipitation hardening on, 25:16510
microstructure of interfaces between explosion welds of copper and tantalum to, effects of heat treatments at 500 to 1100°C on, 25:16529
Moessbauer effect backscatter spectra of bearing and tool, 25:15853
production using process heat reactors, economics of, 25:18206
radiation effects on creep of Type EN588, energy dependence of neutron, 25:16554
radiation effects on tensile properties of Type A350, pile neutron, 25:16547 (NRL-7211)
reduction by cerium additions in melts, kinetics of, 25:16453
testing of shipping container reinforcing fins of, under impact loading, 25:15867 (ORNL-TM-1312(Vol.9))
thermal emissivity of austenitic, at 200 to 700°C, methods for measuring, 25:16501
welding to coated zirconium and zirconium alloys, composition of dip-coating bath for protection against hydrogen embrittlement during, 25:16473(P)
STELLARATORS
design of two-pass, 25:17208(T) (LA-tr-70-22)
magnetic fields for, optimum parameters for selecting, 25:17207 (IYAF-8-70)
plasma confinement in levitated spherator, helium, 25:17127
plasma confinement in Tor-1, effects of resonance structure on, (T), 25:17123(T) (CTO-740)
plasma resonance perturbations in Tor-2, compensation of, (T), 25:17219(T) (CTO-741)
STERILITY
radioinduced, in male mosquitos for population control, effects of, on sexual activity, cobalt-60 γ, 25:16293
STEROIDS
metabolism in fungi, effects of carbon-14 and tritium labeling on, 25:16022
STILBENE, α-METHYL-
radioinduced isomerization in cyclohexane, γ, 25:15650
STORAGE BATTERIES
development and testing of lithium--selenium, 25:16404(R) (ANL-7663)
development of chalcogen--lithium, for vehicular propulsion, 25:16405(R) (ANL-7756)
STRATOSPHERE
charged particles in, balance equations and research on, (T), 25:16928
fallout monitoring of Western Hemisphere lower, Oct. 1969 and Jan. 1970, 25:16114 (HASL-239, pp II.1-129)
fallout monitoring of, over Australia and North America, Jan. 1969 to June 1970, 25:16114 (HASL-239, pp II.1-129)
radiation monitoring of Western Hemisphere lower, during Oct. 1969 and Jan. 1970, gross gamma, 25:16114 (HASL-239, pp II.1-129)
radioisotope content of, during Oct. 1969 and Jan. 1970, estimates of strontium-90 and zirconium-95, 25:15784 (HASL-239, pp I.80-91)
STRONTIUM
abundance in 112 Her AB, (E), 25:16645
content and distribution of stable, in Sea of Azov during 1966, 25:15760(T) (AEC-tr-7214, pp 161-86)
determination by atomic absorption spectrometry in nitrous oxide--acetylene flame, 25:15497
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
neutron capture at 14 MeV, γ spectra from, (E), 25:17834
photon reactions (γ,xn) with, cross sections for, (E), 25:17932
plasma of, production and use in Q devices, 25:17192
sorption by multi-loaded zirconium phosphate anion exchange resins, 25:17257 (NIRS-9, pp 1-14)
STRONTIUM ACETATES
radiolysis of single crystals of, EPR studies of x, 25:15676
STRONTIUM CARBONATES
analysis for strontium by atomic absorption spectrometry, 25:15497
STRONTIUM FORMATES
radiation effects on, ESR spectral studies on hyperfine parameters of CO_2^- radicals produced by, 25:15646
STRONTIUM ISOTOPES Sr-81
beta and electron-capture decay of, γ spectra and half-life for, (E), 25:17784
STRONTIUM ISOTOPES Sr-84
energy levels from yttrium-84 decay, spin-parity assignments for, (E), 25:17784
STRONTIUM ISOTOPES Sr-85
distribution in tissues of pregnant rats and fetuses following subcutaneous injection, 25:16000 (ORO-678, pp 14-24)
metabolism in chickens in relation to calcium-45 metabolism, effects of age on, 25:16002 (ORO-678, pp 94-101)
production by deuteron reactions with rubidium chlorides, targets for, 25:15702
retention by edible herbage in relation to consumption by cows and content of milk, 25:16076 (FOA-4-4445)
transfer from pasture to cow milk, measurements of, 25:16076 (FCA-4-4445)
transport in model river system, calculated and measured, 25:16083
uptake and retention by man, tracer study of, 25:15998 (NIRS-9, pp 63-82)
uptake and retention by marine fish, tracer study of, 25:15998 (NIRS-9, pp 63-82)
uptake by leaves of bean plants, 25:16089(R) (EUR-4545)
STRONTIUM ISOTOPES Sr-86
alpha differential inelastic scattering cross sections for, (E/T), 25:17819
energy levels from alpha inelastic scattering and strontium-87 (d,t) reactions, deformation parameters, spectroscopic factors, and spin--parity assignments for, (E), 25:17819
STRONTIUM ISOTOPES Sr-87
deuteron reactions (d,t) with, angular distributions from, (E), 25:17819
STRONTIUM ISOTOPES Sr-88
energy level transitions from rubidium-88 decay, (E), 25:17786
photon reactions (γ,π⁺) with, meson (π⁺) yields from, (E), 25:17789
STRONTIUM ISOTOPES Sr-89
content in ground-level atmosphere at Ispra, Italy, July to Oct. 1970, 25:15785 (HASL-239, pp III.40-4)
content in rainwater at Fayetteville, Arkansas, following 8th Chinese nuclear explosion, effects of rainfall rate and storm type on, 25:15791
content in surface soils near Leningrad, USSR, 1954 to 1965, 25:15757(T) (AEC-tr-7214, pp 21-6)
deposition on graphite and Hastelloy N samples from MSRE core, 25:15625 (ORNL-4622, pp 60-118)
determination in fallout pot collections and ion exchange resins, radiochemical, 25:15513 (HASL-239, pp I.23-57)
determination in surface air, radiochemical, 25:15514 (HASL-239, pp I.58-62)
ratio to strontium-90 in depositions at Atlantic Ocean weather stations during 1963 to 1970, fallout, 25:16132(R) (HASL-239(App.))
ratio to strontium-90 in monthly depositions at selected world land sites during 1959 to 1970, fallout, 25:16132(R) (HASL-239(App.))
uptake by leaves of bean plants, 25:16089(R) (EUR-4545)
uptake by x-irradiated fractured bones in mice, 25:16321
yields in alpha fission of bismuth-209 and plutonium-239, absolute cross sections for, (E/T), 25:17898
STRONTIUM ISOTOPES Sr-90
accumulation in bones of swine following ingestion, fitting of Gompertz growth curves to, 25:16008

compatibility of compounds incorporating, with heat-resisting capsule materials, 25:15838 (ORNL-4359)
content and distribution in brackish and fresh waters in USSR during 1966, 25:15760(T) (AEC-tr-7214, pp 161-86)
content in atmospheric precipitation and seawater at Great Bahama Bank area, June 1967 to Aug. 1970 measurements of, 25:15782 (HASL-239, pp I.2-22)
content in cereals, food chain, and milk in Soviet Union during 1963 to 1966, 25:16070(T) (AEC-tr-7214, pp 249-66)
content in ground-level atmosphere at Ispra, Italy, July to Oct. 1970, 25:15785 (HASL-239, pp III.40-4)
content in human bones from Africa and South America, 1969 and 1970, 25:16114 (HASL-239, pp II.1-129)
content in Indian Ocean, 1962, 25:15471(T) (AEC-tr-7214, pp 220-6)
content in New York City and San Francisco diets, 1970, 25:16114 (HASL-239, pp II.1-129)
content in rainwater at Fayetteville, Arkansas, following 8th Chinese nuclear explosion, effects of rainfall rate and storm type on, 25:15791
content in soils at Espanola, Los Alamos, and Sante Fe, New Mex, 25:15763 (LA-4562)
content in stratosphere during Oct. 1969 and Jan. 1970, estimates of, 25:15784 (HASL-239, pp I.80-91)
content in surface soils near Leningrad, USSR, 1954 to 1965, 25:15757(T) (AEC-tr-7214, pp 21-6)
content in surface soils near Moscow, USSR, 1963 to 1966, 25:15777(T) (AEC-tr-7214, pp 9-20)
content in surface-level atmosphere in northern and southern hemispheres, predicted and measured values for, 25:15783 (HASL-239, pp I.63-79)
content in waters of Atlantic Ocean, April to July 1964, (E), 25:15799(T) (AEC-tr-7214, pp 187-219)
content in waters of Atlantic Ocean, Aug. to Nov. 1963, (E), 25:15800(T) (AEC-tr-7214, pp 227-48)
content of algae, birds, crustaceans, fish, and otters in Alaska, 25:16072(R) (BMI-171-110)
content of animals, drinking water, plants, precipitation, and seawater in Greenland during 1969, 25:16080(R) (RISO-222)
content of atmosphere, milk, and vegetables in Soviet Union during 1965 and 1966, 25:16065(T) (AEC-tr-7214, pp 70-81)
content of environment and food samples at Ispra, Italy during 1969, 25:16131 (EUR-4563)
content of environment, food, and human bone samples in Denmark during 1969, 25:16139 (RISO-220)
content of human bones from residents of arctic regions of Soviet Union sampled during 1965, 25:16067(T) (AEC-tr-7214, pp 108-14)
content of human bones in Soviet Union during 1965 and 1966, 25:16068(T) (AEC-tr-7214, pp 115-25)
content of human diet in Netherlands during 1969, 25:16003 (RA-41)
content of milk and rainwater in New Zealand during 1970, 25:16078 (NRL-F-39)
content of milk and tap water in New York during 1954 to 1970, monthly fallout, 25:16132(R) (HASL-239(App.))
content of milk and wheat in Switzerland during 1967, 25:16087
content of milk as function of environmental and geographic differences in Minnesota, 25:16084
content of urinary calculi in relation to content of human diet, 25:16125
deposition at Atlantic Ocean weather stations during 1963 to 1970, fallout, 25:16132(R) (HASL-239(App.))
deposition at selected world land sites during 1959 to 1970, monthly fallout, 25:16132(R) (HASL-239(App.))
deposition in human bones and urinary calculi, correlation between β doses following, 25:16192
determination in bones, calcium phosphate, fallout pot collections, ion exchange resins, milk, plants, and water, radiochemical, 25:15513 (HASL-239, pp I.23-57)
determination in cereals and plants, effects of silicates on, 25:15753
determination in seawater, effects of reagents on chemical, 25:15471(T) (AEC-tr-7214, pp 220-6)
determination in surface air, radiochemical, 25:15514 (HASL-239, pp I.58-62)
dietary intake by infants in United States, estimation of annual, using data on milk and minerals from 1954 to 1968, 25:16088
distribution in USSR soils, 1964 measurements of vertical, 25:15758(T) (AEC-tr-7214, pp 82-6)
distribution in USSR soils, effects of soil type on, (E), 25:15759(T) (AEC-tr-7214, pp 143-60)
effects on bones of radiation chimeras of mice, neoplastic, 25:16329
effects on eggs of Misgurnus fossilis following incubation in solutions with yttrium-90, effects of development stage on mutagenic, 25:16093
effects on skin of sheep, effects of, on body weight, 25:16318 (ORO-678, pp 58-64)
incorporation into dog tick larvae for tracer studies of tick ecology, transovarial, 25:15989
migration in soil columns, 25:16089(R) (EUR-4545)
monitoring of atmospheric, at worldwide sites, comparison of results from various countries, 25:15780(T) (AEC-tr-7214, pp 267-93)
ratio to cesium-137 in New York City tap water during 1965 to 1970, monthly fallout, 25:16132(R) (HASL-239(App.))
separation from cereals and plant materials, evaluation of methods for, 25:15753
transport in field crop ecosystems, effects of agricultural practices, hydrology, and soil type on, 25:16085
uptake by man in Soviet Union from food during 1965 and 1966, 25:16064(T) (AEC-tr-7214, pp 37-50)
STRONTIUM ISOTOPES Sr-94
yields from fast fission of plutonium, (E), 25:17899
STRONTIUM OXIDES
properties of strontium-90-enriched heat source of, for use in SNAP-23A, 25:15846(R) (WANL-4182-3)
STRONTIUM TITANATES
properties of strontium-90-enriched heat source of, for use in SNAP-23A, 25:15846(R) (WANL-4182-3)
properties of strontium-90-enriched, for use as heat source for organic Rankine power system, 25:15839 (ORNL-TM-2960)
STROPHANTHIDIN
radiolysis of solutions of, effects of Nipagin on, 25:15687
STRUCTURES
content of ammonium uranate in air of industrial, recommendations regarding maximum permissible, 25:16119
damage to ground zero, from Milrow Event, (E), 25:15805 (NVO-79, pp 20-40)
STYRENE
radiation effects on subsequent polymerization with acrylonitrile and cellulose, effects of composition and solvent on γ, 25:15655
radioinduced polymerization with cellulose, concentration measurements during γ, 25:15658
STYRENE POLYMERS
electron energy loss and scattering at 5 to 30 keV, 25:17257 (NIRS-9, pp 1-14)
labeling of particles of, with carbon-11 by proton irradiation for use in aerosol deposition studies, 25:15993
SULFATES
effects on spectrographic determination of rare earths, 25:15476
SULFOBROMOPHTHALEIN SODIUM
labeling with iodine-131, method for, 25:15994
SULFOXIDE, BUTYL CYCLOHEXYL
solvent properties for uranium as uranyl nitrate, 25:15733
SULFUR
determination in coal by prompt γ activation, using californium-252 source, evaluation of, 25:15849
determination in iron, effects of spark duration on relative sensitivity factors for sass spectrometric, 25:15474 (Y-1757)
determination in milk by oxidation using Benedict's reagent and gravimetry, 25:15516
determination in ore processing intersediates by beta-backscattering method, 25:15510(T) (AEC-tr-7196)
effects on uv-radioinduced inactivation of ribonuclease, mechanism of, 25:16034
neutron elastic and inelastic scattering at 5.4 to 8.5 MeV, cross-section calculations for, (T), 25:17830
spectra in solar corona, (E), 25:16701
SULFUR FLUORIDES
effects on hydrogen yields from γ radiolysis of methylcyclohexane and 3-methylpentane at -196°C, 25:15686
SULFUR ISOTOPES S-32
abundance relative to sulfur-34 in volcanic gases, effects of kinetic isotope effects and isotopic exchange reactions on, 25:15597
energy levels from phosphorus-31 (d,nγ) reactions, analog, (E), 25:17851
energy levels from proton resonances in phosphorus-31, phase shifts, widths, and spin--parity assignments for, (E), 25:17774 (NP-18623)
energy levels from proton resonances in phosphorus-31, spin--parity assignments for, (E), 25:17853
helium-3 elastic scattering at 8 MeV, angular distributions for, (E), 25:17780
helium-3 reactions (He-3,α) at 8 MeV, angular distributions for, (E), 25:17780
helium-3 reactions (He-3,α) at 8 MeV, angular distributions of alpha particles and cross sections for, (E), 25:17796
nuclear binding energy, charge radius, and quadrupole moments of, Hartree--Fock calculation of, (T), 25:17727
scattering by palladium-106 and -110 at 55 and 56 MeV, gamma and sulfur-32 angular distributions and attenuations of gamma distributions from inelastic, (E/T), 25:17910
scattering by titanium-46, titanium-48, and titanium-50 at 70 to 74 MeV, Coulomb excitation by inelastic, (E), 25:17811
SULFUR ISOTOPES S-33
energy levels from (p,t) and (p,He-3) reactions, isobaric analog, (E), 25:17788
energy levels from chlorine-35 (p,He-3) reactions, isobaric analog, (E), 25:17753
energy levels of, lifetimes from Doppler-shift

XUM

attenuation for, (E/T), 25:17821
energy-level transitions in, multipole-mixing ratios using particle--gamma angular correlations for, (E/T), 25:17821
energy-level transitions in, single-particle-model, shell-model, and Nilsson-rotational-model analysis of matrix elements for, (E/T), 25:17821
nuclear deformation parameter from rotational-model analysis of, (E/T), 25:17821
SULFUR ISOTOPES S-34
abundance relative to sulfur-32 in volcanic gases, effects of kinetic isotope effects and isotopic exchange reactions on, 25:15597
proton reactions (p,γ) at 2.079 MeV, gamma spectra from, (E), 25:17817
SULFUR ISOTOPES S-35
determination in gas-phase labeled organic compounds by beta counting, microchemical, 25:15520
determination in milk by liquid scintillation counting, 25:15516
energy levels from (p,t) and (p,He-3) reactions, isobaric analog, (E), 25:17788
energy levels from chlorine-37 (p,He-3) reactions, isobaric analog, (E), 25:17753
SULFUR ISOTOPES S-37
energy levels from argon-40 (n,α) reactions at 14 MeV, (E), 25:17818
SULFUR ISOTOPES S-38
production in alpha fission of bismuth-209 and plutonium-239, upper limits for, (E/T), 25:17898
SULFUR SYSTEMS
Li--S, corrosive effects of fused, on electromotive cell current-collector and dielectric materials, 25:16405(R) (ANL-7756)
Li--S, properties for use as electrolyte in vehicular batteries, 25:16405(R) (ANL-7756)
SULFURIC ACID
effects in exchange of deuterium and tritium with para-hydrogen of bromobenzene, kinetic studies on, 25:15610
separation of selenium and tellurium from solutions of, by solvent extraction using thionaphthenic acids, 25:15737
SUN
acceleration of, equatorial, (T), 25:16718
activity of, effect of 11-year and secular cycles on Earth's atmospheric circulation, (E/T), 25:16919
activity of, relation to geomagnetic storms, 25:16904
activity of, relation with interplanetary field between Earth and Venus and Earth magnetic activity of 27-day, (E), 25:17033
convection in, inhomogeneous, (T), 25:16718
eclipse of May 20, 1966, effect on ionospheric E-region electron density, (E/T), 25:16927
effect of maximum activity of, on ionospheric E-region ionization, (E/T), 25:16915
effects of 1954 minimum activity of, on coupling coefficients of cosmic neutron component, (T), 25:16853
element abundances in, review of problems in determination of, 25:16693
magnetic field strengths in, (E), 25:16686(T) (AD-710690)
motion in atmosphere of, large-scale velocity fields in, (E/T), 25:16719
plasma emission from, variable-temperature analysis of viscous and thermally conductive, (T), 25:16977
radio emission from, periodic fluctuations of, (E), 25:16687(T) (AD-712020)
radio flux at 16 and 30 GHz, absolute, (E), 25:16715
spectra of, interpretation of iron-spark lines in, 25:16694
spectroscopy of, review of progress on, (E), 25:16680(R) (AD-713229)
SUNSPOTS
activity of 11-yr cycle of, relation to cosmic-ray intensity variations, (T), 25:16860
distribution of groups of, longitudinal, (E), 25:16709
effect of minimum activity of, on thermospheric ionization functions, (E/T), 25:16983
effect on occurrence of midlatitude spread F and geomagnetic activity, (T), 25:17027
effects of cycle of, on Balmer α distribution to 70,000 km in exosphere, (E/T), 25:16952
effects on F2 layer seasonal variations, low activity, (E), 25:16953
effects on F2-layer electron content, Faraday method for, (E/T), 25:16882 (AD-711524)
effects on Sq variations of geomagnetic fields at conjugate and subfocal observatories, (E), 25:16999
magnetic field action in, Sept. 2-7, 1961, 25:16686(T) (AD-710690)
observations for 1969, Wolf numbers for, (E), 25:16711
observations on, (E), 25:16689(R) (AD-713229)
relation with deviations of F2-layer critical frequencies, approximating, (E/T), 25:16981
structure of, variable electric conductivity in, (T), 25:16712
SUPERCONDUCTIVITY
empirical approach to, review of, 25:17079
research at Ames Laboratory, (E/T), 25:17403 (IS-2300, pp 187-251)
SUPERCONDUCTORS
correlation functions for charged particles in, long-distance, (T), 25:17337
critical field of Type-II two-band, upper, (T), 25:17102
current--voltage characteristics of SNS junctions and other weak links, (T), 25:17087
electrodynamics of, nonlinear effects in variable field in, (T), 25:17106
electromagnetic response of surface sheath in inclined magnetic field, (T), 25:17097
electron--phonon systems in, statistical mechanics of, (T), 25:17104
energy gaps in, from tunneling, (T), 25:17108
excitation state density in thin films in magnetic field, (T), 25:17107
fluctuation and microwave resistance of alloy films, (T), 25:17100
Josephson current in, geometrical dependence of maximum dc, (E), 25:17092
Josephson effect in, absence of quantum-electrodynamic corrections to electron charge in, (T), 25:17103
magnetic flux jumps in, instabilities from, (E), 25:17091
precipitates in Type-II eutectic alloys, 25:17110
quasi-particle electromagnetic interaction in, (T), 25:17077
quasi-particle motion (Zitterbewegung) in, (T), 25:17075
radiation detection by films of, enhanced-mode, 25:17093
thermal capacity of clathrates at low temperatures, (E), 25:17090
thermodynamic fluctuations in cylinders of, fluctuation--dissipation relation and its applications to, 25:17078
tunnel current in MIM and SIM junctions, effects of fluctuations on, (T), 25:17095
tunneling into, Schottky barrier probe, (E), 25:17111
vortex motion in Type-II, linear response theory and time-dependent Ginzburg--Landau equations for transport properties associated with, 25:17101
x-ray spectra and energy bands of high-temperature, 25:17083
SUPERNOVA REMNANTS
Pup A, detection of soft x rays from, (E), 25:16681
Vel X, detection of soft x rays from, (E), 25:16681
W 28, magnetic-field distribution of, (E), 25:16662
W 28, radio brightness distribution of, (E), 25:16662
SURFACE-ACTIVE AGENTS
book: Corrosion and Metal Protection. Collection of Papers (In Russian), 25:16407
effects on reactions of radiolytic hydrated electron with benzene, 25:15671
SURFACE WATERS
radiation monitoring of Amchitka Island, Alaska, following Long Shot and Milrow Events, 25:15806 (NVO-79, pp 41-8)
radioisotope content of, at Mound Lab., Miamisburg, Ohio, during January to July 1970, 25:16077 (MLM-1784)
strontium-90 content and distribution in fresh and brackish, in USSR during 1966, 25:15760(T) (AEC-tr-7214, pp 161-86)
SURFACES
bibliography on surface and vacuum physics, 25:16772
radioactive contamination of floor, following iodine-131 accident in Korea, 25:16118
radioactive contamination of, relation of, to contamination of air, 25:16117
thermal stresses in multibore circular or square heat transfer, 25:15834
SURGERY
combination with chemotherapy and radiotherapy for treatment of lymphosarcomas in children, review of, 25:16272
radiation effects on mouse tolerance to simulated nuclear detonation, 25:16357
SURVIVAL
radiation effects on, of cattle, effects of dose and dose fractionation on γ, 25:16311 (ORO-678, pp 28-34)
radiation effects on, of rats, following exposure of kidneys with subsequent nephrectomy, protective effects of prednisolone on x, 25:16218
SWEDEN
radiation monitoring near nuclear facilities in, methods and objectives for, 25:16167
SWINE
radiation dosimetry in bones of, following strontium-90 ingestion, calculations for cumulative β, 25:16008
radiation effects on behavior of miniature, effects of dose fractionation and time intervals on γ and neutron, 25:16301 (AD-709938)
radiation effects on $LD_{50/30}$ survival of, effects of depth dose distribution on fast neutron, fission neutron, and γ, 25:16317 (ORO-678, pp 51-7)
radiation effects on leukocytes of, fission neutron, γ and x, 25:16315 (ORO-678, pp 47-8)
radiation effects on, description of pathological changes following necropsy, 25:16319 (ORO-678, pp 65-73)
strontium-90 accumulation in bones of, following ingestion, fitting of Gompertz growth curves to, 25:16008
SWITZERLAND
strontium-90 content of foods in, during 1967, 25:16087
SYMMETRY GROUPS
baryon resonance classification in, 25:17542

breaking of chiral, strength relative to SU(3) breaking interaction for, 25:17456
broken, scale transformations for hypothetical mass limit in two-body leptonic K and π decays in, 25:17538
Σ(2), Wigner coefficients for, 25:17529
3L(4,R), Vierbein formalism in general relativity theory in nonlinear realizations of, 25:17582
hadrons in, bootstrap model for, 25:17528
Lie algebra and groups for nonrelativistic hydrogen atom, 25:16832 (CEA-R-4112)
O(2,1) variables for single-particle spectra, 25:17420
O(3,1), irreducible representations for relativistic expansions of amplitudes of spinless meson two-body interactions with spinless mesons, 25:17481
$SO_0(n,1)$, unitary irreducible representations of, 25:17530
SU(1,1), continuous bases for unitary irreducible representations of, 25:17417
SU(2), formulation of asymptotic, for hadrons, 25:17544
SU(2), hadron mass spectra intermultiplet regularities in asymptotic, 25:17544
SU(3) x SU(3), for eta--X mixing, 25:17541
SU(3) x SU(3), mass matrix of Goldstone bosons in spontaneously broken, Mathur and Okubo domains and Kuo invariance for negative eigenvalues of square, 25:17543
SU(6)/sub W/, A_2 splitting in 405 representation of, 25:17488
U(6,6) and chiral-dynamic models for N + N interactions, one-pion-exchange and two-pion-exchange contribution to, 25:17520
U(6,6) and chiral-dynamic models, phase parameters for N + N interactions in, 25:17521
SYMMETRY GROUPS SU(3)
algebraic realization of, predictions for nonets from, 25:17523 (JINR-E2-5229)
asymptotic, for broken SU(3) sum rules for Λ → p + e⁻ + anti ν decay, vector meson couplings, and π⁰ → 2γ decay, 25:17544
breaking interaction strength relative to chiral symmetry breaking, 25:17456
broken, for masses of baryon resonances, relativistic equation in, 25:17546
factorization in dual-resonance models, 25:17468
formulation of asymptotic, for hadrons, 25:17544
hadron mass spectra intermultiplet regularities in asymptotic, 25:17544
sum rules for Λ → p + e⁻ + anti ν decay, vector meson couplings, and $\pi^0 \to 2\gamma$ decay in broken, asymptotic symmetries for, 25:17544
SYNCHROCYCLOTRONS
experimental facility for CERN 600-MeV, for (p,2p) reactions, magnetic spark chamber, 25:17619
SYNCHROTRON RADIATION
absorption and emission in nonequilibrium plasma, (T), 25:16692
emission by monoenergetic electrons moving in circular orbits, computer program for spectral intensity, angular distribution, and polarization for, (T), 25:17443
emission from hydromagnetic bubbles in interstellar or intergalactic fields, (T), 25:16678
SYNCHROTRONS
design parameters of CERN 300-GeV proton, 25:17628
synchrotron radiation from electron, computer program for spectral intensity, angular distribution, and polarization for, 25:17443
SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP)
neutron flux distributions for reflector controlled, (E/T), 25:18203
SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP-19)
testing under reentry and launch-abort conditions, 25:15836(R) (INSD-2873-44)
thermoelectric generator for, design and development of, 25:15836(R) (INSD-2873-44)
SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP-23)
thermoelectric generator for, design, development, and testing of, 25:15846(R) (WANL-4182-3)

T

TANTALUM
analysis for trace carbon, 25:15489
corrosion by EBR-II coolant sodium, 25:16544 (ANL-EBR-31)
determination by substoichiometric separation and activation or isotope dilution, 25:15507
determination gravimetrically as phosphate, effects of titanium and tungsten on, 25:15481
determination in iron and steel, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in ores and rocks by neutron activation and radiochemical separation, 25:15532
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
effects of wrapping vanadium with foils of, on contamination during annealing in silica at 1000 to 1250°C, 25:16503
enthalpy of solution in liquid plutonium at 700to 1000°C, 25:16440 (LA-4559)
grain size refinement in cast ingots of, thermomechanical method for, 25:16430
interaction parameter and lasing conditions for superconducting, (T), 25:17115 (ORO-3665-24)
mechanical properties of bcc monocrystalline, at 4.2 to 550°K, effects of carbon, nitrogen, and oxygen interstitials on, 25:16478
mechanical properties of recrystallized, effects of strain rate on, 25:16462
microstructure of interface between explosion weld of steel to, effects of heat treatments at 500 to 1100°C on, 25:16529
oxidation of evaporated monocrystalline films of, in electron microscope, 25:16401 (AD-711634)
photon elastic scattering at 90 and 124.5° and 1.12 and 1.33 MeV, Delbrueck and Rayleigh amplitudes for, (E), 25:17795
production, properties, and uses of, review of, 25:16493
purification by electron beam melting, parameters for, 25:16429
radiation effects on properties of fuel cladding of, neutron, 25:16544 (ANL-EBR-31)
radiation effects on swelling of, in-pile, 25:18180(R) (WHAN-FR-50)
separation by solvent extraction using triphenylguanidine in nitrobenzene, 25:15507
separation from other elements by precipitation as tantalum phosphate, 25:15481
separation of water-soluble compounds of, from 4-methyl-2-pentanone by steam distillation, 25:15746(P)
shock compression behavior at 25 and 900°C, Mie--Grueneisen equation for off-Hugoniot states in moderate-stress, (E), 25:16494
sputtering in argon--oxygen mixtures, effects of oxygen partial pressure on, 25:16497
TANTALUM ALLOYS AND SYSTEMS
welding by electron beam and gas tungsten arc methods, evaluation of, 25:16421 (N-70-36774)
Al--Co--Cr--Mo--Ni-base--Ta--Ti, corrosion by JP-5 exhaust streams, aluminide coatings for protection against, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Ta, microstructure of unidirectionally solidified, 25:16543
Fe-base--Ta, hardening in, Laves phases in precipitation, 25:16512
Hf--Ta, phase studies of precipitation reactions at 600 to 1400°C, 25:16531
Re--Ta, mechanical properties at 4.2 to 550°K, effects of carbon, nitrogen, and oxygen interstitials on, 25:16478
Ta--W-base, properties for use as DART I fuel capsule liner, 25:15837 (MLM-1578)
Ta--Zr-base, superconductivity of, effects on tantalum content on, 25:16518(R) (RLO-2225-T-13-6)
TANTALUM BROMIDES
reactions with tetraethylammonium chloride or triphenylphosphine oxide in anhydrous ethanol, products from, 25:15577
TANTALUM CARBIDES
effects on hardening of cobalt--tungsten carbide cermet tips, 25:16572
properties of, elastic and thermodynamic, 25:16576
Co--HbC--TaC--TiC--WC, mechanical properties of, effects of heat treatment and stresses on, 25:16573
TANTALUM CHLORIDES
reactions with tetraethylammonium chloride or triphenylphosphine oxide in anhydrous ethanol, products from, 25:15577
TANTALUM ISOTOPES Ta-177
energy levels from lutetium-175 (α,2n) reactions, (E), 25:17935
TANTALUM ISOTOPES Ta-181
energy level of, lifetime and M1 transition probability of first-excited, (E), 25:17934
energy-level transitions in, γ circular polarization for 482-keV, (E), 25:17800
proton elastic scattering at 9.7 MeV, optical-model analysis of, (E/T), 25:17873
TANTALUM OXIDES
thermodynamic properties of, emf studies on, 25:15629
TARAPUR POWER REACTOR
startup of, test program for, 25:18069
TARTARIC ACID
effects on sorption of gallium-68 and germanium-68 on alumina, 25:15755
TASTE
radiation effects on, in man following therapy of head and neck carcinomas, 25:16362
TAURINE
radiation effects on content of, in perfused rat liver in vitro, effects of dose on x, 25:16030
TECHNETIUM
bibliography on analytical chemistry of, 25:15470
book: Analytical Chemistry of Technetium, Promethium, Astatine, and Francium, 25:15470
chromatographic behavior in concentrated hydrochloric acid, effects of concentration on, 25:15576
electrode potentials of, effects of sample radioactivity on, 25:15719
TECHNETIUM ISOTOPES Tc-99
use of metastable, as tracer for measurement of blood

XUM

circulation in human psoriatic skin, 25:16244
use of metastable, for thyroid scanning in human children, 25:16247
use of serum albumin microaggregate incorporated metastable, for brain scanning, 25:16235 (UCLA-12-803)
use of sodium pertechnetate-labeled metastable, for scanning human kidneys for evaluation of blood circulation, 25:16257
use of sulfur colloid-incorporated metastable, for scanning lymph nodes in man, 25:16254
TECHNETIUM ISOTOPES Tc-101
beta decay of, gamma spectra and log ft value for, (E), 25:17906
yields from fast fission of plutonium, (E), 25:17899
TECHNETIUM OXIDES
free energy of formation of hydrous, effects of sample radioactivity on, 25:15719
TEETH
analysis of dentine and enamel in human, for trace amounts of aluminum, calcium, chlorine, magnesium, and sodium by thermal neutron activation and γ spectrometry, 25:15545
TELEVISION EQUIPMENT
application of closed circuit, in reactor radiation biology research, 25:16359 (AD-710375)
development for in-vessel viewing of gas cooled reactor, 25:18099(R) (GA-10313)
TELLURIUM
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination of trace amounts of, comparison method based on bichromate--ferriin reaction, 25:15488
determination using pyrrolidinecarbodithioic acid and Triton X-100, spectrophotometric, 25:15498
iodine-131 beta decay embedded in, slowing down of recoil atoms from, 25:15716
iodine-ion reactions at 30 MeV with, inner-shell-vacancy production and x-ray emission in, (E), 25:16759
separation from aqueous solutions by solvent extraction using alkyl sulfoxides, 25:15734
separation from fission products by deposition on metals in acid solutions, 25:15697(P)
separation from hydrochloric acid or sulfuric acid sclutions by solvent extraction using thionaphthenic acids, 25:15737
TELLURIUM ISOTOPES
production of radioactive, by deposition from fission product solutions on metal strips, 25:15697(P)
TELLURIUM ISOTOPES Te-123
energy level of isomeric, magnetic moment and gyromagnetic ratio of first $^3/_2^+$, (E), 25:17883
energy-level transitions of isomeric, e--γ angular correlations in, (E), 25:17883
TELLURIUM ISOTOPES Te-125
deuteron reactions (d,p) at 7.5 MeV, proton angular distributions from, (E/T), 25:17890
energy level at 35 keV, lifetime of, (E), 25:17950
energy levels from antimony-125 beta-decay, spin--parity assignments for, (E), 25:17950
energy levels from antimony-125 decay, spin assignments and transition multipolarities for, (E), 25:17944
energy-level transitions from antimony-125 beta decay, multipolarities and partial lifetimes for, (E), 25:17950
energy-level transitions in, probability for K conversion of, (E), 25:17951
TELLURIUM ISOTOPES Te-126
energy levels from tellurium-125 (d,p) reactions, (E/T), 25:17890
TELLURIUM ISOTOPES Te-128
neutron reactions (n,2n) at 12 to 18 MeV, total cross sections and isomeric cross-section ratios for, (E), 25:17946
TELLURIUM ISOTOPES Te-129
deposition on graphite and Hastelloy N samples from MSRE core, 25:15625 (ORNL-4622, pp 60-118)
energy levels from antimony-129 beta decay, (E), 25:17876
energy levels from antimony-129 decay, spin--parity assignments for, (E), 25:17871
TELLURIUM ISOTOPES Te-130
neutron reactions (n,2n) at 12 to 18 MeV, total cross sections and isomeric cross-section ratios for, (E), 25:17946
TELLURIUM ISOTOPES Te-131
beta decay in ethyl telluride, chemical effects of, 25:15562 (IS-2300, pp 21-89)
TELLURIUM ISOTOPES Te-132
depcsition on graphite and Hastelloy N samples from MSRE core, 25:15625 (ORNL-4622, pp 60-118)
TELLURIUM SYSTEMS
Au--Fe--Te-base, band structure and transport properties of superconducting, (E/T), 25:17084
Au--Mn--Te-base, band structure and transport properties of superconducting, (E/T), 25:17084
Au--Te-base, band structure and transport properties of superconducting, (E/T), 25:17084
TEMPERATURE
effects on cesium-134 retention in rats, combined effects of age and sex on, 25:16007
effects on radiosensitivity of frogs, 25:16354
effects on survival of γ-irradiated honey bees, 25:16287
effects on survival of irradiated mice, pre- and postexposure, 25:16354
radiation effects on rectal, of ponies, effects of work on, 25:16314 (ORO-678, pp 41-6)
TERBIUM
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
complexes with DTPA and EDTA, determination in water by neutron activation, 25:15549
determination using hexafluoro-2,4-pentanedione, fluorometric, 25:15502
energy levels of, identification of ground state, 25:16770
TERBIUM ISOTOPES
nucleon separation and pairing energies in, (T), 25:17888
TERBIUM ISOTOPES Tb-155
energy levels at 155.8 and 227 keV, half-lives and hindrance factor for, (E), 25:17863 (JINR-P6-5484)
nuclear quadrupole moment and deformation parameter for ground-state, (E), 25:17863 (JINR-P6-5484)
TERBIUM ISOTOPES Tb-159
alpha reactions (α,2n) at 30 MeV, rotational spectra of holmium-161 from, 25:17995
energy level of, lifetime and M1 transition probability of second-excited, (E), 25:17934
TERBIUM ISOTOPES Tb-161
production by neutron fission of plutonium-239 and plutonium-241, 25:15690
TERBIUM ISOTOPES Tb-164
beta decay scheme, (E), 25:17880
TESTES
radiation effects on retention of tritium-labeled thymidine in, of mice, effects of dose on x, 25:16349
radiation effects on, of cattle, effects of dose and dose rate on γ, 25:16310 (ORO-678, pp 25-7)
radiation effects on, of rats, effects of dose rate and prenatal exposure on γ, 25:16308 (ORO-678, pp 4-6)
radiotherapy of germ cell neoplasms in human, combined effects of lymphadenectomy, orchiectomy and, 25:16274
TETRAZOLES
radiation effects on, reactions of recoil carbon-14 from, 25:15705(R) (COO-1620-6)
TEXTILES
radioinduced graft polymerization of 2,2,3,3,4,4,4-heptafluorobutyl acrylate on surface of cellulose fiber, properties of product produced by γ, 25:15652
THAILAND
radiation protection programs in, during 1970, 25:16137 (NP-18658)
survey of radiation protection against x-ray installations in, during 1969, 25:16198(R) (RPS-AR-3)
THALLIUM
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
elastic properties of hexagonal, calculation of x-ray, 25:16476
magnetic response of superconducting, and superheating and supercooling critical fields, (E/T), 25:17094
x-ray emission from decay of K-shell vacancies in, relative rates of, (E), 25:16786
THALLIUM ALLOYS AND SYSTEMS
F--Th--Tl, phase studies of, 25:16608
In-base--Tl, Hall coefficient of, effects of pressure on, 25:17316
THALLIUM IONS
reactions with carbon foils at 200 to 1100 keV, equilibrium charge distributions from, (E), 25:16758
THALLIUM ISOTOPES Tl-207
energy levels of, coupling between spin-flip and non-spin-flip particle-hole, (T), 25:17868
THALLIUM ISOTOPES Tl-208
decay of, gamma energies and intensities of, (E), 25:17923
THERMAL CONDUCTIVITY
measurement of mixed oxide fuel, laser flash diffusivity method for, 25:18246 (WHAN-SA-80)
THERMAL INSULATION
development of gas cooled reactor pressure vessel, 25:18099(R) (GA-10313)
materials for SNAP-23A, properties and selection of, 25:15846(R) (WANL-4182-3)
specifications for SNAP-19 fuel capsule, 25:15836(R) (INSD-2873-44)
THERMAL TRANSFER TESTING
equipment and method for ceramics and composites, 25:15856 (WHAN-SA-42)
THERMOCOUPLES
design for measuring heat transfer in mercury, 25:15826(R) (RLO-2227-T-4-1)
THERMODYNAMICS
relation to cosmology and relativity theory, (T), 25:16736
THERMOELECTRIC CONVERTERS
development and testing of SNAP-19, 25:15836(R) (INSD-2873-44)
performance of SNAP-23A Fueled Prototype Mockup System, Experimental Mockup System, and Advanced Prototype System, 25:15846(R) (WANL-4182-3)
safety evaluation of SNAP-19, 25:15836(R) (INSD-2873-44)
shielding for radioisotope-fueled, comparison of iron and

nickel, 25:15840 (ORNL-TM-3213)
THERMONUCLEAR REACTIONS
production in stellar cores, 25:16628
uses in power production, prospects for, 25:15813
THERMONUCLEAR REACTORS
development for power production, review of, 25:17214
development of, review of, 25:17217
magnetic flux singularities in Harmonica 2, 25:17206 (EUR-CEA-FC-463)
magnets for toroidal, computer program for symmetry optimization of, 25:17212 (UCRL-50944)
plasma confinement and heating in Doublet, comparison to Tokamak devices, 25:17131
plasma confinement in levitron, research on, 25:17124 (UCRL-50002-70, pp 4.1-17)
plasma equilibrium in toroidal, with symmetric revolution, (T), 25:17193 (EUR-CEA-FC-551)
plasma injection and confinement in superconducting Levitron, neutral, 25:17125 (UCRL-50976)
prospects of, final report of IAEA panel on, 25:17218
THICKNESS GAGES
operation and performance of gamma radiometric, for plate and sheet rolling mill, 25:15960
THIOCYANOGEN
hydrolysis of, 25:15668
radiolysis of aqueous solutions of, electron pulse, 25:15668
THIOPHENE, TETRAHYDRO-
complexes with niobium bromide and chloride, magnetic properties and spectra of, 25:15562 (IS-2300, pp 21-89)
THIOPHENE, TETRAHYDRO-2-HEPTYL-
1-oxide, solvent properties for thorium, 25:15734
1-oxide, solvent properties for uranium as uranyl nitrate, 25:15733
THIOPHENE, TETRAHYDRO-3-HEXYL-
1-oxide, solvent properties for uranium as uranyl nitrate, 25:15733
THIOPHENE, TETRAHYDRO-4-ISOPROPYL-2-PROPYL-
1-oxide, solvent properties for uranium as uranyl nitrate, 25:15733
THORIUM
complexes with Arsenazo III in perchloric acid solutions, spectral studies on, 25:15632
complexes with peroxy radicals, ESR studies on, 25:15638
content of man in Soviet Union, effects of age and geography on, 25:16066(T) (AEC-tr-7214, pp 87-107)
determination by method based on reaction of EDTA and lead iodate, 25:15479
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in high-temperature coated reactor fuels by recoil and chemical etching methods, 25:15521
diffusion of rare earths in, at 1185 to 1480°C, 25:16398 (IS-2300, pp 101-86)
effects on thermometric titration of aluminum, 25:15484
magnetic properties of high-purity, 25:16398 (IS-2300, pp 101-86)
preparation of large single crystals of, method for, 25:16398 (IS-2300, pp 101-86)
purification by electrotransport, efficiency of, 25:16398 (IS-2300, pp 101-86)
separation as pivaloyl trifluoroacetonate from cobalt and rare earth pivaloyl trifluoroacetonates by gas chromatography, 25:15752
separation by solvent extraction using fluorinated β-diketones and gas chromatography, 25:15562 (IS-2300, pp 21-89)
separation from aqueous solutions by solvent extraction using alkyl sulfoxides, 25:15734
separation from nitric acid solutions by solvent extraction using DEHPA--TBP, synergism in, 25:15738
separation from rare earths, scandium, and yttrium in acidic aqueous solutions containing ferric ions by solvent extraction using organic phosphorus compounds, 25:15747(P)
solubility in bismuth--lithium--neodymium solutions, 25:15726 (ORNL-4622, pp 199-225)
x-ray emission from decay of K-shell vacancies in, relative rates of, (E), 25:16786
THORIUM ALLOYS AND SYSTEMS
Al--Ce--Th, electric conductivity of Ce/sub 1-x/Th/sub x/Al$_3$, Kondo sideband theory of, (E/T), 25:17304
Ce--Th, superconducting transition temperature of, effect of nonmagnetic 4f resonances on, 25:17113
F--Th--Tl, phase studies of, 25:16608
Th--transition metals, phase studies of, 25:16398 (IS-2300, pp 101-86)
THORIUM CARBIDES
ThC_2--UC_2, coatings for, removal by pickling of pyrolytic carbon and silicon carbide, 25:16565
ThC_2--UC_2, irradiation testing of coated particles, 25:18099(R) (GA-10313)
THORIUM FLUORIDES ThF_4
BeF_2--LiF--ThF_4, electric conductivity in molten, 25:15625 (ORNL-4622, pp 60-118)
BeF_2--LiF--ThF_4, liquidus temperatures of, 25:15625 (ORNL-4622, pp 60-118)
BeF_2--LiF--ThF_4--UF_4, reprocessing of reactor fuels of, development of close-coupled system for, 25:18138 (ORNL-TM-3137)
CeF_3--ThF_4, phase diagrams for, 25:15625 (ORNL-4622, pp 60-118)
THORIUM ISOTOPES Th-228
gamma spectra of, equilibrium mixture with daughters, (E), 25:17861 (IN-1448(Rev.))
production by slow neutron irradiation of protactinium-231, calculations on, 25:15699
THORIUM ISOTOPES Th-230
triton reactions (t,pf) at 18 MeV, proton spectra, fission probabilities, and fission-fragment angular distributions from, (E/T), 25:17918
THORIUM ISOTOPES Th-232
accumulation in human bones, effects of age on measurements for, 25:16011
alpha fission at 20 to 41 MeV, cross sections for, (E), 25:17858(R) (COO-1716-11)
neutron fission at 14.0 MeV, fragment mass--energy distributions and mass yields from, (E), 25:17901
neutron fission at 4.8 MeV, fragment mass--energy distributions, mass yields, and anisotropies from, (E), 25:17901
neutron fission of, epicadmium energy integral rates for, (E/T), 25:17915
oxygen-16 reactions at 137 MeV, differential cross sections for formation of light-element isotopes by nucleon exchange in, (E), 25:17891
proton fission at 20 to 85 MeV, charge distribution of products from, (E), 25:17927
triton reactions (t,pf) at 18 MeV, proton spectra, fission probabilities, and fission-fragment angular distributions from, (E/T), 25:17918
THORIUM NITRATES
complexes with triphenylphosphine oxide, crystal and molecular structure of, 25:15636
THORIUM NITRIDES
oxidation of ThN and Th_3N_4, kinetics of, 25:16560
thermodynamic functions of, 25:16590
THORIUM ORES
gamma spectra, (E), 25:17861 (IN-1448(Rev.))
THORIUM OXIDES ThO_2
analysis for trace amounts of cerium, dysprosium, erbium, gadolinium, and ytterbium by isotope dilution method, 25:15505(T) (N-70-38452)
corrosion by lithium at 375°C, relations with microstructure and purity, 25:16405(R) (ANL-7756)
effects on precipitation of protactinium oxide from molten fluorides, 25:15625 (ORNL-4622, pp 60-118)
preparation of high-purity, method for, 25:16398 (IS-2300, pp 101-86)
radiation effects on surface reactivity of, proton, 25:16619
solubility in fused chloride salts at 560 to 630°C, 25:16398 (IS-2300, pp 101-86)
thermal conductivity of, model for determination of porosity correction factor for, 25:16591
ThO_2--UO_2, precipitation from beryllium fluoride--lithium fluoride--thorium tetrafluoride--uranium tetrafluoride, 25:15726 (ORNL-4622, pp 199-225)
ThO_2--UO_2, thermal conductivity of, model for determination of porosity correction factor for, 25:16591
ThO_2--Y_2O_3, properties for use as solid electrolyte, 25:16569 (IS-2300, pp 1-5)
THORIUM VANADATES
crystal structure of ThV_2C_y, 25:16609
THREONINE
radiation effects on content of, in perfused rat liver in vitro, effects of dose on x, 25:16030
THROMBOPOIETIN
effects on blood platelet production, 25:15991
THULIUM
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
determination of, effects of solution composition on spectrographic, 25:15476
enthalpy of solution in liquid plutonium at 700to 1000°C, 25:16440 (LA-4559)
heavy-ion reactions with, fission fragments from, (E), 25:17924
hyperfine structure of, measurement using Fabry--Perot interferometer and internal atomic beam, 25:16793
separation from ytterbium in hydrochloric acid solutions by solvent extraction using D2EHPA, 25:15561 (IS-2300, pp 7-20)
THULIUM ISOTOPES
nucleon separation and pairing energies in, (T), 25:17888
THULIUM ISOTOPES Tm-169
alpha reactions (α,xn) up to 150 MeV, statistical analysis of, (E/T), 25:17940
energy levels of, unified-model analysis of, (E/T), 25:17907
energy of, calculation of effects of deformation on total, 25:17963
THULIUM ISOTOPES Tm-171
energy levels of, unified-model analysis of, (E/T), 25:17907
THULIUM ISOTOPES Tm-173
energy levels from erbium-173 beta decay, unified-model analysis of K = $^1/_2$ anomalous rotational, (E), 25:17921

XUM

energy-level transitions from erbium-173 beta decay, intensities of, (E), 25:17921
THULIUM ISOTOPES Tm-176
beta decay of ground-state and isomeric, β-γ and γ-γ ccincidence spectra and half-lives for, (E), 25:17866 (NP-18599)
nuclear spin and parity of, (E), 25:17866 (NP-18599)
THYMIDINE
effects of tritium-labeled, on mice, effects of, on colony formation by hematopoietic cells, 25:16023
radiation effects on incorporation of carbon-14 and tritium-labeled, in lymphocytes, by extracorporeal exposure of blood, 25:16038
use of tritium-labeled in vitro, for immunization of spleen cells of mice, 25:16056
THYMINE
radiolysis of oxygen-containing aqueous solutions of, reactions of electron and hydroxyl group adducts in, 25:15674
THYMUS GLAND
histology of allografts of, in cheek pouch of thymectomized, x-irradiated hamsters, 25:16328
immunological function of injected cells of, in neonatal chickens, 25:16057
radiation effects on growth of, of rats, effects of prenatal exposure on γ, 25:16309 (ORO-678, pp 7-13)
radiotherapy of enlarged, in children, development of benign and malignant thyroid neoplasms following, 25:16372
removal of, effects on erythropoiesis in mouse chimeras, 25:16338
transplantation of fresh and frozen, into thymectomized, x-irradiated mice, 25:16327
THYROID GLAND
analysis of human, for bromine, copper, iodine, and manganese by neutron activation and radiochemical separation, 25:16306 (NIRS-9, pp 55-61)
content of bromine, copper, iodine, and manganese in human, in relation to hyperthyroidism and neoplasms, 25:16306 (NIRS-9, pp 55-61)
function studies of human, in vivo tracer method for measurement of, 25:15987
iodine isotope uptake from environment following nuclear accidents, methods for measurement of potential, 25:16172
iodine isotope uptake from milk and air, kinetics of, 25:16082
iodine-131 content of, of cattle in New Zealand during 1970, 25:16078 (NRL-F-39)
iodine-131 uptake by, of children in relation to content of milk in 1962, 25:16010
radiation effects on activity of, in catfish, effects of dose on x, 25:16332
radiation effects on activity of, of cattle, effects of dose on iodine-131, 25:16320 (ORO-678, pp 78-82)
radioinduced benign and malignant neoplasms in human, following childhood therapy of enlarged thymus, 25:16372
radioinduced carcinoma in human, effects of atomic bombing in Japan on incidence of, 25:16371
scanning of human, measurement of dimensions by iodine-131, 25:16252
uptake of tritium-labeled ...eutral red and toluidine blue by, of dogs, 25:16017
TIN
alpha elastic scattering at 166 MeV, optical-model analysis of, (E/T), 25:17739
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in beryllium oxide, iron, and steel, effects of spark duration on relation sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
effect of superconducting, on surface impedance of gold films, (E/T), 25:17080
electron transmission at 1.0 to 2.5 MeV through, angular and energy distributions from, (E), 25:17259
energy gap of tin/superconducting lead double layers as function of temperature, forbidden-band, (T), 25:17096
magnetic response of superconducting, and superheating and supercooling critical fields, (E/T), 25:17094
oxygen interaction with thin superconducting films, adsorbed, 25:17085
radiation effects on, yields of indium-113m from neutron, 25:15696(P)
superconducting tunneling conductance of, using Schottky barrier probe, (E), 25:17111
supercurrents in cylindrical films of, stability of, 25:17098
TIN ALLOYS AND SYSTEMS
Al--Mo--Si--Sn--Ti-base--Zr, embrittlement of α-stabilized, effects of long exposures at 800 to 1100°F on, 25:16465
Al--Mo--Sn--Ti-base--Zr, embrittlement of α-stabilized, effects of long exposures at 800 to 1100°F on, 25:16465
Al--Sn--Ti-base--V, crack propagation behavior in air and salt water, review of, 25:16436 (AD-710635)
Al--Sn--Ti-base--V, fatigue of, review of effects of material forms and heat treatment on, 25:16436 (AD-710635)
Bi--Sn, diffusion in liquid, at 300, 340, and 400°C, 25:15561 (IS-2300, pp 7-20)
In--Sn, diffusion in liquid, at 300°C, coefficient for, 25:15561 (IS-2300, pp 7-20)
In--Sn, electric conductivity at 200 to 800°C, specific, 25:16508
In--Sn, magnetic response of superconducting, 25:17094
La--Sn, superconducting tunneling conductance of intermetallic $LaSn_3$, using Schottky barrier probe, (E), 25:17111
Nb--Sn, first-order structural transformation in intermetallic Nb_3Sn, (E/T), 25:17306
Nb--Sn, martensitic transformation and superconducting transition temperature of Nb_3Sn, alloying effects of aluminum on, 25:17082
Sn--Sn, tin-119 Knight shift in $SnSn_3$, effects of crystalline field on, (T), 25:17321
TIN BROMIDES
complexes with tetramethylthiourea and thicurea, structure of, 25:18271 (CCO-38-727)
TIN CHLORIDES
complexes with tetramethylthiourea and thicurea, structure of, 25:18271 (CCO-38-727)
TIN ISOTOPES
energy levels of even, pair-distribution coefficients of ground-state, (T), 25:17999
proton inelastic scattering at 156 MeV by even, DWBA analysis of, (E/T), 25:17931
TIN ISOTOPES Sn-112
proton reactions (p,n) with, neutron spectra determined from (p,np') reactions, (E), 25:17882
proton reactions (p,np') at 13.9 to 17.5 MeV, excitation functions and proton and low-energy neutron spectra for (p,n) reactions determined from, (E), 25:17882
proton reactions below 5 GeV, cascade--evaporation model for analysis of low-energy particles produced in, (T), 25:17515 (JINR-P2-5549)
TIN ISOTOPES Sn-113
use as tracer for measuring wear in brush-rotor systems, 25:15847
TIN ISOTOPES Sn-114
energy levels from indium-113 (He-3,d) reactions, partial strengths for, (E/T), 25:17822
TIN ISOTOPES Sn-116
deuterium reactions (d,He-3) at 28.9 MeV, angular distributions for, (E), 25:17942
TIN ISOTOPES Sn-117
use of metastable, as tracer for measuring wear in brush-rotor systems, 25:15847
TIN ISOTOPES Sn-118
deuterium reactions (d,He-3) at 28.9 MeV, angular distributions for, (E), 25:17942
proton reactions (p,d) using polarized beam, differential cross section and asymmetry for, (E), 25:17831
proton reactions (p,d) with, DWBA analysis of asymmetries and scattering amplitudes from, (T), 25:17856 (CEA-CONF-1652)
TIN ISOTOPES Sn-119
nuclear magnetic resonance in $SnSn_3$, effects of crystalline field on Knight shift in, (T), 25:17321
proton reactions (p,d) using polarized beam, differential cross section and asymmetry for, (E), 25:17831
proton reactions below 5 GeV, cascade--evaporation model for analysis of low-energy particles produced in, (T), 25:17515 (JINR-P2-5549)
TIN ISOTOPES Sn-120
deuterium reactions (d,He-3) at 28.9 MeV, angular distributions for, (E), 25:17942
energy-level scheme from antimony-120 and indium-120 decays, (E), 25:17865 (NP-18598)
proton elastic scattering at 9.7 MeV, optical-model analysis of, (E/T), 25:17873
TIN ISOTOPES Sn-122
deuterium reactions (d,He-3) at 28.9 MeV, angular distributions for, (E), 25:17942
TIN ISOTOPES Sn-124
deuterium reactions (d,He-3) at 28.9 MeV, angular distributions for, (E), 25:17942
TIN ISOTOPES Sn-127
beta decay of ground-state and isomeric, γ and x-ray singles and coincidence spectra from, (E), 25:17864 (NP-18596)
TISSUE EXTRACTS
radioprotective effects of thymus, on cultured thymus cells, γ, 25:16279 (NIRS-9, pp 15-53)
TISSUES
analysis for carbon-14 and tritium using nitric acid digestion procedure and dioxane-based scintillator, 25:16529
analysis of fish for trace amounts of cesium, cobalt, manganese, scandium, and zinc by neutron activation, 25:15540
cesium-137 content of, in pregnant rabbits and rats following administration during pregnancy, 25:16024
dose depth distribution in, of swine, fast neutron, fission neutron, and γ, 25:16317 (ORO-678, pp 51-7)
iron-59 incorporation in erythropoietic, of mice following intravenous injection, 25:16018

radiation dosimetry in, for use in radiography and therapy, methods for x, 25:16150
radiation dosimetry of californium-252 in, 25:15849
radiotherapy in, properties of electron beams for, 25:16264
TITANIUM
abundance in 112 Her AB, (E), 25:16645
alpha-particle reactions at 6.25 to 20 MeV/amu with, ratio of x-ray yields from, to deuteron-induced yields, (E), 25:16762
complexes with peroxy radicals, ESR studies on, 25:15638
corrosion by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination in beryllium oxide, iron, steel, and uranium, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
ductility of, effects of grain size on, 25:16487
effects of additions of, on mechanical properties of fast neutron-irradiated Hastelloy N, 25:16548 (ORNL-TM-3064)
effects on creep rupture properties of irradiated Hastelloy N, 25:16399 (ORNL-4622, pp 119-98)
effects on determination of tantalum gravimetrically as tantalum phosphate, 25:15461
effects on mechanical properties and microstructure of tungsten, 25:16474
effects on strength of chromium--molybdenum--nickel alloy, 25:16399 (ORNL-4622, pp 119-98)
elastic properties of hexagonal, calculation of x-ray, 25:16476
enthalpy of solution in liquid plutonium at 700 to 1000°C, 25:16440 (LA-4559)
neutron elastic scattering at 150 to 1200 keV, intermediate structure in cross section for, (E), 25:17839
neutron inelastic scattering by, cross sections for gamma yields from, (E), 25:17842
neutron total cross section at 150 to 1200 keV, intermediate structure in, (E), 25:17839
photoelectric work function of, (E), 25:17299
reactions with fluorine, kinetics of, 25:16411
reduction of tetravalent, in molten fluorides at 480 to 500°C, 25:15567(R) (ORO-3518-19)
TITANIUM ALLOYS AND SYSTEMS
Mo--Nb-base--Ti--Zr, preparation and properties for use as elastic sensor at 700 to 750°C, 25:16475
Al--Co--Cr--Mo--Ni-base--Ta--Ti, corrosion by JP-5 exhaust streams, aluminide coatings for protection against, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Co--Cr--Mo--Ni-base--Ti, corrosion by JP-5 exhaust streams, aluminide coatings for protection against, 25:16403 (AGARD-CP-73-71, Paper 22)
Al--Cr--Fe--Mo--Ti, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Cr--Mo--Ni-base--Ti, mechanical properties at 1200 and 1400°F, effects of γ--γ' mismatch and volume fraction γ' on, 25:16463
Al--Cr--Mo--Ti--V, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Cr--Mo--Ti-base, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Ge--Nb--Ti, superconductivity of, (E), 25:17076
Al--Mo--Si--Sn--Ti-base--Zr, embrittlement of α-stabilized, effects of long exposures at 800 to 1100°F on, 25:16465
Al--Mo--Sn--Ti-base--Zr, embrittlement of α-stabilized, effects of long exposures at 800 to 1100°F on, 25:16465
Al--Sn--Ti-base--V, crack propagation behavior in air and salt water, review of, 25:16436 (AD-710635)
Al--Sn--Ti-base--V, fatigue of, review of effects of material forms and heat treatment on, 25:16436 (AD-710635)
Al--Ti--Zr, phase studies of, 25:16457
Al--Ti--Zr, tensile properties at high temperatures, 25:16457
Al--Ti-base--V, corrosion by chlorine pentafluoride, fluorine, and nitrogen oxide, 25:16413
Al--Ti-base--V, deformation at 800 to 1040°C, effects of surface oxidation on, 25:16446
C--Co-base--Cr--Ti--W--Zr, mechanical properties of, effects of composition and cast structure on, 25:16477
Cr--Ni--Ti, corrosion of Uniloy, by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
Cr--Ti-base, phase transformations in, electron microscopic studies of, 25:16518(R) (RLO-2225-T-13-6)
Cr--Ti-base, precipitation of omega phase in, effects of phase separation on, 25:16518(R) (RLO-2225-T-13-6)
Cr--Ti-base, superconducting transition temperature of, effects of mixed phases on, 25:16518(R) (RLO-2225-T-13-6)
Cr--Ti-base, superconducting transitions in, relations with microstructural changes, 25:16518(R) (RLO-2225-T-13-6)
Fe--Ti-base, superconducting transitions in, relations with phase separation, 25:16518(R) (RLO-2225-T-13-6)
Mo--Nb--Ti--V, phase studies of, 25:16528
Mo--Ni--Ti-base, mechanical properties of, 25:16456
Nb--Ti-base, superconducting transition temperature of, effects of mixed phases on, 25:16518(R) (RLO-2225-T-13-6)
Ni-base--Ti, interactions with uranium dioxide in argon at 1500°C, microcharacterization of zone of, 25:16586
Ti--U-base, annealing of metastable phases of, 25:16515(T) (ORNL-tr-2440)
Ti--V-base, tensile properties of, effects of flowing sodium at 600 to 750°C on, 25:16499
Ti-base--Nb, superconducting transitions in, relations with phase separation, 25:16518(R) (RLO-2225-T-13-6)
Ti-base--Ni, mechanial properties of, 25:16456
Ti-base--V, superconducting transition temperature of, effects of mixed phases on, 25:16518(R) (RLO-2225-T-13-6)
Ti-base--V, superconducting transitions in, relations with phase separation, 25:16518(R) (RLO-2225-T-13-6)
TITANIUM BORIDES
thermal stability and wear resistance of coatings of, on high carbon steel substrates, 25:16596
TITANIUM CARBIDES
properties of, elastic and thermodynamic, 25:16576
Co--NbC--TaC--TiC--WC, mechanical properties of, effects of heat treatment and stresses on, 25:16573
Mo--Ni--TiC-base, microstructure of, 25:16594
Mo--Ni--TiC-base, wear resistance of, 25:16594
TITANIUM IONS
spectra from highly ionized dense plasma, x-ray, (E), 25:17162
TITANIUM ISOTOPES
energy levels from scandium (He-3,t) reactions, isobaric-analog, (E/T), 25:17823
TITANIUM ISOTOPES Ti-46
chlorine-35 inelastic scattering at 70 to 74 MeV, Coulomb excitation by, (E), 25:17811
proton reactions (p,γ) at 1.363-MeV resonance, gamma branching ratio in, (E), 25:17845
proton reactions (p,n) at 8 to 12 MeV, n-γ coincidence spectra and excitation function for, (E), 25:17840
sulfur-32 inelastic scattering at 70 to 74 MeV, Coulomb excitation by, (E), 25:17811
TITANIUM ISOTOPES Ti-48
chlorine-35 inelastic scattering at 70 to 74 MeV, Coulomb excitation by, (E), 25:17811
sulfur-32 inelastic scattering at 70 to 74 MeV, Coulomb excitation by, (E), 25:17811
triton reactions (t,α) at 12 MeV, angular distributions for, (E), 25:17833
TITANIUM ISOTOPES Ti-49
proton reactions (p,d) using polarized beam, differential cross section and asymmetry for, (E), 25:17831
TITANIUM ISOTOPES Ti-50
chlorine-35 inelastic scattering at 70 to 74 MeV, Coulomb excitation by, (E), 25:17811
sulfur-32 inelastic scattering at 70 to 74 MeV, Coulomb excitation by, (E), 25:17811
TITANIUM ISOTOPES Ti-51
energy levels of, intermediate-coupling model for calculation of, 25:18010
TOKAMAK DEVICES
plasma confinement and heating in, comparison to Doublet device, 25:17131
plasma instability in TM-3, by correlation techniques, (E/T), 25:17204
TOLUENE, p-CHLORO-
radiolysis in lower aliphatic alcohols, reactions of solvated electrons in γ, 25:15688
TOLUENE, p-NITRO-
electronic transition of, effects of deuterium on energy of principal, 25:15612
TOLUIDINE BLUE
uptake of tritium-labeled, by parathyroid and thyroid glands of dogs, 25:16017
TONGUE
radiotherapy of neoplasms and lymph node metastases from, in man, evaluation of effectiveness of, 25:16269
scanning of human, for ectopic thyroid using iodine-131, 25:16250
TOXINS
production of botulinum, in fish fillets, effects of γ radiation processing on, 25:16391 (MIT-4049-2)
radiation effects on production of botulinus, in processed fish, 25:16395
TRACE ELEMENTS
content in seawater on United Kingdom coast, 25:15542
content of human thyroid gland in relation to hyperthyroidism and neoplasms, neutron activation studies on, 25:16306 (NIRS-9, pp 55-61)
determination in seawater by neutron activation and atomic absorption spectrophotometry, 25:15542
determination in seawater by neutron activation, pre-treatment of samples for, 25:15536
determination in seawater by thermal neutron activation and multiparametric spectrometry, 25:15541
effects on survival of irradiated animals, combined effects of bone marrow treatment on, 25:16354
TRACER TECHNIQUES
data analysis for, development of compartmental biological models using computers, 25:16020
data from cell reproduction, development of mathematical model for, 25:15995
development of radioactive, for measuring wear, accuracy

XUM

and economic advantages of, 25:15809
development of tritium, for measuring moisture permeability of protecting coatings, 25:15851
methods for measuring thyroxine secretion rate, 25:15987
use in measuring water discharge through Flatiron and Pole Hill power plants, 25:15827 (TID-25395)
uses of radioisotope, in metallurgy, 25:16400

TRANSACTINIDE ELEMENTS
production of superheavy, on-line electromagnetic method for, 25:15848
search for superheavy, using heavy-ion reactions, 25:17928

TRANSDUCERS
fabrication of ultrasonic, method for preparing lithium sulfate crystal for, 25:16564(P)
performance of thermal, in nondestructive testing of ceramics and composites, 25:15850 (WHAN-SA-42)

TRANSFORMERS
use with single-phase generator as substitute for synchronous MHD generator, parametric design study of, 25:16869

TRANSITION METAL ALLOYS AND SYSTEMS
magnetic susceptibility of superconducting A15-type phases of, 25:17112
Pr--transition metals, phase studies of binary, with 6th period non-rare earths, 25:16398 (IS-2300, pp 101-86)
Th--transition metals, phase studies of, 25:16398 (IS-2300, pp 101-86)
transition metals--Y, phase studies of groups IVB and VB binary, 25:16398 (IS-2300, pp 101-86)

TRANSITION METAL BORIDES
machining of refractory, fracture behavior during spark, 25:16566

TRANSITION METAL CARBIDES
machining of refractory, fracture behavior during spark, 25:16566

TRANSITION METALS
microstructure of bcc, 25:16398 (IS-2300, pp 101-86)
preparation of monocrystalline, by arc-zone melting, 25:16398 (IS-2300, pp 101-86)
properties for use as catalytic dehydrogenation agents for zirconium and zirconium alloys, 25:16408(P)

TRANSPLANTS
effects on secondary disease of lethally irradiated mice, mixtures of allogeneic and xenogeneic hemopoietic cell, 25:16050
histology of thymus, in cheek pouch of thymectomized x-irradiated hamsters, 25:16328
restoration of thymectomized, x-irradiated mice by, of fresh and frozen thymus, 25:16327

TRANSPORT THEORY
boundary conditions for, comparison of Federighi's with Marshak's, 25:17268
particular solutions of transport equation, 25:17267
solutions of monoenergetic equation with anisotropic scattering, particular, 25:17262

TRANSURANIUM ELEMENTS
production by neutron reactions with plutonium-239, plutonium-240, and americium-241, 25:15691
search for remote, in ocean-bottom iron--manganese nodules, analysis of fission tracks for, 25:15770

TRITIUM
content and transport in Amchitka Island, Alaska ground waters, following Milrow Event, 25:15806 (NVO-79, pp 41-8)
content in worldwide atmospheric precipitation, method for predicting natural, 25:15765
content of atmosphere and surface waters in vicinity of Mound Lab., Miamisburg, Ohio, during January to July 1970, 25:16077 (MLM-1784)
content of atmosphere, methods for sampling using silica gel, 25:16179
decay in erbium and scandium tritides, calculations of lattice constant changes due to helium-3 from, 25:17274 (SC-RR-70-753)
deposition on soil and subsequent transport through human food chain, role of rainfall in, 25:16138(R) (ORNL-TM-3134)
determination in animal tissues by nitric acid digestion and scintillation counting, 25:15529
determination in gas-phase labeled organic compounds by beta counting, microchemical, 25:15520
determination in metals by combustion in oxygen and scintillation counting, 25:15511 (CEA-R-4020)
determination of low-level, liquid scintillation detector system for, 25:15886 (NP-18661)
deuteron reactions (d,He-3) and (d,t) at 11 MeV, neutron--neutron effective range parameters for, (E), 25:17690
deuteron reactions (d,He-3) and (d,tpn) at 10.9 MeV, helium-3 and triton energy spectra from, (E), 25:17693
distribution in tissues of mice, effects of Bremsstrahlung emission on autoradiography of, 25:15988
effects of disintegration of incorporated, on biological and physical properties of DNA, 25:16048
effects on conversion of 6,7-estrone to 15α-hydroxyestrogens and 7α-estrogens, 25:15613
effects on hemopoietic cells of mice, x-radiosensitivity of surviving colony-forming units following, 25:16345
effects on metabolism of steroids in fungi, 25:16022
effects on strength and swelling of irradiated beryllium, 25:16552
energy levels of, calculation using resonant two-body forces, (T), 25:17968
energy-level transitions between hyperfine-structure levels of μ-mesic atoms of, (E), 25:16797
exchange between saturated solutions of sodium metasilicate and its nonahydrate, 25:15581
exchange between water and thiamine chloride hydrochloride, 25:15619
exchange in fluoroborate coolant salt, effects of metals of construction on, 25:15625 (ORNL-4622, pp 60-118)
exchange reactions with para hydrogen of bromobenzene in aqueous sulfuric acid solutions, kinetic studies on, 25:15610
incorporation in natural naphthoquinone of mycobacterium phlei, 25:16330(R) (USC-113-F-17-X-12)
monitoring in atmosphere and stack effluents, methods for, 25:16143(R) (UCRL-50007-70-2)
monitoring of, open G--M detector for T_2O surface, 25:15892
neutron elastic scattering at 6 MeV, cross sections for, (E/T), 25:17971
nuclear binding energy, doublet scattering length, Coulomb energy, and S'- and D-state probabilities for, calculations using Faddeev equations, (T), 25:17689
oxidation to tritiated water, personnel hazards of, 25:16195 (CEA-Bib-179)
proton elastic scattering at 156 MeV, differential cross sections for, (E), 25:17699
proton elastic scattering at 6.5 MeV, cross sections for, (E/T), 25:17971
proton reactions (p,n) at 156 MeV, differential cross sections for, (E), 25:17699
proton reactions (p,n) at 6.4 MeV, cross sections for, (E/T), 25:17971
radiation effects on retention of thymidine-incorporated, in tissues of mice, effects of dose on x, 25:16349
radiation protection for factory personnel handling, 25:16204
reactions of μ-mesic atoms of, in hydrogen isotope mixture, (T), 25:16797
reactions of recoil, with deuterated methane--hydrogen system, 25:15710
reactions of recoil, with deuterated methane--hydrogen system, 25:15709
release from nuclear power plants, dose rates from projected, 25:18080 (BNWL-SA-3665)
uptake of neutral red and toluidine blue-incorporated, by parathyroid and thyroid glands of dogs, 25:16017
use as tracer for measuring moisture permeablity of protective coatings, 25:15851
use as tracer for measuring transpiration rates of tropical trees, 25:15997

TRITONS
binding energy of, effects of high-energy phase shift on, 25:17959
optical potential for, exact expression for, (T), 25:17984
reactions (t,α) with boron-10 at 1.5 to 3.5 MeV, differential cross section for, (E), 25:17747
reactions (t,α) with titanium-48 at 12 MeV, angular distributions for, (E), 25:17833
reactions (t,d) with beryllium-9, boron-10, and lithium-6 at 1.5 to 3.5 MeV, differential cross sections for, (E), 25:17746
reactions (t,p) with cobalt-59 at 11.82 MeV, proton angular distributions from, (E), 25:17802
reactions (t,pf) with plutonium-240 and -242, thorium-230 and -232, and uranium-236 and -238 at 18 MeV, fission probabilities and fission-fragment angular distributions from, (E/T), 25:17918
scattering by A = 40 to 210 nuclei at 10 to 40 MeV, optical-model analysis of elastic, (E/T), 25:17823
scattering by helium-4 at 0.8 to 3.9 MeV, cross sections for elastic, (E), 25:17704
scattering by helium-4, polarization in elastic, (E), 25:17686 (LA-4538)
scattering by lead-210 at 20 MeV, differential cross sections for inelastic, (E), 25:17905
scattering by nuclei, calculation of optical potentials for elastic, 25:17987

TRI-UNIVERSITY MESON FACILITY (TRIUMF)
cyclotron for, conceptual design of injection system for 500-MeV H-, 25:17616 (TRI-70-3)

TRYPSIN
effects on RNA synthesis in liver of irradiated rats, 25:16027
radioinduced inactivation of, effects of protein conformation, temperature, and wavelength on uv, 25:16037

TRYPTOPHAN
radiation effects on content of, in perfused rat liver in vitro, effects of dose on x, 25:16030

TRYPTOPHAN, 5-HYDROXY-
effects on x radiosensitivity of cultured ecuse sarcoma cells, 25:16279 (NIRS-9, pp 15-53)

TSURUGA POWER REACTOR
startup of, test program for, 25:18069

TUNGSTEN
analysis for trace carbon, 25:15489
cesium sorption on (100) surfaces of, work function changes from, 25:17295

corrosion by atomic and molecular fluorine, effects of temperature and pressure on, 25:16411
crystal structure of oxygen-covered surfaces of, ion microscopic and LEED studies on, 25:16523
crystal structure of surfaces of, effects of electric fields and temperature gradients on, 25:16522
deposition on alloys by reduction of tungsten fluoride, 25:16399 (ORNL-4622, pp 119-98)
determination by neutron activation and isotope dilution, substoichiometric, 25:15548
determination in beryllium oxide, iron, and steel, effects of spark duration on relation sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
determination in tungsten--vanadium alloys and vanadium-containing solutions by ion exchange and polarography, 25:15475
effects on determination of tantalum gravimetrically as tantalum phosphate, 25:15481
enthalpy of solution in liquid plutonium at 700to 1000°C, 25:16440 (LA-4559)
galvanomagnetic coefficients of, prediction from Fermi surface, (E/T), 25:17305
grain-boundary dislocations in wires of, 25:16539
hydrocarbon decomposition on, field emission studies on, 25:15562 (IS-2300, pp 21-89)
mechanical properties of, effects of electron beam melting conditions, titanium, and zirconium on, 25:16474
microstructure of, effects of electron beam melting conditions, titanium, and zirconium on, 25:16474
photon elastic scattering at 90 and 124.5° and 1.12 and 1.33 MeV, Delbrueck and Rayleigh amplitudes for, (E), 25:17795
production, properties, and uses of, review of, 25:16493
radiation damage clusters in, microscopic studies of fission-fragment, 25:17292
radiation effects on tensile properties of recrystallized polycrystalline, fast neutron, 25:16546 (N-70-38376)
reactions of molecular oxygen or tungsten dioxide with surface of, (E), 25:16472
separation from solvent extracts of ores or waste by direct precipitation, 25:15749(P)
sintering of, mechanism for nickel-activated, 25:16435
surface self-diffusion energy of, effects of strong electric field on, (E), 25:16507
tungsten carbide overlayer on (112) surface of, crystal structure of, 25:16602
tungsten-187 beta decay in, slowing down of recoil atoms from, 25:15716
work function of (100) surface of, effects of cesium sorption on, 25:17295

TUNGSTEN ALLOYS AND SYSTEMS
welding by electron beam and gas-tungsten arc methods, evaluation of, 25:16421 (N-70-36774)
C--Co-base--Cr--Ti--W--Zr, mechanical properties of, effects of composition and cast structure on, 25:16477
Co--Fe--W, phase studies of, 25:16470
Co--Fe--W, welds of, effects of composition on production of crack-free, 25:16470
Co-base--Cr--Fe--Mn--Ni--W, corrosion of Unitemp 605, by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
Eu--O--W, crystal structure of $EuWo_4$ and Eu_6WO_{12}, 25:16603
Fe--W, creep of single phase, at 850°C, effects of strain and time on, 25:16452
Fe-base--W, hardening in, Laves phases in precipitation, 25:16512
Fe-base--W, microstructure of incoherent twin segment of, field ion microscope study of, 25:16534
Ir--Re--W, phase studies of, 25:16527
Nb-base--W, flow stress of monocrystalline, measurement of athermal component of, 25:16461
Ni--W, growth of eutectic, effects of unidirectional solidification on, 25:16535
Ni-base--Re--W, properties of rhenium--tungsten fiber-reinforced, for use in turbine blades, 25:16437 (AGARD-CP-73-71, Paper 19)
Ni-base--W, microstructure of eutectic, electron microscopy study of, 25:16530
Ta--W-base, properties for use as DART I fuel capsule liner, 25:15837 (MLM-1578)
UN--W, phase studies at 2100 to 2700°C, 25:16607
V--W, analysis for tungsten by ion exchange and polarography, 25:15475

TUNGSTEN CARBIDES
analysis for tantalum by gravimetry as tantalum phosphate, 25:15481
crystal structure of overlayer of, on tungsten (112) surface, 25:16602
properties of, elastic and thermodynamic, 25:16576
tungsten-187 beta decay in, slowing down of recoil atoms from, 25:15716
Co--NbC--TaC--TiC--WC, mechanical properties of, effects of heat treatment and stresses on, 25:16573
Co--WC, properties for use in hard cermet tips, effects of tantalum carbide additions on, 25:16572
Co--WC-base, mechanical properties of, effects of heat treatment and stresses on, 25:16573
Co--WC-base, microstructure of foils of, transmission electron microscopy study of, 25:16599
Co--WC-base, strength of cracked, effects of annealing at 400 to 1200°C on recovery of, 25:16570

TUNGSTEN ISOTOPES W-181
content in rainwater, 1968 to 1969, 25:15794

TUNGSTEN ISOTOPES W-182
energy levels of, g-factors for 2+, (E), 25:17900

TUNGSTEN ISOTOPES W-184
energy-level transitions in, monopole mixing ratio of 2+ + 2+ 793-keV, 25:17875
proton reactions below 5 GeV, cascade--evaporation model for analysis of low-energy particles produced in, (T), 25:17515 (JINR-P2-5549)

TUNGSTEN ISOTOPES W-186
energy levels of, g-factors for 2+, (E), 25:17900

TUNGSTEN ISOTOPES W-187
beta decay in tungsten, tungsten carbide, or tungsten oxide, slowing down of recoil atoms from, 25:15716

TUNGSTEN OXIDES
desorption from tungsten surfaces, measurements of flash, 25:16472
tungsten-187 beta decay in, slowing down of recoil atoms from, 25:15716

TURBINE BLADES
materials for, development of metal fiber-reinforced composite, 25:16437 (AGARD-CP-73-71, Paper 19)
materials for, review on development of high-temperature, 25:16420 (AGARD-CP-73-71, Paper 21)
Moessbauer effect backscatter spectra of zinc-coated, 25:15853

TURBINES
control valves for, development of fast-acting electrohydraulic, 25:15811
description of closed Brayton cycle, for large nuclear power plants, 25:15821
design of low-pressure steam, for nuclear power plants, 25:18165
evaluation of combined-cycle gas and steam, for power reactor power conversion systems, 25:18164
fabrication of large steam, methods and problems of, 25:15822
steam enthalpy in nuclear power plant, tracer techniques for determination of wet, 25:18097

TYROSINE
effects on uv-radioinduced inactivation of ribonuclease, mechanism of, 25:16034
hydrochloride, radioinduced paramagnetic centers in monocrystals of, photochemical conversion of γ, 25:15654
yields from radiolysis and uv photolysis of N-(3-phenyl-L-alanyl)glycine, comparison of, 25:15678

TZM (MOLYBDENUM ALLOY)
performance as strengthening member in DART I fuel capsule, 25:15837 (MLM-1578)

U

UDP GLUCOSE--GLYCOGEN GLUCOSYLTRANSFERASE
radiation effects on activity of, in liver of rats, x, 25:16025 (AD-713087)

ULTRAVIOLET RADIATION
effects on aerated aqueous solutions of N-(3-phenyl-L-alanyl)glycine, comparison of mechanism of radiolysis with, 25:15678
effects on DNA base ratios in bacteria following exposure to sunlight, 25:16383(R) (UCB-34-P-156-X-2)
effects on formation of pyrimidine dimers in cultured human cells, 25:16044
effects on function of nervous system in goby fish, 25:16279 (NIRS-9, pp 15-53)
effects on Fusarium moniliforme, combined effects of ethylenimine on mutagenic, 25:16095
effects on genetic recombination in Escherichia coli, 25:16104
effects on glutamate-α-oxoglutarate reaction in ascites tumor cells, glutamate dehydrogenase activity following, 25:16033
effects on growth of saprophytic fungi on surfaces of southern pine beetles, 25:16379
effects on inactivation of ribonuclease, mechanism of effects of sulfur acid tyrosine on, 25:16034
effects on intracellular phage in lysogenic strains of mycobacterium avium, uv, 25:16109
effects on Newcastle Disease Virus, effects of, on RNA synthesis and interferon production in chick embryo cells following infection, 25:16054
effects on phage T4, sensitizing effects of cationic derivatives of acetophenone on inactivating, 25:16388
effects on polyploids of Saccharomyces cerevisiae, effects of ploidy on mutagenic, 25:16094
effects on pyruvate-lactate reaction in ascites tumor cells, lactate dehydrogenase activity following, 25:16033
effects on Salmonella typhimurium, mutagenic, 25:16107
effects on trypsin inactivation, effects of protein conformation, temperature, and wavelength on, 25:16037
effects on yeasts, mutagenic, 25:16279 (NIRS-9, pp 15-53)
emission of extreme, during solar flares, (E), 25:16699

XUM

ULTRAVIOLET SOURCES
shutter for, for photoluminescence dosimetry readout, Kerr cell, 25:15961 (ANL-7760(Pt.1), pp 1-12)
UNITED KINGDOM
radiation monitoring near nuclear facilities in, programs for, 25:16171
radioactive waste disposal monitoring during 1969, 25:16128 (AHSB(RP)R-105)
UNIVERSE
evolution of, antimatter in, (T), 25:16731
URACIL, 5-BROMO-
effects on chromosomes and seedling height of barley, combined effects of EMS, fission neutrons, and γ radiation on, 25:16091 (ORO-678, pp 126-34)
URACIL, 5-FLUORO-
effectiveness for treatment of esophagus cancer in man in combination with gamma radiation, 25:16270
URANIUM
abundance in Apollo 11 and 12 samples, (E), 25:16741
analysis for trace amounts of aluminum and chromium by gas phase chromatography after solvent extraction using TTA, 25:15483
analysis for trace amounts of impurities, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
analysis for uranium-235, operator's manual for Baird Atomic enrichment tester for, 25:15915 (DUN-M-30)
complexes of tetravalent, with EDTA, spectra of, effects of frequency, pH, and temperature on NMR, 25:15630
complexes with peroxy radicals, ESR studies on, 25:15638
content in mined ores, radiometric method for determining, 25:15797
determination in high-temperature coated reactor fuels by recoil and chemical etching methods, 25:15521
determination in presence of other metals by polarography, 25:15480
determination in seawater by solvent extraction and x-ray fluorescence, 25:15492
diffusion in polycrystalline hyperstoichiometric uranium nitride at 1600 to 1850°C, tracer method for determination of, 25:16589
effects on controlled-potential coulometric determination of nitrites, 25:15501
effects on determination of ruthenium by atomic absorption spectrophotometry, 25:15493
enrichment by countercurrent ion exchange between uranium(IV) and uranium(VI) in acid solutions, 25:15736(P)
mining of, radon hazards to personnel during, 25:16120
neutron total cross sections at 100 to 150 MeV, optical-model analysis of, (E/T), 25:17914
preparation by carbothermic reduction of uranium oxide, kinetics of, 25:16398 (IS-2300, pp 101-86)
proton reactions below 5 GeV, cascade--evaporation model for analysis of low-energy particles produced in, (T), 25:17515 (JINR-P2-5549)
reactions of trivalent, with cobalt complexes in perchloric acid solution, 25:15574
reduction of hexavalent, polarographic studies on, 25:15480
removal from water cooled reactor containment systems, performance of engineered safeguards, (E/T), 25:18183 (WHAN-SA-39)
separation by solvent extraction using fluorinated β-diketones and gas chromatography, 25:15562 (IS-2300, pp 21-89)
separation from aqueous solutions as uranyl compound by solvent extraction using organic phosphorus compounds, NMR studies of effects of anions on, 25:15739
separation from fast reactor fuels, design of pyrochemical facility for, 25:15817
separation from fuel salt by oxide precipitation, 25:15726 (ORNL-4622, pp 199-225)
separation from nitric acid solutions by solvent extraction using alkyl sulfoxides, 25:15733
separation from rare earths by cation exchange using sulfonic KU-2 resin, 25:15729(T) (UCRL-Trans-10509)
separation from solvent extracts of ores or waste by direct precipitation, 25:15749(P)
separation from TBP extracts by distillation and ignition, 25:15750(P)
separation from zirconium by extraction into bismuth--platinum solutions, 25:15625 (ORNL-4622, pp 60-118)
separation of ruthenium from nitric acid solutions of, by solvent extraction using dodecane--TBP, 25:15725 (NP-18656)
spectra of tetravalent, in fluoride melts, coordination effects on, 25:15625 (ORNL-4622, pp 60-118)
x-ray emission from decay of K-shell vacancies in, relative rates of, (E), 25:16786
URANIUM ALLOYS AND SYSTEMS
production of fine-grained stable fuels of, containing beryllium or boron, 25:16428(P)
Al--Mo--U, phase diagrams of U--UAl_2--Al_8Mo_3--Mo, at 500 to 1250°C, partial isothermal, 25:16537
BeO--U, radiation effects on stability of, 25:16484
BeO--U, tensile properties at 500 to 600°C, 25:16484
C--U, thermodynamic properties of, review of, 25:16604
Co--U, phase studies of, computerized method for, 25:16613
N--U, thermodynamic properties of, review of, 25:16604
Nb--U-base, crystal lattice parameters at -200 to +400°C, effects of composition on, 25:16517 (RFP-1535)
Nb--U-base, dimensional stability of polycrystalline, at -200 to +400°C, effects of composition, time at temperature, and strain on, 25:16441 (RFP-996)
Nb--U-base, phase transformation in, reversible martensitic transitions during γ--α, 25:16517 (RFP-1535)
O--U, thermodynamic properties at 300 to 1300°K, 25:16579
Pd--Pu--Rh--Ru--U, occurrence of inclusions of, in irradiated plutonium carbide--uranium carbide, 25:16541
Pu--U, physics calculations for thermal reactor fuels, (E/T), 25:18135 (EUR-4477)
Pu-base--U, density and viscosity of liquid, at 620 to 900°C, 25:16466
Ti--U-base, annealing of metastable phases of, 25:16515(T) (ORNL-tr-2440)
URANIUM BROMIDES UBr_x
reactions with tetraethylammonium chloride or triphenylphosphine oxide in anhydrous acetonitrile or dichloromethane, products from, 25:15577
URANIUM CARBIDES
bulk modulus of, relations with interatomic distance, 25:16576
grain-boundary grooving of polycrystalline, at 1100 to 1600°C, mechanism for, 25:16583
preparation of fuel microspheres and shards of, flowsheets for, 25:15552 (NP-18650)
preparation of fuel pellets of, by carbothermic reduction of uranium dioxide, 25:16562 (NP-18650)
thermal conductivity and thermoelectric properties at high temperatures, 25:16571
PuC--UC, inclusions in irradiated, occurrence of palladium--plutonium--rhodium--ruthenium--uranium, 25:16541
PuC--UC, plutonium distribution in pellets of, effects of annealing in thermal gradients on, 25:16597 (ANL-7703)
ThC_2--UC_2, coatings for, removal by pickling of pyrolytic carbon and silicon carbide, 25:16565
ThC_2--UC_2, irradiation testing of coated particles, 25:18099(R) (GA-10313)
URANIUM CHLORIDES UCl_x
reactions with tetraethylammonium chloride or triphenylphosphine oxide in anhydrous acetonitrile or dichloromethane, products from, 25:15577
URANIUM DEPOSITS
formation of Grants Region, N. Mex., geology of, 25:15798
mineralogy of central African Bakouma, 25:15795 (CEA-R-4003)
ores from Grezieux-le-Fromental, processing of, 25:15756
prospecting for, mathematical model for selection of programs for, 25:15796 (GJO-918-5)
URANIUM FLUORIDES UF_x
BeF_2--LiF--ThF_4--UF_4, reprocessing of reactor fuels of, development of close-coupled system for, 25:18138 (ORNL-TM-3137)
URANIUM FLUORIDES UF_6
reduction of vaporous, by hydrazine diluted by inert gas, properties and spectra of compound produced by reduction, 25:15564 (IJS-584)
uranium-235 concentration in, cost schedules for, 25:15845 (TID-21015(Rev.2))
URANIUM ISOTOPES U-232
gamma spectra, (E), 25:17861 (IN-1448(Rev.))
production by slow neutron irradiation of protactinium-231, calculations on, 25:15699
URANIUM ISOTOPES U-233
gamma spectra, (E), 25:17861 (IN-1448(Rev.))
neutron capture to absorption ratio for, in circulating molten salt reactor fuel, (E/T), 25:18101 (ORNL-4622, pp 7-59)
neutron fission of, epicadmium energy integral rates for, (E/T), 25:17915
neutron fission of, prompt neutron emission probability from, (T), 25:18239
proton fission at 20 to 85 MeV, charge distribution of products from, (E), 25:17927
URANIUM ISOTOPES U-234
content of Kiskiminetas River, Pennsylvania, effects of coal mine drainage on, 25:16185
determination of abundance of, relative to uranium-238 in natural waters using scintillation spectrometer, 25:15519
gamma spectra, (E), 25:17861 (IN-1448(Rev.))
URANIUM ISOTOPES U-235
concentration in natural uranium by countercurrent ion exchange between uranium(IV) and uranium(VI) in acid solutions, 25:15736(P)
concentration in uranium hexafluoride, cost schedules for, 25:15845 (TID-21015(Rev.2))
distribution in ceramic fuel elements, gamma scanning method for determination of, 25:15860
gamma spectra of, and its equilibrium mixture with daughters, (E), 25:17861 (IN-1448(Rev.))
neutron fission of, alpha and fission-fragment mass and energy distributions from ternary thermal, (E/T), 25:17917
neutron fission of, delayed neutron and photoneutron parameters for, (E/T), 25:18242

neutron fission of, epicadmium energy integral rates for, (E/T), 25:17915
neutron fission of, polar α emission in thermal, (E), 25:17869
neutron fission of, prompt neutron emission probability from, (T), 25:18239
neutron fission of, tabulation of prompt and delayed product yields from thermal and fast, (T), 25:17855 (ANL-7676)
neutron fission of, time-dependent yields of beta particles from fragments of thermal, (E), 25:17919
neutron reactions with, group-averaged cross sections and resonance parameters for, (E/T), 25:17862 (JAERI-1199)
proton fission at 20 to 85 MeV, charge distribution of products from, (E), 25:17927
URANIUM ISOTOPES U-236
neutron fission of, epicadmium energy integral rates for, (E/T), 25:17915
triton reactions (t,pf) at 18 MeV, proton spectra, fission probabilities, and fission-fragment angular distributions from, (E/T), 25:17918
URANIUM ISOTOPES U-237
gamma spectra, (E), 25:17861 (IN-1448(Rev.))
URANIUM ISOTOPES U-238
content of Kiskiminetas River, Pennsylvania, effects of coal mine drainage on, 25:16185
determination of abundance of, relative to uranium-234 in natural waters using scintillation spectrometer, 25:15519
neutron fission at 12.2 to 18.2 MeV, angular distribution of products from, (E), 25:17949
neutron fission of, epicadmium energy integral rates for, (E/T), 25:17915
neutron inelastic scattering by, cross sections for gamma yields from, (E), 25:17842
neutron reactions with, group-averaged cross sections and resonance parameters for, (E/T), 25:17862 (JAERI-1199)
proton fission at 20 to 85 MeV, charge distribution of products from, (E), 25:17927
triton reactions (t,pf) at 18 MeV, proton spectra, fission probabilities, and fission-fragment angular distributions from, (E/T), 25:17918
URANIUM MINERALS
crystal mineralogy of uraniferous phosphate-type, at Bakouma area of central Africa, 25:15795 (CEA-R-4003)
URANIUM NITRIDES
analysis for nitrogen, 25:15500
diffusion of uranium in polycrystalline hyperstoichiometric, at 1600 to 1850°C, tracer method for determination of, 25:16589
thermodynamic functions of, 25:16590
Mo--UN, phase studies at 2100 to 2700°C, 25:16607
UN--W, phase studies at 2100 to 2700°C, 25:16607
URANIUM ORE PROCESSING PLANTS
tailings of, radiation hazards from wind dispersal of, 25:16177
URANIUM ORES
gamma spectra, (E), 25:17861 (IN-1448(Rev.))
processing by lixiviation with sulfuric acid, 25:15756
radiation hazards to man from wind dispersal of tailings of, 25:16177
uranium content of mined, radiometric method for determining, 25:15797
URANIUM OXIDES UO_2
bubble distribution in, during irradiation, model for description of intragranular, 25:16588
bubble size distribution in irradiated, model for calculation of intragranular, 25:16584
creep behavior during irradiation, design and operation of equipment for studying, 25:16568 (BMI-1894)
crystal defects in, formation energies of, 25:16598
diffusion of oxygen in carbon-containing hyperstoichiometric, mechanism of thermal, 25:16587
diffusion of oxygen in, oxygen-18 (p,γ) reaction study of self-, 25:16581
effects of hyperstoichiometric, on precipitation of protactinium oxide from molten fluorides, 25:15625 (ORNL-4622, pp 60-118)
fission gas release from sintered, effects of burnup rates, fuel characteristics, and temperature on, 25:16574
interactions with nickel--titanium alloy in argon at 1500°C, microcharacterization of zone of, 25:16586
preparation from TBP--uranyl nitrate extracts by distillation and ignition, 25:15750(P)
preparation of dense shapes of, development of methods for, 25:16398 (IS-2300, pp 101-86)
uranium-235 distribution in fuel plates of, gamma scanning method for determination of, 25:15860
CeO_2--UO_2, cerium distribution in pellets of, effects of annealing in thermal gradients on, 25:16597 (ANL-7703)
PuO_2--UO_2, dissolution of fast reactor fuels of, in boiling nitric acid, effects of fabrication variables on, 25:15732 (WHAN-FR-34)
PuO_2--UO_2, distribution uniformity of plutonium oxide (PuO_2) in pellets of, (E/T), 25:18140 (WHAN-SA-7)
PuO_2--UO_2, fission product distribution in pin type fuel elements of, radiation effects on molybdenum, 25:18247 (WHAN-SA-96)
PuO_2--UO_2, irradiation testing of recycle fuels of, 25:18098(R) (BNWL-1522-1)
PuO_2--UO_2, plutonium distribution in pellets of, effects of annealing in thermal gradients on, 25:16597 (ANL-7703)
PuO_2--UO_2, preparation of low-density fuel pellets and shards of, flowsheets for, 25:16562 (NP-18650)
PuO_2--UO_2, properties of fuels of, mechanical, physical, and thermal, (E), 25:18137(R) (GEAP-10028-36)
PuO_2--UO_2, radiation effects on dense clad fuel rods of, at 800 W/cm power, pile neutron, 25:16614 (EURAEC-2146)
PuO_2--UO_2, radiation effects on gas cooled fast breeder reactor fuels of, 25:18136(R) (GA-9838)
PuO_2--UO_2, radiation effects testing of fuels of, 25:18137(R) (GEAP-10028-36)
PuO_2--UO_2, thermal conductivity of, effects of composition and temperature on, (E), 25:18246 (WHAN-SA-80)
PuO_2--UO_2-base, creep behavior during irradiation, design and operation of equipment for studying, 25:16568 (BMI-1894)
PuO_2--UO_2-base, thermal conductivity of solid solutions of, at 100 to 1200°C, effects of plutonium dioxide content on, 25:16592
ThO_2--UO_2, precipitation from beryllium fluoride--lithium fluoride--thorium tetrafluoride--uranium tetrafluoride, 25:15726 (ORNL-4622, pp 199-225)
ThO_2--UO_2, thermal conductivity of, model for determination of porosity correction factor for, 25:16591
URANIUM OXIDES U_3O_8
reduction to metal by carbothermic reactions, kinetics of, 25:16398 (IS-2300, pp 101-86)
URANIUM PHOSPHIDES
magnetic-moment phase transition in UP, molecular-field theory of, 25:17300
URANIUM SILICIDES
thermal conductivity and thermoelectric properties at high temperatures, 25:16571
URANYL ARSENITES
production by potentiometric titration of uranyl nitrate and sodium arsenite, effects of pH on, 25:15575
URANYL CHLORIDES
analysis for free hydrochloric acid, spectrophotometric, 25:15496
URANYL COMPOUNDS
reactions with vanadates, preparation of uranivanadates in aqueous solutions from, electrometric studies on, 25:15628
separation from aqueous solutions by solvent extraction using organic phosphorus compounds, NMR studies on effects of anions on, 25:15739
URANYL FLUORIDES
thermal decomposition of, at 760 to 800°C, dissociation constant and vapor pressure for, 25:15566(T) (ORNL-tr-2422)
URANYL IONS
thermodynamic properties of, at 0 to 100°C, 25:17858(R) (COO-1716-11)
URANYL NITRATES
activity coefficients in aqueous solutions at 10 to 50°C, 25:15634
analysis for free nitric acid, spectrophotometric, 25:15496
complexes with TBP, recovery of uranium from, by distillation and ignition, 25:15750(P)
crystal structure of dihydrate of, neutron diffraction studies on, 25:15642
denitration of, design of fluidized bed for, 25:15819
thermodynamic properties of, 25:17858(R) (COO-1716-11)
URANYL VANADATES
preparation of aqueous solutions of, by reactions of uranyl compounds with vanadates, 25:15628
UREA, 1-ETHYL-1-NITROSO-
effects on Fusarium moniliforme, mutagenic, 25:16095
UREA, HYDROXY-
effects on cell cycle kinetics in mice, effects of erythropoietin following, 25:16344
effects on hematopoiesis in irradiated mice, 25:16347
effects on rat bone marrow, role of endothelial and reticular cells and lymphocytes in regeneration following, 25:16341
effects on x radiosensitivity of mice, 25:16279 (NIRS-9, pp 15-53)
URIDINE, 5-BROMO-2'-DEOXY-
effects on x-radiosensitivity of cultured hamster cells, 25:16096
URINARY TRACT
radiation dose to calculi in human, from deposited strontium-90, 25:16192
strontium-90 content of calculi from human, in relation to content of human diet, 25:16125
URINE
radiation effects on fatty acid content of, of animals and man, 25:16316 (ORO-678, pp 49-50)
radioisotope concentrations in, of dogs, effects of DTPA on relative americium-241 and plutonium, 25:16012
radioisotope content of bovine, following intravenous and oral administration, cerium-144 and scandium-46, 25:16001 (ORO-678, pp 83-8)
UROCHORDATA
Halocynthia papillosa, manganese-54 content of Mediterranean during 1966, 25:16124

XUM

Phallusia mammilata, manganese-54 content of Mediterranean during 1966, 25:16124
UTERUS
radium implantation in, local anesthesia for, 25:16268

V

VACUUM SYSTEMS
bibliography on surface and vacuum physics, 25:16772
sample movement into and out of high, design and operation of safety air-lock for, 25:15876
VALVES
design of quick-closing, for coolant hold-up measurements in steam--water heat transfer systems, 25:15824
design requirements for high pressure and high temperature systems, for water cooled power reactors, 25:18131
development in Japan for liquid metal cooled fast breeder reactor cooling system, 25:18132
development of fast-acting electrohydraulic control, for turbines, 25:15811
VAN ALLEN RADIATION BELTS
alpha particle intensity in, from capture during geomagnetic storms, 1 to 8 MeV solar, (T), 25:16884 (AD-711813)
electron angular distributions in, naturally and artificially injected trapped, (E), 25:17042
electron detection by equipment on Kosmos 261 satellite, 25:17026
electron intensities in, effect of Coulomb interactions on longitude distribution of, (T), 25:16902
electron intensity variations in inner, effects of geomagnetic storms on, (E), 25:17045
electron precipitation from outer, effect of magnetospheric convection and polar wind on morning energetic, (E/T), 25:16942
electrons in, instability-associated anisotropy of distribution function of ultrarelativistic, (E/T), 25:16972
ion detection by equipment on Kosmos 261 satellite, 25:17026
proton energy spectra in, variable-thickness spinning wheel simulation of, (T), 25:16891 (N-70-37510)
proton energy spectra of 200 eV to 1 MeV in, (E), 25:16878 (AD-710759)
proton trapping in, long-term variations in high-energy, (E/T), 25:16893 (N-70-40998)
trapping of quasi-trapped charged particles in, during magnetic-storm recovery, (T), 25:17053
VAN DE GRAAFF ACCELERATORS
beam position stabilizer for LECH, 25:17635
design for use with cyclotron injector for light-ion acceleration, 25:17655
experimental facility for neutron activation analysis, pneumatic transport system for targets for, 25:17629
experimental facility for Univ. of Toledo, for beam--foil spectroscopy, 25:17638
VANADATES
reactions with uranyl compounds, preparation of uranivanadates in aqueous solution from, electrometric studies on, 25:15628
VANADIUM
abundance in 112 Her AB, (E), 25:16645
complexes with peroxy radicals, ESR studies on, 25:15638
contamination during annealing in silica at 1000 to 1250°C, effects of wrapping with tantalum or zirconium foils on, 25:16503
corrosion by sodium at high temperatures, effects of barium getter on, 25:16398 (IS-2300, pp 101-86)
deformation of, effects of hydrides on, 25:16398 (IS-2300, pp 101-86)
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by spectrophotometry using 1-(2-carboxy-4-sulfonatophenyl)-3-hydroxy-3-phenyltriazene, 25:15503
determination in iron and steel, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in low and high alloy steel by flame emission spectrometry, 25:15482
determination of trace amounts of, by proton activation, method for, 25:15557
enthalpy of solution in liquid plutonium at 700to 1000°C, 25:16440 (LA-4559)
hardness anisotropy of, 25:16398 (IS-2300, pp 101-86)
interaction parameter and lasing conditions for superconducting, (T), 25:17115 (ORO-3665-24)
neutron inelastic scattering by, cross sections for gamma yields from, (E), 25:17842
oxygen relaxation strength in annealed and oxidized, internal friction study of, 25:16481
photoelectric work function of, (E), 25:17299
polishing of polycrystalline, method for electro-, 25:16422
preparation by aluminothermic reduction of vanadium oxide, method for, 25:16398 (IS-2300, pp 101-86)
proton reactions (p,2p) at 600 MeV, (E), 25:17757
purification by electrotransport, efficiency of, 25:16398 (IS-2300, pp 101-86)
radiation effects on defect structure of, fission fragment, 25:16555
radiation effects on properties of, neutron, 25:16398 (IS-2300, pp 101-86)
separation from solvent extracts of ores or waste by direct precipitation, 25:15749(P)
superconducting tunneling conductance of, using Schottky barrier probe, (E), 25:17111
tensile properties at -60 to +27°C, effects of nitrogen and oxygen on, 25:16504
effects on mechanical properties of chromium--molybdenum--nickel and manganese--molybdenum--nickel alloy weld metals, 25:16483
VANADIUM ALLOYS AND SYSTEMS
Al--Cr--Mo--Ti--V, welds on, aging and quenching method for increasing strength of, 25:16506
Al--Sn--Ti-base--V, crack propagation behavior in air and salt water, review of, 25:16436 (AD-710635)
Al--Sn--Ti-base--V, fatigue of, review of effects of material forms and heat treatment on, 25:16436 (AD-710635)
Al--Ti-base--V, corrosion by chlorine pentafluoride, fluorine, and nitrogen oxide, 25:16413
Al--Ti-base--V, deformation at 800 to 1040°C, effects of surface oxidation on, 25:16446
C--Nb-base--V--Zr, properties of, chemical, mechanical, and physical, 25:16447(P)
Cu--V, phase studies of, 25:16398 (IS-2300, pp 101-86)
Ga--V, phases in superconducting, electron-probe microanalysis in diffusion layers, 25:16525
Mo--Nb--Ti--V, phase studies of, 25:16528
Mo--Nb--V, crystal structure and lattice constants of solid-solution, 25:16524
Mo--Ni-base--V, corrosion-resistant properties of, 25:16418
Ni--V, phase studies of, 25:16398 (IS-2300, pp 101-86)
O--V, phase studies of, 25:16398 (IS-2300, pp 101-86)
Ti--V-base, tensile properties of, effects of flowing sodium at 600 to 750°C on, 25:16499
Ti-base--V, superconducting transition temperature of, effects of mixed phases on, 25:16518(R) (RLO-2225-T-13-6)
Ti-base--V, superconducting transitions in, relations with phase separation, 25:16518(R) (RLO-2225-T-13-6)
V--W, analysis for tungsten by ion exchange and polarography, 25:15475
VANADIUM HYDRIDES
effects on deformation of vanadium, 25:16398 (IS-2300, pp 101-86)
VANADIUM ISOTOPES V-46
energy levels from titanium-46 (p,n) reactions, spin-parity assignments and γ branching ratios for, (E), 25:17840
VANADIUM ISOTOPES V-47
energy levels from titanium-46 (p,γ) reactions at 1.363-MeV resonance, (E), 25:17845
VANADIUM ISOTOPES V-51
proton reactions (p,n) at 4.013 and 5.016 MeV, Hauser--Feshbach analysis of angular distributions from, (E/T), 25:17820
VANADIUM ISOTOPES V-53
decay scheme, (E), 25:17806
VANADIUM NITRIDES
analysis for nitrogen, 25:15500
VANADIUM OXIDES
dissociation of, thermodynamics of, 25:16600
magnetic anisotropy of V_2O_3 single crystals at 4 to 700°K, Curie--Weiss law fit of, 25:17303
reduction to metal by aluminothermic reaction, method for, 25:16398 (IS-2300, pp 101-86)
surface contact potential difference of cleaved (010) V_2O_5 surfaces on platinum electrode, 25:17313
VANADIUM SILICIDES
thermal conductivity and thermoelectric properties at high temperatures, 25:16571
x-ray spectra and energy bands of high-temperature superconducting, 25:17083
VANSTAR-7
tensile properties of, effects of flowing sodium at 600 to 750°C on, 25:16499
VANSTAR-8
tensile properties of, effects of flowing sodium at 600 to 750°C on, 25:16499
VANSTAR-9
tensile properties of, effects of flowing sodium at 600 to 750°C on, 25:16499
VEGETABLES
asparagus, radiation processing of, combined effects of heat on, 25:16089(R) (EUR-4545)
beans, radiation processing of, combined effects of heat on, 25:16089(R) (EUR-4545)
peas, radiation processing of, combined effects of heat on, 25:16089(R) (EUR-4545)
potatoes, effects of radiation processing on sprouting in comparison to effects of chemical inhibitors, 25:16394
radioisotope content of, in Soviet Union during 1965 and 1966, 25:16065(T) (AEC-tr-7214, pp 70-81)
spinach, radiation processing of, combined effects of heat on, 25:16089(R) (EUR-4545)
VELA PROJECT
radiation hazards from Long Shot Event in, evaluation of, 25:15806 (NVO-79, pp 41-8)

VENOMS
radioprotective effects of bee, against whole-body γ radiation effects on mortality in mice, 25:16232
VENUS (PLANET)
shock structure effects on orientation of interplanetary magnetic fields, (T), 25:16740
VERMICULITES
sorptive properties for cesium and sodium, effects of chemical environment on, 25:15728 (ORO-678, pp 102-13)
VERMONT YANKEE POWER REACTOR
design parameters of, revised and additional data on, 25:18084 (DOCKET-50271-37)
operations aspects of, revised and additional data on, 25:18084 (DOCKET-50271-37)
VESSELS
cover gas circulation system for sodium cooled reactor, description of, 25:18124(P)
seals for sodium cooled reactor, description of cover gas leaking, 25:18124(P)
VIBRATIONS
effects of two-phase flow on 19-rod clusters, 25:18129
effects on genetics of Drosophila, Habrobracon, and Tribolium in Soviet Union and United States, 25:16292
effects on xanthine dehydrogenase activity in Drosophila and Habrobracon, effects of γ radiation on, 25:16028
VINCRISTINE
use in combination with radiotherapy and surgery for treatment of lymphosarcomas in children, review of, 25:16272
VIRUSES
EB, effects of in vitro growth of human leukocytes cultured with x-irradiated blastoid cells, 25:16283
Newcastle Disease, radiation effects on, effects of, on RNA synthesis and interferon production in chick embryo cells following infection, uv, 25:16054
VISION
radiation effects on, of monkeys, effects of dose on γ and neutron, 25:16302(R) (AD-709971)
VITAMIN A GROUP
radiation effects on physicochemical and organoleptic properties of oil concentrates of, γ, 25:16390(T) (JPRS-52121, pp 63-8)
VITAMIN B GROUP
radiation effects on physicochemical and organoleptic properties of oil concentrates of, γ, 25:16390(T) (JPRS-52121, pp 63-8)
radioinduced degradation of, effects of concentration of solution on γ, 25:16392
VOLCANOES
sulfur isotope ratios in gases of, effects of kinetic isotope effects and isotopic exchange reactions on, 25:15597

W

WATER
analysis for beta-emitting radioisotopes following enrichment by selective ion exchange, radiometric, 25:15515
analysis for soluble metal chelates by neutron activation, 25:15549
analysis for strontium-90, radiochemical, 25:15513 (HASL-239, pp I.23-57)
analysis for trace amounts of cesium, cobalt, manganese, scandium, and zinc by neutron activation, 25:15540
analysis for uranium-234/uranium-238 using scintillation spectrometer, 25:15519
content in surface soils, effects of snow on neutron radiometric measurement of, 25:15769
content of man, tritium tracer study of whole-body, 25:15999 (NP-18392)
corrosive effects on Type 316 stainless steel at 289°C, 25:16417
determination in 2-ethyl-1-hexanol by gas chromatography or absorption spectrophotometry in Sol--Gel process, 25:15473 (MLM-1777)
effects of salt, on crack propagation behavior of aluminum--tin--titanium--vanadium alloy, 25:16436 (AD-710635)
effects on fast neutron radiosensitivity of seeds of barley and rice, 25:16376 (ORO-678, pp 135-51)
effects on fission neutron radiosensitivity of barley seeds, 25:16376 (ORO-678, pp 135-51)
effects on kinetics of polymerization of γ-irradiated cellulose with monomers, 25:15656
effects on mass transport-induced thermal expansion of concrete, 25:16622
effects on polymerization of γ-irradiated cellulose with acrylonitrile and another monomer, 25:15655
flow through high-head pumps and turbines, tracer measurements of, 25:15827 (TID-25395)
heat transfer from boiling, effects of vapor content on, 25:15832
neutron attenuation at 0.5 to 18 MeV, 25:17257 (NIRS-9, pp 1-14)
neutron attenuation in, measurement of thermal, (E), 25:18171 (CEA-N-1386)
neutron diffusion coefficients for, temperature-dependent thermal-, (T), 25:17676
neutron distribution behind cylinders of, angular and energy, (E), 25:17261
radiation chemistry of, reactions of electrons, excitons, and holes in, 25:15659 (AD-713551)
radioactivity monitoring of, calibration of scintillation detector system for iodine-131, 25:15881 (ENWL-B-41)
radiolysis of stored solutions of, by plutonium, gas evolution from, 25:15660(T) (AEC-tr-7217)
radiolysis of supercritical, system for Harwell variable-energy cyclotron for studying, 25:17643
radiolysis of, adsorbed on silica at 77°K, ESR study of trapped hydrogen atoms from γ, 25:15665
radon emission into, from radioactive minerals, 25:15774
radon-219 emission into, from radioactive minerals, 25:15774
reactions with sodium fluoride--sodium tetrafluoroborate eutectic, 25:15625 (ORNL-4622, pp 60-118)
solvent properties for styrene in swollen cellulose films, 25:15658
transpiration by tropical trees, use of tritium-labeled water for measuring, 25:15997
glycerol--H_2O, mass transfer coefficients for helium bubbles in, (E/T), 25:18101 (ORNL-4622, pp 7-59)
WATER-d_2
determination at high concentrations by density measurement and ir spectroscopy, 25:15486
effects on fluorescence of indole derivatives, solvent, 25:15587
effects on NMR spectral studies on complexes of uranium(IV)--EDTA, 25:15630
effects on oxygen binding capacity, autoxidation, and heat denaturation of human hemoglobin, 25:16045
neutron diffusion coefficients for, temperature-dependent thermal-, (T), 25:17676
WATER-t_2
hazards to personnel, 25:16195 (CEA-Bib-179)
radiation from, open G--M detector for surface monitoring of, 25:15892
use of tritium-labeled, as tracer for determining total water content of man, 25:15999 (NP-18392)
WATER SUPPLIES
cesium-137 ratio to strontium-90 in New York City, during 1965 to 1970, monthly fallout, 25:16132(R) (HASL-239(App.))
radioisotope content of, in Greenland during 1969, 25:16080(R) (RISO-222)
strontium-90 content of, in New York during 1954 to 1970, monthly fallout, 25:16132(R) (HASL-239(App.))
WATER VAPOR
effects of reduced-pressure, on ignition of plutonium and plutonium alloys, 25:16442 (RFP-1566)
permeation through protective coatings, tritium tracer method for measuring, 25:15851
WATER WAVES
generation by Milrow Event of tsunami-type, (E), 25:15808 (NVO-79, pp 97-106)
WEAR
measurement of brush-rotor system, radioactive tracer methods for, 25:15847
measurement of local, neutron activation method for, 25:15855
measurements in machine parts, accuracy and economic advantages of radioactive tracer methods for, 25:15809
WEIGHT
measurement on conveyer belts, gamma radiometric, 25:15957(T) (AEC-tr-7197)
WELDING
development of automatic, for remote fabrication and maintenance of reactor components, 25:18101 (ORNL-4622, pp 7-59)
WELDS
inspection of, performance of iridium-192 sources for radiographic, 25:15857
WELL LOGGING
equipment for neutron activation analysis, 25:15959
method for gamma, for determinating lithology of boreholes in lower Volga region, USSR, 25:15766
neutron source for, evaluation of californium-252, 25:15849
neutron source for, evaluation of californium-252, 25:15850
WHEELS
wear of train, neutron activation method for measurement of, 25:15855
WHISTLERS
frequencies in stratified collisionless ionosphere, intermode coupling at ion, (E/T), 25:16947
propagation in bow shock, dual satellite observation of upstream, 25:16894
propagation in ionosphere, effect of collisions on ion cyclotron, 25:17019
propagation in ionosphere, ion temperature determination from, (T), 25:17017
propagation in ionosphere, vlf-mode coupling and polarization reversal of electron and proton, (E/T), 25:16948
propagation in magnetosphere, waveguide-ducting of vlf, (T), 25:17029
propagation in Maxwellian plasmas, instabilities from, (T), 25:17243
WHOLE-BODY COUNTERS
performance of automatic, effects of body contour on, 25:16123

XUM

WIND
effect of polar, on morning energetic radiation-belt electrons, (E/T), 25:16942
WINDSCALE PRODUCTION REACTORS
radiation monitoring program for, off-site emergency, 25:16171
WOOD
radiation effects on creep and elasticity of Englemann spruce, gamma, 25:16623
radiation effects on properties of, γ, 25:15651
radioinduced destruction of insects, mold fungus, and mushrooms in, 25:15651

X

X RADIATION
absorption of, from Crab Nebula, interstellar, (E), 25:16675
book: Medical Radiation Physics, 25:16275
cosmic background, contribution of discrete sources to, (T), 25:16670
detection of, comparison of germanium, silicon, sodium-iodide, and xenon proportional detectors for, 25:15900
dose to human population of Netherlands for 1967, 25:16136 (NP-18590)
dose to human tissues during mammography, 25:16255
dose to man during high-energy therapy, effects of field size and shape on, 25:16190
dose to personnel, review of maximum permissible, 25:16135 (NP-18514)
dosimetry for radiography and therapy, thermofluorescent methods for, 25:16150
dosimetry for therapy of tinea capitis of human children, dose to brain, eyes, and thyroid glands during, 25:16130 (BRH/DBE-70-4)
dosimetry for therapy, methods for calculations of depth dose for, 25:16186
dosimetry of, properties of lithium fluoride TSEE dosimeters for, 25:15953
effectiveness for therapy of human plasma cell tumors, monitoring of abnormal serum globulins to determination of, 25:16273
effects of pulsed, on ammonia, ion lifetimes following, 25:15685
effects of soft, in vicinity of Sco X-1, heating and ionization, (E), 25:16682
effects on activity of catfish thyroid, effects of dose on, 25:16332
effects on activity of esterases in blood serum, duodenum, liver, and pancreas of rabbits, x, 25:16032
effects on activity of pyrophosphate phosphohydrolase in liver of mice, effects of pH and dose on, 25:16046
effects on amino acids content of perfused rat liver in vitro, effects of dose on, 25:16030
effects on biological materials, effects of dose rate on calculation of RBE for, 25:16126 (AD-713557)
effects on blood serum proteins and survival of rabbits, protective effects of injections of lysozyme against, 25:16229
effects on bone marrow of mice, assay of erythrocytic and granulocytic repopulating ability following, 25:16339
effects on bone marrow of mice, effects of chalone on mitotic replenishment of stem cells following, 25:16325
effects on bone marrow regeneration in femur of rabbits, effects of depletion of medullary cavity on, 25:16340
effects on brain of rabbits, following embryo exposure, 25:16352
effects on carnations and tulips, mutagenic, 25:16089(R) (EUR-4545)
effects on chromosomes of hamster cells, effects of aberrant, on mitosis, 25:16096
effects on colony-forming ability of hemopoietic cells of mice, 25:16345
effects on content of histamine and mast cells in rat skin at 12 and 30 keV, 25:16353
effects on cultured 8-azaguanine-resistant hamster cells, effects of dose on mutagenic, 25:16101
effects on cultured hamster cells, effects of 5-bromodeoxyuridine and cysteamine on, 25:16096
effects on DNA and RNA content of bone marrow and spleen of rats, protective effects of mumie against, 25:16231
effects on DNA films in relation to electrical conductivity, 25:16036
effects on DNA of mammalian cells, effects of hydrated electrons, hydroxyl radicals, and hydrogen atoms on induced single and double breaks, 25:16217 (UR-49-1389)
effects on Down's syndrome incidence in children, relation of in utero exposure to, 25:16368
effects on Drosophila, mutagenic, 25:16279 (NIRS-9, pp 15-53)
effects on duration of cell cycle, 25:16291
effects on embryonic chicken tibiae, damaging, 25:16330
effects on erythropoiesis in mice, effects of transplanted bone marrow and thymocytes on, 25:16338
effects on formation of nicotinamide-adenine dinucleotide in perfused isolated rat liver, methods for determining, 25:16031
effects on formation of polyribosomes in liver of rats in comparison to ACTH, effects of adrenolectomy on local and whole-body, 25:16029
effects on function of nervous system in neonatal dogs following whole-body exposure of pregnant mother, 25:16356
effects on gaseous and liquid hydrobromic acid, hydrochloric acid, and hydriodic acid, review on, 25:15666
effects on genetic recombination in Escherichia coli, 25:16104
effects on glycolytic enzymes in liver of rats, 25:16025 (AD-713087)
effects on growth of cultured mouse sarcoma cells, effects of 5-hydroxytryptamine on, 25:16279 (NIRS-9, pp 15-53)
effects on healing of bone fractures in mice, inhibitory, 25:16321
effects on hematopoiesis and survival of rabbits, protective effects of bone marrow hydrolysate against, 25:16333
effects on hematopoiesis in mice, effects of bone marrow transplants on, 25:16334
effects on hematopoiesis in polycythemic mice, effects of erythropoietin on, 25:16343
effects on human blastoid cells, effects of, on growth of leukocytes from mononucleosis patients, 25:16283
effects on immune reactions in mice following administration of smallpox virus, effects of age on whole-body, 25:16060
effects on immune reactions in mice following injection of sheep erythrocytes, 25:16052
effects on immune reactions of rats injected with spleen cells from donors with heliotrine-induced cirrhosis of liver, 25:16062
effects on immune response of leukemia patients to bone marrow transplants, effects of cyclophosphamide on, 25:16059
effects on immune response of neonatal chickens to injected antigen from Bursa of Fabricus, spleen, or thymus, 25:16057
effects on intragenic recombination during meiosis in Saccharomyces, 25:16106
effects on jute, effects of mutagenic, on plant height and yield of progeny of, 25:16108
effects on leukocytes of man and swine in vitro, 25:16315 (ORO-678, pp 47-8)
effects on liquid argon at 87°K, anti W-value for, 25:15669
effects on male germ cells in mice, protective effects of AET, chloramphenicol, and dose on mutagenic, 25:16227
effects on male germ cells of guinea pigs, hamsters, mice, and rabbits, effects of species on mutagenic, 25:16103
effects on metabolism in liver in rats, whole-body, 25:16279 (NIRS-9, pp 15-53)
effects on metabolism of iodine-131-labeled homologous albumin in rats, effects of time of administration on enhancing, 25:16021
effects on mice, comparison of protective effects of colony-forming units from bone marrow and spleen against, 25:16230
effects on mice, effects of thymectomy and transplants of fresh and frozen thymus on, 25:16327
effects on mice, effects of, on serial passage of immunocompetent cells, 25:16051
effects on mice, protective effects of dithiocarbamates of aminothiophenes against, 25:16219
effects on neurons in brain of rats, electron microscopy of, 25:16331
effects on ovaries of sheep, effects of, on efficacy of luteinizing hormone for prolonging life span of corpus luteum, 25:16324
effects on oxygen-17-labeled sodium formate single crystal, ESR studies of CO_2^- radical from, 25:15680
effects on plasma lipoprotein synthesis in rats, sub-lethal, 25:16041
effects on polycrystalline glycines, EPR spectral studies on effects of crystal structure and deuterium on free radical yields from, 25:15675
effects on polyploids of Saccharomyces cerevisiae, effects of ploidy on mutagenic, 25:16094
effects on potatoes for resistance to diseases and pests and yield, mutagenic, 25:16089(R) (EUR-4545)
effects on premetamorphic newt larvae, effects of age and dose on, 25:16350
effects on rate of synthesis of DNA in cultured cells, 25:16279 (NIRS-9, pp 15-53)
effects on restoration of liver weight in rats following partial hepatectomy, effects of cobalt compounds and iron compounds on whole-body, 25:16355
effects on retention of tritium-labeled thymidine in tissues of mice, effects of dose on, 25:16349
effects on Salmonella typhimurium, mutagenic, 25:16107
effects on sensitivity of adult house flies to malaoxon or malathion following pupal irradiation, additive effects of piperonyl butoxide treatment of adult on, 25:16286
effects on sodium chloride, correlation of V color centers with positron lifetime, 25:17291
effects on sperm of mice, effects of, on chromosome inversions in relation to frequency of first anaphase bridges in meiotic cells of offspring, 25:16090(R)

(NYO-3671-10)
effects on spleen cell colony formation, effects of testosterone propionate on inhibitory whole-body, 25:16223
effects on strontium acetate and zinc acetate single crystals, EPR studies of, 25:15676
effects on survival of chromium-51-labeled erythrocytes in dogs, guinea pigs, and rats, effects of dose on whole-body, 25:16284
effects on survival of HeLa cells, effects of sulfhydryl content on, 25:16279 (NIRS-9, pp 15-53)
effects on survival of mice, effects of hydroxyurea on, 25:16279 (NIRS-9, pp 15-53)
effects on survival of mice, evaluation of protective effects on antifungal agents on effects of fungal infections on, 25:16224
effects on survival of rats following exposure of kidneys, with subsequent nephrectomy, protective effects of prednisolone, 25:16218
effects on survival of rats in comparison to predicted data, 25:16335
effects on survival time of erythrocytes of rabbits, protective effects of adenosine against, 25:16221
effects on thrombocytopoietic system of mice following platelet depletion by injection of antiplatelet serum, 25:16348
effects on thymectomized hamsters for studies on thymus allografts in cheek pouch, 25:16328
effects on tissues of lungs of rabbits, effects of dose on pathological, 25:16305(T) (LF-tr-33)
effects on uptake of tritium-labeled thymidine by intestinal cells in goldfish, effects of, 25:16279 (NIRS-9, pp 15-53)
effects on yeasts, mutagenic, 25:16279 (NIRS-9, pp 15-53)
emission from calcium ions during flare of Nov. 2, 1969, (E), 25:16700
emission from Cen A, (E), 25:16683
emission of pulsed, from Crab Nebula, (E), 25:16675
emission of soft, from Vel X and Pup A, (E), 25:16681
hazards to patients during diagnosis, ICRP recommendations for protection against, 25:16201
isodose charts for medium energy and high energy, 25:16151
measurement of auroral, balloon-borne instrument for, (E), 25:17031
monitoring of high-altitude auroral-zone, balloon, (E), 25:16885(R) (AD-712726)
observation of cosmic diffuse, in balloon flights, errors in, (E), 25:16862
observations of auroral, at Syowa, Antarctica, Jan. 14 to Feb. 14, 1969, (E), 25:17030
propagation and reflection in interference layers, 25:17682
X-RAY EQUIPMENT
calibration of diagnostic and therapeutic, in Thailand, progress report for 1969, 25:16198(R) (RPS-AR-3)
certification of weldment inspection personnel using, 25:16111
X-RAY SOURCES
development of curium-244 and samarium-145--promethium-145, for bone scanning, 25:15835 (ANL-7760(Pt.1), pp 33-5)
XANTHINE OXIDASE
radiation effects on activity of, in Drosophila and Habrobracon, effects of space flight on γ, 25:16028
XENON
cesium-excited-atom reactions with, mechanisms of excitation transfer in, 25:16820
effects on radiolysis of cyclopropane, 25:15664 (NP-18627)
instability in reactors, XITRAN-2 computer program for, 25:18229 (ORNL-TM-2580)
neon-atom scattering by, glory oscillations in velocity dependence of total collision cross sections for, (E), 25:16829
photon reactions with liquid cross sections for pair production from, (E), 25:17255 (JINR-P1-5482)
reactions between atoms of, differential elastic scattering and ionization cross sections and interaction potentials for, (E), 25:16810
solubility in sodium, effects of gas partial pressure, purity, and temperature on, 25:15573
XENON IONS
reactions with helium at 10 to 75 keV, excitation functions for, (E), 25:16808
XENON ISOTOPES
separation from cover gases in nuclear facilities, evaluation of collection processes for, 25:15723 (NACAR-10007)
XENON ISOTOPES Xe-125
retention in neutron-irradiated xenon trioxide, 25:15707
XENON ISOTOPES Xe-127
retention in neutron-irradiated xenon trioxide, 25:15707
XENON ISOTOPES Xe-129
retention of isomeric, in neutron-irradiated xenon trioxide, 25:15707
XENON ISOTOPES Xe-131
retention of isomeric, in neutron-irradiated xenon trioxide, 25:15707
XENON ISOTOPES Xe-133
distribution in Neckar River from Obrigheim Power Reactor, 25:18094 (NP-18622)
retention in neutron-irradiated xenon trioxide, 25:15707
retention of isomeric, in neutron-irradiated xenon trioxide, 25:15707
XENON ISOTOPES Xe-135
retention in neutron-irradiated xenon trioxide, 25:15707
yields from fast fission of plutonium, (E), 25:17899
XENON ISOTOPES Xe-137
yields from fast fission of plutonium, (E), 25:17899
XENON ISOTOPES Xe-138
yields from fast fission of plutonium, (E), 25:17899
XENON ISOTOPES Xe-142
beta decay of, γ spectra from, (E), 25:17941
XENON OXIDES
purification of xenon-133-labeled, by thin-layer chromatography, 25:15693
radiation effects on, retention of radioisotopes and isomers of xenon from neutron, 25:15707
separation from iodates and periodates by thin-layer chromatography, 25:15693
yields of iodine-133-labeled, from neutron irradiation of sodium perxenate, 25:15693
XENON SYSTEMS
N--Xe, thermodynamic properties of high-temperature, (T), 25:17180

Y

YTTERBIUM
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
determination of trace amounts of, in thorium dioxide by isotope dilution method, 25:15505(T) (N-70-38452)
determination of, effects of solution composition on spectrographic, 25:15476
iodine-ion reactions at 30 MeV with, inner-shell-vacancy production and x-ray emission in, (E), 25:16759
mechanical properties at 78 to 525°K, 25:16398 (IS-2300, pp 101-86)
separation from thulium in hydrochloric acid solutions by solvent extraction using D2EHPA, 25:15561 (IS-2300, pp 7-20)
YTTERBIUM ALLOYS AND SYSTEMS
In--Yb, phase studies of, 25:16398 (IS-2300, pp 101-86)
YTTERBIUM ISOTOPES
nucleon separation and pairing energies in, (T), 25:17888
YTTERBIUM ISOTOPES Yb-168
energy levels from lutetium-168 electron-capture decay, 25:17878
proton elastic scattering at 10 to 13 MeV, excitation functions and isobaric analogue resonances for, (E), 25:17945
YTTERBIUM ISOTOPES Yb-170
energy-level transitions in, relativistic Hartree--Fock calculations of K-shell internal conversion coefficients, L-subshell ratios, and second-order K- and L-shell particle parameters for, (T), 25:17916
proton elastic scattering at 10 to 13 MeV, excitation functions and isobaric analogue resonances for, (E), 25:17945
YTTERBIUM ISOTOPES Yb-172
energy levels of, g-factors for 2+, (E), 25:17900
energy-level transitions in, relativistic Hartree--Fock calculations of K-shell internal conversion coefficients, L-subshell ratios, and second-order K- and L-shell particle parameters for, (T), 25:17916
proton elastic scattering at 10 to 13 MeV, excitation functions and isobaric analogue resonances for, (E), 25:17945
YTTERBIUM ISOTOPES Yb-174
energy levels of, g-factors for 2+, (E), 25:17900
proton elastic scattering at 10 to 13 MeV, excitation functions and isobaric analogue resonances for, (E), 25:17945
YTTERBIUM ISOTOPES Yb-176
energy levels from thulium-176 decay, spin-parity assignments for, (E), 25:17866 (NP-18599)
proton elastic scattering at 10 to 13 MeV, excitation functions and isobaric analogue resonances for, (E), 25:17945
proton reactions (p,t) with, strong second-order processes in, (T), 25:18015
YTTRIUM
complexes with Arsenazo III in presence of Complexone III, spectrophotometric studies on, 25:15631
creep at 595 to 700°C and 0.28 to 4 kg/mm², mechanisms of, 25:16454
elastic properties of hexagonal, calculation of x-ray, 25:16476
mechanical properties at 77 to 800°K, 25:16398 (IS-2300, pp 101-86)
photoelectric work function of, (E), 25:17299
preparation of large single crystals of, method for, 25:16398 (IS-2300, pp 101-86)
separation from aqueous hydrochloric acid and nitric acid solutions by solvent extraction using D2EHPA, 25:15561 (IS-2300, pp 7-20)
separation from aqueous nitric acid solutions by solvent extraction using D2EHPA, 25:15561 (IS-2300, pp 7-20)

separation from hydrofluoric acid solutions by sorption on Teflon, 25:15694
separation from thorium in acidic aqueous solutions containing ferric ions by solvent extraction using organic phosphorus compounds, 25:15747(P)
YTTRIUM ALLOYS AND SYSTEMS
Al--Ce--Y, electric conductivity of Ce/sub 1-x/Y/sub x/Al$_2$, Kondo sideband theory of, (E/T), 25:17304
Al--Y, thermal capacity of intermetallic YAl$_2$, 25:16398 (IS-2300, pp 101-86)
Cd--Y--Zn, phase diagram of YCd$_3$--Zn section of, 25:16542
Ce--Y, thermal capacity of, 25:16398 (IS-2300, pp 101-86)
Cu-base--Y--Zr, electric conductivity of heat-resisting dilute, 25:16455
Ge--Y, phase studies of, 25:16398 (IS-2300, pp 101-86)
Sb--Y, phase studies of, 25:16398 (IS-2300, pp 101-86)
transition metals--Y, phase studies of groups IVB and VB binary, 25:16398 (IS-2300, pp 101-86)
YTTRIUM ISOTOPES Y-83
decay of isomeric, γ energies and half-life for, (E), 25:17784
YTTRIUM ISOTOPES Y-84
beta decay of, γ spectra and half-life for, (E), 25:17784
YTTRIUM ISOTOPES Y-87
production by irradiation of strontium-87-labeled strontium oxide on aluminum in variable energy cyclotron, 25:15703
YTTRIUM ISOTOPES Y-88
production of carrier-free, by sorption on Teflon from irradiated zirconium target, 25:15694
YTTRIUM ISOTOPES Y-89
neutron capture at 14 MeV, γ spectra from, (E), 25:17834
photon reactions (γ,xn) with, cross sections for, (E), 25:17932
YTTRIUM ISOTOPES Y-90
effects on eggs of Misgurnus fossilis, following incubation in solutions with strontium-90, effects of development stage on mutagenic, 25:16093
effects on skin of sheep, effects of, on body weight, 25:16318 (ORO-678, pp 58-64)
YTTRIUM ISOTOPES Y-91
content in surface soils near Leningrad, USSR, 1954 to 1965, 25:15757(T) (AEC-tr-7214, pp 21-6)
sorption on charcoal from aqueous solutions, effects of humic acids on, 25:15744
yields from neutron fission of plutonium-239 and plutonium-241, 25:15689
YTTRIUM ISOTOPES Y-94
yields from fast fission of plutonium, (E), 25:17899
YTTRIUM OXIDES
corrosion by lithium at 375°C, relations with microstructure and purity, 25:16405(R) (ANL-7756)
corrosion of dielectrics of, by lithium--sulfur mixtures at 375°C, 25:16405(R) (ANL-7756)
diffusion of oxygen in, at 850 to 1100°C, kinetics of, 25:16569 (IS-2300, pp 1-5)
spectra of fused Y$_2$O$_3$, infrared reflection and absorption, 25:17312
ThO$_2$--Y$_2$O$_3$, properties for use as solid electrolyte, 25:16569 (IS-2300, pp 1-5)
YUGOSLAVIA
beta activity in atmospheric fallout of, following Chinese nuclear tests, 1967, 25:15787

Z

ZINC
content of tissues of oysters from North Carolina, 25:16081
corrosion in batteries, effects of lead impurities in manganese dioxide on, 25:18260(T) (AI-Trans-276)
determination by atomic absorption spectrophotometry using lens masks, 25:15495
determination by method based on reaction of EDTA and lead iodate, 25:15479
determination in beryllium oxide and uranium, effects of spark duration on relative sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in biological materials and organic compounds by neutron activation and radiochemical separation, 25:15531
determination in marine organisms by neutron activation, 25:15537
determination in polymetallic ores using nonspectrometric gamma-gamma method, 25:15527
determination in silicon by thermal neutron activation and radiochemical separation, 25:15547
determination of trace amounts of, in fish, mollusks, water, and aquatic plants by neutron activation, 25:15540
diffusion in lithium-6 and -7, tracer studies of, 25:16500
diffusion in magnesium--zinc--zirconium alloy at 310°C, calculation of, 25:16491
effects on age hardening of chill cast aluminum--zirconium alloy, 25:16511
elastic properties of hexagonal, calculation of x-ray, 25:16476
neutron inelastic scattering by, cross sections for gamma yields from, (E), 25:17842
neutron reactions with, production of zinc-65 by, 25:15698
preparation of high-purity monocrystals of, development of controlled growth rate equipment and method for, 25:15561 (IS-2300, pp 7-20)
radiation effects on content of, in blood plasma of sheep, effects of skin exposure to strontium-90--yttrium-90 β, 25:16026 (ORO-678, pp 74-7)
ZINC ACETATES
radiolysis of single crystals of, EPR studies of x, 25:15676
ZINC ALLOYS AND SYSTEMS
Al-base--Zn, radiation damage in, annealing kinetics of 90°K electron, 25:17278
Cd--Y--Zn, phase diagram of YCd$_3$--Zn section of, 25:16542
Cd--Zn, deformation in eutectic, at 150 to 255°C, superplastic, 25:16451
Mg--rare earths--Zn--Zr, production and uses of, for engine block, precautions for, 25:16433
Mg-base--Zn--Zr, diffusion of zinc in, at 310°C, calculation of, 25:16491
Pr--Zn, phase studies of, 25:16398 (IS-2300, pp 101-86)
ZINC IONS
effects as retaining ion on chromatographic separation of rare earths using EDTA, 25:15731(T) (UCRL-Trans-10513)
ZINC ISOTOPES
energy levels from copper (He-3,t) reactions, isobaric-analog, (E/T), 25:17823
ZINC ISOTOPES Zn-61
electron capture decay of, energy levels of copper-61 and gamma spectra from, (E), 25:17848
ZINC ISOTOPES Zn-62
energy levels from zinc-64 (p,t) reactions, spin-parity assignments for, (E), 25:17836
ZINC ISOTOPES Zn-64
alpha reactions with, compound-nucleus decay in, (E), 25:17824
ZINC ISOTOPES Zn-65
energy levels from copper-65 (p,n) reactions at 2.6 to 3.1 MeV, electromagnetic branching of transitions of, (E), 25:17804
production of oil-soluble, by neutron irradiation of zinc and solvent extraction, 25:15698
proton reactions below 5 GeV, cascade--evaporation model for analysis of low-energy particles produced in, (T), 25:17515 (JINR-P2-5549)
radiation effects on uptake of, by sheep erythrocytes, effects of skin exposure to strontium-90--yttrium-90 on β, 25:16026 (ORO-678, pp 74-7)
uptake and distribution in tissues of oysters from North Carolina from fallout during 1964 to 1966, 25:16081
ZINC ISOTOPES Zn-66
alpha elastic and inelastic scattering at 19.5 MeV, angular distributions from, (E/T), 25:17793
ZINC ISOTOPES Zn-68
proton reactions (p,n) at 4.0 to 5.0 MeV, Hauser--Feshbach analysis of angular distributions, spectra, and excitation functions for, (E/T), 25:17820
ZINC ORES
alpha emission by volatile fractions of lead ore mixtures with, containing neptunium-237, 25:15761 (JINR-P6-5307)
ZINC OXIDES
radiation effects on surface reactivity of, proton, 25:16619
ZINC SELENIDES
lithium-ion implantation in n-type, type conversion and junction formation, 25:17281
ZINC TELLURIDES
ion implantation for p-type conversion to n-type layers, chlorine-, 25:17271 (CEA-CONF-1719)
ZIRCALOY
properties for use as fuel cladding and pressure tubes in water-cooled reactors, 25:16498
radiation effects on fuel rod cladding of, burst and quench tests of, 25:16139 (WCAP-7379(Vol.2))
ZIRCALOY-2
corrosion by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
corrosion by lithium--sulfur mixtures at 375°C, 25:16405(R) (ANL-7756)
fracture of flawed pressure tubes of, mechanisms of, 25:16502
tensile properties of, effects of uniaxial compression and tension on, 25:16492
welding to stainless steel at 25 and 300°C, friction method for, 25:16423
ZIRCALOY-4
fracture of wedge-opening-load specimens of, effects of hydridation on, 25:16444 (WAPD-TM-936)
ZIRCONIUM
abundance in 112 Her AB, (E), 25:16645
coating for protection against hydrogen embrittlement during welding to steel, composition of dip-coating bath for, 25:16473(P)
complexes with Arsenazo III in perchloric acid solutions, spectral studies on, 25:15632
complexes with peroxy radicals, ESR studies on, 25:15638

dehydrogenation of surfaces of, using transition metal catalyst, 25:16408(P)
determination in beryllium oxide, iron, and steel, effects of spark duration on relation sensitivity factors for mass spectrometric, 25:15474 (Y-1757)
determination in rocks and seawater by neutron activation, 25:15536
effects of additions of, on mechanical properties of fast neutron-irradiated Hastelloy N, 25:16548 (ORNL-TM-3064)
effects of wrapping vanadium with foils of, on contamination during annealing in silica at 1000 to 1250°C, 25:16503
effects on mechanical properties and microstructure of tungsten, 25:16474
effects on thermometric titration of aluminum, 25:15484
elastic properties of hexagonal α-, calculation of x-ray, 25:16476
enthalpy of solution in liquid plutonium at 700 to 1000°C, 25:16440 (LA-4559)
neutron inelastic scattering by, cross sections for gamma yields from, (E), 25:17842
photoelectric work function of, (E), 25:17299
photon elastic scattering at 90 and 124.5° and 1.12 and 1.33 MeV, Delbrueck and Rayleigh amplitudes for, (E), 25:17795
polishing of, performance of mixed acids in electrolytic, 25:16427(P)
reactions of molten, with gaseous oxygen at high temperatures, free fall method for studying kinetics of, 25:16460
separation from aqueous solutions by solvent extraction using alkyl sulfoxides, 25:15734
separation from mineral acid solutions by sorption on silica gel, 25:15743
separation from uranium containing systems of bismuth and fluoride salt by precipitation with platinum, 25:15625 (ORNL-4622, pp 60-118)
slip and twinning in oxygen-containing, 25:16520

ZIRCONIUM ALLOYS AND SYSTEMS
coating for protection against hydrogen embrittlement during welding to steel, composition of dip-coating bath for, 25:16473(P)
dehydrogenation of surfaces of, using transition metal catalyst, 25:16408(P)
polishing of, performance of mixed acids in electrolytic, 25:16427(P)
properties for use as fuel cladding and pressure tubes in water-cooled reactors, 25:16498
Al--Ge--Nb--Zr, superconductivity of, (E), 25:17076
Al--Mo--Si--Sn--Ti-base--Zr, embrittlement of α-stabilized, effects of long exposures at 800 to 1100°F on, 25:16465
Al--Mo--Sn--Ti-base--Zr, embrittlement of α-stabilized, effects of long exposures at 800 to 1100°F on, 25:16465
Al--Mo--Zr-base, phase transformation in, strain induced retained β--martensitic α', 25:16540
Al--Ti--Zr, phase studies of, 25:16457
Al--Ti--Zr, tensile properties at high temperatures, 25:16457
Al-base--Fe--Si--Zr, properties for use as dip-coating bath for protection of steel--zirconium alloy joints against hydrogen embrittlement, 25:16473(P)
Al-base--Zr, hardening of chill cast, effects of copper, magnesium, manganese, silicon, and zinc on age, 25:16511
C--Co-base--Cr--Ti--W--Zr, mechanical properties of, effects of composition and cast structure on, 25:16477
C--Nb-base--V--Zr, properties of, chemical, mechanical, and physical, 25:16447(P)
Ce--Cu-base--Zr, electric conductivity of heat-resisting dilute, 25:16455
Cu-base--Y--Zr, electric conductivity of heat-resisting dilute, 25:16455
Cu-base--Zr, tensile properties at 400°C, 25:16455
Mg--rare earths--Zn--Zr, production and uses of, for engine block, precautions for, 25:16433
Mg-base--Zn--Zr, diffusion of zinc in, at 310°C, calculation of, 25:16491
Mg-base--Zr, diffusional flow in dilute fine-grain, with non-Newtonian viscosity, 25:16489
Mo--Nb-base--Ti--Zr, preparation and properties for use as elastic sensor at 700 to 750°C, 25:16475
Nb--Zr, superconducting transitions in, relations with phase separation, 25:16518(R) (RLO-2225-T-13-6)
Nb--Zr, superconductivity of, (E), 25:17076
Nb--Zr-base, fabrication and mechanical properties for use as pressure tube material, 25:16496
Nb--Zr-base, properties for use as fuel cladding and pressure tubes in water-cooled reactors, 25:16498
Nb-base--Zr, corrosion by lithium--selenium mixtures at 375°C, 25:16404(R) (ANL-7663)
Nb-base--Zr, preparation of longitudinal and transverse section foils from wires of, ion beam thinning method for, 25:16431
Nd--O--Zr, phase studies of, 25:16601
Os--Zr-base, crystal lattice parameters of $Zr_{11}Os_4$, 25:17319
Os--Zr-base, superconducting transition temperature of, 25:17319
Ta--Zr-base, superconductivity of, effects on tantalum content on, 25:16518(R) (RLO-2225-T-13-6)

ZIRCONIUM CARBIDES
properties of, elastic and thermodynamic, 25:16576

ZIRCONIUM CHLORIDES
reduction of $ZrCl_4$, formation of monochloride by, 25:15562 (IS-2300, pp 21-89)
KCl--LiCl--$ZrCl_4$, solvent properties for thorium dioxide at 560 to 630°C, 25:16398 (IS-2300, pp 101-86)

ZIRCONIUM HYDRIDES
neutron thermalization in, Einstein model for time-dependent, 25:17679

ZIRCONIUM ISOTOPES Zr-85
decay of, half-life and γ spectra for, (E), 25:17784

ZIRCONIUM ISOTOPES Zr-88
energy levels from niobium-88 decay, spin-parity assignments for, (E), 25:17784

ZIRCONIUM ISOTOPES Zr-90
energy level of, g-factor of 8+, (E), 25:17870
helium-3 reactions (He-3,d) with, DWBA calculation of cross sections from, (T), 25:17912
proton elastic scattering at 9.7 MeV, optical-model analysis of, (E/T), 25:17873
proton reactions (p,n) with, neutron spectra determined from (p,np') reactions, (E), 25:17882
proton reactions (p,np') at 13.9 to 17.5 MeV, calculation of proton and low-energy neutron spectra for (p,n) reactions from, (E), 25:17882

ZIRCONIUM ISOTOPES Zr-91
proton elastic scattering at isobaric analogue resonance of ground state of, models for, 25:18034
proton reactions (p,d) using polarized beam, differential cross section and asymmetry for, (E), 25:17831

ZIRCONIUM ISOTOPES Zr-92
helium-3 reactions (He-3,d) with, DWBA calculation of cross sections from, (T), 25:17912

ZIRCONIUM ISOTOPES Zr-95
content in stratosphere during Oct. 1969 and Jan. 1970, estimates of, 25:15784 (HASL-239, pp I.80-91)
content in surface soils near Leningrad, USSR, 1954 to 1965, 25:15757(T) (AEC-tr-7214, pp 21-6)
decay of, gamma energies and intensities of, (E), 25:17923
determination in irradiated fuel elements, γ spectrometers, scintillation counters and semiconductor radiation detectors for, 25:18248
determination in surface air, radiochemical, 25:15514 (HASL-239, pp I.58-62)
diffusion in pyrolytic carbon and silicon carbide coatings, 25:16585
effects on burros, late, 25:16313 (ORO-678, pp 36-40)
separation from niobium-95 by precipitation as phosphate, 25:15481

ZIRCONIUM ISOTOPES Zr-96
deuteron reactions (d,n) with, DWBA calculations of cross sections from, (T), 25:17912

ZIRCONIUM OXIDES
dehydration behavior of hydrous, at 200 to 1000°K, 25:16577
radiation effects on surface reactivity of, proton, 25:16619
sorptive properties for gallium and germanium, 25:15692
CaO--ZrO-base, density of, deviation from pure anion vacancy model, 25:16605
Cr_2O_3-base--ZrO_2, properties for use as dry bearing lubricant, 25:16563(P)
MgO--ZrO_2-base, properties for use as SNAP-19 thermal insulation, 25:15836(R) (INSD-2873-44)

ZIRCONIUM PHOSPHATES
sorptive properties for cesium and strontium, 25:17257 (NIRS-9, pp 1-14)

ZODIACAL LIGHT
brightness of, photometric observations of, (E), 25:16695
origin of gegenschein and interplanetary dust, (T), 25:16748

ZOE REACTOR
experimental facilities of, design parameters of Naiade 1 neutron attenuation, 25:18171 (CEA-N-1386)
shielding materials of, thermal neutron attenuation in, (E/T), 25:18171 (CEA-N-1386)

ZOOLOGY
research at Juelich Nuclear Research Center, 1969, 25:15964(R) (NP-18602)

REPORT NUMBER INDEX

Reports, conference papers and proceedings, numbered translations, and patents are included in this index. Each item is listed by report number; this is followed by the abstract number and a brief notation regarding public availability. The index entries show which reports are on file in the institutions listed on the back of the front cover (Dep.), which reports have been published in open-literature journals (journal citation), and which reports can be purchased (source and price). Whenever a report is identified by more than one number, the availability is given under the primary number, and a cross reference is given under the secondary report number.

The report number codes apply to USAEC reports unless designated otherwise. Non-USAEC reports are identified by parenthetical notes after the report codes; e.g., (non-AEC), (British), (Canadian), (French). The note (Misc.) identifies the codes used for both USAEC and non-USAEC reports. Patents are listed under the heading "PATENTS"; the country of origin is included in parentheses.

A comprehensive list of both USAEC and non-USAEC report codes is contained in the latest revision of TID-85, *Report Number Series Used by the Division of Technical Information in Cataloging Reports.* This information is also included in the Cumulative Report Number Index (issued annually).

Availability of USAEC Reports

All USAEC Reports abstracted in *Nuclear Science Abstracts* are available through one or more of the following sources:

(1) University and public libraries in the United States. A list of these organizations appears on the inside front cover of each issue of *NSA*.

(2) NCR Microcard Editions in Microcard and micronegative form. Orders and inquiries should be sent to: Order Processing Department, 365 South Oak Street, West Salem, Wisconsin 54669.

(3) National Technical Information Service, U. S. Department of Commerce, Springfield, Virginia 22151.

(4) Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402.

(5) National Cash Register Co., P. O. Box 3111, Oak Ridge, Tenn. 37830, in micronegative form. Purchase details available on request.

Availability of Non-USAEC Reports

U. S. Reports. Reports of U. S. Government agencies are available to the public from the National Technical Information Service (NTIS). If specific availability is not shown, inquiries may be directed to NTIS.

Non-U. S. Reports. Reports of atomic energy organizations of other countries are available from NTIS for U. S. sale only. Specific availability in the country of origin is shown, when known, at the report number entry. Otherwise, inquiries should be made to the organizations listed below:

AUSTRALIA

Australian Atomic Energy Commission Research Establishment. Available upon request from the Library, Australian Atomic Research Establishment, Private Mail Bag, Sutherland, New South Wales, Australia.

BELGIUM

Centre d'Etude de l'Energie Nucléaire. Available upon request to individuals and organizations from the Centre d'Etude de l'Energie Nucléaire (C.E.N.), Studiecentrum voor Kernenergie (S.C.K.), Technical Information Dept., MOL-DONK (Belgium).

CERN

CERN European Organization for Nuclear Research. Available without charge from CERN European Organization for Nuclear Research, Geneva 23, Switzerland. Copies are deposited in libraries throughout the world.

FRANCE

Commissariat à l'Energie Atomique. Inquiries for reports numbered 1-2199 should be addressed to Service Central de Documentation du C.E.A., Centre d'Etudes Nucléaires de Saclay, Boîte postale n° 2, 91. GIF-sur-YVETTE, FRANCE. Reports numbered 2200 and above are available from La Documentation Française, 31 quai Voltaire, 75, PARIS (7e), FRANCE.

Service Central de Protection contre les Rayonnements Ionisants. Copies are available from Ministère de la Santé Publique, Service Central de Protection contre les Rayonnements Ionisants, B.P. n° 78 Le Vesinet (France) Telex 25667.

GERMANY

Deutsches Elektronen-Synchrotron DESY. Copies are available from Deutsches Elektronen-Synchrotron DESY, Dokumentation, 2000 Hamburg 52, Notkestieg 1, Germany.

Gesellschaft für Kernforschung mbH (KFK). Copies are available from Gesellschaft für Kernforschung mbH, 75 Karlsruhe, Postfach 947, Germany. Copies are also deposited in many national nuclear centers in the world.

Kernforschungsanlage. Copies may be ordered from Zentralbibliothek der Kernforschungsanlage Jülich, Jülich, Bundesrepublik Deutschland.

Hahn-Meitner-Institute für Kernforschung. Available without charge from Hahn-Meitner-Institute für Kernforschung Ber-

lin, Bibliothek, Glienicker Strasse 100, 1 Berlin 39, Germany. Copies are deposited in many national nuclear centers in the world.

Johann-Wolfgang-Goethe Universität, Frankfurt Am Main, Institut für Kernphysik, (IKF). Copies are available from Gmelin Institut, 40–42 Varrentrappstrasse, Frankfurt (Main), West Germany.

ISRAEL

Israel Atomic Energy Commission. Available without charge from Israel Atomic Energy Commission, Soreq Nuclear Research Centre, Yavne, Israel.

ITALY

Centro Informazioni Studi Esperienze (CISE). For sale at CISE Press Office, Casella Postale 3986, Milano, Italy. Copies are deposited in the libraries of various nuclear centers in Italy and abroad.

Comitato Nazionale per l'Energia Nucleare. Copies are available from Comitato Nazionale per l'Energia Nucleare, Divisione Affari Internazionali e Studi Economici, Ufficio Pubblicazioni, Via Belisario, 15, Roma, Italy.

JAPAN

Japan Atomic Energy Research Institute (JAERI). Available from the Staff Supply Cooperative of Japan Atomic Energy Research Institute (JAERI), Tokai-mura, Naka-gun, Ibaraki-ken, Japan. Copies are deposited in depositories in Tokyo, Nagoya, and Osaka.

Nagoya University. Copies are available from Research Information Center, Institute of Plasma Physics, Nagoya University, Nagoya, Japan.

University of Tokyo. Available free of charge from Institute for Nuclear Study, University of Tokyo, Tanashi-Machi, Kitatama-gun, Tokyo, Japan.

NETHERLANDS

Reactor Centrum Nederland. For sale by Reactor Centrum Nederland, 112 Scheveningseweg, 's-Gravenhage, The Netherlands. Copies are deposited in university libraries in Holland and in many national nuclear centers in the world.

NEW ZEALAND

Institute of Nuclear Sciences. Copies are available from Librarian, N. Z. Institute of Nuclear Sciences, D.S.I.R., Private Bag, Lower Hutt, New Zealand. Copies are deposited in other countries.

PAKISTAN

Atomic Energy Center. Copies are available from Atomic Energy Center, P. O. Box 658, Lahore, (West Pakistan).

POLAND

Reports of the Polish nuclear institutes are published by the Nuclear Energy Information Center of the Government Commissioner for Use of Nuclear Energy. Copies are available free of charge from Nuclear Energy Information Center, Palace of Culture and Science, Warsaw, Poland.

SPAIN

Junta de Energia Nuclear. "JEN" reports are available without charge from Servicio de Documentation, Junta de Energia Nuclear, Ciudad Universitaria, Madrid (3), España.

SWITZERLAND

Eidgenössisches Institut für Reaktorforschung. "EIR" reports are available from Eidgenössisches Institut für Reaktorforschung, c/o Bibliothek, 5303 Würenlingen/Switzerland.

TURKEY

Turkish Atomic Energy Commission. Copies are available free of charge from T.A.E.C., Çekmece Nuclear Research Center, P. O. Box 1, Airport, Istanbul, Turkey.

Conferences

Published conference proceedings as well as individual unpublished papers from conferences are included in this index. A CONF number is assigned to the conference if published proceedings are received and also if only a single paper is received. The base number used is year-month-sequence. Thus, the number CONF-650101 indicates that the conference was held in 1965, in January, and that this was the first January 1965 conference so received. This number would be assigned to complete published proceedings. If individual papers are received, the base number is extended to include a paper number, e.g., CONF-650101-1. As additional papers are received, they will be assigned consecutive numbers in the series, CONF-650101-1, CONF-650101-2, etc. This numbering system ensures that all papers received from a conference will be associated with that conference in this index.

If published proceedings are received after the receipt of individual papers, the complete proceedings will be abstracted and the abstract number will appear in this index with the base CONF number.

Abbreviations Used in Availability Column

AECL	Reports of the Atomic Energy of Canada Limited are for sale by the Scientific Document Distribution Office, Atomic Energy of Canada Limited, Chalk River, Ontario, Canada.
CFSTI	See NTIS
DENM	Reports of the Atomic Energy Commission Research Establishment, Risö, are available on exchange from the Library, Danish Atomic Energy Commission, Risö, Roskilde, Denmark. Also for sale at the price shown from Jul. Gjellerup, Booksellers, 87 Sölvgade, Kobenhavn K., Denmark. Reports of Danatom are available on loan from Research Establishment, Risö, Roskilde, Denmark. Copies are available from Danatom, Aurehojvej 2, Hellerup, Denmark.
Dep.	AEC reports so designated are maintained in the organizations listed on the inside front cover of *NSA*. Prior to July 1, 1965, reports were deposited either in printed copy form or in microform. After that time, all reports have been in the form of micronegatives. Reports from other countries so designated are available in the United States at the organizations listed on the inside front cover of *NSA*.

XUM

DTIE Available from the U. S. Atomic Energy Commission, Division of Technical Information Extension, P. O. Box 62, Oak Ridge, Tennessee 37830. (Conference papers are available on loan only.)

EM Blueprints of AEC engineering drawings are available from NTIS, U. S. Department of Commerce, Springfield, Virginia 22151. Current prices of the CAPE-packages may be obtained from this address. TID-4100, available from the Division of Technical Information Extension, P. O. Box 62, Oak Ridge, Tennessee 37830, contains information on all the CAPE-packages for sale.

EUR For sale by Centrale de vente des publications des Communautés européennes 37, rue Glesener-Luxembourg.

GPO For sale by the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

IAEA Available from the International Atomic Energy Agency, Vienna, Austria, and from its sales agencies in various countries throughout the world. A list of these agencies is found in each STI/DOC and STI/PUB publication.

NORW Reports from Forsvarets Forskningsinstitutt are available from Norwegian Defense Research Establishment, Library, P. O. Box 25, Kjeller, Norway.
"KR" reports are available on an exchange basis from the Library, Institutt for Atomenergi, Box 40, Kjeller, Norway.
Reports of the Norwegian Reactor School are available from the Library, Institutt for Atomenergi, P. O. Box 40, Kjeller, Norway.

NRC For sale by the National Research Council of Canada, Ottawa, Ontario, Canada.

NTIS For sale by the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22151 at the following prices for eye legible copy:

1–300 pages	$3.00
301–600 pages	$6.00
601–900 pages	$9.00

Documents over 900 pages have special prices which may be obtained from NTIS. Microfiche copy of each separately bound document can be purchased for $0.95.
Reports issued by organizations outside the United States will be sold by NTIS *only to purchasers within the United States.*
Purchasers outside the United States may acquire such reports from the sources described elsewhere in these columns.

OECD Available from O. E. C. D., Publications 2, rue, André-Pascal, 75 Paris 16e, France, and from its sales agencies in various countries throughout the world. A list of these agencies is found in each OECD publication.

SWED "AE" reports are for sale from Aktiebolaget Atomenergi, Library Section, Box 43041, Stockholm 43, Sweden. Microcopy of these reports is available from the International Documentation Center, Turnba, Sweden.
Reports of the VDDIT-series may be obtained from Aktiebolaget Atomenergi, Information Office, Scientific and Technical Information, Box 43041, Stockholm 43, Sweden.
Other series are not generally available to the public. Organizations in the Atomic Energy field may obtain copies from Aktiebolaget Atomenergi.

UK United Kingdom Atomic Energy Authority reports generally may be purchased from Her Majesty's Stationery Office, P. O. Box 569, London S.E.1. Copies of many UKAEA reports (particularly earlier ones) may be purchased in microcopy form from Micro Methods Ltd., East Ardsley, Wakefield, Yorkshire, England. Copies of UKAEA reports are deposited with the National Lending Library for Science and Technology and 10 public libraries in England; with the USAEC and (through USAEC) with NTIS; and in most national nuclear centers throughout the world. In the USA, UKAEA reports are available on a subscription basis, by subject category, from UNIPUB, Inc., P. O. Box 433, New York, N. Y. 10016, USA.

UN Mail orders should be directed to the Sales Section, Room 1059, United Nations Headquarters, New York, New York 10017.

ZAED Available from Zentralstelle für Atomkernenergie Dokumentation, 6000 Frankfurt/Main 90, P. O. Box 901069, Westendstr. 21, West Germany

AEC Symposium Series

Proceedings of a Biology Division, Oak Ridge National Laboratory, conference held May 1970

Sponsored by
National Cancer Institute
and
U. S. Atomic Energy Commission

December 1970
483 pages, 6 x 9
Library of Congress Catalog Card:
73-609398

Published as No. 21 in the AEC Symposium Series, this book is available as CONF-700501 for $6.00 from
National Technical Information Service
U. S. Department of Commerce
Springfield, Virginia 22151

This conference reviewed the animal models currently used in experimental respiratory carcinogenesis. The usefulness of the various animal systems to provide critical information regarding the etiology and pathogenesis of human lung cancer was discussed together with a proposed classification for respiratory tract tumors in animals.

Session I: Structure and Function of Cellular Elements in the Lungs and Their Response to Injury

Session II: Human Lung Tumors

Sessions III and IV: Classification of Lung Tumors in Domestic and Experimental Animals

Session V: Current Experiments in Respiratory Carcinogenesis

Session VI: Panel Discussion: Recommendations for Classification of Lung Tumors in Animals
